Appendix

The American Ideal

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 21, 1957

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very great address which has been prepared for delivery tomorrow afternoon at 2 o'clock by J. Edgar Hoover, Director of the Federal Bureau of Investigation. The title of the address is "The American Ideal." It is to be delivered at the Freedoms Foundation annual awards at Valley Forge, Pa. I believe my colleagues and the people of the country generally will want to read the address by this wise American, J. Edgar Hoover.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE AMERICAN IDEAL

(Address of J. Edgar Hoover, Director, Federal Bureau of Investigation, at Freedoms Foundation annual awards, Valley Forge, Pa., February 22, 1957)

This day and this place are dear to the hearts of all true Americans who realize the meaning of the freedoms which our forefathers won for us. So long as this Nation endures, we pray that men will gather—as we have today—to do honor to the memory of the man, George Washington, who was "First in war, first in peace, and first in the hearts of his countrymen."

The American Revolution was kept alive by the dreams and the genius and the indomitable spirit of George Washington. In those dark hours here at Valley Forge, he and his men fanned the flame of liberty to inspire by their determination others who had lost hope or had grown faint of heart.

Because of George Washington and his valiant men, this place is hallowed ground. Here, our American heritage was made secure. Here, our own "freedom fighters" stood firm to protect our infant Republic, and refused to permit the forces of tyranny to crush their dream.

It, indeed, it fitting that Freedoms Foundation should be centered at Valley Forge—where the laying of the foundation of our American heritage was assured by the willing sacrifices of those brave men to whom liberty was dearer than life; liberty, not alone for themselves, but for the generations which were to inherit the precious fruits of their sacrifices. The foundation's location lends emprasis to its purpose—of passing on, through knowledge of its real meaning, the torch of freedom.

In this historic setting and in this reverent atmosphere, I am deeply honored to be selected to receive Freedoms Foundation's George Washington Award. In honoring me, you also are honoring the loyal men and women of the Federal Bureau of Investigation who have made its achievements possible.

Our America was born out of the yearning for freedom, the same yearning which only recently spurred heroic Hungarians to fight enemy tanks with stones and homemade bombs. Our shores have become the haven of the oppressed and beckon to those in the old world to come and to be free; to worship God as they choose; to seek the opportunities which America offers to those who are willing to work and fight to preserve a way of life which gives so much to so many.

The American ideal is woven of a thousand things. It is woven of unfaltering faith in God, faith in the destiny of this Nation, of battles and of Valley Forge, and Gettysburg, and the Marne, and Anzio, and Iwo Jima. Threaded through the fabric is the patience of a Washington, the wisdom of a Franklin, the humility of a Lincoln, the integrity of an Eisenhower, the courage of an unknown soldier, the vision of a Jefferson and the sacrifice of a Nathan Hale. It is laced with the memory of men's words: "I have not yet begun to fight!" and "I only regret that I have but one life to lose for my country."

The American ideal is embodied in our Nation's integrity and honor and in our homes in which respect for the rights of others is taught by precept and example. It is part and parcel of our Bill of Rights and the constitutional concepts which recognize that all men are free and equal, endowed by their Creator with the unalienable rights of life, liberty, and the pursuit of happiness. The American ideal embodies the sum total of the wisdom, the courage, and the sacrifices of our Founding Fathers. Its foundation is the faith of our fathers.

The American ideal has its roots in religion. Without its religious sanction and inspiration, the American ideal would pale and wither to extinction. It is the American precept that men shall live as equals under a government by law, which is embodied in the greatest of all laws:

"Whatsoever ye would that men should do to you, do ye even so to them; for this is the law and the prophets."

From those bleak days in Valley Forge, men have fought and died for the American ideal. We know ideals can be preserved only through eternal vigilance. Our own ideal of freedom and our way of life are under ceaseless attack both from within and without. We fail in achieving our ideal every time an American home fails by producing a juvenile delinquent. The failure is that of adult America. Youth needs only to be guided along the proper path and to be given the direction and training to determine right from wrong; good from bad; the true from the false; belief in the dignity of man; belief in themselves; and faith in a supreme being.

Every law-abiding person who wishes to preserve our American freedoms certainly must recognize that they cannot long endure without respect for authority which is dedicated to preserving civil liberties rather than to destroying them. Without freedom, a society loses its meaning, and without protective authority, it becomes anarchy.

The primary mission of our constitutional Republic is to preserve the proper balance between freedom and authority. Our generation has witnessed assault after assault on this constitutional balance of freedom and authority.

The pseudo liberal and the neo-Fascist seek either license or an excess of authority. The pseudo liberal has increasingly conceived committees in the name of defending every freedom, but none to uphold authority. When he has succeeded in lessening freedom by curtailing authority, he has claimed social progress. These self-styled social reformers seek to substitute license for freedom. They have become the ready tools of the Communist conspiracy and their refusal to recognize the difference between authority for the common good, and oppression, has aided in making possible an era of Communist expansion.

To be sure, the psuedo-liberals proclaim themselves as anti-Communist. They have made efforts in recent years to curtail the Government's authority to defend our national security. Some of them may be honest and sincere but they are misguided. Others seek the pseudo-liberal cloak to conceal more sinsister objectives, because deceit is the very essence of communism.

The tragedy of our generation has resulted from our spiritual shortcomings, from the disastrous moral failures of our age, and from the failures of the last war and the last peace.

Our generation has suffered two world wars. After World War I, the free world awoke to the realization that the war "to make the world safe for democracy" was not finished. After World War II, a tired and peace-seeking people had the satisfaction of knowing that the Fascist monster had been destroyed. Then came another shock. Soviet Russia launched a cold war against the West and a not so cold one against other defenseless peoples to extend its orbit of destructive influence over one-fourth of the earth's surface and approximately 40 percent of the world's peoples.

The free world has been slow to recognize the Communist approach despite the blueprints for action which the Communists have proclaimed to all with ears to hear and eyes to read. From the time the Communists came to power in Russia until today, they have used duplicity, propaganda, treason, and even armed force to distort truth. In the 109 years since the Communist Manifesto was written they have never won power in any country by the free vote of a majority of the people.

Communism is doomed ultimately to fall, because it is anti-God and denies the dignity of man. The day will come when it will be rejected by all the peoples of the world. But that day never will come through wishful thinking. It will come only when the fires of freedom burn bright and the sinews of freedom are strengthened. No brutality can erase the urge to liberty which surges in every man's heart. The fall of worldwide communism will come only when the world, both the free and the enslaved, resolves that this heartless dictatorship shall end. We can hasten that day by eternal vigilance in protecting the American ideal against abuse and by extending the power of its influence.

The present generation of fathers and mothers must decide now for the future generations—whether that future shall hold freedom or slavery, depends on how completely the challenge of communism is met and vanquished.

Let there be no mistake, the fires of freedom smoulder even in the heart of Communist strongholds. Even the power of Stalin and his successors has not been able to extinguish it.

The Hungarian freedom fighters give testimony to the ruthlessness of the Communist might and to the strength of peoples yearning to be free. Last November Nikita

Khrushchev, the present head of the Russian Communist Party and the principal spokesman for the Soviet Union, in referring to the freedom-loving countries of the West, stated: "Whether you like it or not, history is on our side. We will bury you."

More recently, Khrushchev has praised Stalin and even had the atheistic audacity to call upon God to send more men like Stalin to fight for communism.

It cannot be denied that 10 of the 11 members of the present governing body of the Communist Party of the Soviet Union were puppets for the old tyrant Stalin, and whatever they learned in the art of governing by force they learned from him.

The gyrations of the Soviet Communists have produced a chain reaction in Communist Parties around the world. American Communists have put on a dazzling performance of shifting and turning. In the days and weeks which lie ahead, they will resort to every time-proven Communist trick to deceive the American public by advocating a peaceful transition to socialism, by appealing to the masses with trumped-up charges of injustices, by seeking to build a broad coalition of Socialist forces, by recapturing the naive, and mobilizing the pseudo-liberals.

Behind all this still prevails the determination to intensify the class struggle with resort to deceit, misrepresentation, and the use of force and violence when necessary.

Their aims and tactics are obvious. The Communist conspiracy has been exposed for what it is in courtrooms, by congressional committees and by the press, radio, and television. Its new look and program are designed to enable the American Communists to regroup and develop a militant party to accomplish their historic mission of destroying American freedoms. Soviet-style communism remains the ideal, and the Communist Party intends to do its best to impose it upon this country.

Crippling blows have been dealt to the Communist cause in the United States. But there is a greater task which rests with our teachers, the moulders of public opinion, the ministers of every faith, our labor leaders, and our industrialists. In short, the responsibility of education to preserve the American ideal rests with every American home. Truth and education are the ultimate answers in the fight to preserve the American ideal.

The Nation can be thankful for a Freedoms Foundation which stands as a sentinel, as did our Revolutionary freedom fighters here at Valley Forge, which is the vivid symbol of their suffering.

If we have the courage and the determination to face the future with the humility and the dedicated sacrifices of our Founding Fathers, then the Star-Spangled Banner shall continue to fly over this, our home of the free and land of the brave, and freedom fighters in other lands may eventually secure these blessings which are ours. This is the goal of the American ideal.

America's Economic Responsibilities in the World's Crisis

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 21, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a speech which I delivered in Washington on February 12, 1957, before the Fourth National Conference on International Economic and Social Development, be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR HUBERT H. HUMPHREY BEFORE THE FOURTH NATIONAL CONFERENCE ON INTERNATIONAL ECONOMIC AND SOCIAL DEVELOPMENT, WASHINGTON, D. C., FEBRUARY 12, 1957

Ladies and gentlemen, my good friends of the Fourth National Conference on International Economic and Social Development, you have asked me to say a few words at your opening luncheon on the topic "America's Economic Responsibilities in the World's Crisis." There could be no more timely topic.

Rethinking our foreign economic aid, a process which is going on these days all over Washington, is merely part of a needed broader reexamination of American foreign policy. This reexamination has been prompted by a series of changes in the world situation. If you will permit me at this point in your day's program, I would like to sketch some of these world changes, as I see them.

Since 1951 nearly all our foreign aid, totaling about $25 billion in 6 years, has gone to arm and maintain a circle of allies around the Communist bloc. No matter what else the Republicans or anyone else may call it, this is our policy of containment. We have sought to establish a ring of pacts, of military bases, a ring of standing armies, a ring of political and economic strong points, a ring of information, pamphleteering and propaganda for freedom. Consequently, about 60 percent of our foreign aid went for military hardware, another 25 to 30 percent for budgetary and financial support of governments which were maintaining armies therwise beyond their means, and approximately 10 percent for technical and developmental assistance.

It is fair to say, I believe, that we have never really had a definite policy for speeding up the economic growth and development of friendly non-Communist countries. Whatever we have done along this line was basically only incidental to our military containment policy. Hence, the appropriateness of the term defense support for much of our development aid.

Last summer some Members of Congress, I among them, thought it was time to reexamine the basic premises of our foreign aid program, which had remained unchanged since the start of the Korean war. It was time we took a look at the changes in the world which might require alteration of our aid programs. In 1956 this call for a reexamination led to the creation of the Fairless Committee by the White House, and to separate investigations by the House Foreign Affairs and Senate Foreign Relations Committees.

Frankly, I think it is important that we all understand the world change that many in Congress had in mind. Many of these changes have no connection with economic development. Yet the changes in policy which they suggest may very well affect economic development. Here are some of them that bothered many of us last year when the reexamination began:

First, the Russians had achieved an extraordinary break-through in developing a long-range Air Force and the intermediate missle, which brought into question the usefulness of many of our overseas bases. While this was happening, Congress chopped $900 million off the foreign military budget and added the same amount to our domestic Air Force.

Second, the American development of tactical atomic weapons raised very serious questions about the development and size of the NATO ground forces in Europe.

Third, the Russian propaganda for coexistence had seriously weakened the bonds among our North Atlantic allies.

Fourth, the rapid growth of the Russian economy had permitted the Communist bloc for the first time to offer a steel mill to India, to pave the streets of Kabul, to build a technological institute in Rangoon, and even to dicker tentatively with Egypt about the Aswan Dam. This raised the question whether we should try to outbid the Russians. In fact, it was a panic of outbidding that produced the original offer to finance the Egyptian dam, just as it was our subsequent reversal, very clumsily done, which immediately precipitated the Suez crisis.

Fifth, the growing unrest in the satellites brought into doubt our East-West trade rules, which treated these puppet governments exactly the same way we treat the Russians.

Sixth, Soviet participation in the United Nations technical-assistance program caused some Members of Congress to oppose our participation, or at least they wished to scale down our contribution. That was a factor in the amendment to limit American participation to one-third of the funds.

Seventh, and finally, there was a wave of nationalist fervor among African and Asian nations which challenged and exposed some of our political attitudes toward colonialism and neutralism, and raised serious questions about the adequacy and purpose of our economic programs.

This is not an exhaustive list of the world changes that affected our aid programs, but it will serve as a sufficient backdrop for the points I wish to make.

Different Members of Congress have reacted very differently to these seven changes. For me, they pose one overriding question: Is "gunboat diplomacy" an adequate policy for the leader of the free world.

Even if we bring up to date that Coolidge-era phrase about gunboats, and call this "H-bomb diplomacy," or "military pact diplomacy," or "massive retaliation diplomacy," my question remains: Is this an adequate policy for the United States?

I do not question the need for adequate defense; I support it. For some time, however, I have publicly doubted whether the United States has begun to develop the kind of affirmative and constructive policies, which show what we are for, as well as what we are against—policies which can draw together the forces of freedom everywhere, policies which can ultimately establish a secure world climate for the freedoms we cherish here at home. Our foreign policy needs a new emphasis. It needs the emphasis of economic growth, and progress, along with national independence for free people and nations. Military containment must give way to economic and social development.

This dynamic policy can be compounded of many elements. The policy includes a vigorous support of the United Nations and its agencies, in deed as well as in word. It includes a rethinking and reemphasis of our educational exchange programs, of our information programs, of our diplomatic representation, to make them adequate to the new world situation. We need to back up openly the new plans of the Western European union, Euratom, and the common market. We must support the embryonic North African Federation, the regional stirrings in Africa south of the Sahara. We need to speak out in responsible Jeffersonian language on the subject of colonialism and national independence, and Wilsonian idealism on self-determination. The rest of the world honors two Americans above all others in the 20th century: Woodrow Wilson and Franklin D. Roosevelt. It is high time that the United States Information Service and the Voice of America mentioned them once in a while.

Our disarmament efforts must be more than posturing and slogans; they must be serious, practicable, and believable. We need a much broader program for stimulating private trade, private investment, public loans; and we need to take a new look at a public investment program.

All of these things the Eisenhower administration endorses in its forwardlooking speeches. And some actions have been taken. But for the most part, these ideas remain generalized slogans.

This brings me back to the subject of this conference. A vigorous approach to world economic growth has been advanced as one of the important tools in a dynamic American offensive for freedom. I agree. This is one of the keys to a practical and effective foreign policy.

I don't mean the kind of half-hearted effort we have undertaken in the past, hidden under a label of military containment. I mean the kind of bold, affirmative proposal which could capture the imagination of the entire world. Such a plan has been supported by some of you on humanitarian grounds. It has been defended by economists on economic grounds. There is good justification for each position. But I suspect the approach to world economic development that has the greatest chance for political action in the United States is the one which stresses positive American leadership in the free world.

So, if I may sum up what I have thus far said in a roundabout way: World economic development is but part of a much broader discussion about the adequacy of American foreign policy, and an economic-aid program offers one of the most important ways to demonstrate a positive leadership.

My second point is closely related to my first: There will be no significant departure in our economic development programs in 1957 unless President Eisenhower gives us both a proposal bearing his name, and more than his customarily mild, detached leadership.

I have heard some optimistic opinions about the magic effect of a Vandenberg-type resolution in the Senate, or a Stimson-Paterson type committee to stir up public support for a new policy, or something like the Harriman and Krug committees of 1948 to gather the facts for a new program. As you know, these steps played a significant part in the launching of the Marshall plan. But sober politicical thinking must make us realize that without General Marshall's speech at Harvard, without President Truman's prompt and vigorous support, without the meeting of European representatives to draw up a European recovery program, there would have been no Marshall plan. Then, as now, the leadership of the top officials of the executive branch was the critical element.

Yet, frankly, I find no evidence today that President Eisenhower is preparing a recommendation for a bold departure in foreign economic policy. The Fairless Committee, according to all present reports, is prepared to recommend a reduction in foreign aid. The House Foreign Affairs Committee is already studying a report by its recently retired chairman, Mr. Richards, which proposes a reduction in foreign aid. I will not presume to speak for the other members of the Senate Foreign Relations Committee, since we are scheduled to submit recommendations on the same subject within a month or two.

I am convinced that the United States will sooner or later be driven to a more far-reaching foreign economic policy, if not by the logic of groups like yours, then by successful Russian economic penetration of the free world, or by a series of political disasters in Asia and Africa, which can only be ameliorated by bold economic action.

Let me say a word about the so-called Eisenhower doctrine in this connection. All of us know that in the Middle East there are real and present dangers of regional war, subversion, and poverty. Nothing in the Eisenhower doctrine atempts to meet these real dangers except for the request for discretionary reallocation of some economic aid already appropriated. We do not even know where that economic aid is to go, to what governments, and for what purposes. In fact, I may say that I am gravely worried that the economic-aid aspect of the Eisenhower doctrine may do the cause of economic assistance generally grave harm.

I am a champion of economic assistance for underdeveloped nations when there is a realistic probability that this assistance will be used for economically and socially progressive results. In places like India, Burma, Pakistan, and Turkey—nations where hopeful, democratically oriented, welfare-conscience governments are in power—the case for economic assistance is a strong and persuasive one. The state which most conspicuously offers that kind of opportunity in the Middle East, Israel, presumably will not benefit from the economic assistance aspects of the Eisenhower doctrine. Indeed it appears that the nations of the Middle East most likely to receive new financial benefits from the United States are those nations ruled by the most feudal and reactionary regimes.

By deliberately asking a Congress, already increasingly skeptical of economic-assistance programs, for authority apaprently to bribe feudal Middle Eastern potentates under the guise of an economic-assistance program, President Eisenhower may well have done a disservice to the cause of economic assistance generally.

I have never been known as a pessimist. I hope I am wrong about what I have just said, as well as about the chances for a new program this year. But I believe your discussions at this conference will be more realistic if they are based on the hard, discouraging outlook that there is not likely to be a substantial change in American foreign policy leadership this year. I think this is deplorable, but I believe it is the fact of the matter.

This leads me to my third point. I also believe that forward-looking groups such as yours can perform a service in advancing ideas and establishing a favorable climate for a new American economic leadership. I suggest this can be done best by identifying those key issues, those leading questions, on which a shift in American policy must be based. I have not studied this subject at length, as some of you have, and I am sure this list of issues can be improved by your discussions. In a very abbreviated form, here are my suggestions on those key questions, and my personal answers to them.

Question No. 1: Have underdeveloped countries, especially those in Asia and Africa, acquired a new importance to the United States and the free world that requires us to work out policies of accommodation to their legitimate needs, just as we have long worked out accommodations with Western Europe?

My answer is an unqualified yes. No one privileged to serve on our American delegation to the United Nations, as I have been at the current session, can fail to grasp that these new and developing nations of Asia and Africa, now numbering 27, control over a third of the votes in the General Assembly. By the end of the year, two more may be added, that is, Ghana, formerly the Gold Coast, and Malaya. Almost all future additions to the family of free nations will lie in Asia and Africa. The outcome of the great struggle between freedom and communism will unquestionably be decided by the turn of events in these countries.

Question No. 2: Is economic development the most important relationship which the United States can employ to build a position of trust and respect among developing nations?

Unquestionably it is. All the more reason, therefore, why the new economic approach must be accompanied by more sensitive attitudes toward neutralist foreign policies and toward the remnants of colonialism.

Question No. 3: Is it a fact that the developing countries need, and can wisely use, a substantially larger flow of outside capital?

I have talked to no reputable economist who does not confirm this fact. One of the ablest authorities on the subject, Professor Rostow of MIT, has been advising our Senate committee, and is appearing on your program. When you think back on the large amounts of capital which the United States found it necessary to import from Europe in launching its own development process, it is not surprising that these newly developing countries likewise look to older economies for their initial capital.

Question No. 4: Can private investment provide a sufficient capital flow for these purposes or must we look also to public investment?

The United States has not done nearly enough to encourage its citizens to invest abroad. More private investment is certainly possible. But I never heard of a private investor prepared to finance hospitals, malaria control, a teacher training school, a county agent operation, or a community development project. We know that these steps are often necessary before private investment can go into an area. The conclusion seems inescapable that public investment must supply a substantial portion of the capital, at least in the early years.

Question No. 5: Have we fully explored the use of our abundance of food and fiber as an integral part of a general economic assistance program?

Recognizing the political difficulties confronting a large-scale economic assistance program, it is all the more important that we explore the possibilities of increasing our activities by means of programs such as the Agricultural Trade and Development Act of 1954. Congress originally spelled out the use of foreign currencies accruing from the food and fiber sales under Public Law 480 as follows: (1) to expand international trade; (2) to encourage economic development; (3) to purchase strategic materials; (4) to pay United States obligations; and (5) to foster in other ways the foreign policy of the United States.

Merely to list these objectives answers the question of whether we have used this law to its fullest extent. The answer is clearly no. Both in my role as a delegate to the United Nations General Assembly, and as a member of the Senate Agriculture Committee, I have recently proposed increasing this type of program, including the actual extension of Public Law 480 for a 2-year period with an authorization for $3 billion.

Already we have gained practical experience under this program in India, Turkey, Spain, and certain South American countries. Further development of national food and fiber reserves, coordinated with the progrm of the Food and Agricultural Organization, operating under the auspices of the United Nations, remains to be explored. We have merely scratched the surface of the real possibilities in this field.

Question No. 6. Should we look to national governments like the United States, or international bodies like the United Nations, to adminsiter such a program?

I fail to understand why this question is so often posed as an either-or proposition. We need both. But I do think the greatest gap in our present economic development machinery is an international fund which can finance sound projects in underdeveloped countries. That is why I have always supported the Special United Nations for Economic Development (SUNFED),

though I recognize that the present proposals for the capitalization of SUNFED are wholly inadequate. We need a good deal more thinking on what the relationship of such a fund should be to the International Bank and the International Finance Corporation, for unless that question is worked out satisfactorily, there will be little inclination of the donor countries to entrust funds to an international body. Nor should we neglect the possibility of regional economic development authorities, especially in the Middle East.

Question No. 7: How long will this proposed development program continue?

The only honest answer is that it will continue throughout our lifetime, and probably throughout the lives of our children. Our initial commitment should not be for less than 4 or 5 years. If we think this is a quickie job for political expediency, we would do better to keep the money in our pockets and forget the proposal.

Question No. 8: What would this proposal cost?

There have been many estimates. Last year the Committee for Economic Development suggested from $500 million to $1.5 billion in new capital each year, over and above the present flow. The most detailed estimate I have seen was that advanced by the MIT study project, which came up with a total cost of $2.5 billion a year, of which some part would be borne by other industrialized countries, part could be financed with American farm surpluses, and the balance of about $1.5 billion a year would be provided by American public funds. This represents a little less than we are now spending on so-called economic aid, though, of course, under the MIT proposal this amount would go entirely for economic development, rather than military support.

Question No. 9: Can we afford it?

In 1956 the United States spent 1.1 percent of its gross national product on foreign aid. Nine years ago, during the first year of the Marshall plan, we spent 1.7 percent of our gross national product, a proportion half again higher. Can you blame the United Nations members for hanging their heads in embarrassment when our Government told the Economic Committee 2 weeks ago that we cannot support SUNFED because we cannot afford it? Actually two U. N. members—Canada and France—are making larger contributions to international development, in relation to their present economies, than is the United States. Western Europe and Canada combined are making larger net investments in foreign countries than is the United States.

The question has never been whether we can afford it, but whether our national interest will assign a sufficiently high priority to this foreign policy leadership to justify the use of our resources. It is one of the purposes of this conference, I trust, to help establish that priority.

In closing, let me quote the speech of President Eisenhower, delivered 3 weeks ago at his second inauguration. It was one of his great utterances. He said:

"We must use our skills and knowledge and at times our substance to help others rise from misery, however far the scene of suffering may be from our shores. For wherever in the world a people knows desperate want, there must appear at least the spark of hope, the hope of progress—or there will surely rise at last the flames of conflict." The President concluded: "We are called to meet the price of this peace."

I should like to conclude with the hope that he will help us meet it, with the active leadership the situation so urgently requires. If such leadership is forthcoming, I need not tell the President that you and I and all others devoted to the cause of a more enlightened foreign policy will support his efforts wholeheartedly.

Thirty-Ninth Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Thursday, February 21, 1957

Mr. BUTLER. Mr. President, on February 17 of this year, Mr. Joseph Kajeckas, Counselor of the Lithuanian Legation, spoke at the commemoration of the American-Lithuanian Society of Washington, D. C., on the 39th anniversary of the proclamation of Lithuania's independence.

The remarks of Mr. Kajeckas were, in my opinion, most timely and worthy of consideration. Therefore, I ask unanimous consent to have his speech printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY JOSEPH KAJECKAS, COUNSELOR OF THE LITHUANIAN LEGATION, ON THE OCCASION OF THE 39TH ANNIVERSARY OF THE PROCLAMATION OF LITHUANIA'S INDEPENDENCE, AT THE COMMEMORATION OF THE AMERICAN-LITHUANIAN SOCIETY OF WASHINGTON, D. C., AT THE HOTEL DUPONT PLAZA ON FEBRUARY 17, 1957

It is seven and a half centuries since the founding of the united Lithuanian state by King Mindaugas and 39 years since the resurrection of the Lithuanian Republic to independent life. It is also 30 years since the death of a great Lithuanian, the patriarch of Lithuania's renaissance, Dr. Jonas Basanavivius.

The aspirations of the Lithuanian nation, after long years of slavery, were still very much alive. Heartened by determination to defend the resurrected state, and encouraged by a whole pattern of favorable international circumstances, among them the right of self-determination of nations proclaimed by President Wilson, the Lithuanian people made a reality of their longstanding dreams for independence.

The delicate flower of independence strengthened and blossomed; God blessed the efforts of the long-suffering nation. Progress flourished, welfare increased. Some nations we succeeded in equaling, others we even surpassed. We were proud of our achievements; we had passed the test of a free people.

Then came the Second World War. The Baltic States proclaimed their neutrality, an act not to the Soviet liking. The Kremlin, following in the footsteps of Czarina Catherine II, conspired against the Baltic people by concluding the Molotov-Ribbentrop agreement. By that agreement, Lithuania was made an object of exchange by neighboring despots. The will of the Lithuanian people and their solemn treaties were trampled upon by these despots and Lithuania was enslaved. The greatest crime of the latter 18th century was once again perpetrated in the 20th century.

Shortly before that enslavement, the Soviet official newspaper, Izvestia, on May 16, 1940, took off its mask. It proclaimed that the neutrality of the smaller nations, not supported by sufficient military force, belonged to the sphere of fantasy. By condemning the neutrality of small nations, the Soviets hoped to see the Baltic countries lean toward them. Not only self-interest but also Lithuanian decency would not permit Lithuanians to soil their good name by freely entering into such friendship. Lithuania could have been saved only by respect for freely contracted international treaties. Lithuania was protected by treaties as though by a veritable chain of fortresses. However, the Communists do not sign treaties to fulfill them.

At the same time, I may point out, the Soviets did not show any more respect for the neutrality of Nazi-occupied countries: Belgium, the Netherlands, Luxembourg, and others.

Today the Soviets react to the Eisenhower doctrine for the Middle East by sounding an alarm against intervention in Arab affairs. Soviet tactics led Molotov to a similar attempt to mislead the world in October 1939. He affirmed that rumors of impending sovietization of the Baltic States was pure nonsense and merely the work of provocateurs. Events have proved that talk of sovietization was by no means nonsense and that the greatest of all provocateurs proved to be Molotov himself. Only a few days ago Shepilov, in a statement endorsed by Gromyko on the Suez Canal, appealed to "law and justice." Alas, to the appeal for law and justice of the Lithuanian nation that cries out to heaven for vengeance he and the Kremlin remain deaf. Russian deeds clearly proved and continue to prove that falsehood is one of the greatest weapons in the Communist arsenal to enslave nations and that their solemn pledges are entirely worthless.

Last summer the Kremlin exhibited feigned scandalization because a Communist woman athlete in London was accused of shoplifting some hats. The Soviets considered it an insult to incriminate a Communist for appropriating the property of other people. The Lithuanians have physically experienced the fact that the Bolsheviks are capable of appropriating hats even with heads. They subjugate entire nations with all their freedom and foreign territory with all its wealth. They substantially reduce the pocketbooks of Lithuanian-Americans and Lithuanians in their homeland or in exile in Siberia by exorbitant fees whenever a modest gift package is being forwarded to their beloved ones. According to the Lithuanian historian, Mrs. V. Sruoga: "They * * * appropriate even our history just as they appropriated our independence and freedom."

A number of years have passed since the Iron Curtain descended on Lithuania. It has been said that time works to the advantage of the Communists in captive nations. The Hungarian insurrection destroyed that myth. In Lithuania, as in Hungary, the vaccine of slavery was and is incapable of killing the longing of the people for freedom. Lithuania was actually the first Hungary. The Lithuanians were the first of all captive nations who dared to rise en masse against the Red occupant in the summer of 1941. Many of you present here today were participants in or witnesses of that uprising. Only recently we celebrated its 15th anniversary. After the second so-called Soviet liberation the Lithuanians again fought against their occupant for several years. Finally Lithuanians also participated actively, according to eye-witnesses, in the first uprising in the very midst of the Soviet colonial empire, in the slave-labor camps of Vorkuta, during the summer of 1953.

However, the cry of these Lithuanian blood-plebiscites did not, at the time, find as great a response in the free world as did the Hungarian uprising, although Lithuanian insurrections resulted in even greater losses. In spite of this, we rejoiced at the heroic struggle of that country, with which Lithuania's history was once bound, since that insurrection symbolized the spirit of all enslaved people and their thirst for freedom. We rejoiced because that courageous act shook the very foundation of the Soviet colonial empire. We also rejoiced because that

daring act shook the conscience of the free world. We were reminded that once already in Lithuanian history a march of freedom began in the Carpathian Mountain regions. We rejoiced at the uprising, but were also saddened because of its failure. We were disappointed that the United Nations lacked the courage to effectively support the Hungarian Nation and that it lacked the courage to deprive the Soviet aggressor of membership, following the example of the League of Nations at the time of Russia's aggression against Finland.

The Hungarian revolt did not solve the fate of captive nations. We continue to live in times of great importance. The free world is grouping, the Eisenhower doctrine is being proclaimed, their is much talk of unity, integration, federations, and need of close international relations.

Lithuanian history and Lithuania's leading figures have always stressed the importance of unity. Having gone through such schooling, Lithuanians are united in their enslaved homeland and in Siberian exile. We hope that this unity will always be effectively practiced by Lithuanians living in the free world, since it is one of the prerequisites to Lithuania's liberation.

Besides unity, we are also in need of friends. We do not lack them, but there are never too many. On this solemn occasion, we consider it an honor and a pleasure to remember at least some of our friends. Availing ourselves of the opportunity of this commemoration of the Nation's Capital, we wish to extend our public gratitude in the first place to the President of United States, Mr. Eisenhower, and to the Secretary of State, Mr. Dulles, for the nonrecognition of the Soviet occupation of Lithuania, its condemnation of that occupation, and the support extended to that nation on numerous occasions. We would also like to extend our gratitude to the Secretary of State for his encouraging statement made yesterday in connection with this celebration. The honorable Under Secretary of State and Mrs. Loy Henderson had planned to be with us at this commemoration. Unfortunately, he was prevented from attending because of illness. Nevertheless, they are both with us in spirit. Mr. Henderson is probably the only official at the present time in the State Department who witnessed the early struggle, the spirit of sacrifice, and the real will of the Baltic people to be free and independent. Mr. Henderson was also an eyewitness of our first enthusiastic commemorations of February 16 in the homeland. We appreciate very much his desire to be with us and wish him a speedy recovery. We are deeply grateful also to the Chief of the Baltic Section in the State Department, the Honorable Howard Trivers. We owe a debt of deep gratitude also to numerous governors of States, Senators, Congressmen, mayors of cities, all other honored guests present at this commemoration, and, in general, to the American people for their sympathy and support of Lithuania.

Lithuania is also in need of tireless, courageous work for Lithuania's liberation.

The Lithuanian nation is a Christian nation. Thus, it is only natural that her hope in Lithuania's brighter future is based on God.

At one celebration in Cana of Galilee, the mother of God took pity on the guests and, having approached Christ, said to Him: "Son, they have no wine." And, as we know, wine was provided. Probably no nation is more devoted to the Holy Mother of God than is Lithuania. It is thus impossible that on the occasion of this, the greatest day of the Lithuanian nation and people, the gracious Madonna of Ausros Vartu (the Gates of Dawn) in Vilnius would not intercede with her Son for her devoted children's freedom. Her intercession will bring only one possible result: Yes, Lithuania will rise again, and of the slavery it now suffers, there will remain but a ghostly memory of the past.

Big Business Gets Most of Government Subsidies for Help

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 21, 1957

Mr. JOHNSON of Texas. Mr. President, the Federal Government pays for almost two-thirds of all research and development in the United States, and 95 percent of these subsidies are paid to companies employing more than 500 workers.

This is another example of the squeeze being put on small business in the country today.

The facts about this particular small business dilemma are set forth in a recent column by Sylvia Porter appearing in many newspapers throughout the country. I ask unanimous consent that Miss Porter's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The Government itself well may be giving the kiss of death to independent small business in our land—through the Defense Department's program of channeling huge amounts of funds for research and development year after year almost exclusively to big business.

The importance of this cannot be overestimated.

In our age of technological revolution, research has become crucial. In more and more industries, what a corporation gets out of research decides whether it thrives or dies.

Yet, despite the Government's oft-repeated concern about the trend toward concentration of industrial power, its own policies are contributing to this trend. And no one who has the facts can deny it.

The House Small Business Committee of the 84th Congress has just released its final report on its investigations in 1955 and 1956. I have studied every page of the chilling 191-page document which leads its chairman, WRIGHT PATMAN, Democrat, of Texas, to predict that if the trends of the past 5 years continue, within 18 years, all manufacturing business and most of the distribution and service business of the Nation will be controlled by corporations having more than $100 million of assets.

But this colorful comment of the controversial PATMAN is not what impressed me. Rather what hit me was a chapter tucked far back in the report entitled "Government Subsidies for Research and Industrial Advancement," for it tells the following tale:

The Government currently pays for almost two-thirds of all research and development in our country.

The Defense Department is by far the biggest spender of the funds, and it alone passes out about $1.5 billion of research money annually to private companies, 100,000 times as great as the small lending program, designed to assist small business expansion.

Now where does the money go?

A full 95 percent of it goes to companies employing more than 500 workers. This certainly fits the definition of big business firms.

In the past 3 years, research contracts totaling $4.7 billion have been awarded. Of this, $4.6 billion, or 98.1 percent, has gone to the 500 largest contractors.

What are some of the implications of this?

The companies doing the research turn up not only inventions for defense but also products for civilian uses.

To quote the Attorney General himself, "Processed foods, electronic devices and pencillin, to list only a few present-day commercial products, were all originally developed under research and development programs for defense purposes."

The companies have the privilege, under our national patent policy, to patent and control an invention if they want to. In the past 5 years alone, the companies have claimed rights to at least 6,788 inventions.

Again, this leads the Attorney General to make the extraordinary admission, "What indications are available warn that the Government expenditures may not run counter to the industry trend toward concentration but in some degree may even enforce it."

So what, then, should be done? At a minimum, the report suggests:

The administration should eliminate the statistical vacuum that exists on who's geting what for reserach so a sound program can be worked out that will better protect our competitve system.

It certainly should greatly simplify the contract bidding process so smaller companies won't be under so brutal a disadvantage.

It should make sure that the officers in charge of awarding contracts don't discriminate against small business because of their cautious tendency to deal only with firms which have an established reputation.

It surely should begin at once a reexamination of our whole patent policy to see what amendments are in order.

The Government pays lipservice daily to the health of small business. Its research program is shiveringly close to the kiss of death.

Contest Between Democratic India and Communist China

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 21, 1957

Mr. HUMPHREY. Mr. President, several times on the Senate floor, I have had occasion to emphasize the great contest now being conducted on the continent of Asia between democratic India and Communist China—a contest in economic development and political philosophy.

The noted columnist, Dorothy Thompson, has recently been in New Delhi, and her column on January 28, 1957, was entitled, "Will Asia's Future Depend on Nehru?"

I ask unanimous consent that the text of her column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Minneapolis Star of January 23, 1957]

WILL ASIA'S FUTURE DEPEND ON NEHRU?

(By Dorothy Thompson)

NEW DELHI.—It is odd that if anywhere a national leader acts out of a completely consistent philosophy of life and politics, he should be opposed and misunderstood in some parts of the world.

Among world leaders today there are few—if there are any others—who are as all of a piece as Jawaharlal Nehru.

It has taken the better part of half a century as a student, an intellectual, a revolutionary (constantly in and out of jail), and, finally, as the undisputed leader of India, to make him what he is.

His revolutionary experience and international outlook fit together. The Indian resistance, eventually resulting in the withdrawal of the British from India, is the unique example in history of national liberation achieved by nonviolence.

Except for the frightful communal war that subsequently broke out through the unwillingness of part of the Moslems to remain with the Hindu majority, thus bringing about partition, the evolution of the Indian union, considering the vast divisive influence, has been remarkably peaceful and accomplished by democratic processes through democratic institutions, to which Nehru is not only committed but dedicated.

If ever a man was in a position to make himself a dictator, Nehru held that position and many factors might have pushed him toward it: the need to achieve unity by almost any means; the challenge of enormous problems whose solution is retarded by democratic machinery; the extreme disparity between rich and poor and the hopes of the people for rapid alleviation.

The pull of communism on long-ossified societies retarded in economic development is less ideological than its demonstrated capacity to accomplish things, in themselves desirable, in a hurry.

But Nehru could not possibly be sympathetic to communism because of its theoretical and applied emphasis on violence and class war. He knows that social classes exist. He desires to attain a classless society, through equality of opportunity, but he does not think the way to attain it is by chopping off heads.

He believes in civil liberties and law, and is convinced that means determine ends. He is, as a superbly educated and cultivated man, allergic to intellectual rigidities or to the assumption that any man, movement, religion, or creed has a monopoly on truth.

He is conscious of two forces, one propelling societies toward change and the other restraining them by tradition. And although he is distinctly a man of the left, he seeks to bring about change, as far as possible, within tradition, knowing that tradition is the cement of a nation.

On whether and how quickly he or his successors succeed in lifting India into enduring unity and a modestly decent life for all by democratic processes and without totalitarian machinery may well depend the future of all Asia.

There are two great and populous states in Asia—India and China.

In both countries the hopes of the teeming, long-exploited masses, mostly villagers, are now vibrant. If India, with its slower but in Nehru's mind surer evolution, can year by year sufficiently fulfill those hopes to keep alive confidence in progress, India is likely to be the model for the rest of Asia.

If India fails and China succeeds, China will exercise the greater magnetism.

One thing we may be sure of: the future of Asia will not be determined in Washington, London, or Moscow, but in Asia itself, and most notably in New Delhi or Peiping.

The policies of America, Europe, and Russia may influence choices but will not determine them. In fact, anything that smacks of intervention—military, political, of applied political economy—will ricochet. One can help India and other countries struggling to create democratic institutions, but we shall not be aiding such institutions if we condition economic aid upon participation in the cold war.

The cold war is not their war. Their war is upon hunger, poverty, disease; upon ossified institutions; upon the inheritances of colonial rule; upon illiteracy, ignorance, and superstition; upon a long-ingrained position and habit of inferiority with its dangerous tendencies to oversensitivity and overcompensation.

Nehru's foreign policy is part and parcel of his internal policy. It is the only conceivable foreign policy for India.

Educational Television

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 21, 1957

Mr. NEUBERGER. Mr. President, out of fairness to Federal Communications Commissioner T. A. M. Craven, I ask unanimous consent to have printed in the RECORD Mr. Craven's letter to me dated February 20, 1957.

Mr. Craven takes exception to my remarks of February 18 and the article, Educational TV's Case, which appeared in the February 18 issue of Newsweek magazine.

While Commissioner Craven offers a defense of his proposal to reassign unused educational television channels, he admits that if, under his proposal, educational television channels are not used within a reasonable time, his plan provides for other uses of such channels. This is precisely what I am opposed to, for it means that these channels will go to commercial operators, and it forces educators to determine now their future use of educatinal television channels. Educators need further time to develop educational television, which is just coming into its own.

Without the reservation of educational television channels, such as that which currently exists under FCC regulations, desired television channels are unlikely to be used for educational purposes. In my own State of Oregon, educational television hopes to be on the air in Portland and Corvallis by next fall on the good, low-frequency, VHF channels.

Since Commissioner Craven questions remarks by Mr. Ralph Steetle, executive director of the joint council on educational television, I have asked Mr. Steetle for a statement in answer to Commissioner Craven. This is only fair. I also ask unanimous consent to have printed in the Appendix of the RECORD, Mr. Steetle's answer to Commissioner Craven's letter.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., February 20, 1957.

Hon. RICHARD L. NEUBERGER,
United States Senate,
Washington, D. C.

DEAR SENATOR NEUBERGER: I have noted your remarks in the CONGRESSIONAL RECORD of February 18 in which you state the following:

"Mr. President, the Federal Communications Commission has under study a report by FCC Commissioner T. A. M. Craven, which would open for commercial application those television channels set aside by the Commission for educational television.

"I protest most vigorously any attempt which would deny to the people of the United States the limited number of television channels set aside for educational use. This is what the Craven proposal amounts to."

I regret to state that you have been misinformed. The facts are exactly the opposite.

In my recommendation to the Federal Communications Commission to delete the table of assignments I also included the following:

"Announce that in the distribution of television channel facilities to States and communities, the Commission will take into special consideration the needs of educational institutions in each State which plan to utilize television channels for educational as contrasted to commercial purposes. In this connection the educational institutions will be requested to make their needs and plans known to the Commission."

It is my belief that my proposal not only favors educational television in a constructive manner but also goes further than the Commission's existing policy relating thereto in terms of flexibility and efficiency. For example, prior to taking office as a commissioner, I was a consulting engineer for the Board of Education of the State of Connecticut. It was my opinion that the Commission's allocation of educational channels to the State of Connecticut was most inefficient because the transmitting stations had to be located in such a manner as to render ineffective coverage to the State. My present proposal will eliminate such inefficiency.

There are some States which do not desire to utilize television as a part of the educational system for many years to come. If the educational institutions and organizations in these States notify the Commission that they do not intend to use television within a reasonable time, it is true that my plan would provide for other uses of such channels. However, if there is any indication of a desire to utilize television in a State's educational system, my plan offers most extensive cooperation and encouragement.

In June 1937 I prepared a report on communications for the National Resources Committee. This was published as part of a report of that Committee entitled "Technological Trends and National Policy." In my report was included the following statement with reference to education:

"In education, the application of these modern methods of communication may well effect a complete change in methods of educating not only the child and the adult but also the entire public. The new communication development may also revolutionize the present school systems of the country."

I also note that in your extension of remarks you have quoted a statement from Mr. Steetle of the Joint Council on Educational Television. Mr. Steetle has not even given me the courtesy of ascertaining from me personally what my recommendation was and what my intentions are. Apparently he has acted merely on rumor and has jumped to erroneous conclusions. If this loose thinking is typical of educational television headquarters in Washington, it would appear that the real educators of the country are not being advised logically.

I know that you are fair-minded enough to insert this letter in the CONGRESSIONAL RECORD to offset the injustice promoted by Mr. Steetle.

Very respectfully,

T. A. M. CRAVEN,
Commissioner.

JOINT COUNCIL ON EDUCATIONAL TELEVISION,
Washington, D. C., February 21, 1957.

Hon. RICHARD L. NEUBERGER,
United States Senate,
Washington, D. C.

DEAR SENATOR NEUBERGER: Commissioner T. A. M. Craven, of the Federal Communications Commission, has courteously sent us a copy of his letter to you dated February 20, 1957, in which he makes reference to your remarks in the CONGRESSIONAL RECORD of February 18 regarding his proposal to abolish the table of television assignments including educational reservations. With respect to his letter, we would like to make the following comments:

In 1952 the Federal Communications Commission reserved 242 television channels for education. Additional reservations since that date bring the total to 257. Developments during the past 4 years have fully justified the wisdom of this action. While the full utilization of these channels has not yet been realized, what has already happened represents one of the greatest achievements for education in communications history. The American public is indebted to the Federal Communications Commission for making this remarkable development possible.

Recently the Joint Council on Educational Television submitted to the Commission a progress report indicating that 24 educational television stations are in operation and 10 others are under construction. In at least 20 more communities strong local and State organizations are planning to build educational stations and have substantial money and/or equipment on hand or pledged.

In at least 25 additional towns and cities with smaller populations, prospects look good for the eventual use of reserved channels.

As we pointed out in our report to the Commission, today we can document more than $50 million spent or pledged the past 4 years for research and experimentation in educational television and the construction and operation of stations.

Educational stations now on the air are providing adult education in many ways—they are bringing into the homes of America the reality and beauty of famous museums, art galleries, and educational centers.

They are making available on a regular basis the discussions of distinguished scholars in the fields of science, philosophy, and literature, and the performances of artists in the fields of painting, sculpture, music, drama, etc. A new pattern of television programing for children has emerged, which emphasizes wholesome and constructive living with a format which is both entertaining and instructive.

During the past two years there has been a great increase in the use of television in the schools. Also, thousands of adults are enrolled in college telecourses. Much experimentation already completed has clearly demonstrated the effectiveness of this medium as a teaching tool. New research projects and program developments underway presage its wide and more effective use at all levels in the educational process. The educational television stations have already demonstrated their ability to help solve the problems that face education in today's world.

In the light of television's meaning to education, reports of proposals to abolish the television allocation table, including the educational reservations, give us cause for concern. We believe that the adoption of any such action at this time would seriously jeopardize the development of educational television throughout the United States and unquestionably deal a fatal blow to plans for the establishment of educational stations in virtually all communities that do not now have stations on the air or under construction.

In a substantial number of communities, local and State educational organizations are pushing ahead with plans to build educational stations. In these cities substantional money and/or equipment is available or has been pledged for the construction of stations. Because of special problems which these communities have faced, as yet they have not achieved their ultimate goal. Nevertheless, they are continuing their efforts to secure the necessary funds for construction and initial operation and we believe that they will succeed within a reasonable period of time.

Precipitant deletion of educational reservations in these communities, however, would block these plans. These channels would immediately become available for commercial application. In most cities where VHF channels are involved, the only way in which the educators could seek to use the channels would be to file competing applications for construction permits. In most cases this would involve them in long and expensive hearings. It is our opinion that very few, if any, educational organizations would be able to expend the time, effort, and public funds in contested hearings, the outcome of which would be uncertain.

It is our considered opinion on the basis of our experience with educational organizations and our knowledge of the protracted character of contested television proceedings that the elimination of the TV reservations would virtually put an end to any further development of the educational television service. We do not believe any qualified observer will disagree with this opinion.

In numerous towns with limited resources and small population where channels have been reserved, there is active interest in building educational stations; but more time obviously is needed in order to effectuate plans. As the Commission indicated in its sixth report and order and in its decisions implementing that order, it was because of this expected circumstance that the Commission made the reservations in the first place. One of the compelling considerations for adopting the reservations was to make sure that educational institutions in small communities would have time to make plans for stations. It is crystal clear that abolition of the allocation table including the reservations in these small towns and communities would increase the concentration of these valuable television facilities in the large urban centers. A healthy, nationwide television service should include facilities not only in the large metropolitan areas, but also in the smaller cities.

Literally millions of American citizens have given their time and energies to bring educational television to its present stage of delevolpment. Thousands of organizations, including a substantial portion of educational institutions throughout the country, business and civic groups, many foundations and charitable organizations, have contributed millions of dollars for research, experimentation, and for construction and operation of educational television facilities.

As a result, it has been clearly demonstrated that television is one of the most effective means for improving the quality of education and helping meet the critical teacher shortage at all levels of learning; and is a powerful device for accelerating and extending adult education and helping meet such social problems as illiteracy, crime, mental and physical illness and other threats against our national security.

Because of these facts, reports which suggest that serious consideration is being given to a proposal to delete the educational reservations have alarmed educational and civic leadership throughout the country.

In his letter to you, Commissioner Craven has pointed out how he believes educational television interests would be served by his proposal. However, for the reasons set forth above, we believe that a deletion of educational channels would be a serious barrier to the further expansion of educational television throughout the country.

Sincerely yours,

RALPH STEETLE,
Executive Director.

Talmadge Bills Lauded

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 21, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Talmadge Bills Show His Quality," from the LaGrange (Ga.) Daily News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TALMADGE BILLS SHOW HIS QUALITY

HERMAN TALMADGE is stepping wisely in the United States Senate. His recent introduction of three bills designed to curb usurpation of power and encroachment upon individual rights by the Federal judiciary evidently required much forethought. The result is that none of the bills smack of southern extremity, all are reasonable, and each should merit objective attention from representatives of each section of the Nation.

The three Talmadge-sponsored bills forelay the rightful argument projected by those who hold the State in high esteem in clear, unadulterated language. The bills would (1) remove school integration suits from Federal jurisdiction; (2) require 5 years' experience as a judge to qualify as a Justice of the Supreme Court; and (3) require jury trials for persons cited for contempt of court because of alleged actions outside the court.

Georgians are familiar with the first two measures, particularly since Senator TALMADGE pledged his support to both during his senatorial campaign last summer. The first bill is purely and simply a proposal to insure State sovereignty where State sovereignty is justified. The second measure is a pressing need where judicial understanding is a prime requisite.

A reading of TALMADGE'S third measure would cause this Nation's Founding Fathers to gasp were they around today. They would be astounded that any measure was needed to guarantee a person the right to a jury trial at this late date in American

history. But it is clear that the racial issue has enveloped so many constitutional government supporters in a fog of confusion that a basic American right has been seriously threatened and even abused.

Senator TALMADGE—less than 2 months after he entered the upper House Chamber in Washington—has well represented his State of Georgia and the Nation in voicing the above-mentioned bills. For those who anticipated cautious yet firm action by the freshman Senator, HERMAN TALMADGE has given them affirmation. For those who expected the former colorful Georgia governor to enter the Senate in a blaze of boisterousness and thus be categorized a rabble-rouser, he has given them reason to change their minds.

Country's First Arsenal Located in Springfield, Mass., in 1794

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of the Members on the occasion of George Washington's birthday tomorrow the following article which appeared in the Springfield, Mass., Daily News on February 19 pointing to the fact that President Washington recommended that the country's first manufacturing arsenal be located in Springfield in 1794, and that this facility, known as the Springfield Armory and the birthplace of the famous Garand rifle, is still operating as a key unit in the Nation's defense for the research and development and manufacturing of small weapons.

WASHINGTON'S CHOICE MEANT CITY INDUSTRY—OBSERVANCE OF FIRST PRESIDENT'S BIRTH ESPECIALLY SIGNIFICANT TO ARMORY

The far-reaching effects upon the city of Springfield resulting from a decision by George Washington to locate a national armory in this area is emphasized in a Washington's birthday statement issued by Springfield Armory authorities today.

The gunplant will observe the birthday anniversary of the first President on Friday by closing down all production facilities for the day. Only such essential duties as performed by guards, firemen, and telephone operators will be maintained for the national holiday. The museum will also be closed for the day.

The armory statement follows:

"SPECIAL SIGNIFICANCE

"The birthday of George Washington, celebrated as a national holiday on Friday, Feb. 22, is of particular significance to employees of the Springfield armory and to residents of the greater Springfield area.

"The strategic location of Springfield, together with a natural abundance of skilled gunsmiths in this area, led to the recommendation by George Washington for placing this country's first manufacturing arsenal at its present location in 1794. The economic growth of Springfield from an agricultural settlement to a prosperous industrial city is a direct result of that decision.

"Equally important, as a result of the choice by George Washington, was the development of religious diversification and the consolidation of weapons craftsmanship in what is now known as the greater Springfield area. Recognition of the role played by the Springfield armory in the development of the city of Springfield is attested to by the incorporation of the main arsenal in the seal of the city of Springfield.

"PRESIDENT'S FORESIGHT

"The foresight of George Washington in providing for a small arms center has contributed materially to the economic security of this city and the national defense of this country.

"It is with appropriate appreciation," the statement concludes, "that we recognize Friday, Feb. 22, as a national holiday in commemoration to America's first military commander in chief whose wise decisions have meant so much to Springfield armory employees, residents of the greater Springfield area and to the free citizens of a free United States of America."

School Aid Issue

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Chicago Daily News of February 7, 1957]

SCHOOL AID ISSUE

When the bill to provide Federal funds for school construction came up in Congress a year ago, Representative ADAM POWELL, Democrat, of New York, raised a rude question. Why, he asked, should one branch of the Government give money to southern school systems that refuse to obey the integration order of another branch, the Supreme Court?

POWELL'S amendment, which provided that no segregated school system could receive the proposed Federal school aid, resulted in defeat of the bill in the House. Many northern Congressmen seized the opportunity to vote for the amendment to demonstrate their opposition to segregation. After the amendment passed, some of the same Congressmen joined with southern segregationists to defeat the amended measure.

Repeating his request for school aid this year, President Eisenhower openly urged Congress not to bring up the "complex problems of integration" in connection with the bill. Representative POWELL, however, says he plans to do just that. Another fight on the issue is almost certain.

Proponents of Federal aid howled loudly last year that their foes had cast aside all scruples to adopt the Powell amendment and then use it as a club to kill the entire bill.

In their zeal to get the Federal Government into the school business they profess to see no connection between policies of Congress and the Court. On the contrary, we fail to see how the segregation issue can possibly be avoided in any consideration of Federal money for schools.

If Congress passes the bill but ignores segregation it gives its approval and a monetary reward to the South's costly and artificial system of separate education of the races. Federal funds would be used to strengthen the very practices outlawed by the Federal Government through the Supreme Court.

There are many reasons for objecting to the Federal-aid bill. Probably it should not be passed, even with a restriction such as POWELL'S amendment. But it certainly should not be passed without it.

Comdr. Harry R. Swanson

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, February 21, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Boulder (Colo.) Camera of December 15, 1956. This article describes the outstanding career of Comdr. Harry R. Swanson, USNR, who is now serving as administrative assistant to Gov. Robert D. Holmes, of the State of Oregon. Commander Swanson served valiantly and outstandingly during World War II in the South Pacific and in the bitter and tragic conflict in Korea. All of us from the State of Oregon are most pleased to have a person of Commander Swanson's ability, patriotism, and integrity associated with our new Governor in the executive offices at Salem, Oreg.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HARRY R. SWANSON TO BE ADMINISTRATIVE ASSISTANT TO GOVERNOR-ELECT HOLMES, OREGON

Gov.-elect Bob Holmes, of Oregon, has appointed Harry B. Swanson, former member of the Navy ROTC staff at the University of Colorado, as his administrative assistant, it was learned here today. Mr. Swanson, with the rank of commander, was assistant professor of naval science at CU from October 1950 to December of 1952, when he was recalled to active duty as a lieutenant commander, and assigned to Korea. He remained there until released from active duty in December of 1953.

Both Mr. and Mrs. Swanson and their children, Christine, now 13, and Harry III, 10, made many friends during their residence in Boulder. They were members of the country club, also of the dancing club. When Mr. Swanson was called into active service Mrs. Swanson and children went to Astoria, Oreg., to be with her parents.

The Astorian Evening Budget, received in Boulder, says:

"Swanson will resign his present position with the Columbia River Packers Association, with sales and public relations duties. He is 40 years old, has been a resident of Oregon since 1937, and of Astoria since finishing duty in the Korean war as a commander in the Navy.

"IS OMAHA NATIVE

"Swanson has been an active citizen of Astoria during his residence here. He is a board

member of the chamber of commerce and of Rotary Club, has just been elected president of the Navy League chapter here, and has just finished serving as chairman of the United Fund-Red Cross drive. He is a vestryman in Grace Episcopal Church, and member of the Elks lodge and Scandinavian Benevolent Society.

"Born in Omaha, Nebr., in 1916, Swanson attended the United States Naval Academy, University of Nebraska, and Oregon State College, where he was graduated with a bachelor of science degree in forestry and where he is affiliated with Sigma Nu Fraternity.

"SERVED IN TWO WARS

"Swanson served in World War II on small craft in the Aleutians and South Pacific, and served in several amphibious landings.

"After the war Swanson was an assistant professor in the Navy ROTC at University of Colorado, Boulder, until recalled to active duty for the Korean conflict. In that war he served at Chinhae, Korea, as member of a Navy advisory group handling the training program for the Republic of Korea Navy. He won the Korean Uichi award, presented to him by President Syngman Rhee, among other decorations.

"Swanson married Josephine Waffle, of Astoria, in 1940. They have 2 children, Christine, 13, and Harry III, 10.

"The Swansons also sponsor a Korean student, Lee Kyu Baik, at Star of the Sea High School.

"Swanson is a lifelong Democrat.

"Mrs. Swanson and children will remain at 3652 Duoni Street, Astoria, until school is out. Mr. Swanson begins his new duties December 15. The inauguration is January 4."

The Eisenhower Doctrine

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 21, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column of Daniel K. Grahl, editor of the Fort Valley (Ga.) Leader-Tribune, as it appeared in the issue of January 31, 1957.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

PEACHLAND JOURNAL
(By Daniel K. Grahl)

PRESIDENT ASKS FOR A DANGEROUS POWER

There has been a great deal in the news lately about the power President Eisenhower asks in order to be in a position to enforce his Middle East doctrine.

It is a grave and dangerous power he asks.

There is always the possibility that his Middle East doctrine will be wrong, and if he is in a position to try to enforce it by the use of American troops there is always on hand the fear of precipitation into war. And we have had enough of war and its results.

We are convinced that Eisenhower wants a lasting peace, but we also are aware of the fact that if the troops are not so readily available, there is a lot less likelihood that he will use them without a period of deep and sober thought.

In the first place, we think it is time for the Government to stop trying to finance the entire world. At least until we get to the point where we are financing our own country on a sound, 100 cents to the dollar, dollar.

The Middle East countries are all ruled by men and dynastys that are "loaded" with money or the things which make money.

If those countries are so direly in need of money and the things it will buy, why don't they see that their rulers relinquish some of their enormous wealth to ease the pain.

And, if the rulers of those countries don't think enough of their own people to help them out of their health and welfare squalor, why should "Uncle Sugar" take it upon himself to ease the burden? Aside from the belief that we are our brothers' keeper, the Good Book also says that the Lord helps those who help themselves.

Activities of Radio Free Europe

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 21, 1957

Mr. HUMPHREY. Mr. President, the activities of Radio Free Europe have recently been commented upon extensively in the press in connection with the Hungarian revolt. Differing statements have been made concerning the role of Radio Free Europe during those critical days last November. This background lends all the more interest to the study of Radio Free Europe just completed by Robert T. Holt, instructor in political science at the University of Minnesota. On January 29, the Minneapolis Star carried an article by its staff writer, Ted Kolderie, summarizing Mr. Holt's study. I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STUDY COMMENDS RADIO FREE EUROPE
(By Ted Kolderie)

The Polish, not the Hungarian, rebellion is the kind of political change that Radio Free Europe has been trying to encourage in the satellite countries of Eastern Europe. At least that's the conclusion of Robert T. Holt, political science instructor at the University of Minnesota, who has just completed a year-long study of the psychological warfare agency.

"Radio Free Europe (RFE) sees no possibility of driving Russian forces out with violent uprisings and western intervention," Holt said.

"RFE feels that for a long time 'liberation' can mean only a gradual evolution of these countries into independent but nonwestern governments. This is the philosophy that underlies its political commentary."

Radio Free Europe is a private American voice carrying news, entertainment, and political comment to Poland, Hungary, Czechoslovakia, Bulgaria, and Rumania. It is financed with contributions raised in the United States by the Crusade for Freedom.

After the Hungarian revolt, the organization was accused of inciting the Hungarians to rebel and making rash promises of Western aid. It has denied the charges.

Holt said that RFE officials are sure they did nothing deliberately inciteful. RFE tried not to press any particular set of demands nor back any particular leader. The main task RFE set for itself, Holt said, was to tell the Hungarian people as fully as possible what was going on in their country, and what Western reaction was.

RFE monitored and played back the broadcasts from the five Hungarian provincial stations captured by the rebels. It carried a full report on the U. N. debate—being careful to emphasize that this was only a parliamentary action and that the U. N. was all tied up in the Suez affair.

Rash promises were made, according to Holt, by one radio station near Frankfurt, Germany, which broadcast in Hungarian: "We stand ready to send aid and volunteers. Send someone to the border to meet us."

This station—operated by Russian exiles—was turned over during the rebellion to a right-wing group of Hungarian army veterans now living in Germany, Holt said.

Despite an impressive technical operation, a certain discouragement had begun to creep into RFE by 1953 Holt said.

Unwilling to incite the people to a violent revolution and unable to promise a liberation by Western military force, the radio seemed limited to harassing the regime and supporting the people's morale.

Then in June 1953, came the workers' protests at the Skoda works in Czechoslovakia and the riots in East Berlin. Out of its analysis of these discontents and of the regimes' response to them RFE began to develop its philosophy of liberation.

This, Holt said, was RFE's analysis:

The uprisings indicated the existence of substantial opposition among workers and young people.

The fact that the protests were put down ruthlessly indicated that the regimes were uncertain about Communist policy in the post-Stalin period. It showed that the regime needed the workers' cooperation in the effort to raise productivity.

A practical way toward liberation, RFE concluded, lay in encouraging the workers to use their latent strength to resist sovietization and to win increasingly large concessions from their leaders.

The propaganda line that developed, Holt explained, was not a call to arms but a reasoned attempt to explain to the people that certain basic historical forces were inevitably working for their freedom.

The Hungarian rebellion, however, which began as a spontaneous reaction to events in Poland, lacked strong leadership and drifted in a pro-Western direction, Holt said. He said the Western governments failed tragically.

Their diplomatic and military pressure was seriously weakened by the British-French invasion of Egypt, and the United States did little, he said, to encourage the Russians not to intervene in Hungary.

"We stood to gain if neutralist governments could be established in Poland and Hungary," he said. "Our diplomats could have suggested to the Russians that in return, we would be willing to guarantee the existing frontiers, or to negotiate on German rearmament and reunification.

"If we had held out such an offer, then Russia would have had a political loss to weigh against the gains she expected from intervening in Hungary."

"I came away from studying the RFE organization much impressed," Holt said. "They are competent, responsible people—keenly aware that they're operating an instrument of American foreign policy."

Government Aid to Colleges

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, February 20, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have

printed in the Appendix of the RECORD an editorial which appeared in the Newark (N. J.) Star-Ledger on January 26, 1957, and a copy of my letter to the editor of the Newark Star-Ledger which was published in that newspaper on February 8, 1957.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

[From the Newark Star-Ledger of January 26, 1957]

SENDING HIM TO COLLEGE

New Jersey's Senator CASE has made the observation that youth is being priced out of the college market. He cites the increased cost of operating colleges which, reflected in higher tuition rates, is actually denying higher education to a large number of promising students.

The Senator suggests Federal aid to States to help expand and construct 2-year colleges as a means of extending educational opportunities to those unable to afford 4 years in college.

CASE's proposal has considerable merit, but unfortunately it could become immersed in a serious educational question that has been argued for a long time. This debate involves the role of the 2-year colleges and their ability to fully prepare students for highly technical careers.

On the one side it is pointed out that 2-year colleges serve a highly useful purpose in training young people for stenographic, nursing, art and some types of medical careers. On the other side, it is argued that they cannot train engineers, scientists, teachers, doctors and other technical people for whom there is such a great need.

Thus, until the debate is finally decided and the roles of the two types of colleges are established to the satisfaction of both, it would seem better to use any available Federal grants for the production of skills most needed at the present time. That would not only be of enormous value to the Nation but at the same time would fulfill the now unattainable dreams of many deserving, youngsters.

This aid could take the form of State or Federal scholarships to talented though needy students who currently lose out on a college education because of the limited number of private endowments. The bulk of the private scholarships now go to class valedictorians. But what of the student with straight 90's who wound up 3d, 4th or 5th in his class? Scholarships available to this group are usually insufficient to help him clear the 4-year hurdle. Result: A wasted resource.

If the Federal Government is to embark on an extensive college aid program, this seems to be the field which would produce the greatest harvest.

[From the Newark Star-Ledger of February 8, 1957]

CASE ASKS COMMUNITY COLLEGES

I have read with great interest the editorial which appeared in the Newark Star-Ledger of January 26, 1957, on my suggestion for expanding facilities for college education.

While I recognize that many youngsters do need financial help in obtaining a college education, it seems to me, the major problem is one of providing colleges for them to attend. The vast growth in our population and in the percentage of youngsters desirous of obtaining a college education has meant that many qualified young men and women are finding there is no room for them.

It is clear we do need additional college capacity throughout the country. As you know, the New Jersey State Board of Education has warned that by 1963 1 out of every 3 young people in New Jersey wanting to go to college will find no place unless we move to create facilities.

It seems to me that actually there is a need for both kinds of college training—the 2-year type, which would help develop the semiprofessional and technical workers who have become so essential in our society, as well as the 4-year colleges and professional schools which produce the engineers, scientists, teachers, and doctors.

Of course, many of the students who complete the work in the 2-year colleges continue in higher education. The American Association of Junior Colleges estimates this number at 65 percent.

Many of these will emerge as the engineers, scientists, teachers, and doctors we need. On the other hand, if they have no place to go for the first 2 years, we may lose their talents entirely for these fields.

The goals of the community colleges are to meet these two particular needs at the lowest cost per student:

(1) to provide 2 years of college education in preparation for the final 2 years at a 4-year college;

2. To provide a terminal program of 2 years of post-high-school general education with opportunities for vocational training for the subprofessions and occupations of a technical nature.

It might be useful to describe the kind of vocational training offered in some of the 2-year junior or community colleges. In general, the colleges offer advanced training in all the occupations taught in the high schools. They have the staff and equipment to instruct in air conditioning, refrigeration, airplane construction, air transportation, housing construction, radio and television, and the manufacture of synthetic products. In a State like New Jersey, with its highly diversified industry, such training should be particularly helpful.

In addition, community colleges provide training for senior professional workers beyond the range of high-school education—for architectural and mechanical draftsmen, dieticians, technicians in medical and industrial laboratories, bookkeepers, automotive and electrical technicians, dental hygienists, nurses' aides, assistants in doctors' and dentists' offices.

The President's Commission on Higher Education in its 1947 report estimated that in many fields of work there are 5 jobs requiring 2 years of college preparatory for every one that requires 4 years.

Your suggestion about a scholarship program is indeed an interesting one. I recognize the need for attracting our brightest minds into the college classrooms, and I think that a general expansion of capacity will have this effect. A scholarship program by itself, it seems to me, would help the brilliant youngster enter college, but unless total capacity is expanded, he cannot help but displace a less talented youth.

Comments such as yours will be helpful in bringing this need to the attention of the country and I am hopeful that out of this will come a real drive to do something about it.

CLIFFORD P. CASE,
United States Senator.

Repeal of Federal Cabaret Tax

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. DINGELL. Mr. Speaker, I am introducing today a bill to repeal the Federal cabaret tax.

Before attempting to discuss the effects of this legislation, I shall, first of all, give a few brief facts about this tax.

At the present time the Federal Government imposes a tax of 20 percent on amounts charged for "admission, refreshment, service—including checkroom service—or merchandise at any roof garden, cabaret, or other similar place furnishing a public performance for profit by or for any patron or guest who is entitled to be present during any portion of such performance."

Before the outbreak of World War II the rate of this tax was as low as 3 percent with an exemption granted to charges under $2.50. During this war, when Federal revenue requirements were sharply increased, this rate was increased to as high as 30 percent in 1944. The following year it was reduced to 20 percent, which is the current rate prevailing today. Some reductions in existing amusement taxes were effected by the Excise Tax Reduction Act of 1954; but the Federal cabaret tax has remained unchanged since the war.

Revenues from the Federal cabaret tax reached their highest peak in 1946. Since that time they have steadily declined until today this tax brings in only about half of what it produced in 1946. The total amount collected each year in my own State of Michigan and in the United States as a whole since 1946 is as follows:

[In thousands of dollars]

Fiscal year—	Federal cabaret tax receipts	
	United States	Michigan
1946	72,077	3,312
1947	63,350	2,968
1948	53,527	2,765
1949	48,857	2,673
1950	41,453	2,266
1951	42,646	2,423
1952	45,489	2,138
1953	46,691	2,276
1954	38,312	1,832
1955	39,271	1,617
1956	42,255	1,686

I strongly recommend the repeal of the Federal cabaret tax for the following reasons:

First, repeal of this tax will stimulate business and employment in the entertainment field. Because of this high tax, there has been a marked reduction in patronage which has caused numerous places of entertainment in hotels, restaurants, et cetera, to close. The American Hotel Association has reported that because of this tax the number of entertainment rooms declined from 700 in 1946 to 250 in 1950. The closing of these places of entertainment has brought about the unemployment of thousands of entertainers, waiters and waitresses, cooks, kitchen help, and other personnel.

The abolition of this tax would tend to stimulate the patronage of these cabarets since many individuals would then be able to afford this type of entertainment. This would bring about the reopening of many additional entertainment rooms providing employment for musicians, waiters, cooks, and others. The National License Beverage Association estimated in 1954 that repeal of this tax

would encourage 2½ times as many establishments to use live entertainment. It has also been estimated that such repeal would cause payrolls for music and entertainment to double in volume. repeal would cause payrolls for music ness and increase employment not only in cabarets, but also in other lines of enterprise, since consumers would have to pay less for entertainment and would have more money available for other purposes.

Secondly, it is not believed that there would be any net loss in Federal revenues if this tax were repealed.

The increased employment of musicians, entertainers, and other personnel would provide additional income tax revenue to the Federal Government. This would offset the loss in cabaret tax receipts which would result from the abolition of this tax. As may be seen in the figures on collections presented above, since 1946 this tax has produced diminishing revenue.

Total collections have declined $30 million from an alltime high of $72 million in 1946 to $42 million in 1956. Similarly, collections in Michigan have been cut in half, having decreased from $3.3 million to $1.7 million in this same period.

Thirdly, continuation of the Federal cabaret tax is no longer justiable in peacetime. Only in time of such national emergency as war when the Government must tap every possible source of income, and where the curtailment of an activity may even be desirable for manpower or austerity reasons is such tax defensible. More than 11 years have elapsed since the close of World War II, and we find this tax still on the statute books. There is no present justification for this tax.

Fourthly, repeal of this tax would create a more favorable economic climate for the training and development of musicians and other entertainers who have a real contribution to make to American culture. This tax has worked a real hardship on these individuals in the past. Continuation of it will tend to discourage gifted individuals from embarking on such an uncertain career. In time, the entertainment world would suffer a shortage of real talent.

Finally, the repeal of the cabaret tax will encourage the opening of more desirable places of entertainment for our young people.

With the closing of so many entertainment rooms in hotels, young people, seeking a place to dine and dance, have been compelled to patronize less desirable taverns and night clubs for their amusement. Repeal of this tax will enable many hotels to open rooms which will offer more wholesome surroundings for our Nation's youth.

Repeal of this tax is now long overdue. I, therefore, strongly urge immediate adoption of my bill which will bring this about.

The Trade Agreements Program

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

PRESIDENT'S FIRST ANNUAL REPORT ON OPERATION OF THE TRADE AGREEMENTS PROGRAM

(Statement by O. R. Strackbein, chairman, the nationwide committee of industry, agriculture, and labor on import-export policy)

The President's first anual report dated February 11 on the operation of the trade agreements program as required by the Trade Agreements Extension Act of 1955 was late, grudging, and fragmentary.

It greatly overvalues the trade program, claiming for it things that happened in spite of it; and short-changed Congress through failure to mention important failures and shortcomings of the program.

Principally, the report was used as a sales talk and the President used it to give his OTC proposal another shot in the arm, something it badly needs if it is ever to get back on its clay feet.

The whole GATT system that the President also tries to refurbish to make it look good has become an unwieldly patchwork without much life left in it.

The President gives a wide berth to the abysmal failure of the trade agreements program to accomplish its principal professed mission: to find markets abroad for our farm surpluses.

In 1955 and 1956 the foreign market for our cotton virtually collapsed after 20 years of stimulation under trade agreement bargaining. Congress came to the rescue with Public Law 480 and with the Agriculture Act of 1956.

We are now buying back with public funds, in the form of hundreds of millions of subsidy dollars, what the trade agreements program in the meantime, according to its zealous advocates, was gaining for our farm products all the while, i. e., expanded export markets.

The objectivity of the report can be judged by its oppressive silence on other excrescences and malformations of the great program. Notorious among the absentees is the coup recently engineered outside of GATT by the Departments of State and Commerce in behind-the-scenes negotiations with Japan. Evidently GATT was too weak a vehicle. Or was it because 14 members of GATT, including Britain and France, have so far refused to let Japan come in through the front door? Perhaps it should be noted that the arrangement with Japan was mentioned as a fait accompli in a footnote in the President's report, while nothing was said of its gestation or genesis.

Equal silence greeted the European proposal for a free trade area. However, since GATT was able to adapt itself to the Coal and Steel Community of Europe and despite its firm stand against the British Imperial preference system, it seems safe to guess that it will be able to swallow the much more ambitious European proposal.

There is one obvious conclusion to be reached from the President's report. The President has accepted the State Department's guiding principle in his assessment of the trade agreements program. This is, swallow anything from contradiction, duplicity and backtracking to wrapping, buckling and failure so long as and to the extent that so doing will keep the control over our foreign commerce in the hands of the State Department and the President and out of the hands of Congress. Nothing else seems to matter.

The Facts on the Benson Plan

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 21, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter and accompany chart which I have received from Hon. Frank Binford, former mayor of Thomaston, Ga., which cite pertinent and revealing facts about the operation of the Benson farm plan in Upson County, Ga.

There being no objection, the letter and chart were ordered to be printed in the RECORD, as follows:

FRANK BINFORD SUPPLY CO.,
Thomaston, Ga., February 19, 1957.

Hon. HERMAN E. TALMADGE,
United States Senate,
United States Senate Building,
Washington, D. C.

DEAR HERMAN: I personally want to thank you for the prompt action you took on behalf of the cotton farmers recently.

As you know, I didn't have a cotton acreage, but merely was reporting the conditions as they existed.

The farmers of Upson have expressed deep appreciation in the way you went to bat for them, and, now that additional funds have come through, they are making many complimentary remarks as to the fine way you have represented them on this cotton soil-bank issue. You were the first to challenge the Secretary of Agriculture on the way he handled the matter, and we are all proud of you.

Now, I am enclosing a statement, given me yesterday, of the 9 years our local livestock sales barn has been in operation. Please analyze carefully:

As I see the picture, it is this: 1952 was the last year the Democrats were in office. That year we sold 8,998 head of cattle, 9,108 head of hogs—18,106 head of hogs and cattle—for $1,143,852.26.

Now look at 1953, 1954, 1955, and 1956, the years Mr. Benson has been in office.

Finally, in 1956 we sold 16,795 head of cattle, 16,825 head of hogs—33,620 head of cattle and hogs—for $1,146,624.29.

This means to me just one thing—that the Georgia farmers are having to produce twice as many head of cattle and hogs to receive the same money in 1956 under the Republican administration as they did in 1952 under a Democratic administration.

Now, HERMAN, I imagine this picture would be true as a whole on a nationwide basis. I don't think our sales barn is much out of

line with others over the country. Would you?

Mr. Benson tells us our livestock income is only down a few percentage points. Actually, ours here at this barn is up a few points, but, at the same time, we have had to produce twice as much, which in turn has pyramided our cost. Also, I don't notice any appreciable drop in beef prices when we go to the market for finished meat sold over the counter.

HERMAN, this report impressed me very much, as I had not seen such figures elsewhere and didn't know if you had seen such a summary of actual sales or not.

Best regards. I am,

Sincerely yours,

FRANK BINFORD.

Message of Hon. Luis Muñoz-Marín, Governor of the Commonwealth of Puerto Rico, to the Third Legislative Assembly, First Regular Session, January 17, 1957

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1957

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

MESSAGE OF HON. LUIS MUÑOZ-MARÍN, GOVERNOR OF THE COMMONWEALTH OF PUERTO RICO, TO THE THIRD LEGISLATIVE ASSEMBLY, FIRST REGULAR SESSION, JANUARY 17, 1957

Considering the great complexity of our problems, I am pleased to inform you that the state of the commonwealth is excellent. Perhaps I should refer to the pace of the country's progress. For instance, with stimulation and help from the state, net private income increased by about 7 percent. For reasons to be discussed later, the overall income gain of the economy as a whole was about 2 percent.

We felt the cumulative effects of past capital investments; the program of industrialization was intensified; good use was made of the excellent economic conditions in the United States, our principal market. It is interesting to note that, during the year, Puerto Rico itself provided more capital than it imported. The fact that Puerto Rico improved its economic conditions despite considerable curtailments in Federal expenditures here is encouraging. The curtailments were in defense spending and were evidently made for purely military reasons; nonmilitary Federal contributions were increased rather than diminished.

That indicates that Puerto Rico's economic development now depends less than formerly on factors beyond Puerto Rico's own will and effort.

Manufacturing continued its dynamic growth, and produced a net income 17 percent greater than that of the preceding year. During the past 2 years, Puerto Rico has laid a firmer foundation for the establishment of new industrial groups, a new type of basic industries which attract other industries. That new economic form is represented by the two large oil refineries. As formerly, the past year was also characterized by industrial diversification. In addition to expansion in textiles and clothing, new factories were established for electronic products, drugs, chemicals, and metalwork. All of which greatly strengthened our purpose that, in an increasing number of industries, minimum wages shall reach the United States level, fixed at $1 per hour.

External trade continued to expand. Exports of goods and services came to $602 million; imports reached the unprecedented level of $808 million. Occasionally one encounters confusion over that lack of balance. It is assumed that the balance of trade fully expresses Puerto Rico's economic relations with the rest of the world. If that were the case, and if the negative balance represented consumer goods, we would have a serious problem. But it is not the case. Forces other than the balance of trade are in operation, remittances from Puerto Ricans in the United States; Federal help for roads, hospitals, public welfare; the transfer of capital from abroad to Puerto Rico; pay for veterans and the families of soldiers, etc. By coming here without Puerto Rico having to export in return, those unilateral disbursements tend to counteract the negative balance of trade. Thus the loss in balance of payments, covering the import and export of goods and services, was not $206 million, that was the negative balance of trade; it was $92 million. Even that negative balance was favorable to Puerto Rico, since a large part of the increased imports consisted of machinery and other capital goods designed for industrial and agricultural expansion.

Fixed investments reached $213 million during the past year—almost 19 percent of the total production—as compared with 17.5 percent during the preceding year. More than half of the funds needed for that high percentage of investment came from Puerto Rico's economy: depreciation reserves, undistributed profits, public funds invested in industrial and other permanent improvements rather than being spent for services. That means that we are not consuming the seeds, but are rather sowing a considerable proportion of them for a new and better harvest. During the year, in the executive mansion, I personally initiated a development service designed to stimulate and facilitate the investment of Puerto Rican capital. Our increasing economic vigor is again indicated by the fact that $21 million invested abroad by individual Puerto Ricans and institutions were withdrawn during the year and invested in Puerto Rico. The average annual income reached $2,400 per family.

We are concerned over the fact that agriculture, despite notable progress in certain of its branches, lags behind other sections of the economy in its general contribution to Puerto Rico's progress. Except in coffee and cattle, agricultural expansion has been relatively small. However, coffee suffered considerable damage from hurricane Santa Clara.

A paradoxical situation exists in Puerto Rico. Aside from ourselves, the people of Puerto Rico, the soil is virtually our only natural resource. There are no fuels or minerals, at least in sufficient quantities to be economically significant. With the soil as our only natural resource, the danger looms nevertheless that the intense development of other branches of our economy may create so great a difference between nonagricultural and agricultural wages—to say nothing of wages in the United States—that a considerable part of our land may find itself in the position of having nobody to work it, or of being able to obtain workers only on the basis of wages which preclude all incentives for profits. That possibility would confront us with the paradox of a country which, because of its progress in all that part of its economy for which it lacks natural resources, is forced to leave unused a part of the only natural resource that it does possess. And that, while a part of its rural population—much smaller of course than a few years ago, but always deserving of all the interest and help we can give it—continues to live at levels of undesirable poverty.

We must redouble our dedication in that area of our collective life. We must create muscles of progress for that part of our problem. It is not an easy task, but the Puerto Rico of our generation has gained prestige—in its own eyes and the world's—through the accomplishment of difficult tasks. Above all, the task requires devotion and creative imagination. Among other things, the government must do its best to end the lack of coordination which has hitherto existed among agricultural agencies, each of which labors with genuine interest

for the improvement of our people. Not for the first time do I mention this in a message. The lack of coordination is due in part to the differing legal origins of the various agencies which work in agriculture. Because of the legal situation, insular and federal, impedes executive coordination, we should be all the more determined to make a maximum effort toward the fullest efficiency in government actions in agriculture.

The men and women participating in that governmental struggle—every one of whom has my most sincere esteem as well as, I am sure, that of the legislature—all of them together must see to it that the best possible use of Puerto Rico's soil emerge from the good faith of all and the great interest of farmers and workers.

Certain sections of our land could be used efficiently through mechanization—and their workers be paid high wages, competitive with those in other branches of the economy. In bringing that about, however, we must exercise the widest possible sense of social responsibility, remembering that mechanization—despite being necessary and an economic asset permitting much better wages—also causes painful temporary dislocations, increasing unemployment among some of the workers. Whatever is done along those lines should be accompanied by the best social measures permitted in every case by the economic situation.

Because of topography and other conditions, another section of the land cannot be worked by mechanical means. In many cases it will not be possible to pay wages that are either desirable or competitive. Probably a part of that land cannot be made productive except on a basis of tenure in small, family-worked farms. The problems of credit, markets, industrialization of agricultural products, improvement of seeds, and others, must be tackled vigorously. Particularly, a solution must be found for the problem of credit. The recently inaugurated experiment of guaranteed credits has to date failed to bring satisfactory results. I don't believe that it should be abandoned; we must seek solutions for the difficulties revealed by the experiment.

Cooperating with other agencies, the Government Development Bank has made a study of agricultural credits which I will transmit to the legislature at an early opportunity.

In my budget message I recommended the continuation and strengthening of the programs which are already successful—like that for pastures, the improved coffee program, that for guaranteed minimum prices, and the seed program; in adidtion I recommend a substantial appropriation for the subsidiaries which the land authority will have to create, under a law previously approved by you, as important parts of the dynamic effort on behalf of our agriculture. Hitherto, the land authority has been an instrument almost exclusively devoted to the more equitable distribution of the fruits of production. Now we must add the function of aiding in the increase of agricultural production.

In case your studies lead to the conclusion that other measures should be taken, or that more should be done than I recommend here, don't hesitate to do so—as is your full right—making the decisions needed for instituting proper action, either through reducing other appropriations or through an increase in revenues.

With reference to living conditions among the workers: Employment rose by 20,000 during the year, though unemployment—because the labor force increased by 8,000—was reduced by only 12,000. In the sense of increased stability, the quality of employment was also improved. Nevertheless, employment opportunities diminished in agriculture and home needlework.

More workers with more employment in manufacturing, saw their average wages increased about 13 percent during the year. That was due to economic development, the actions of labor organizations, and government actions toward increasing minimum wages. In the United States, during the same year, hourly wages in manufacturing increased only about 3 percent, although the gap is still large between wages in Puerto Rico and in the States. The minimum wage laws of both the Commonwealth and the Federal Government have contributed to the end of lessening that gap. Our law is broader, since it covers both interstate and international commerce as well as local, and includes agriculture.

It is our aim to create in Puerto Rico an economy of wages adequate for serving as a foundation for a good civilization, as well as an economy which succeeds in abolishing unemployment. It is extremely difficult to accomplish both at the same time. As in the case of agricultural mechanization, factors which permit wage increases may simultaneously create a certain amount of unemployment. Nevertheless we note that average wages rose substantially during the last fiscal year while unemployment was also reduced—though less substantially. It must be pointed out, however, that this result was produced within the framework of a migration to the United States which kept Puerto Rico's population at the level of the preceding year—or approximately 2,270,000 inhabitants.

Unquestionably, were it not for that opportunity for migration and work abroad, Puerto Rico's entire great and heroic productive effort, in which all social classes participate, could not prevent its heading more or less rapidly in this stage of our development toward economic disaster.

That means that Puerto Rico, with all its productive muscles tensed, its economic life notably invigorated, its private initiative effectively stimulated and accompanied by public initiative and effort, still lacks the means for coping with its great natural population growth which would vitiate all effort—were it not for the fact that everybody who wishes has the opportunity freely to cross the frontier which leads to new opportunities without leading to new citizenship. Obviously, we should not be permanently content with that situation. Our production should solve that problem also.

To offset the impact of technological unemployment, I recommend legislation providing compensation for those who suffer such unemployment. It is not necessary that such compensation come in all cases from the public treasury. It may be possible to provide it through collective bargaining—though that may require enabling legislation. Wherever possible, technological unemployment should be leveled off through intensification of economic development in the affected areas. The Economic Development Administration has been instructed to pay special attention to that matter, offering special incentives, constructing—in advance—factory buildings which will serve to channel the movement of new industries toward those regions. Unemployment insurance will also help.

To alleviate the human suffering caused by seasonal unemployment, I recommend an appropriation for the initiation of a plan for light public works—in addition to the basic public works plan—which can provide incomes for the unemployed in times of reduced employment in Puerto Rico's various regions.

The wage increases required for arriving at income goals basic to a good spiritual and material civilization are daily more compatible with the growth of our economic system. Low-wage jobs are also disappearing in Puerto Rico—as is natural to the development of a dynamic economic system aimed at the elimination of extreme poverty. But meanwhile a part of our population which merits our esteem and will have our support is left in destitution. We must face the anguish as well as the hope of those changes.

It seems to me well to consider the possibility of a retraining program for those whose means of earning their bread is threatened by the same progress that we are creating for their children. On the one hand, that might include training in the management of small farms, since part of our land can ultimately be used for the solution of that great social problem, and on the other training in the newly emerging industrial skills.

With regard to education, I am pleased to inform you that enrollment has exceeded established goals at all school levels. Ninety-four percent of the children of proper age attended elementary schools; the original goal was 91 percent. In no country in the world is the figure 100 percent, and in the United States it is about 96 percent. Attendance in intermediate schools was about 84 percent, with a goal of 75 percent. The high schools were attended by 43 percent of the children of appropriate age; the original goal was 41 perecnt.

During the year, the first group of Puerto Rican English teachers was sent for instruction to the United States, to live in English-speaking communities. A difficulty encountered in the teaching of English—which is from all viewpoints so badly needed as a second language of the Puerto Ricans—is that the great majority of English teachers are people whose vernacular is not English. It is neither possible nor desirable to import thousands of teachers from the United States to replace other thousands of teachers in Puerto Rico. Nevertheless it is clear that a good English teacher must be truly familiar with the language's usage. In the years to come, more groups—more than a thousand teachers—will therefore be sent to spend a full year in United States communities where there are few other Puerto Ricans, and where they can so accustom themselves to the daily, familiar use of the language the teaching of which is their main task. Ninety were sent this year. It is planned to send 200 or more every year. The plan deserves the legislature's full support, which, I am sure, it will receive.

Funds are recommended for eliminating double enrollment—which means half education. All arrangements for introducing educational television in Puerto Rico have been virtually completed. The station of the department of education will probably be in service before the middle of the year. The Secretary of Education has made major efforts toward the establishment of that new means of education. It can become extremely useful, not only to the children and youths in the schools—after methods of using it in the classroom have been perfected—but also as a means of raising the cultural level of the entire population. Television is one of the great instruments given to man by science and technology. Man everywhere, with the natural imperfections of his wisdom, is not using it anywhere near as well as it deserves to be used in the service of great human values, which, after all, tend to be more simple and profound than complex and superficial. Together with private stations, the educational station should strive to raise the use of that great medium to the level of its potentialities. The fact that it is free from all commercial incentives will help in fulfilling that great obligation. The station will transmit neither commercial nor partisan political programs.

In the University of Puerto Rico, the school of dentistry is about to be opened, with the aim of developing it to the high level attained by the school of medicine.

Not only that school, but also the development of other postgraduate courses—such as in the social sciences—deserves support. Because of the many demands on the public treasury, we cannot give to the school system or to higher education all the funds that they need and merit. We must make efforts to approximate them as closely as possible. I believe that in the future, in an age in which humanity must face atomic energy, the democratic world will come more clearly to understand the fact that greater abundance and quality—enormously greater—must be given to education, even at the expense of luxuries and other matters which are much less important to a man's life. A good military force has a far greater chance of preventing war if accompanied by an excellent education. Not having to maintain a military force, Puerto Rico should be all the more dedicated to education.

Despite the fact that it must still struggle with important handicaps from the days when it was capriciously administered by remote control, our educational system has rendered great services to Puerto Rico, especially in strengthening our people's natural democratic attitudes. Since coming to depend on Puerto Rico's own democratic institutions, it has made important contributions to our society's improvement—in the form of libraries, literacy campaigns, community education, radio programs at high levels, the production of didactic materials, free schools of music, educational experiments like the Morovis plan, adult education, and the multiplication of school lunchrooms.

On the other hand, Puerto Rico is undergoing changes so rapid, and at times so drastic, that a careful revision of the educational sysetm may well be advisable. Toward that end I invoke the cooperation, not only of the elements closely related to the Government—the department of education, the University of Puerto Rico, this legislative assembly—but also of the other and many groups which form part of the educational process—parents, teachers, magazines, newspapers, publishing houses, radio and television stations, social, civic, and religious organizations, political parties.

I do not consider it necessary to choose between education of the masses—which democracy demands—and optimum instructional facilities for the more gifted. The two aims are compatible, one with the other. Both serve democracy. Let us base our efforts on that conviction.

With regard to health—the average life span has risen to 68 years. Infant mortality continued its notable decline, reaching an annual figure of only 56 deaths per thousand of children less than a year old.

A large hospital and a school for nurses were opened in the Ponce district. Fifty-eight new school lunchrooms were established, bringing their total number to 1,579; the rural aqueduct service was extended to 10,000 new families, bringing the total number of families receiving that service in our countrysides to 194,000; approximately 400,000 people were vaccinated against infantile paralysis.

During the year, with help from the United States Public Health Service, and the Rockefeller Foundation, we completed a study toward the establishment of regional, integrated medical services—in a large area served by the hospital of the Bayamón district, which includes 17 municipalities. In the same sense, I believe it would be well to experiment in relation to all Government services, not merely the medical, and some preliminary plans have been drafted in that connection. I will communicate with the legislature at the proper time, requesting cooperation. I will also have to approach you with regard to the development of better and less expensive medical facilities for the middle class.

Housing problems, which lie in the realm of social welfare, as well as problems of public welfare in the official sense, require increasingly careful attention from our Government. The Committee on the Reorganization of the Executive Branch, presided over by James Rowe, which I appointed in 1949, has this to say about the administrative problem:

"Like many of the states and cities, Puerto Rico will probably at some time find it necessary and desirable to establish an independent welfare agency for the administration of all major programs for the care of the needy, the handicapped, and the aged."

I believe the time has come for the establishment of a Department of Social Welfare, apart from the Department of Health, which is itself carrying a large burden of great responsibility. I also believe that an effort should be made to unite within a single organization all the Government agencies charged with providing adequate housing for the people. The Government feels that public housing should be temporary—as long as the family's economic situation permits nothing else—but that the fact should be recognized that it is the aim of every Puerto Rican family to own its own home. I know I can count on the legislature's cooperation in that matter.

Housing is one of the most difficult problems confronting us. In 1950, 94,000 out of 226,000 urban homes, or 43 percent were in slum areas. There conditions were counter to the legitimate desire of every Puerto Rican family for a good home. In a study by the Planning Board, the foundation has been laid for an attempt—including of course the work already done since 1950—to solve that problem for at least half of those families by 1960.

Nevertheless, the problem is more difficult than here indicated. In the country are thousands of homes which are inadequate according to the concepts of our people and Government of what a good rural home should be. That was shown during the last hurricane, by the large number of homes damaged or destroyed in the rural areas. I consider it necessary—though of course it cannot be done quickly—to face that problem, toward the end that rural construction consist, every day to a greater extent, of concrete or other wind-resisting materials. Probably the best means of reaching that goal is the plan of mutual cooperative aid under which the Government supplies materials at half price, as well as supervision, and the families desiring to improve their housing supply the work. The plan deserves continued support from the legislature.

As indicated, our objective should be that every family come to own its home, and that that home, though often modest, be always decent and solid. All measures should be taken toward putting the cost of those homes within the reach of families of small means. For those who cannot as yet begin to acquire their own homes, we should continue to provide public housing, and for those who do not want to live in the public developments we should provide lots with the minimum essential urban services to permit them to build their own houses, with or without the cooperative method of mutual assistance.

I recommend strongly that legislation be approved to permit the families which live in semi-urban public housing developments to purchase their homes in those developments, through payment of the debt still remaining—by a liberal payment plan. Since that may require changes in Federal regulation, I have sent the head of the Puerto Rican Housing Authority to Washington to take the proper measures with Federal authorities. In many instances the taxes that tenants would have to pay when they become owners will be considerably higher than the payments they have to make now—which will aggravate the solution of their housing problem. I therefore believe that tax exemption for a number of years should be included in the appropriate legislation. Since the aim is to provide individually owned housing for those families, and not to plunge them into real-estate speculation, it seems well, also, to restrict the right of sale for a reasonable number of years.

This message is becoming longer than I had intended. I will mention other important matters very briefly. Most of them can be found in greater detail in the budget message that I submitted to you on the session's first day. I will communicate with you about the others from time to time.

The Financial Council has been established by Executive order to advise on the investment of public funds held by the Treasury, on policy re public debt, on legislation and administrative practices relating to banks and investment companies, on the investment of pension funds. Its aim is to make Puerto Rico's financial power as effective as possible in its contribution to the country's economic growth.

The program of rural electrification should be strengthened and accelerated.

I regard as urgent the legal establishment of the Cooperative Development Administration, which today exists as part of the Governor's office.

I recommend legislation to finance the legitimate expenditures of political parties, equally for all, and prohibiting large contributions from any source. It is needed for the purpose of freeing all political parties from undue ecnomic influence. I also believe that the system of dues accepted from employees of the government, which has been in effect in Puerto Rico throughout this century, has accomplished a certain public end in freeing political parties from subordination to great economic powers; however, it should be discontinued once the problem has been solved through the public appropriations that I recommend.

As you know, I asked Mr. Roger Baldwin, eminent defender of civil liberties everywhere, member of the American Civil Liberties Union, and adviser on civil liberties to the United Nations, to direct a study toward protecting civil liberties in Puerto Rico in the most effective manner possible. I believe that this is the only government in the world which has made such a request. When the report is completed, I will take administrative action on the parts demanding it, and will have the honor to submit the report to you for whatever legislative action this Assembly may deem appropriate.

I should not end this message on the State of the country without brief observations on its state of mind.

I believe that the country desires a spirit of profound unity among our people, without dimunition of the most energetic expression of differences in ideas, or in the appreciation of facts and the support of aims. Insofar as possible, the country desires that that vigor be intellectual. The majority and the minorities owe loyalty to the people of Puerto Rico—loyalty in public debate; loyalty to the respect of democratic decisions; loyalty to the right to question those decisions—but only before the people of Puerto Rico themselves; loyalty to all the rights of the minorities. All these are loyalties to democracy itself.

The country's spirit should be at ease, absolutely at ease, regarding its political status. Under no circumstances can it be replaced by another without consulting the people and accepting their will. As far as the Puerto Rican Government is concerned, all may rest completely assured that this government favors, supports, and will continue to support, permanent association with the United States of America. The further de-

velopment of the Commonwealth status, far from implying separation, implies a deeper mutual understanding. It is obvious that the less power is exercised by some citizens over others, within their great common citizenship, the greater must be the feeling of union between them. As yet we know of no American citizen anywhere who is averse to increasing his freedom. We Puerto Ricans should not be the exception.

Simple Justice for Small Business

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, in its final report the Select Committee on Small Business of the House of Representatives made a number of recommendations of great importance to the welfare of the 4 million small businessmen of our country.

No one of these recommendations was more important that "(5) That the appropriate committees consider legislation to repeal the excise taxes imposed during World War II, or reimposed during the Korean period, be promptly repealed, and that the necessary revenue which these taxes might yield be provided for in setting the progressive rates on corporate incomes, as already recommended."

According to the House Small Business Committee, these excise taxes, imposed during periods of national emergency, had as their purpose not merely the necessity for raising revenue, but also the purpose of discouraging unessential uses of scarce goods and discouraging the use of scarce materials and labor in the production and distribution of items which were considered not to contribute to the national defense. This latter purpose has now disappeared, and it is manifestly of doubtful wisdom to maintain, in periods of relative surplus, taxes which discriminate among goods and services which consumers may want to purchase. Yet the taxes continue on a variety of so-called luxury goods, such as cosmetics, luggage, musical instruments, household appliances, and so on.

The heavy impact of these taxes, as it happens, is on the smaller business firms. Furthermore, the transportation tax on freight shipped by common carrier discriminates as between small firms and their direct competitors in the big business segments of industry. Small manufacturers and other small suppliers tend to depend upon common carriers for transporting their goods to markets, in which case the tax enters into the cost of the delivered goods. In contrast, big manufacturers can avoid the impact of the tax by operating their own private transport systems, or by employing contract carriers to assemble their needed supplies and deliver their finished goods to market.

I include here a letter and a press release which I have received from George J. Burger, vice president, National Federation of Independent Business.

Mr. Burger also has some very interesting and important things to say regarding the excise taxes:

NATIONAL FEDERATION OF INDEPENDENT BUSINESS,
Washington, D. C., February 21, 1957.
Hon. FRANK THOMPSON, Jr.,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: Due to your consistent and sincere interest in the welfare of small business, I trust that you will find the attached press release of considerable interest and, more important, of interest to your colleagues in the Congress.

What we are trying to do is correct a rank injustice in the present excise-tax levy on tires and tubes that are carried by approximately 300,000 independents in the tire sales and servicing field. In simple words, their stocks of tires and tubes carry the excise tax as soon as they are delivered. On the other hand, in the case of certain large tire manufacturers, who own and operate retail stores which are in direct competition not alone with their own independents but with all other independents, their stocks of tires and tubes are exempt from the excise-tax levy until the tires are sold to the users.

This discrimination has existed for 15 years and both the House and Senate Small Business Committees have recommended steps to correct this unfair situation.

Apparently there can be no correction by the Treasury Department until the Congress enacts remedial legislation.

Small business is not asking for any special consideration but merely justice in the tax levy.

Thanking you for your usual cooperation and help to small business,

Sincerely,

GEORGE J. BURGER,
Vice President.

RELEASE OF FEBRUARY 19, 1957

George J. Burger, vice president, National Federation of Independent Business, today dispatched the following telegram to all members of the Ways and Means Committee. The full text of the telegram is quoted below:

"As the full Committee on Ways and Means Committee will meet in executive session on Tuesday, February 19, to consider the report of the Subcommittee on Excise Taxes which was made public on January 14, in behalf of small business and particularly independent members of the rubber tire industry we urge the full committee to reconsider section 112 in particular of the subcommittee's report as it pertains to the excise tax levy on stocks of tires delivered to the independents and the manufacturers' retail store stocks of tires being exempt from such levy until their stocks are sold.

"We contend it may be found the subcommittee's statement: 'The quantities of tires marketed through these outlets represent only a very small fraction of the total volume,' is in error, and to substantiate our contention we are quoting from a communication from a responsible source in the independent tire trade, which states: 'I am amazed that the committee would conclude "that the quantities of tires marketed through these outlets" (through company-owned stores) "represent only a very small fraction of the total volume" because as a previous manager of one of these company-owned stores, I am sure that the volume produced by these three company-owned stores is greater than any six independent competitors in this area.'

"We are in further disagreement with the subcommittee report where it states: 'Considerable time usually elapses between the date that the independent tire dealer receives tires from the manufacturer and the date that he pays for them.' Again substantiating from a responsible source, he says: 'What a laugh. It is customary for our supplier to close his books on or about the 25th of the month—any tires bought prior to that time are due for payment the 10th of the following month, which includes the excise tax, so that tires bought on the 23d or 24th are paid for in about 20 days. This is a long time before it is collected from the customer.'

"The federation will never present a problem to any congressional committee unless the facts are the truth and the whole truth, and never will the federation be charged with giving misleading information to any congressional committee. We are merely asking for justice—that tire manufacturers retail store stocks of tires carry the same tax burden as is now applied to approximately 300,000 independent handlers of tires throughout the Nation.

"Is this too much to ask of the committee and the Congress? Bear in mind that the rubber manufacturers, through their spokesman, in testimony given on November 28, 1956, expressed willingness to pay the tax on the company-owned store stocks of tires, and in view of their agreement it would seem obvious there should be no reluctance on the part of the full committee to write in the proper regulation applying the tax to the tire manufacturers' retail store stocks of tires.

"All we are asking is simple justice and a fair break for small business."

Chemical Additives in Our Food Supply Can Cause Cancer

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. DELANEY. Mr. Speaker, in 1950, 1951, and 1952, I was chairman of a select committee which investigated the use of chemical additives in foods and cosmetics. A large number of leading medical authorities, public health officials, scientists, and representatives of food, cosmetics, and chemical interests appeared before the committee.

Testimony given in the hearings established the fact that the enormously expanded use of a constantly growing number of new chemical additives in foods constitutes a definite hazard to public health and that new legislation is needed to bring the situation under control.

For this purpose, in the 84th Congress I introduced H. R. 4014, a bill to protect the public health by amending the Federal Food, Drug, and Cosmetic Act so as to provide for the safety of chemical additives in food. No action was taken by that Congress, so on January 29 I reintroduced the bill, which is now H. R. 4014.

Mr. Speaker, although over 5 years have elapsed since the committee terminated its investigation, evidence continues to accumulate showing the urgent need of this legislation. The following letter, sent me by one of the noted cancer experts of the country emphasizes the urgency.

I know that Members of Congress have many things to claim their attention, but this letter is of such importance that I hope my colleagues will take the time to give it serious study.

I believe that if they will do so, they will agree that no time should be lost in taking action on legislation that will insure our citizens a safe food supply.

The letter follows:

ENGLEWOOD, N. J., *January 28, 1957.*

Hon. JAMES J. DELANEY,
Member of Congress, House Office Building, Washington, D. C.

DEAR MR. DELANEY: This is in response to your inquiries in your letter of January 7 and at our conference on January 21.

I have studied the bill which you propose to introduce in the present Congress under title "A bill to protect the public health by amending the Federal Food, Drug, and Cosmetic Act so as to provide for the safety of chemical additives in food." I note that this bill is identical with the bill (H. R. 4475) which you introduced in the 84th Congress under this title, and which you proposed after extensive hearings on chemicals in foods conducted by the House Select Committee that you served as chairman.

I believe your bill is a good bill. It provides long-needed arrangements to require pretesting for safety of chemical food additives, and demonstration of their usefulness to consumers, before such substances can be marketed. Your bill would correct the present situation, which permits exposure of the public to harmful food adulterants for years pending scientific and legal procedures required of the Food and Drug Administration to detect and prove harm.

I find, however, that manufacturers and distributors of food additives have not supported your bill, but have supported other bills, which, although providing for pretesting, omit specification that food additives must be useful to consumers. Proponents of these bills have argued that this omission is inconsequential in that additives would not be used if they were not useful. Government witnesses, however, have indicated that this omission would oblige them to permit adulteration of food with any chemical that at some level of concentration would not harm test animals. This omission in effect converts the pretesting arrangement into a device for introducing any chemical into food. It opens flood gates to legalize adulteration of foods on an unprecedented scale. Furthermore, these bills, but not your bill, provide for appeal through declaratory judgment proceedings, which greatly increase legal obstacles in the way of Food and Drug Administration efforts to protect consumers.

I believe the above points are amply documented by statements by the Secretary of Health, Education, and Welfare, by the Commissioner and Counsel of the Food and Drug Administration, and by others, including proponents of the above bills, in hearings before the Subcommittee on Health and Science of the Committee on Interstate and Foreign Commerce last year. These statements also made clear that your bill did not contain the defects of these other bills.

At these hearings the American Public Health Association's food and nutrition section submitted the view that decision to approve an additive should be based, not only on assurance that it will be "safe" but also that it will benefit the consumer. As evident from testimony on page 86 and elsewhere in these hearings, all bills, except your bill, could not prevent replacement of butterfat in ice cream by anything from plastics to glue, provided evidence were offered that such substances were "safe." Any bill automatically legalizing this type of food adulteration would not seem in the public interest.

From the above considerations, it appears that your bill promises protection to consumers of additives, whereas other bills protect the additives. It would seem urgent that any bills proposed this year be examined for the defects cited.

It seems particularly urgent that any bill to amend the food law should contain a specific provision enabling the Secretary of Health, Education, and Welfare to in no case approve for use in food any substance found to induce cancer in man or in tests upon animals. Need for this provision arises from the recent Aramite decision. Briefly, the Food and Drug Administration found that cancer was induced in rats by a pesticide, Aramite, and issued an order preventing contamination of food with this substance. This order has had to be reversed upon proceedings initiated by a manufacturer (exhibits A and B). The precedent established by this decision creates a loophole for introduction of so-called safe quantities of cancer-inciting additives into food. This loophole seriously impairs the protection consumers might have expected from the arrangements proposed by all bills for pretesting of additives upon animals. This loophole can be closed by a provision specifically excluding cancer-inciting additives from food.

This provision could conveniently be incorporated into your bill by—

1. Insertion of a comma and of the word "carcinogenicity" in section 409 (b) (2), following the words "acute and chronic toxicity."

2. Insertion at the end of section 409 (d) of the sentence: "The Secretary shall in no case approve for use in food any substance found to induce cancer in man or in tests upon animals."

Furthermore, it seems urgent that any bill to amend the food law, including your bill, should expand the definition of chemical additive to include chemicals administered to lower animals destined for use as food. You will recall that this provision was suggested by the Secretary at hearings in the last Congress. You will also recall that your committee heard testimony from inspectors of the Food and Drug Administration to the effect that residues of a cancer-inciting drug, diethylstilbestrol, are commonly found in marketed poultry to which this drug is now commonly administered. My colleagues and I have assembled data to show that this drug is not destroyed by cooking and that marketed poultry have contained per bird up to 342,000 times the amount of this drug sufficing as a daily dose to induce cancer in mice (exhibit C). We have forwarded this exhibit for review to the National Cancer Institute, United States Public Health Service. It has been reviewed by the National Cancer Institute, with endorsement of our view that administration of this drug to food animals constitutes a hazard to consumers (exhibit D).

The remainder of this letter offers support for preceding points. A suggestion for further action is contained in a closing paragraph relative to limitation of additives in the manner now employed for food colors.

As qualification for the present purpose, I submit that I received the degree of doctor of medicine in 1938 from the Johns Hopkins University and have since that time engaged in medical research as a full-time member of the staff, successively, at the Harvard Medical School, the Rockefeller Institute for Medical Research, the Sloan-Kettering Institute for Cancer Research, and, until 1956, as associate professor of industrial medicine at New York University. I am executive secretary of the Cancer Prevention Committee, which is devoted to study of environmental factors in cancer (exhibit M). I hold a fellowship from the American Academy of Nutrition for study of nutrition in relation to cancer. I am writing this letter as a private individual in response to your inquiry, and not as a spokesman for any of chemicals that are harmful in higher concentration. Need for the above specific reference to cancer-inciting substances (carcinogens) in food arises from the fact that all proposed bills, including your bill, relax present law to permit addition to food of safe quantities of chemicals that are harmful in higher concentration. Now, it is true that safe doses can be established for many substances, but responsible bodies of experts have clearly stated that safe doses cannot yet be established with certainty for carcinogens (exhibits E and F). This situation is due in part to the fact that cancer-inciting effects of carcinogens are determined not solely by dose but more importantly by (a) how long the individual lives after he receives a dose, and (b) the condition of the dosed individual.

In man, many years may elapse between exposure to a carcinogen and the time when cancer appears. Purveyors of food containing a carcinogen cannot know whether that food will be consumed by an elderly person at little risk or by a child at much greater risk. In the case of the dye, paradimethylaminoazobenzene, formerly used in foods and drugs, quantities failing to induce cancer in well-fed test animals did induce cancer in animals on less adequate diets. Purveyors of food containing a carcinogen cannot control the diet of those consuming it.

These points are well documented in the scientific literature. In my own experience, I have induced cancer later in life in hundreds of animals by injecting them when young with a single dose of a fraction of a milligram of the carcinogens methylcholanthrene, benzpyrene, dibenvanthracene, or 9, 10-dimethyl-1, 2-benzanthracene. With such single, very small, doses, I have induced cancer from skin, stomach, lung, bladder, ureter, thyroid and prostrate tissues (exhibits G, H, I). With a colleague, I have induced lung tumors in animals by treating their mothers during pregnancy with urethane (exhibit J), a drug sometimes used for human beings. For 8 years, I have engaged in the testing of industrial materials for carcinogenicity by experiments upon animals. In the course of this work, I have induced cancer with a wide range of materials, in upward of a thousand animals ranging from mice to monkeys.

As shown by the Survey of Compounds Which Have Been Tested for Carcinogenic Activity (U. S. Public Health Service publication No. 149), a large percentage of artificial substances have already been found to induce cancer. Chemical industries not infrequently have to weigh such findings against technical and commercial advantages of products. In many instances, it has been possible to develop reasonable and feasible procedures for safe handling of such products through appropriate arrangements for protecting workers against exposure to them, through limiting the number of workers who must handle them, and through medical checks to detect and treat cancer early in such men as are exposed (exhibit K).

On the other hand, a different set of problems is created when carcinogenicity is discovered in a product intended for use on or in food. This involves intentional exposure of large populations who cannot be carefully traced for results of exposure, and who receive no pay for risks they run. Moreover, the hearings brought out that the declaratory judgment provision of industry-supported bills would prevent compensation of consumers even after demonstrated injury by a food additive, since a declaratory judgment would establish the additive as legally harmless no matter what subsequent evidence arose.

A test case seeking tolerance for a known cancer-inciting pesticide in food is recorded on page 7,301 of the Federal Register for

September 30, 1955 (exhibit A). It is there shown that the Food and Drug Administration attempted to prevent contamination of food by a pesticide (Aramite) through establishing a zero tolerance for this substance. It is there shown that a chemical manufacturer thereupon filed a petition requesting that this decision be reviewed by an advisory committee and that a tolerance be established. Exhibit B is the report of that committee. It found that FDA had demonstrated tumors in the livers of rats fed Aramite, but that this substance might be safe if fed at some lesser concentration. Upon this advice, FDA issued an order published in the place cited above (exhibit A) tolerating residues of Aramite in apples, blueberries, cantaloups, celery, cucumbers, grapefruit, grapes, green beans, lemons, muskmelons, oranges, peaches, pears, plums, raspberries, strawberries, tomatoes, watermelons, and sweet corn but not forage thereof. The last phrase indicates that Members of Congress and their constituents can be obliged to eat this substance, but a cow cannot.

The report of this advisory committee (exhibit B) contains the following FDA interoffice communication: "An experiment with any lower dosage level will not remove the onus that Aramite is a known carcinogen. The Division of Pharmacology cannot recommend that such a substance be used on human food." This position was, nevertheless, overthrown; and the resulting order affords a precedent that can be cited by anyone who wishes to introduce a technically valuable but carinogenic additive into food under the so-called safe quantity or conditions of use clauses of the proposed bills, including your bill, concerning food additives. This loophole can and should be closed by amendment specifying that the Secretary shall in no case approve for use in foods any amount of any substance found to induce cancer.

That "safe doses" cannot be safely established for carcinogens in the present state of knowledge has been expressly stated in resolutions adopted by responsible bodies of experts (exhibits E and F). Some reasons for this situation have been cited earlier in this letter.

Need to assure protection of consumers against substances found to induce cancer in animals is attested by the facts that the cancer-causing actions of certain tars, oils, dye intermediates, metallic and radioactive compounds were discovered through exposure of human beings and only later confirmed by tests on animals. Since an announced purpose of pretesting food additives on animals is to anticipate and prevent further such experience, tumors induced in animals by a proposed food additive must disqualify that additive. Although some compounds have induced cancer in one species but not in another, any substance that induces cancer in any species, if used as a food additive, requires consumers to participate without consent, in the experiment of exposure to learn whether man is or is not a susceptible species, or what percentage of human beings respond to the dose involved. Such tests upon man would require detailed studies of large groups of human beings throughout their life spans, since it has been amply shown by many investigators that cancer can arise late in life, both in man and animals, from exposure to carcinogenic materials early in life. These points, together with the point that harmless levels of concentration cannot now be safely established for carcinogens, have been expressly stated by responsible bodies of experts (exhibits E and F).

Exhibit E is the report of a meeting on the prophylaxis of cancer held by the German Research Council in May 1954, at Bad Godesberg. The attendance at this meeting included some 39 scientists from 11 West European countries, notably distinguished public health officials and representatives of major pharmaceutical and chemical industries, whose names and affiliations appear in the exhibit. The following statements are excerpts from the authorized English translation on pages 15 to 19 of this exhibit:

"All participants at the meeting unanimously recommend international cooperation to prevent injury to health through toxic agents, particularly carcinogenic factors in foodstuffs.

"The meeting made the following recommendations:

"1. Basic principles: Staple foods should principally not have any foreign additives to food and should not be artificially colored, if legislation does not decide expressively otherwise.

"2. For the admittance of foreign additives to food the following suppositions were required:

"(a) The additives should be authenticatedly innocuous for human health.

"(b) There should be an actual need for their use.

"(c) The consumer must not be misled as to the true value of the food.

"3. Toxicological evaluation of food additives:

"Substances with reversible, toxicological actions must be judged differently from those with irreversible (e. g., carcinogenic) actions.

"For substances producing reversible toxic effects threshold doses can be laid down, so that concentrations with a satisfactory safety margin can be regarded as harmless. With substances producing irreversible summative toxic effects, on the other hand, there is no nontoxic threshold doses. For this reason very small doses of such substances must be considered dangerous if they are taken continuously, and possibly for the whole duration of life.

"(a) Food additives for human use can be considered harmless according to present day knowledge only if after continuous administration to animals and after observation over the whole lifetime in high concentration which must be considerably higher than would be present in human food so as to give a reasonable margin of safety, they have no toxic effects, do not shorten the average expectation of life on sufficiently defined animal strains, and especially if they in maximum tolerated concentration and on animals demonstrably receptive for such actions do not induce cancer or damage germ cells. The tests should be carried out over three generations.

"(b) No substance, which, tested under these conditions, has any toxic effect or in tests at any dose level induces any type of malignant tumor in any species of animal, at a significantly higher rate than the spontaneous incidence can be considered innocuous to human health."

Exhibit F is resolutions adopted by the symposium on cancer prevention, which I served as chairman, at the Sixth International Cancer Congress conducted by the International Union Against Cancer in July, 1954, at São Paulo, Brazil. These resolutions were adopted unanimously by 12 experts whose names they bear after hearing presentations that included, among others, data showing that the dye, para-dimethylaminoazobenzene (which has been used in foods and drugs) administered as a small single dose to young animals led to development of cancer in them late in life. Similar results with other carcinogens have been repeatedly observed and reported in the literature by many investigators, including myself (exhibits G to J).

These resolutions (exhibit F) were accepted by the International Union Against Cancer and published in its journal, Acta Unio Internationalis contra Cancrum (vol. XI, No. 1, 72–76, 1955). The Union is composed of representatives of cancer organizations in about 50 countries. The general secretary is Dr. Harold F. Dorn, United States Public Health Service, Washington, D. C. These resolutions, which I submit on my own initiative and not at the request of the Union, included the following statements:

"2. In view of evidence that certain types of cancer result from exposure to agents that enter the body from the external environment, a basis for the prevention of these types of cancer is afforded by identification of sources of exposure to such agents and development of feasible measures for minimizing exposure of human populations.

"3. In the case of agents that are known to be capable of eliciting cancer in man, the desirability of minimizing exposure to such agents is clear.

"4. In the case of agents whose carcinogenicity for man is not known but which elicit cancer in experiments conducted upon animals, although it is recognized that the development of cancer in response to such materials may be conditioned by the type of exposure, notably the species of animal or the route of administration, it is not prudent to regard such agents as harmless for man.

"5. Evidence exists to show that the time of appearance of tumors after exposure to carcinogenic agents is, within limits, dependent upon the dose and the frequency of exposure; but small doses and even a single dose may elicit tumors, notably after prolonged latent periods. In view of the latter finding and in view of the summative carcinogenic effect of repeated small doses, concepts of 'safe, threshold doses' are dubious where complete control of a hazard involving exposure to carcinogenic agents is desired.

"9. The Godesberg proposals (the Godesberg proposals are exhibit E) are recommended to the International Union Against Cancer as providing sound general concepts for guidance of thought in the matter of food dyes and additives.

"10. In view of the contamination of foods by residues of pesticides, weedkillers and other foreign materials applied to food or to food-precursors for various purposes, and in view of the carcinogenic action upon animals of certain of these substances, cancer resulting in a variety of internal organs, and in view of the exceedingly great technical difficulties in detection by epidemiological methods of any possible cancer hazards for man presented by such materials, it is felt that such materials should be subjected to the same toxicological scrutiny recommended in the Godesberg proposals (the Godesberg proposals are exhibit E) for evaluation of food additives."

Nearly a score of carcinogenic food additives and contaminants were described in the September 1956 issue of the AMA Archives of Pathology (exhibit L) in an article by Dr. W. C. Hueper, chief, Environmental Cancer Section, National Cancer Institute, United States Public Health Service.

This article was presented at the recent symposium on food additives conducted by the International Union Against Cancer in Rome in August 1956. That symposium was attended by 40 scientists from 21 countries, including officials of the United States Public Health Service and Food and Drug Administration. Resolutions adopted at that symposium will be published in a forthcoming issue of Acta Unio Internationalis Contra Cancrum. I note you have an advance copy of those resolutions, which specifically endorse the position that no substance should be approved for use in foods if it induces cancer in any species of animal at any dose.

In view of these repeated findings by large groups of experts, consumers cannot have confidence in the safety of their food supply if new legislation fails to specifically exclude from food substances found to induce cancer.

High levels of consumer protection have been achieved against well recognized hazards, but a basic advance in philosophy is needed for protection against the more subtle, delayed-action hazards, such as carcinogens. Consideration of these chemical agents of disease stands about in the position of thought 50 to a hundred years ago on microbial agents of disease. It was long doubted that a few tiny microbes could propagate in the body and cause disease. Today, there is much incredulous inertia over the public health aspects of discoveries that a few tiny molecules can start a body cell propagating to form cancer. Yet it is upon this molecular-cellular level that the phenomena of cancer causation take place.

In the United States, where 1 in every 4 persons is estimated to develop cancer, prudence requires every effort to minimize exposures to chemical agents known to incite this disease. These agents are of widely varying molecular structure, but among them a recurring common denominator is that they tend to be biologically foreign substances that cells have not in the course of evolution learned to handle. This is a basic reason for concern over the growing custom of adding biologically foreign substances to food for various immediate technical purposes. It is simply not in the public interest to expose consumers to the unforeseeable risks of a host of biologically foreign food additives that may provide eye-appeal or advertising values but offer no nutritive benefit.

Pretesting of food additives upon animals, called for by all food-law amendments proposed in the last Congress, is unquestionably a desirable screening procedure; but it would be dubious practice to permit on this basis the addition to food of any chemical whatsoever simply on the grounds that such chemicals had not harmed some animals. Yet this is implicit in the industry-supported bills. At hearings in the last Congress, the American Public Health Association's food and nutrition section endorsed the National Research Council's position that decision to use an additive in food should be based, not only on assurance that it will be safe, but also that it will benefit the consumer; and pointed out that tests on animals cannot provide absolute assurance that an additive or any given dose of an additive will be completely safe for human beings. As an example, beta-naphthylamine, from which some presently-used food dyes are manufactured, is recognized as capable of causing cancer in man but not in rats or mice. If a single substance of this sort slips by the pretesting arrangements of the proposed bills, incalculable harm can result.

The wisdom of diverting large sums and a substantial part of the scientific personnel of the Nation to the testing of innumerable nonnutritive food additives for safety is dubious when fundamental questions as to what constitutes good nutrition remain to be solved. The consumer needs food for life and health, not protestations that he is paying his money for nonnourishing substances that someone else thinks will probably not harm him.

Public confidence in such protestations cannot be enhanced by the facts that the cancer-inciting action of one of the most dangerous carcinogens was discovered by the staff of a leading chemical manufacturer, but the senior scientist who made the discovery promptly lost his job. For the nearly 20 years that have since elapsed, manfacture of this substance has continued and it has been used to make food dyes. Meantime, consumers have been required to wait several decades for decisions by juries of test rats and dogs as to the safety of these dyes. While the argument has gone on, upward of half a million pounds of dyes made from this substance have been certified for use in food.

This type of experience is not unique. Although industrial research can be justly proud of high levels of achievement and integrity, there are instances where industry, government and university scientists have been fired or had their research terminated when their studies touched hazards associated with products of commercial interest.

In pretesting additives on animals, effects of carcinogens can be suppressed by intention or accident through solvents or diets, as apparent from testimony before your committee by Dr. Willard Machle. Proposed amendments to the food law require the Secretary to act on admission of new food additives within 90 days after receiving pretesting data from manufacturers. This period would not permit FDA to restudy a proposed additive for carcinogenicity under different solvent, diet or other conditions of test, which FDA has stated require several years. Yet the industry-supported bill would enable the manufacturer to take FDA to court and force approval for the additive on the basis of the manufacturer's data as to its safety. A declaratory judgment obtained under such circumstances would place a lasting seal of approval on the compound.

In view of these circumstances, in view of many considerations among which a few have been touched upon in this letter, in view of the need for conservative prudence in all matters affecting the food supply of the Nation, it seems clear that food additive legislation to safeguard consumers could evolve more soundly if food industries agreed upon their fundamental needs for genuinely useful additives, and then sought approval for a minimum of necessary, thoroughly studied substances mutually and generally agreed upon as safe and beneficial.

A precedent for this procedure is afforded by the 1938 agreement to limit artificial food colors to a list specified in FDA Coal Tar Color Regulations. This list could logically be extended to additives other than colors. Consumers merit such primary consideration, for a large part of the population does not raise its own food, but is dependent on processed foods and is a captive population in respect to what it can eat and what food adulterants it must accept.

The human digestive tract provides an endless and understandably attractive outlet for products of chemical ingenuity; but the health and power of the Nation depend in large part on its food, and it is to our peril if the human digestive tract is legislated into the role of a sewer for disposal of chemicals that afford only commercial advantages.

Reluctance of some major food industries to become outlets for byproducts of chemical imagination was indicated in hearings before your committee by Dr. L. G. Cox and Dr. Roy C. Newton, representing leading food processors. Their statements and the statements of food industry organizations at hearings in the 84th Congress emphasize the desire of food industries to perform to the best of their ability their vital and honorable role in providing the Nation with wholesome food.

In 1823, President Monroe enunciated the doctrine that the Americas were no longer open to exploitation by foreign powers. It seems time to enunciate the doctrine that the American stomach is no longer open to exploitation by biologically foreign food adulterants.

In the present Congress, food industries have the opportunity to take a definitive stand for wholesome foods through support of your bill with provision that cancer-inciting substances should under no circumstances be introduced itno food.

Very truly yours,

WILLIAM E. SMITH, M. D.

Morality and Security: The Forgotten Equation

EXTENSION OF REMARKS

OF

HON. JOHN O. PASTORE

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, February 21, 1957

Mr. PASTORE. Mr. Preisdent, I request permission to have printed in the Appendix of the RECORD an article written by Commissioner Thomas E. Murray, of the Atomic Energy Commission. A reprint of this article appeared in the magazine America on December 1, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MORALITY AND SECURITY: THE FORGOTTEN EQUATION

(By Thomas E. Murray)

The Christian effort at peacemaking from its origin undertook the task of civilizing warfare. It set itself against pacificism—the notion that war is always immoral. But it

set itself even more strongly against barbarism—the notion that the use of armed force is not subject to any moral restraints. Against these two extremes the tradition asserts that war can be a moral action, but only if it is limited in its purposes and methods by the norms of justice.

The fact today is that the Christian tradition of civilized warfare has been ruptured. The chief cause of the rupture has been the doctrine of total war fought to total victory—the kind of victory that looks to the total ruin of the enemy nation. This doctrine of totalization of war represents a regression toward barbarism. It is contrary to the central assertion of the civilized tradition, that the aims of war are limited, and that the use of force in war is likewise limited, not merely by political and military counsels of expediency, but primarily by the moral principle of justice.

THE DRIFT INTO BARBARISM

I need not trace the history of the rupture of this civilized tradition; many of you doubtless know it better than I. The patriotism of the French Revolution gave birth to the concept of the nation in arms, which led to the idea of universal military conscription. Our own Civil War foreshadowed the fatal notion that victory in war means unconditional surrender. A further step toward the concept of total war to total victory was the rejection by the belligerent governments and peoples of Pope Benedict XV's proposals, made on August 1, 1917, for a negotiated peace.

The historically decisive stride in the same direction was taken in World War II by the inception of obliteration bombing. One purpose of this new kind of air attack was to terrorize the enemy civil population, in particular the industrial worker. The developing logic of total war showed itself in the disastrous announcement at Casablanca in 1943 that unconditional surrender was the war aim of the Allied Powers. The immoral decision that the civilian population has no claim to immunity from destruction in war was ratified, with most fearful effectiveness, by the unfortunate American decision to drop atomic bombs on Hiroshima and Nagasaki.

Since World War II the technical possibilities for obliteration bombing have now become unlimited. The United States discovered the secret of the hydrogen bomb; later the Soviet Union came upon the same secret. The significance of this technological achievement cannot be exaggerated. Weapons of war have moved up into a new order of magnitude. Now the barbaric doctrine that everybody may be killed in war is assured of success. Now everybody can be killed in war—easily, quickly, cheaply.

Throughout the course of this whole historical development, no one has ever made the argument that war ought to be made total as a matter of reason and right. War simply became more and more total as a matter of fact and possibility. The immoral impulses of exaggerated nationalism began the development. The material achievements of modern technology completed it. Technological progress has finally removed all the limitations formerly imposed on warfare by pure circumstances—by restricted financial resources, by difficulties in transport and communications and, most important, by inferior weaponry.

This is the historic juncture at which we now stand. If limitations are to be imposed on warfare today, they can be imposed only by the free decisions of men. No other source of limitation presently exists. This is why we stand at a parting of the ways. Two paths are open. In his encyclical of November 2, 1956, Pope Pius XII called one "the road of justice," and the other "the steep slope of violence."

MAN AT A MORAL CROSSROADS

Man can choose to let the mad logic of total war dictate his decisions with regard to military policies and weapons programs. This steep slope of violence, followed far enough, leads toward the totality of ruin implicit in the today's technologically certain fact: Everybody can now be killed in war.

Or man can choose to shake off the hold which this mad logic has fastened upon his mind. He can elect to return to the road of justice—to the civilized tradition of limited warfare. He can recognize that the enterprise of war is inherently subject to certain limitations in its purposes and methods; that these limitations find their original source and their final authority in the moral order; that this order is sanctioned by God; that its precepts are therefore absolute in their command over all human action, including the action of war.

Only along this path of moral choice, as I shall say, will men find their way to security. In the last analysis, only the principle of justice can draw the line between civilized warfare and sheer massacre, between legitimate defense of the basic order of human life and the barbaric destruction of all order in human life. Unless this line is drawn, with absolute firmness, there can be no solid foundation for human security.

I do not say that it will be easy to draw the line at which the civilian claim to immunity from violence in war asserts itself in the face of the counsels of military expediency. But I do say that this civilian claim is made in the inviolable name of justice and that all military operations, defensive or retaliatory, must respect it. All expediencies cede in the face of right.

Similarly, I do not maintain that it will be easy to reverse the trend of a century-old regression into the immoral concept of war as total, and to reaffirm the trend of the Christian tradition toward the concept of war as limited. But I do maintain that this task is not impossible. It is always within the power of man to abandon false ideas and to dismantle the institutions built upon them. He can therefore do away with the idea and institution of total war, if only he decides firmly enough that he wants to do so, and that in the nuclear age he must do so.

He has already been powerfully helped to this decision by the facts themselves. On the practical level, the bankruptcy of any policy of total war is today amply evident. A total nuclear war, fought to a total victory, could only mean total woe. It would mean woe to the vanquished, in a sense far beyond the savage meaning of that barbarian cry. And it would mean woe to the victor too, when he found himself in a world of ruins, amid a humanity which would bear death in its very bones. Here is an argument that must give pause even to the most cynical exponents of violence.

For us, however, the rejection of total war must be more solidly based. Our appeal must be to the high principles of justice that lie at the heart of the western tradition of civilized warfare. Human reason has never refuted these high principles; the will of man has simply abandoned them. The tradition did not succumb to argument, but only to fact—to the fact of man's passions, as they are aroused by the violence of war and proceed to arm themselves with the products of technology.

Here perhaps I should note that the reason and moral conscience of America, too, have been obscured by the dark fires of wartime passion. Upon us, as upon other nations, there rests a responsibility for the rupture of the tradition of civilized warfare. For this reason, no less than for any other, there rests upon us a responsibility for repairing the breach.

The principles of the traditions are still with us, in all their undiminished vitality. The problem is to translate them into practical conclusions in two areas of urgent concern—first, in our military policy in general, and second, in a weapons program that will support our military policies. Here is the way I see the structure of the problem.

OUR PRESENT DEFENSE PROBLEM

The present goal of all the policies of the United States is to force the conflict with communism out of the field of armed violence into the areas of diplomacy, politics and economics. These areas are highly competitive indeed; but competition in them does not mean bloodshed. They are the chosen areas in which we undertake to urge the cause of justice for all men. Moreover, we must be continually mindful that the conflict with communism is basically spiritual; therefore, our victory will not be won without recourse to the sword of the spirit, which is the word of God.

The primary military contribution toward this general American goal must be the maintenance of the capacity to deter all unjust aggression, even of a limited kind. The primacy of this function of force is reinforced today, because our principal enemy will be restrained from the use of force only if we convince him that it will prove too costly to him.

This policy of deterrence may fail. Military aggression of one kind or another may occur. Peaceful methods of rectifying the injustice thus committed may likewise fail. We shall then be forced into war. This contingency must be faced now. The problem is to determine, in advance of this contingency, the military policies that will be consistent with the tradition of civilized warfare.

At one extreme, justice requires that we reject the concept of total nuclear warfare. The bald fact that large nuclear bombs can wipe out whole civilian populations does not put an end to the claim of the civilian to immunity from the violence of war.

At the other extreme, our tradition of civilized warfare does not require that we succumb to the deception involved in the Soviet proposal that all use of nuclear weapons be outlawed. This propaganda aims to make the world believe that any use of nuclear weapons inevitably means the totalization of the conflict. This is not true. A nuclear war can still be a limited war. To believe otherwise is to deny that man is a rational being capable of controlling his own actions. It is likewise to assert that American military men are incapable of making intelligently moral use of their new weapon.

Furthermore, in the present situation of international lawlessness, a total renunciation of nuclear armaments by the United States would mean the betrayal of our moral tradition, which requires that we should not abandon the cause of justice or leave ourselves unprepared to defend it effectively.

Both of these extremes contain the moral fallacy of totalization. Between them we must find a middle course, the road of justice. It leads to a firmly defined but flexible military policy that will recognize two principles as controlling in the use of nuclear arms: first, the military principle of necessity of usefulness; and, second, the higher moral principle of justice in the use of force.

This brings me to the next question. It is the practical question of developing a nuclear-weapons program which will be consistent with the foregoing general military policies.

Here I want to lay all possible emphasis on the initial principle that our military policies must control our weapons program. The fatal error we are presently in danger of making is that of allowing weapons to dictate policy. The danger is really twofold: First, lest we allow weapons technology to

control the weapons program; and second, lest we allow the stockpiled results of the weapons program to control military policies with regard to the use of the stockpile. To succumb to these related dangers would be to turn the whole of United States policy upside down.

RATIONAL NUCLEAR ARMAMENT

Early this year I outlined a nuclear-weapons program that would avert these dangers and give to moral principles and military policies their proper primacy over weapons. To the program I gave the title, "Rational Nuclear Armament." There were three proposals.

The first concerned the size of thermonuclear bombs. Three considerations led me to my position. I stated the first in a speech given on November 17, 1955, when I said that the advent of the H-bomb "taught us, not only that we had a new weapon, but that we had a different kind of weapon * * * The thermonuclear bomb crosses the threshold into a separate category of power" (America, December 3, 1955, p. 269).

The second consideration, closely related to the first, is the fact that it is technologically possible to enlarge indefinitely the qualitatively new dimension of destructiveness created by the hydrogen bomb. I adverted to this fact in a statement before the Senate Subcommittee on Disarmament on April 12, 1956, in these words: "We know that there is no upper limit to the size of bombs that can be made" (America, April 28, 1956, p. 100).

The third consideration is likewise something that we know. As I put it in the November 1955 speech cited above, "there is a limit to the number of large thermonuclear explosions that the human race can withstand without harmful bodily effects," consequent on radioactive products.

From these three considerations a conclusion follows. We ourselves must make a responsible decision with regard to the size of H-bombs that we undertake to manufacture. This decision is not only technological and military, but also moral. It must be controlled by the moral principle of justice as well as by the military principle of usefulness. My proposal was that we make this imperative decision, setting an upper limit to the size of H-bombs to be placed in stockpile. I have already given it as my conviction that the weapons we have in hand are large enough. Indeed, they may prove to be too large. Once we make this decision regarding size, we can be free to give attention to the problem of improving the deliverability and consequently the military usefulness of weapons in the range up to this limit. In addition, we should set a limit to the number, as well as to the size, of the large weapons that we accumulate. The reason is the presumption that there are only a limited number of uses, militarily and morally justifiable, to which they might be put.

My second proposal was that we concentrate increasingly on the development of nuclear weapons in the lower order of destructiveness and that we equip ourselves with a wide range of weapons in this order. The purpose of this policy is to strengthen our capabilities for waging all the kinds of limited warfare into which we may possibly be forced.

Third, I came to the question of tests. Recently there has been much debate concerning the hazards to health involved in past and continued testing of large nuclear weapons. This is an area in which at the present time a great deal of uncertainty exists. The greatest possible study ought to be given to the entire problem of the dangers to health involved in the testing and use of nuclear weapons. However, my proposals have grounds of their own, even apart from the problem of these hazards. They follow from the two major policy decisions I have recommended. My proposals are, first, that no tests should be held of weapons whose magnitude would exceed the upper limit which we must set to the size of our nuclear weapons. Second, that we should accelerate the testing of a wide range of weapons in the lower order of nuclear force. The reason is that our objective should be a balanced stockpile, suited to every strategic and tactical need, but confined within the bounds set by justice to the use of force.

The weapons program I proposed is rational in two senses. It is consistent with the moral principles of the civilized tradition, and it is adapted to the military necessities of the nuclear age.

One further comment needs to be made. My proposals for a rational weapons program have to be considered as a structured unit, consistent in themselves and with their premises. This is particularly true of the proposal with regard to tests. This proposal cannot be called substantially similar to any of the proposals that were made during the recent election campaign.

The program that I propose is designed to carry us through the critical era of uncertain duration which confronts us. The crisis concerns, at bottom, the nature of man. But by the same token, it concerns the nature of war as a human action. The danger in the crisis is lest we commit ourselves to the steep slope of violence that ends in the abyss. But let us not overlook the opportunity which the crisis likewise presents—the greatly historic opportunity to choose the road of justice and to undertake the restoration of the tradition of civilized warfare.

It is with a view to grasping this opportunity that I put forward my program for rational nuclear armament. Its several proposals are counsels of strength, not of weakness. But the strength they counsel is both military and moral. Therefore, they constitute a program for security in the present crisis. They recognize that the security of America does not reside solely in its military power but more basically in its moral strength—the kind of strength that ultimately controls the use of power and makes it serve the ends of justice.

MORALITY AND SECURITY

Our national and international security has been undermined today largely by the rupture of the tradition of civilized warfare. This, and not the discovery of atomic energy, lies at the root of the terror experienced by the world at the thought of war. There will be no security as long as the rupture of the tradition endures. We shall have no security as long as we are prisoners of the moral fallacy of totalization, that is, as long as we consent to the immoral notion of total war, as long as we dream of the impossible notion of total victory, and as long as we cherish the empty illusion that our national security is totally reposed in massive military might. These fallacies furnish the impulse toward the steep slope of violence.

A program of rational nuclear armament would go far toward rescuing us from these disastrous fallacies. In setting us on the road of justice it would likewise set us on the road to security.

A balanced stockpile, resting on a broad base of small atomic weapons, would not indeed be the most destructive stockpile that we are capable of producing. It would not contain the increasingly immense weapons that the United States could manufacture, if we wanted, but that we could not use without carrying the enterprise of warfare over that fixed line, drawn by the principles of justice, which divides civilized warfare from barbarism. Moreover, the kind of stockpile I propose would not be the cheapest that could be assembled; it would not equip us to deal out the greatest number of deaths for the least number of dollars.

But for my part, I reject the reckless line of thought which would identify our national security with the accumulation of the most destructive possible nuclear arsenal and the cheapest possible nuclear arsenal. This kind of armament, heavily overweighted on the side of megaton bombs, would make neither military nor moral sense. It would not strengthen our military position in the face of threats from the Soviet Union or from other sources. Still less would it buttress our moral standing in the eyes of the international community. On the contrary, it would endanger both. And it would, in consequence, undermine our security.

This brings me to what I call "the forgotten equation." I mean the equation between morality and security. This equation is inherent in the Western tradition. The first security that a civilized nation must protect is the security of its own moral life. The nation is secure in proportion to its fidelity to the moral norms that form the spiritual substance of the national life. Concretely, if the United States is obliged to have recourse to armed force in its own defense, it must understand that it is committed to a moral use of force, on penalty of self-destruction—I mean the destruction of its moral self.

The security which America seeks cannot be simply physical. It must also mean the protection of the spiritual identity of America as a member of the family of civilized nations. If America were to lose its own soul by sins of unjust violence, it matters little what else it might gain.

The tragedy is that in our day this equation between security and morality has been forgotton. We have come to believe that security means only one thing—massive power. And we have forgotton that the methods of power, when used in violation of the canons of justice, will undermine the basic moral security of the whole edifice of civilization which they should undertake to protect.

The equation between morality and security is, I say, part of our tradition. The nuclear age has confronted us with another equation whose ultimate terms are terrible indeed. I mean the equation between the immoral use of nuclear force and the destruction of all human security, even the fundamental security of human life itself. Surely this new equation should serve to jog our memories and bring to mind the old equation that we have forgotton. The reforging of the broken link between morality and security is itself an important element in the restoration of the tradition of civilized warfare.

To this task of restoration we are summoned today by the stringent demand of a moral obligation. It is a duty that we owe to ourselves as a civilized Nation. It is further a duty that we owe to Almighty God, whose percepts presided over the formation of our constitutional commonwealth.

God's Time

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, February 21, 1957

Mr. GOLDWATER. Mr. President, one of Arizona's outstanding citizens, Mr. Stephen C. Shadegg, has written for the Episcopal Church and its members a paper entitled "God's Time." This writing is so thought provoking and so typi-

fies the people of this country who recognize our real strength as being a spiritual one, that I ask unanimous consent that it be printed in the Appendix of the RECORD, so that all may benefit by reading it.

Stephen C. Shadegg is senior warden of Trinity Cathedral, Phoenix, Ariz., and is in his third year as chairman for laymen's work in the missionary district of Arizona; 1952 man-of-the-year in Phoenix, Mr. Shadegg is in the pharmaceutical manufacturing business.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOD'S TIME

(By Stephen C. Shadegg)

Not long ago a friend of mine was returning from an assignment he had accepted as a layman in the church. He found himself sharing a pullman seat with a clergyman of another communion. Their conversation started, naturally enough, with their present travels.

My friend explained where he had been and what he had been doing. He told of his work as a member of the presiding bishop's committee on laymen's work in the Episcopal Church.

The clergyman was most interested. He congratulated my friend for his efforts and said, "And you do this all on your own time?"

My friend replied, "No, I do all these things on God's time."

GOD'S TIME

Our lives are truly lived on God's time. He gives us life, health, talent, all our physical and mental resources, and then confirms His omnipotence by giving us freedom of choice.

If we accept these great gifts and acknowledge the Giver, then our total attitude toward our every day life must change. And every Christian layman must make this basic acknowledgment before he can become an effective instrument of God's work.

BE MINDFUL OF THE OWNER

I once loaned a friend a power tool from my hobby shop. He used it with great care to complete a project at his home. Each night he put it back in its case with the chips and sawdust brushed away. When he returned it to me he said, "I was mindful each time I used this thing that it belonged to you."

Since our lives belong to God who gave them to us, should we not also be mindful as we use them each day that we are holders only in temporary possession of the bountiful gifts of a loving Father.

Certainly God means for us to use our lives in our every day work to acquire shelter and food for our families, to earn those things which add to our creature comforts. But this fact only increases our debt to Him.

DO IT YOURSELF

There is a current enthusiasm for "do it yourself" projects. We are constantly bombarded by advertisements telling us we can paint the bathroom or repair the cellar steps or build a bookcase or a planting box, and a great many of us find relaxation and profit in doing these things which are not connected with our regular occupation.

Our Lord was speaking to laymen like you and me when he said "Go ye into all the world and preach the Gospel." And He did not reserve that statement for commencement exercises at some theological school.

THE TIME IS NOW

Our world is currently divided into two armed camps. Most of us, who are not completely preoccupied by the material productivity of our civilization, are aware of this struggle. We know there is a conflict of ideology which will never be resolved without total victory for one side or the other.

We are sometimes vaguely, sometimes acutely, aware of the disharmony of our times. Some of us even get around to the point where we ask ourselves, "Is there something I can do about it?"

FIRE

If the house halfway down the block suddenly caught on fire, you would not turn your back, shrug your shoulders and say, "It is the fire department's job to discover fires and to extinguish them."

Our world abroad and at home is flaming with a force far more destructive than fire. Can we turn our backs and say "It is the clergyman's job to overpower the forces of spiritual and moral decay which threaten us"?

PASSIVE ACQUIESCENCE

Monday through Saturday we are quite willing to accept all the benefits of freedom and of peaceful society here at home which were created for us by the Holy Spirit. Our political institutions, which we prize, were not the result of the signing of any declaration or constitution by a group of individuals. Yet we have come to accept the privilege of political freedom, of economic opportunity and social advancement as rightful possessions.

Our failures can best be recognized when we admit that most of us are only passively acquiescent when we say, "Almighty God, Father of all mercies, we, Thine unworthy servants, do give Thee most humble and hearty thanks for all Thy goodness and loving kindness to us."

Americans are great for organizations. We organize the umpteen agencies of the Community Chest. We help feed the orphans in Korea. We give our blood to the Red Cross. We unite with service clubs which are organized with lofty ideals as an objective. But too many of us do these things without knowing why we do them.

The only compelling reason for you to work on the Community Chest, give blood to the Red Cross, or serve on the Boy Scout Council is to be found in this direction: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind * * *. And * * *. Thou shalt love thy neighbor as thyself."

GIVE ME A JOB

In any church there are always many people who express a sincere desire to do something. They serve on vestries, they work in the women's organizations, the every member canvass, and all the multitudinous groups which go to make up the parish life.

Concerned Christians are always seeking some program, but we must recognize that it is absolutely necessary to be God's servant before you can do God's work. This is not an easy arrangement to achieve, it requires complete and total surrender and commitment.

How many times have you refused something because you say, "I do not want to be under any obligation."

The ego in man rebels against acknowledging our total indebtedness to the Creator. Yet there is no other point of departure. We must confess our total obligation before we can make total commitment. If we are totally committed, then we can no longer discharge our obligation to Almighty God by giving Him an hour of His time on Sunday morning, and for our previous passive acquiescence we substitute a passionate affirmation.

Only total commitment can make us true witnesses, that our hearts may be unfeignedly thankful; and that we show forth Thy praise, not only with our lips, but in our lives, by giving up ourselves to Thy service.

There is an old bromide that a public speaker should stand up to be seen, speak up to be heard, and sit down to be appreciated. It might be said that a Christian layman must necessarily kneel before God in humility, stand up for God in gratitude, and speak out for God with courage.

GOD'S WORK: OUR PLACE IN IT

God's work is to bring peace to all men and our assignment is to work and to pray and to give for the spread of Christ's kingdom on earth.

The committed layman will find that every hour of every day there is opportunity to use God's time for God's purpose. He will measure every act of his life, every statement he makes, every business arrangement he concludes against that one perfect standard of morality and love and conduct established for all men to see and follow by our Lord and Saviour, Jesus Christ.

St. Paul says, "There are varieties of gifts but the same spirit. There are varieties of service but the same Lord. There are varieties of working, but it is the same God who inspires them all in every one. To each is given the manifestation of the Spirit for the common good."[1] And then he says that all men receive certain gifts, some of knowledge or of faith, some of healing, some of prophecy, some of working miracles.

OUR ASSIGNMENT

So we are commissioned, you and I, to use what gifts we possess for the good of all men. God, the Holy Spirit, is in each one of us. Therefore, we must be committed to His divine purpose. We must both be and do. God's church grows and functions through us, and we function and grow through God's church.

DEEPEN THE WORSHIP SERVICE

It is our task as Christian laymen to deepen and strengthen the worship of our church. We cannot be God's servants and do God's work unless we know God's purpose for us. We cannot do, be, or know without God's help.

To help us in this phase of our assignment, we have the gospel of the word and sacraments, the strengthening help of daily prayer, and the inspiration of a vital faith preserved and bequeathed to us by the Church of the Apostolic Succession.

To deepen our own worship and that of those about us, we must certainly know more about the worship of the church through the study of scripture, through the reading of church history and doctrine, through the participation in quiet weekends and meditations.

Because we are weak human beings, the habits and patterns we establish in our lives are important. It is easy to be in church every Sunday. It is most difficult to make it just once a month.

We deepen and strengthen our worship when we bring God into our daily lives and daily conversations, and certainly in all our plans for the future.

EXTEND CHRIST'S KINGDOM

It is also our responsibility to extend Christ's Kingdom on earth, for we are members of that blessed company of all faithful people which is the mystical body of our Saviour, Jesus Christ.

When our commitment to Him becomes total, when we substitute a passionate affirmation for a passive acquiescence, we are then compelled to be evangelists by our lives and our every act.

We can and should survey the needs of our church. We should be familiar with the church's program at home and overseas. Perhaps there is a parish mission near us which needs activating. Perhaps it is the

[1] Revised standard version.

man at the next desk who needs an invitation to join you in the worship of God.

We go through life knowing many people on a rather casual basis. We are willing to discuss politics, business, baseball, the world's affairs, the boss' failure, and sex with almost anyone we know. Why should we then be reluctant to discuss the one thing most important in our lives and in the life of every individual we meet?

SUPPORT

Whatever we give to God is no more than returning to Him what is already rightfully His. Some people will criticize the rector for always discussing money. Some people will say, "The church never calls on me unless there is an every member canvass."

Unfortunately, many clergymen are frightened by money and budgets. We have compelled the church in many instances to live on handouts and by subterfuge such as waffle suppers, ice cream socials, Chinese auctions, and so forth.

Certainly our Lord discussed money many times. Every activity in which you and I participate costs us something, lodge membership, politics, the country club, service club, the polio foundation, and usually a man's interest in a project can be measured by the amount of financial support he gives to that project.

St. Paul lays enormous stress on the importance of the gift of faith. If you want to strengthen your personal faith, deepen your personal religious life, and extend God's Kingdom, you take the first great step when you begin to tithe. The every-member canvass is the opportunity to do something in a concrete material way to express our faith, and it is far more beneficial for the giver than for the receiver.

USE YOUR SPECIAL TALENTS

As God gives us wisdom, knowledge, faith, healing, miracles, and prophecy, and as we accept these gifts, we also accept the responsibility of using them in God's service.

Businessmen can assist with the business affairs of the church and its fiscal policies. Advertising men can use their special skill to make the church known. Engineers and social workers can survey the needs and opportunities of the parish. Each man, in his own work, can and must be a missionary.

God's time is eternity. You and I have only a few fleeting seconds in history. Ours is a desperate urgency.

With God's help, we can be His servants. With God's help, we can do His work. For this we were created. For this God gave us our talents. For this God loans us His time.

We beseech Thee, give us that due sense of all Thy mercies, that our hearts may be unfeignedly thankful; and that we show forth Thy praise, not only with our lips, but in our lives, by giving up ourselves to Thy service, and by walking before Thee in holiness and righteousness all our days; through Jesus Christ our Lord, to whom, with Thee, and the Holy Ghost, be all honor and glory, world without end. Amen.

Postal Deficit

EXTENSION OF REMARKS

OF

HON. F. JAY NIMTZ

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. NIMTZ. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include the following editorial from the South Bend, Ind., Tribune of February 18 concerning the problem of ever-growing deficits in the operation of the Post Office Department:

MAIL FINANCING PROBLEM

In good and bad economic times, the Post Office Department has operated in the red. A series of balanced annual budgets in that Department would be sensational news.

The habit of regarding this condition as normal, however, is becoming more embarrassing now. The idea that ever-bigger postal deficits can be safely added to the general tax load is definitely outmoded.

Since the end of World War II the "traditional" postal deficit has been ballooning. In this period the total postal operating loss has soared to almost $5 billion. A deficit of more than $700 million is indicated in the current fiscal year.

This, of course, is intolerable. The old argument as to whether the Post Office Department should be operated strictly as a business or as a public service, no matter how much it loses, is being watered down.

Even those who put all the emphasis on public service, irrespective of actual costs, must admit that the service is becoming too expensive for taxpayers in general. The sensible thing is to make actual users of the service pay more for it.

Apparently this will be done in the current session of Congress. The postage rate increases probably will not produce a balanced Post Office Department budget but they will cut the annual deficit substantially.

A letter can be mailed today for the same first-class postage that was in effect the depths of the great depression back in the 1930's. This doesn't make sense while the postal operating deficit is soaring.

Maybe we can't reasonably expect our postal service to be entirely self-supporting. But postage increases at least to reduce the operating deficit are in order. The deficit has increased $150 million since Congress refused to pass a postage increase last year. This time, it looks as if the legislators have to do something about it.

It would be encouraging if, meanwhile, the top postal officials were exerting themselves for all possible internal reforms. The bookkeeping practices in the postal department are not entirely in harmony with the realities. All the losses in the carrying of certain types of mail are not as real as the bookkeeping makes them appear.

The Hoover government reorganizing commissions found a lot of flaws in the Post Office Department, and recommended changes for economy and efficiency. Postal officials and Congress have not acted for complete reform on that pattern.

The need of better service will be spotlighted if Congress sanctions higher postage rates. Greatly improved service and smaller annual deficits, if any, apparently can be achieved without spectacular increases in postage.

More Evidence on H. R. 11

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1957

Mr. PELLY. Mr. Speaker, under unanimous consent to extend my remarks, I include a letter from the Washington Gasoline Dealers' Association, Inc., whose offices are in Seattle.

Many conflicting statements are being made about H. R. 11, but here is strong evidence that the small independent gasoline retailer has been put on the spot to oppose legislation which the big oil companies do not favor.

This is the text of the letter:

WASHINGTON GASOLINE DEALERS' ASSOCIATION, INC.,
Seattle, Wash., February 11, 1957.

The Honorable THOMAS M. PELLY,
Representative in Congress,
House Office Building,
Washington, D. C.

DEAR MR. PELLY: I wish to thank you for mailing me the excerpt of the CONGRESSIONAL RECORD. Your statement is true, in that major supplying companies are requesting their lessee operators to write to their Congressmen, asking them to oppose the passage of H. R. 11, the equality-of-opportunity bill.

We have received information that some oil companies demand a copy of the operator's letter to his Congressman. This really puts the operator on the spot. Most of them have short-term leases and must comply with the requests or be subjected to retaliation by their supplier.

If the operator does not write his Congressman the supplier will know, because they will not have received a copy, they will want to know why, and if he does write he must make sure it complies with their requests. The pressure exists in either case, and I sincerely hope I have presented this in a manner that you will fully understand the reasons for the letters from operators opposing this bill.

If this pressure did not exist, I am positive you would find the letters from the operators highly in favor of this bill, just as they were during the last session.

We sincerely hope you will do everything within your power to secure adoption of the equality-of-opportunity bill, which will curb price discrimination.

Respectfully yours,

MERLE N. DIHEL,
Managing Director.

Moral Tone of the Administration

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1957

Mr. PORTER. Mr. Speaker, the President has permitted Robert Tripp ROSS to resign. This is quite in keeping with the President's refusal to dismiss any of his official family, no matter what they do. The following article by Gerald W. Johnson appeared in the New Republic on February 18, 1957, and is, in my opinion, an accurate estimate of the moral tone of the present administration:

THE HIGH MORAL TONE

(By Gerald W. Johnson)

James Reston, bubbling with enthusiasm, said in the New York Times that the way Mrs. Charles E. Wilson called Ike's hand in the National Guard affair was the nicest thing that has happened in Washington since Bess Truman told Harry to watch his language. Mr. Reston had something there, but one nicer thing could have happened—Mr. Wilson could have resigned on the spot.

The nicest part of that would not have been the elimination of the Secretary of Defense. It would have been finding someone quitting this administration on a point of honor, and not in order to avoid or to cover up a stink. Wilson told the truth about draft dodgers who rushed into the

National Guard hoping to escape Korea, whereupon the President publicly called the statement unwise and made without thought.

That was enough, but worse was behind it. Just a few days earlier the Secretary of State had made a remark that seemed to be an unwarranted reflection on the courage of British and French soldiers. But did the President call that unwise and thoughtless? He did not. On the contrary, he said that Dulles is the greatest Secretary of State in history, thereby sweeping under the rug Thomas Jefferson, John Quincy Adams, Daniel Webster, and William H. Seward.

So it seems that when Wilson gets out of line he is unwise and thoughtless; but when Dulles gets a great deal further out of line, he is a great man. If that isn't harsh discrimination, what is it? If Wilson had resented it to the point of quitting his job, the act might have been foolish, but it would not have been snide, and it certainly would not have been smelly.

Back in the old days, before the moral tone of Washington had been elevated by substituting Republican for Democratic jobholders, men were always quitting or being fired for reasons that had no evil smell at all. From the time when Moley pulled out because he didn't like the direction the New Deal was taking, to the time when Truman bounced Henry Wallace for denouncing an administration policy in a public address, many men departed suddenly for reasons that were no reflection on their ethical standards. But the last man who has quit this administration on such a point was Martin Durkin, and that happened so long ago that it has been forgotten.

The Democrats, with their low moral tone, regarded an influence-peddler as a rogue, and their idea of handling a rogue was to give him the boot. Once, and only once, they caught an official ranking as high as an assistant to the Attorney General using his office for personal profit, and they threw him down the front steps amid an uproar that woke the babies in Baltimore.

But things are different in the purer moral atmosphere that now bathes Washington. When in long succession a chairman of the national committee, a Chairman of the Interstate Commerce Commission, a Chairman of the Federal Trade Commission, a Secretary of the Air Force, and a Secretary of the Army are charged with using their official positions to line their pockets in a way that makes the unlamented assistant to the Attorney General look like the smallest of pikers, never a harsh word is spoken. We are asked to believe that they are noble characters, only slightly misguided, and they are fet go with silver trays, with medals, with honorary reviews, with eulogies on White House stationery. Far from being kicked, they are, as Truman put it, "kissed on both cheeks."

An elevated moral tone is a wonderful thing.

Roosevelt "canned" his Secretary of Commerce ruthlessly, but it was because he needed the job for Henry Wallace, not because there was any suspicion that Jesse Jones was making a private profit out of the office, nor even that, like Hobby, he had been asleep on the job. Dean Acheson quit Government service as a protest against devaluation of the dollar, not because he had been advising Government, on one hand, and private contractors dealing with Government, on the other, like the Dixon-Yates man.

Many Democrats quit the Government in wrath, some in chagrin, a few in genuine despair, but only one high-ranking official quit it in shame. And his shame was broadcast to a scandalized world; the immoral Democrats had not discovered the use of official goose grease to palliate stenches. They knew only one way to sweeten the atmosphere and that was to eject the stinker from the premises.

How different it is now that the moral tone of Washington has been elevated. Not only is the grease barrel inexhaustible, but once the misguided character has been duly greased at the White House, the one-party press can be relied to stand by with rosewater in gallon buckets to drench him 'n case any slight fetor should continue to permeate the air.

Still, there are some people who remain hard to convince that all is sweetness and light—for example, Mrs. Wilson—and who insist on injecting candor, apparently never seeing how ruinous it can be to a high moral tone.

The Confederate Battle Flag

EXTENSION OF REMARKS
OF
HON. ROBERT T. ASHMORE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. ASHMORE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an address by Senator John D. Long, of Union County, on The Confederate Battle Flag, which was delivered to the Senate of South Carolina on Tuesday, January 22, 1957; also a senate resolution which was unanimously adopted Tuesday, April 10, 1956.

The speech and resolution are as follows:

Mr. President and gentlemen of the senate, first permit me to acknowledge my indebtedness and give thanks to Dr. J. H. Easterby, of the South Carolina Archives Department; also to Prof. E. Melton Coulter, professor of history in the University of Georgia; and to the Historical Quarterly edited and published by the Georgia Historical Society at the University of Georgia at Athens, Ga., for the historical information contained in my remarks on this occasion.

The Confederate battle flag hanging officially beside Old Glory and the Palmetto State flag in the senate chamber is the symbol of the only nation known to history whose soldiers wore themselves out whipping and chasing the armies of the enemy and thus lost a war by utter exhaustion and collapse.

During its short life span the Confederate States of America had many different flags, but only one battle flag. The Confederate battle flag is of chief interest to us and it is appropriate that our attention be directed to it.

The first provisional flag of the Confederacy was called the Stars and Bars and it looked so much like the Stars and Stripes that the similarity caused much confusion on both sides during the smoke and fury of the battle of First Manassas (called Bull Run by the Yankees). It led each side to charge the other with having used each other's flag for purposes of deception. And particularly a unit in this battle which turned out to be Confederate and which brought victory to the Confederates, was for a time anxiously viewed by both sides, each hoping it to be their own.

Out of this situation arose the famous Confederate battle flag, the flag which is so widely waved today and generally considered the national flag of the Confederacy.

Immediately after the battle both Gen. P. G. T. Beauregard and Gen. Joseph E. Johnston decided that the Stars and Bars should no longer be used by the Confederate armies under their command.

General Beauregard thought that the solution of the dilemma lay in supplanting the Stars and Bars with another Confederate flag and in pursuance of the idea he wrote to William Porcher Miles of South Carolina, who had been appointed chairman of the flag committee in the Montgomery convention, to have the provisional Congress of the Confederate States supplant the Stars and Bars with another Confederate flag.

Miles replied on August 27, 1861, that he, too, thought that the Stars and Bars should be changed and that he had never favored its adoption. He felt that the question of a new flag should be left to the congress of the permanent government, which would come into existence the next year, actually February 22, 1862.

In the meantime the editor of the Southern Literary Messenger (Richmond, Va.), volume 34 (January, 1862), page 67, said that everybody was tired of looking at the Stars and Bars, which resembled the Yankee flag, "and that is enough to make it utterly detestable."

Thereupon Beauregard and Johnston, with Gen. Gustavus W. Smith of the Shenandoah Command agreeing, decided to devise a battle flag of their own. Many designs were submitted to this group of generals.

The one finally chosen in September was the flag that Miles had originally urged on congress instead of the Stars and Bars and so history records that to a South Carolinian belongs the honor of designing the famous Confederate battle flag.

And for that reason there is a unique and added appropriateness to the hanging of this famous and beloved banner in the legislative halls of the General Assembly of the State of South Carolina, the first State to secede from the Union in the formation of the Confederacy.

The flag was to be a square at the instance of General Johnston, 4 feet by 4 for infantary, 3 feet by 3 for artillery, 2½ feet by 2½ for cavalry. It was a red field, across which from corner to corner ran a Saint Andrew's cross in blue, in which were set 13 white stars. The blue cross was separated from the red field by a small white fillet or border.

The three colors used in the flag are red, white and blue. The colors are well contrasted and durable. It is significant that the colors are emblematic of the three great virtues of valor, purity, and truth, and are the same colors adopted by the first American Republic. Thereby tradition ran true from the old to the new.

Like the Stars and Bars this flag was never adopted by Congress, but the War Department issued it to the troops and thereby gave its approval. The flag soon came to be carried in all the Confederate armies and after the first battle of Manassas was used throughout the remainder of the war. The Confederate battle flag thus came to be honored and loved both by soldiers and civilians as the flag of the Confederacy.

However, the flag could not be used on ships at sea for it could not be reversed as a sign of distress, since it was the same in either position. Therefore, the Navy used the Stars and Bars until successive national flags, three in number, were adopted by the Congress, and such use is the extent of their historical significance.

And now so much for the history of the Confederate battle flag which is the flag that is universally known and recognized as the flag of the Confederacy. The banner is often referred to as the symbol of the lost cause. Be that as it may there are those who believe, nevertheless, that no cause is lost whose principle is right.

The nation the Confederate battle flag represented perished at Appomattox, but the

flag waves on. The men who fought and died under the folds now furled won the admiration of the world by their valor. Let me close with the tribute of a great English poet to valor that befits so aptly the Confederate cause and the Confederate soldier in risking all against invasion of their homeland.

"For how could man die better—
Than facing fearful odds—
For the ashes of his fathers—
For the temples of his gods!"

The Confederate battle flag was draped in the senate under the following senate resolution unanimously adopted Tuesday, April 10, 1956:

"S. 749, Mr. Long: a senate resolution to provide for the draping of the battle flag of the Southern Confederacy in the chamber of the Senate of the State of South Carolina;

"Whereas the battle flag of the Southern Confederacy represents an era in the history of America immortalized in the hearts of all southerners; and

"Whereas this flag symbolizes the divine cause of human freedom for which our forefathers fought and for which the men, women, and children of the South displayed a courage and devotion to duty unparalleled in the history of the world; and

"Whereas the battle flag of the Southern Confederacy inspires our dedication to the resurrection of truth with glorious and eternal vindication; and

"Whereas the battle flag of the Confederacy does not hang in the senate chamber; and

"Whereas it is believed that the flag should have such a place: Now, therefore, be it

"Resolved by the Senate of the State of Carolina, That a committee of three from the senate composed of the chairman of the finance committee, the chairman of the judiciary committee, and the chairman of the education committee, act with the clerk of the senate to secure a battle flag of the Southern Confederacy, select an appropriate place in the chamber of the senate, and supervise the draping of the flag. Such expenses as are necessary in the purchase of the flag and for the installation shall be paid from the approved accounts of the senate."

The Stars and Stripes of the United States, the Palmetto State flag of South Carolina, and the Confederate battle flag of the Confederated States of America now are draped above the rostrum of the senate with the following plaque: "Flags of the sovereign people and the senate."

E-Bond Interest Boost Too Little and Too Late

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. MULTER. Mr. Speaker, with further reference to my bills, H. R. 2480 and H. R. 2481, I commend to the attention of our colleagues the following article by Leslie Gould, financial editor of the New York Journal-American. The article appeared in that paper on February 15, 1957:

E-BOND INTEREST BOOST TOO LITTLE AND TOO LATE

The Treasury's proposal of a 3¼ percent interest rate on the savings E- and the H-bonds is a case of too little and too late.

In order to collect the 3¼ percent interest on the savings E-bonds, the buyer must hold the bonds until maturity—1 month short of 9 years. If he sells before 3 years, he will get less than 3 percent.

While this new program is slightly better than the present 3 percent return on the old bonds, the average saver still is better off just leaving his money in a savings bank or a commercial bank that pays immediately 3 percent or better.

The rate should be at least 3½ percent. The Treasury, though, apparently is pinching pennies where the little, thrifty citizen is concerned. On short-term borrowing the Treasury has been paying as high as 3⅓ percent very recently. These are 90-day loans, usually bearing the lowest interest coupon.

In the present market, Treasury notes maturing next year are selling at prices that yield 3.28 percent and on 3-year paper the interest return is 3.36 percent. Yet, under this new program, the savings E-bond holder gets less than 3 percent if he sells before 3 years.

This is a ridiculous and unfair situation and discrimination against the small, thrifty citizen.

TOPPED OTHER BONDS AT FIRST

When the savings bonds were first advanced, they paid an interest above the current market for other Government bonds—a half percent or more.

Regular bonds were returning 2¼ to 2½ percent against 3 percent for the savings bonds.

As a result of Government financial policy and Federal Reserve action this spread has been eliminated, and in recent months other Government bonds have been returning higher yields—substantially so.

For more than 2 years this column has been urging a higher interest on the savings bonds. Patriotism is no longer involved. This is simply a case of hiring money in a competitive market. The competition is with the bond market and banks.

Because there is this discrimination against the smaller saver, the redemptions of savings bonds have been running ahead of sales. The new proposed 3¼ percent hardly is enough to change this.

SHOULD BE TAX EXEMPT

The smart investor will, as noted above, leave his money in a savings bank or a commercial bank. If his tax bracket is high enough, he will buy tax-exempt municipal, State, and public authority bonds. These now return 4 percent or better and the income is exempt from Federal income taxes.

The savings-bonds interest is subject to income taxes. As an additional "sweetner," this interest should be made tax exempt, with possibly a limit on the amount of bonds any individual can hold.

The Treasury is proposing that the present limit of $20,000 bonds to an individual be reduced to $10,000. That, too, is silly, unless the bonds are made tax exempt.

Tito Unwelcome

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1957

Mr. PATTERSON. Mr. Speaker and distinguished colleagues, several months ago millions upon millions of genuine American citizens were suddenly tormented by the rumor that a Communist dictator might receive an official invitation to visit the United States. At once the thought of such an unprecedented spectacle caused a mighty wave of protest that was heard from the Atlantic to the Pacific, from the Canadian border to the Gulf of Mexico.

I myself along with other Members of this distinguished body was one who raised a strong voice of protest against any forthcoming visit of Marshal Tito whose hands are still red with the blood of thousands of Yugoslavians.

Mr. Speaker, let us not forget the American airmen slaughtered by this henchman, let us not forget the persecution of all forms of religion that he sponsored in Yugoslavia, let us not forget the countless other crimes that Tito committed against humanity. Above all, let us never insult the dignity of the American people by permitting such a tyrant to come to the shores of this Nation.

One of the most factual, clear-cut, and concise opinions on any forthcoming visit of Marshal Tito came to me from the Valley Council No. 23, Knights of Columbus, of Ansonia, Conn. So impressive was the Valley Council's letter that I ask unanimous consent to insert it here as a part of the CONGRESSIONAL RECORD.

KNIGHTS OF COLUMBUS,
VALLEY COUNCIL No. 23,
Ansonia, Conn., January 26, 1957.

Representative JAMES T. PATTERSON,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE: Valley Council No. 23, Knights of Columbus, with a membership of 487, earnestly requests you to make the following representation to Secretary Dulles and to the Department of State:

"If we thought, and rightly so, that it was impossible to do business with Hitler, what hope is there of dealing with the partner of Satan—Josip Broz? His accomplishments to date—murder of American airmen, persecution of all forms of religion, oppression of a million Croats—are public knowledge. No temporary political advantage gained by such a visit, can ever balance the frustration that all must feel, who still believe in our elected leaders and the Divine Authority from whom they derive their power."

Sincerely yours,
JOHN F. RYAN, *Lecturer.*

The Problems of Disarmament—a Speech by Hon. Kenneth Keating at Bangkok, Thailand, at Meeting of Inter-Parliamentary Union

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like include the thoughtful, important address delivered by Congressman KENNETH B. KEATING of New York at the November meeting of the Inter-Parliamentary Union in Bangkok, Thailand. I do this with considerable enthusiasm because I am reliably informed that both speeches given in Thailand for the distinguished

delegates to the Inter-Parliamentary Union by our friend, the Honorable KENNETH B. KEATING, were judged to have been among the most meaningful presented for the consideration of the world gathering of statesmen. The principles and the facts emphasized by Representative KEATING may be looked upon as an affirmative hopeful program for eventual disarmament with security, justice, and peace for all the peoples of the earth. The address follows:

SPEECH OF REPRESENTATIVE KENNETH B. KEATING ON THE PROBLEMS OF DISARMAMENT

Mr. President and fellow delegates, the Committee on Reduction of Armaments is to be congratulated for the splendid report which so well summarizes the history of disarmament efforts ever since the first known treaty on this subject in 1817 limiting the naval forces maintained between the United States and Canada on the Great Lakes. Men have been thinking of disarmament for at least the century and one-half since that treaty. The committee's report is most illuminating as to the efforts of our governments in the four decades since the end of World War I and the creation of the League of Nations.

Surely no one can read this chronicle, of committees, commissions, and debates and drafts resolutions, without admitting that the efforts of our governments have been tremendous. And yet the chronicle is one of failure upon dismal failure. All efforts have produced precisely nothing. Our committee rightly concludes that there is a lack of trust and confidence among the negotiators—and that this lack is fatal to any real possibilities of agreement. Our committee implies, I fear, that the situation is hopeless.

To this I say we cannot abandon hope. We must carry on our efforts, and double them and double them again. I do not know the way. I fear that none of us in this great assembly will be able to point the way with clearness and certainty. But in my heart, there is good will. In my heart there is determination, to go on struggling with this Gordian knot until some one of us, or all of us together, find a way to lay it open.

In the sessions of the Interparliamentary Union this year and in the previous years I have seen and felt the same good will, the same high determination, all around me among our fellow delegates. I think we are brought closer, as spokesmen in this great assemblage from so many nations, by the very strains and stresses that threaten so blackly to pull our world apart. It is my personal hope—even a quiet prayer—that we shall meet again next year, and in succeeding years, with more harmony, more freedom of action, and ever more of the very mutual trust and confidence which are so rightly emphasized in this report.

Now I wish to offer briefly for these debates some observations about the problems of disarmament which seem most important and most troubling to me. Some of our negotiators, particularly in recent years, have become more and more like hagglers in the market place who do not really want to buy or sell. The good price, the fair bargain, and the sincere offer are scorned and cheapened just as lustily as the outrageous proposition. If the buyer nods agreement to a price, the seller shifts what he is offering and changes his terms. Yet, this is the most crucial series of negotiations being conducted in the whole range of human activities on the face of the earth today and the need for bargains that will stick—to make disarmament work—is plainly more urgent than it has ever been in all times past since we began recording the history of mankind.

For the simple, inescapable truth is that disarmament has become the practical equivalent of peace. The weapons we command today are so frightfully destructive that men cannot live at peace with them. The fireball itself has assumed the proportions of a mortal enemy, an evil genie who may be no respecter of the master who uncorks him.

My country has the bomb. My country has pressed forward with the awesome testing needed to keep pace with developments in the laboratories of our scientists. But let no one believe for an instant that we would not give it up and have done with the whole undertaking. Thoughtful leaders among my countrymen have long since realized that this is a burden and a responsibility from which no one can profit. We recognize it as a great liability, and we shall go on straining to find some way in which it can be safely put aside forever.

I would be less than candid if I did not note that my country's persistent efforts have not been matched in other quarters. Immediately after the war, when the United States alone held the secret of nuclear fission, we urged a plan for international control of all fissionable material, with controls to prevent the production of weapons and inspection to enforce the controls. This plan encountered the stonewall of Soviet opposition and drew a Soviet veto when it was proposed to the United Nations Security Council. Ban the bomb first, the Russians said, and then we will talk about controls.

From that day to this, the Communist leaders have flatly refused to countenance any limitations based on mutual rights of inspection. It is painfully obvious that with the development of fission and fusion weapons of total destruction, the advantage of surprise, enjoyed by treacherous aggressors, has also become total. Therefore, the need for direct assurances about the war preparations of one's potential enemies has also increased to a near-absolute degree.

In the last decade the production of these atomic weapons has gone forward to a point where it would no longer be practical to limit production alone. There are too many stockpiles, capable of being hidden away until they are needed. So any inspection system upon which confidence can be based must also include regular observation of what the experts call "delivery systems." We must watch each other's guided missiles sites, and the activities of bombers and submarines and fighter squadrons, to have full protection against the dangers of a sudden knockout blow.

Our efforts to share the secrets of the atom for peaceful uses, launched in 1953 in President Eisenhower's ringing speech to the United Nations General Assembly, were obstructed from the outset by Russian opposition to any kind of open-handed disclosure. The President's open-sky proposal at the Geneva meetings in July of last year were met with the same Communist insistence on exchanged promises without exchanged inspectors and observers. At present my country is strenuously urging an interchange of teams of observers for limited inspection missions; as well as experimental inspections in small strips of territory dedicated for the purpose by each nation. We have also offered to exchange advance notice of every movement involving our Armed Forces abroad, in international territory or on foreign soil. But the opposition still says: "Ban the bomb; take our word that we will do the same; and then we will talk about controls."

In our efforts to achieve reductions of conventional armaments, we have encountered the same frustrating techniques: our Soviet rivals are willing to talk only of cuts in manpower, not of reductions in the number or potency of their weapons; and they keep urging fractional cuts in their standing forces while at the same time absolutely refusing to tell us the number against which the fractions are to be applied.

I have strayed a little into this explanation of the frustrating deadlock that grips my own country. But I think the problem merits emphasis. In my opinion, until we throw down the walls and expose ourselves to free observation by our neighbors, there can be little of the mutual trust and confidence on which the report we are considering grounds so much. Full, open, free, and honest inspection is needed to separate the empty claims of propagandists from those offers and protestations which may constitute real steps toward peace.

Now I shall turn to one of the more general points I wish to make—namely, that many nations may soon have these frightful weapons. Some years ago, the United States, and with those nations who share our heritage of freedom, held the bomb in an uneasy monopoly. This was short-lived. Now, there is not a nation in the world community, once possessed of the secrets which cannot be guarded very long, which would find itself unable to produce this weapon. Ultimately, and perhaps not too far in the future, many many national leaders will share the awesome responsibility of having total destruction at their command. What will happen to mutual trust and confidence then? What will happen to the traditional processes of diplomacy? And what will then be the plight of the troubled citizen watching the sky in constant anxiety lest this new lightning shall destroy his world? If we do not force a resolution of the stalemate now, we may find our problems multiplied to infinite and hopeless lengths.

Next, I would like to observe that in my my opinion our basic premise with respect to armaments becomes each year less valid. Most nations have believed that an adequate level of armaments meant security. We made ourselves strong so we could resist attack and protect our vital interests in the community of nations. I submit that this no longer works as it did for our predecessors. The security which any nation can fashion for itself by excelling in modern armaments may prove illusory, because such excellence now means vastly disproportionate insecurity for everybody else. With the conventional arms of half a century ago, to be powerful and well prepared for war meant only to assert a moderate threat against those with whom you might compete. If they were powerful and well prepared too, they threatened moderately in return. In a test of arms, there would be injury inflicted, losses and probably some devastation, and a separation between the victors and the vanquished.

I question whether this is true for us today. He who threatens, threatens absolutely. There may be no victors and no vanquished, but only victims and insufferable devastation. So I think we should recognize that the menace of armaments, and the resulting insecurity of those who are threatened, has greatly weakened the usefulness of the concepts of security by strength and alliances which are traditional in our thinking about international relations.

Another point which should be emphasized is the inefficiency of modern armaments to solve any of the real problems that beset us today. Aat peace, the burden of modern armaments is crushing to everyone who carries it. The costs have mounted and mounted, until far more than half the total costs of all of our governmental and social services are drained off for weapons and the specialists of modern warfare. This means food for the hungry, medical care for the sick, education for our children and more of the good things of life for everyone, diverted and drained off for the uneconomic and nonproductive functions of increasing our military potential.

And could the super bombers or the guided missiles ever solve the problem that really concern us? Of course, they could not. There are fundamental ideological differences between the totalitarian and democratic forms. They cannot be resolved by guns.

There is a competition between the Soviets and the Western world in the economic sphere. Both they and we are dedicated to different methods of the production and distribution of the things men want and need. We feel that our system is the best that men have ever devised. We have produced abundance, and we have faith that we can go on upholding a better, richer way of life than that achieved by the Communists. But could that competition be resolved by warfare? Would anyone gain if their system were forced upon our country, or ours on them, at bayonet point? Of course not.

But would the world gain if we could achieve a lusty honest competition of economy with economy? Would we threaten each other if we undertook to prove that the good things of life flow more freely in our economy than in theirs? If we could ever turn to it, and get into that kind of competition, we would enter it with great confidence but all the world would win no matter who achieved the laurel wreath. So the positive aspects of disarmament are as important as the negative. If we can put the burden aside, there is no limit to the wonders of the golden age we might achieve.

Lastly, there is another point which we might as well face squarely, that time is running against us. The cruel reality is that we have achieved disarmament twice in this century, by the catastropic expedient of dissipating our armaments in global warfare. We have reduced the tensions and diminished our strength by knocking ourselves prostrate in the aftermath of each of these Armageddons. And it is in these aftermaths that the possibilities of disarmament look best.

In 1919, President Wilson caught the imagination of the world with his leadership in the League of Nations. In 1945, the beginnings of the United Nations at San Francisco were auspicious and the world was full of hope. Must we wait for such an opportunity again? Or will it be possible to change the course and interrupt the cycle? Let us bend every effort here and now, this day and tomorrow and in the immediate future, to expose the truths about this problem of disarmament, then to face them realistically and find a way to do something about them.

Unsanctioned Sanctions

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1957

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the Washington Post of February 12, 1957, makes most interesting reading:

UNSANCTIONED SANCTIONS

Secretary General Hammarskjold has done a good day's work in recommending against United Nations sanctions on Israel. This probably will not end the talk of punitive action under the proposed Arab-Asian sanctions resolution, but it should remove any immediate threat of a vote in the General Assembly. It should serve to take the United States off an ugly hook. More important, it should facilitate Mr. Hammarskjold's task of persuading Israel to withdraw her troops behind her borders.

The General Assembly cannot, as Mr. Hammarskjold noted, actually impose sanctions, although it can recommend them. Legal considerations apart, a vote for sanctions against Israel would come with bad grace after the failure of the Assembly to act against Russia in the case of Hungary. No sanctions have been voted by the Security Council against India, either, in the case of Kashmir (and happily India seems to be modifying her attitude under pressure of world opinion). As a practical matter sanctions against Israel at this time would be a very one-sided kind of justice in the absence of reasonable assurance against renewal of hostilities by Egypt. Mr. Hammarskjold is quite right in saying that sanctions might introduce new elements of conflict.

Obviously Israel must comply with the U. N. withdrawal resolution. But the corollary is to use U. N. troops to enforce the 1949 armistice in such a way as to provide Israel the security to which she is entitled and at the same time permit Egypt to save face. This delicate task, rather than punishment, is what ought to occupy the constructive attention of the General Assembly.

Dean Erwin N. Griswold's Tribute to Zechariah Chafee, Jr.

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1957

Mr. PORTER. Mr. Speaker, Zechariah Chafee, Jr., died February 8, 1957. I knew him as a teacher and as a friend. The following is a tribute spoken by his colleague, Erwin N. Griswold, dean of the Harvard Law School at a memorial service I attended at Memorial Church, Harvard, on Sunday afternoon, February 10, 1957. I know that Professor Chafee's many friends and admirers will agree with and appreciate the words Dean Griswold spoke on this occasion and which are as follows:

We are met together—family, colleagues, and friends—to pay our heartfelt tribute to Zechariah Chafee. Here, truly, was a gentle man; and here, too, was a great scholar who wove many threads into that endless fabric we call the law, and added fundamentally to man's understanding of the problems of living with his fellow men.

He was a native of Rhode Island and always designated himself as "of the Rhode Island bar." It is fitting that he will rest in his native State. But a proper share of his spirit will surely stay here, where so much of his work was done, and where his influence was so great.

It was nearly 47 years ago that Zechariah Chafee came to Cambridge to enter the Harvard Law School. He had graduated from Brown University several years before, and had spent some time at the beginnings of a business career. He retained his interest in business and practical affairs throughout his life. But his abilities and natural inclinations brought him before long to the law school. Three years after graduation he returned as a member of the faculty. In this capacity, he served, with great distinction, for 40 years, a period of time exceeded by only three other persons in the school's history. It was last June that he retired, of his own choice. Yet even in retirement, he continued his active work. He was appointed by the university one of its first television lecturers, and gave throughout the fall and winter a series of lectures on human rights and the Constitution. It was only 10 days ago that he gave the final lecture, completing what he had planned. We had not yet come to think of him as retired.

Professor Chafee was a great lawyer. His courses in equity brought enlightment to many generations of students. For a number of years he taught bills and notes, one of the most technical fields of the law, and he made extensive and important written contributions to its problem. He had great interest in the problems of unfair competition and equitable remedies, and wrote extensively on them. His many articles on interpleader were monumental. There is nothing else which approaches them in quality. And he was instrumental in drafting and procuring the adoption of the Federal Interpleader Act, which is the biggest step forward in this field in a century. I suspect that if he had been asked what was the one thing he had done of which he was most proud, he would have pointed to this act. This was really law, and he loved technical law. And he was superb in analyzing and explaining it. His work would have been outstanding if he had done this alone. The depth of his knowledge, his vigorous standards of scholarship, and his command of clear and graceful English, spoken as well as written, made him a great teacher, respected and admired by thousands of students now practicing throughout the land.

But he also entered another and perhaps larger and more importbant area, that of human rights, and liberty and freedom. I am not sure, but I suspect that his activity in this field was almost accidental. At a fairly early age, more than 35 years ago, he was himself the focus of an important controversy about academic freedom. Out of the attack on him based on his article on the Abrams case, Harvard crystallized much of its thinking on these problems. It was because of this event, which was too important to be called an episode, that he dedicated the definitive edition of his free speech in the United States to President Lowell—using his words—"whose wisdom and courage in the face of uneasy fears nad stormy criticism made it unmistakably plain that so long as he was president no one could breathe the air of Harvard and not be free."

In recent years Professor Chafee devoted a large part of his time and talent to matters of liberty and freedom. He prepared a collection of documents on human rights. He probed in two series of published lectures into the origins of human rights in the Constitution. And he published only last spring his volume on the Blessings of Liberty. These are all distinguished contributions to pressing problems of our time. But they are problems which are a part of the stream of history. And Professor Chafee presented them with the light and skill which came from his rare ability as a legal historian. His approach to these problems was always constructive and conservative, in the true sense of that term. As he himself wrote,

"The boughs of the tree of liberty may be swayed this way and that by recent gales, but their strength to withstand the wind comes from the depth and toughness of their roots in the past. The greatest danger to the American people is that they themselves may erode these roots by forgetfulness and indifference, the slow smokeless burning of decay. In the long run the public gets just as much freedom as it wants.

"Therefore, this book has been written in the hope of helping men and women to remember how the human rights in our Constitution grew strong before they gained a place there. These things were not found under a gooseberry bush. They were shaped and achieved through centuries of struggle, through the willingness of men to languish in prison and die there, through long thinking and endless tedious work. Others have labored and we have entered into their labors. Generations gave these human rights to us, and it is for us in turn to secure the blessings of liberty to ourselves and

our posterity, strengthened and enriched while in our hands."

I have spoken of Zechariah Chafee as a scholar and teacher, and as a leader of thought on fundamental public questions. He was, too, a man, a friend, a human being of rare warmth and charm. Those of us who were privileged to know him as a colleague will always treasure our memories of him—the bright phrase, the cheerful expression, the willing hand and mind, his quick entry into your room, his generous appreciation and encouragement. He believed in leisure. His was the voice that defended Washington's Birthday as a holiday, and sought to add other days to the list. His way was easy. Yet he was a prodigious worker. His scholarly production was of first-rate quality. Yet its quantity was always great. He was never hurried or impatient. His writing was never careless. The range and depth of his writings and interest were extraordinary. He had an inquiring mind.

Zechariah Chafee was a great American. He loved its country and its people. He believed in its traditions. He had ideals. He had ideals for his country and he believed that a country should at least try to live up to its ideals. He knew that that was not easy, and he thought that it was worthwhile for him to help. There were some who did not understand him, but it was not from want of friendly effort on his part to lead them to the light.

That there should be death is inherent in the fact of life. There is an infinite sadness in the parting. But there is joy, too, in the life that has been lived and in the influence it has wrought. God's greatest gift vouchsafed to man is a full and rich and productive and useful life. Zechariah Chafee, through his talent, his energy, and his character has left his blessing on us and on all his fellowmen.

"So live, that when thy summons comes to join
The innumerable caravan which moves
To that mysterious realm where each shall take
His chamber in the silent halls of death,
Thou go not, like the quarry slave at night,
Scourged to his dungeon; but sustain'd and soothed
By an unfaltering trust, approach thy grave,
Like one who wraps the drapery of his couch
About him, and lies down to pleasant dreams."

"Day full-blown and splendid—day of the immense sun, action, ambition, laughter,
The night follows close with millions of suns, and sleep and restoring darkness."

Getting the Job Done

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. REES of Kansas. Mr. Speaker, I am sure Members of the House will be interested in reading an address delivered by the Honorable Clifford R. Hope, a former member of the House and for many years was the ranking member or chairman of the House Agriculture Committee. Mr. Hope delivered the following address at St. Louis, Mo. on the occasion of the annual meeting of the National Association of Soil Conservation Districts on February 6, 1957.

GETTING THE JOB DONE

If there is one lesson which comes down to us through the pages of history, it is that the nation which neglects its soil and water resources will die and that the fall of nations in the past has been due more to erosion than to war—more to the loss of soil fertility than loss of battles; or perhaps it would be more accurate to say that loss of battles has followed rather than preceded the loss of soil fertility.

For centuries observers have noted that poor land means poor people—poor in body, poor in mind and poor in spirit. We have seen this happen in our own country in areas where much of the land is worn out. Illustrations of this fact abound throughout the world, and almost invariably the dominant nations are those which have fertile agricultural areas of their own or trading nations which are able to import what they lack at home in the way of good and nourishing food.

Too often, I think, we overlook the fact that the marvelous progress of our own Nation has been due in a large measure to the fact that we started out a comparatively short period back in history with tremendous soil and water resources. I shall point out in a moment how far we have gone in wasting these resources, but nevertheless no nation in the world except a few others similarly situated to our own, such as Canada, Australia and New Zealand, has been able to furnish its people with a domestic food supply containing the minerals, vitamins and proteins which the people of America have enjoyed throughout their history.

And yet, rich as our national resources were in the beginning, much of what we had has been destroyed or dissipated.

One thing which we in this country must never overlook is that much of our best land, by reason of its topography, climate and rainfall pattern, is especially subject to erosion. The extent of this destruction is hard to measure in figures—and the figures vary—but a survey made as recently as 1953 showed that of 478 million acres used for crops in the United States, 121 million acres were deteriorating at a critical rate and an additional 128 million acres was deteriorating at a serious rate.

The fact is that although there were voices crying in the wilderness against the destruction of our soil 200 years ago, as long as there was new land farther west which could be taken up and farmed, little attention was paid to their warnings although conspicuous exceptions can be found. Thus we have the story, too often true, of the farmer who bragged that he had worn out 3 or 4 farms in his lifetime.

It is now less than 30 years since we, as a nation, inaugurated a national program of soil and water conservation as such. The beginning of that program was an amendment on the floor of the House to an agricultural appropriation bill in 1923, which made money available for research covering soil erosion on farmlands. Under that and subsequent appropriations, 10 erosion research stations were set up to study the causes and control of erosion. Farm and watershed demonstrations, soil conservation work in cooperation with farmers followed through the Soil Erosion Service set up by Executive order in 1933, and subsequently the Soil Conservation Service authorized by Congress in 1935.

Then, 19 years ago last August 4, the first soil conservtion district in this country was established by a vote of the farmers in Anson County, N. C. This was truly a historic occasion. From that small beginning we have come a long way.

It is encouraging to see how much progress we have made. At the same time, the enormity of the task and the tremendous job that remains to be done cannot help but put a damper upon over-enthusiastic contemplation of our accomplishments.

Naturally enough, at the outset the emphasis was on preventing soil erosion. As conservation technology and experience progressed, we began to pay more attention to sustaining and building soil fertility. Still more recently, special emphasis has been placed on water management, particularly in creek-size tributary watersheds.

However, I want to make it clear that the recent upsurge in attention to watershed development is not a new thing in our conservation effort. The Soil Conservation Act of 1935 clearly contemplated both soil and water conservation. In fact, it was based on the idea with which I am sure all of us are in agreement, that soil and water conservation are so closely connected that there is no way that they can be separated. They must be considered together.

Thus in 1953 when the pilot plant projects were set up, it was done without any new legislation and the appropriations were made under the authority of the original 1935 act. It will be recalled also that some of the earliest soil conservation districts were based upon watershed areas rather than by following county lines. However, in order to give specific direction to watershed activities as such, Congress has in recent years passed legislation dealing directly with the subject.

The first specific action of Congress relating to upstream water development was a provision in the 1936 Flood Control Act. In that act the Secretary of Agriculture was authorized to make surveys on watersheds in the interest of soil erosion prevention, waterflow retardation and sediment control.

Under the authority of this legislation, 11 projects were approved and authorized in the Flood Control Act of 1944. Those were all large projects. Not one of them has yet been completed. Annual appropriations have been made for them ever since their commencement back in the late 1940's, but these appropriations have been so meager compared with the amount of work to be done, that it will still be many years before the projects are completed although appropriations in recent years have been stepped up somewhat.

Although only 11 projects have actually been started, surveys covering a considerable number of additional projects have been made by the Department of Agriculture but never acted upon by Congress.

Let me now recount briefly other legislation which has been enacted by Congress to expand our soil conservation program. All of us of course are familiar with the agricultural conservation payment program, which was set up in the Soil Conservation and Domestic Allotment Act of 1935.

Then there is the pilot-plant program, which, as I stated a few moments ago, is based upon the authority contained in the 1935 act.

There is Public Law 566 of the 83d Congress, the Watershed Protection and Flood Prevention Act, and Public Law 1018 of the 84th Congress which amends and expands it.

Another important piece of conservation legislation is the amendment to the Water Facilities Act, which provides for insured loans for soil and water conservation purposes. I believe that this legislation will grow in importance as time goes by, although for the moment it is adversely affected by the tight money market.

Then there is the amendment to the internal revenue laws which was passed by the 83d Congress after urging by farmers and conservationists for many years, and which permits farmers and ranchers to treat expenditures for a number of soil conservation practices as current annual expenses which may be deducted from farm income in computing income taxes.

Thus we now have Federal authority of the broadest scope for carrying out soil and

water conservation programs. Many States have supplemented this legislation through State laws, especially along the lines of State activity in water conservation, so that I think it can fairly be said that we have sufficient legislation on our statute books to carry out a comprehensive program. Of course as time goes on, it will be necessary to amend this legislation as to detail, when trial and error may demonstrate the need for the same.

But laws of course are not self-executing. To make progress we must have action, and there has been a great deal of action in carrying out our basic conservation legislation. Nearly 13,500 soil-conservation district supervisors, directors, and commissioners are now unselfishly shouldering the local direction of the soil-conservation program in the more than 2,700 organized districts. They work without compensation except the satisfaction which comes from service in a noble cause.

As of July 1, 1956, we had organized 2,721 soil-conservation districts comprising an area of 1 billion, 546 million acres. New districts are being formed at an average rate of about 4 per month. Again as of July 1, 1956, the estimated land in farms in the soil-conservation districts was 1 billion 2 million acres, which is 86 percent of the total farm land in the continental United States.

Within this area were an estimated 4,890,000 farms and ranches, which is 91 percent of all farms in the United States under the 1950 census.

An additional 60,246 farms and 3,450,000 acres of farm land are in districts in the Caribbean area, Alaska, and Hawaii. A third of all the States, as well as Puerto Rico and the Virgin Islands are 100 percent covered by districts.

District conservation farm plans total 1,034,000, covering 286 million acres. The soil survey on which the conservation farm planning is based embraces 476,500,000 acres, plus 43,500,000 of range site surveys.

Contour cultivation has been adopted on about 30 million acres, stripcropping on 29 million acres, terraces on more than a million acres, tree planting on 2.5 million acres, and 667,000 farm ponds have been built.

In soil-conservation districts we have real farmer control on matters pertaining to the welfare of the land. The formation, control, and operation of these districts have presented to the Nation a perfect example of democracy in action from the first step of circulating a petition for a referendum through voting in the referendum to the election of district supervisors after farmers have voted in favor of the establishment of a district.

Never before in the history of this or any other country has there existed such a large and active body of volunteer, unpaid agricultural leaders as the force of soil conservation district supervisors, directors, and other district officials. Certainly all of us can be proud of the great job which has been done so far.

However the amount which remains to be done is staggering. All in all, it is probable that not more than 10 percent of the work needed to be done has yet been accomplished. That constitutes a challenge to every one of us.

There are two immediate and pressing problems which confront us from a conservation standpoint at the present time. One is the result of the drought which has prevailed in parts of our country for as long as the past 7 years. At least 15 States are now seriously affected by this drought, which has brought tragedy and desolation to some of the finest farming land in our country. In the Great Plains area from Canada to Mexico, there are vast areas in which, if the drought continues and unfavorable weather conditions prevail during the next 2 or 3 months, untold damage can result. In many areas the rainfall during the year 1956 is the lowest since weather records have been kept. Absence of severe wind during the fall and winter months has prevented great and lasting damage already. Credit must be given also to the fact that farmers in this area, equipped with proper tools and possessed of the knowledge which we have learned in controlling wind erosion during the past 25 years, have done a heroic job in keeping the land in the best possible condition under the circumstances which prevail.

This is short-range work, but as is well known, the Department of Agriculture under the leadership of the Soil Conservation Service, is about to start on a long-range program covering the entire Great Plains area.

The other problem of great immediacy in many parts of the country is that of water. I have already referred to the fact that soil and water conservation are inseparable and that water conservation has been considered as an integral part of soil conservation since the program first began. But it is only during the last 5 or 6 years that we have begun to realize that in many parts of the country, including some of the humid areas, the question of an adequate water supply is of immediate and pressing importance.

This is in part due to the tremendous increase in water consumption coincident with our increase in population, in part to the expansion of industry, the increase of irrigation, and also in expanded consumption for household purposes. Today the use of water in this country amounts to 200 billion gallons a day with the prospect that it will not be many more years until we will be using twice as much.

When we realize that our steel industry uses 4 trillion gallons of water a year, that the petroleum industry uses 1½ trillion gallons every year, and that the daily household water use per American citizen amounts to more than 50 gallons—we can get some idea of how our total economy depends upon water conservation.

If we are going to increase our water supply in this country, we must begin right where the rain falls. We must proceed on the basis that the ground is the greatest and most wonderful reservoir of all; that there is more natural water storage capacity in the earth than in all the man-made structures and reservoirs we can ever hope to build on top of it.

I do not mean to say that anything we can do to the land and the small streams in the upper watersheds is going to cause all the water to soak into the ground and to prevent forever the rapid accumulation of runoff water sufficient to cause floods in the river valleys down below. What I do mean to say is that every drop of water which can be retained in the area in which it falls, either in the earth or in small retarding structures, is one drop subtracted from a potential flood and one drop added to our useful water supply.

The sad part about our approach to the question of conserving water is that in too many cases we have started at the wrong end. We have put the cart before the horse. Instead of spending our money and doing our work by holding the water near the place where it falls and storing it in the ground where it will be ready for use and in a useful form when we need it—we have spent nine-tenth of our funds in building great dams and reservoirs to hold the water which should not have gotten away in the first place, and which would not have done so had proper conservation measures been applied.

I have heretofore referred to the 1936 Flood Control Act and amendments thereto. That act provided for upper watershed development as well as downstream projects. It has been in effect for 20 years. During that time, including the 1957 fiscal year, there has been appropriated for upstream flood prevention, $61,200,000 embracing 11 projects. By way of comparison in round figures, the flood control improvements completed and placed in operation by the Corps of Army Engineers to control the water after it got away from the land and into the channels of larger streams have cost to date $1,500,000,000. In addition, projects which were in a construction stage in 1955 were estimated to cost $4,200,000,000. Projects in the planning stage were estimated to cost $3,300,000,000. The estimated cost of flood-control projects authorized but on which no work has been accomplished were estimated to be $2,100,000,000.

In other words, the total flood-control program on the major rivers of the Nation today including projects completed, under construction, in the planning stage, and authorized, represents a total estimated cost of $11,100,000,000.

Practically all of this is Federal money, since it is estimated that the total non-Federal contributions to the national flood-control program so far have been less than 6½ percent.

Of course some of this money has been and will be spent, but in my opinion, if we carry out an adequate soil and water conservation program on the land and in the upper reaches of our streams where the work ought to start, a very large percentage of the funds expended or to be expended by the Army Engineers for flood control would not be necessary.

I am not opposed to flood control by reservoirs on our major streams as a means of conserving and controlling the runoff which may occur after we have placed into effect a sound soil and water program on the land itself; but as I said awhile ago, the tragedy is that we have started at the wrong end.

I do not want to sound too discouraging. We have made great progress in many ways—we have laid a solid foundation for the future. We have the authority now—and I think adequate authority, subject to such changes as may be found necessary through experience, to carry out a great soil and water program in this country. The machinery which has been set up, beginning with our soil-conservation districts and going up to the Soil Conservation Service in the Department of Agriculture, is geared to the job. There are cooperating agencies, all of them in the main working effectively with the Soil Conservation Service in carrying out work on the land. I am referring to the Agricultural Conservation Program Service, the Farmers Home Administration, the Forest Service, the Department of the Interior and its several agencies, the Soil Bank—as well as State and private forestry programs. The Extension Service in most cases has done a grand job in carrying out the educational phases of the soil and water conservation program.

The machinery is set up to do the job, but it can't be done without money. We must operate on a larger scale. I do not favor attempting to move any Government program faster than we can find competent personnel to carry it out, but the time has come when the thing which is impeding an adequate soil and water program is the lack of funds in the Federal budget.

This indicates to me that we need to do more in an educational way in convincing the country, the Department of Agriculture, the Bureau of the Budget, and the Congress that a greatly expanded program is urgently needed.

We cannot afford to sit by complacently and say that the problem is being solved because we know how to deal with it in a technical way and because the machinery has been set up by which conservation programs can be carried out and because most of our people are intellectually or emotionally convinced that conservation is a fine thing.

If we look back into history we will find that many of the great nations of the past which neglected their land and which finally failed on that account, knew a great deal about how to deal with the problems of erosion.

The areas in the world which perhaps show the greatest effects of soil neglect are those around the Mediterranean, such as north Africa, the Near East, Greece, and Spain, and southern Italy—and yet ancient documents as well as remnants of work done on this land hundreds of years ago, show that the people whose neglect ruined the land in those areas centuries ago, knew a good deal about conservation and conservation practices.

China is a land which has suffered tremendously from erosion. Much of its best land has washed into the sea, and yet 2,000 years ago the people of China knew much of what we now know about conservation methods.

Here in our own country Washington and Jefferson in their time were concerned with the dangers of erosion. Patrick Henry is credited with making the statement that "he is the greatest patriot who stops the most gulleys," and yet in spite of the example and activity of these great men, it was almost 150 years before we began serious governmental efforts to deal with our soil and water problems.

May I say again, it is not enough that we are conscious of the problem. It is not enough that everybody is in favor of conservation as a principle. It is not enough that we have developed a well-organized program of governmental assistance. What we need is action, and action on a scale commensurate with the size of the job which needs to be done.

I know of no organization which has done more and which can do more than this one in bringing an adequate conservation program to a realization in this country. I say this with full knowledge that there are many other great and influential organizations working for the same objective. They are all making a genuine and effective contribution. Between them they have accomplished wonders in making the people of this Nation more conservation minded.

But you who comprise the officers and members of this organization have a background which peculiarly qualifies you to furnish the leadership in a crusade to speed up this great program of soil and water conservation. You are men of the soil; you are leaders in your own States and communities; you have the confidence of your fellow farmers; you are dedicated to the idea of conservation, and yet you are practical men who know that the big job ahead can only be accomplished by hard work, persistence, and cooperation. Yours is a truly great responsibility. You have accomplished much and because you have, much more is expected in the years ahead. More power to you.

Schools and the Future

EXTENSION OF REMARKS

OF

HON. SAMUEL K. McCONNELL, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. McCONNELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Journal of Commerce of January 31, 1957:

SCHOOLS AND THE FUTURE

We live in an age in which standards of training and skill required of the working population are high and steadily getting higher.

It is also an age in which the strong trend toward automation is changing established patterns of working and living. Side by side with these trends new and rather urgent problems are emerging. What to do about untrained workers? What to do about the technologically displaced workers? The cost of ignoring these problems may prove quite high to business, to labor, and to society generally.

This being so, the Federal aid to education bill which the President sent to Congress on Monday rates top-flight priority on economic as well as social grounds. The urgency of expanded facilities for adequate training is already illustrated by the great lengths to which many businesses are forced to go today in order to obtain personnel with reasonably specialized abilities.

Scarcities of adequately trained persons are already bottlenecking development of many types of automated equipment, to use just one illustration. And the scarcities are limiting not only the use of such equipment, once developed and produced, but also the development and production of automated equipment itself.

If the situation is already difficult, it will be accentuated as times goes on. As the President warned, pupils in the public schools jumped by 5,500,000 in the past half decade, and our facilities are already bursting at the seams. They will increase by another 6 million in the next 5 years, while enrollment in institutions of higher education may triple in 10 to 18 years.

Without care and foresight, then, we may be moving into a situation characterized by acute shortages of adequately equipped workers on the one hand, and growing numbers of poorly equipped, technologically displaced job applicants on the other.

It is accordingly fitting that the President chose the Federal aid to education bill to lead off his procession of special legislative requests to the new Congress.

The President's proposal is about as economical an approach to a compelling national need as could be devised. It will prove controversial for that very reason. The formula which it supplies for allocating funds to the States, like that used in the President's bill last year, does not spread money around quite so freely as some of the Democrats would prefer. By and large, it is a good formula, for it tries to put the money where the need is greatest.

The antisegregation issue remains a threat to the legislation. But this issue need not prove insurmountable if the President carries through with the sense of urgency which marked his initial message, and proves willing, if need to be, to take his appeal to the people of the country to get a bill. There is need for strong leadership and determination within the administration and in Congress to counteract a defeatist attitude on this legislation.

In addition to providing for grants on a matching basis, the bill recognizes that some school districts may be unable to obtain borrowed funds at reasonable rates. Hence, provision is made for the Federal Government to purchase up to $750 million of such construction bonds over the 4-year period.

This is a realistic and sensible approach to a problem which could hamper the program when it begins to get underway. By substituting Federal credit for local, it does not increase the total amount of borrowing.

It does, however, because of the more favorable terms which are available to the Federal Government, make funds available more cheaply where the ability to pay may be limited.

While the proposed basis for allocating grants to the States is preferable to the democratic formula, the precise terms ought not to be permitted to become a further source of delay. Any reasonable compromise should be speedily accepted by both sides.

The administration might well agree to throw out that part of its formula which gives added weight to "effort" or "performance" by the State. This concept, while theoretically desirable, deviates from the criterion of need and has caused too much argument already.

It is by no means crass to say that education is good business. The uneducated and economically unintegrated may suffer wasteful and needless disabilities in a highly technical age. The ability of our youth to find their economic and social place in our increasingly complex environment will measure the social and economic cost of delay to the Nation in the years to come. Congress should lose no time in getting the aid to education bill underway.

United States Must Beware of Efforts To "Prussianize" Joint Chiefs

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego (Calif.) Evening Tribune of Thursday, December 6, 1956:

UNITED STATES MUST BEWARE OF EFFORTS TO "PRUSSIANIZE" JOINT CHIEFS

Continuing pressure to substitute a Prussian-style supreme general staff for our time-tested, war-proven Joint Chiefs of Staff is a step toward weakening American defenses.

This pressure is coming from a small group of active and retired military figures.

This is not a matter to be shrugged off as just an argument among the "brass."

What is at stake is a workable American concept of defense.

What is being devious proposed in its place is an alien concept that has invariably led to military disaster and national collapse.

If this judgment seems overly dire, just consider:

The single chief of staff-supreme general staff idea enabled the Prussians to gain military and political control of Germany under both the Kaiser and Hitler and goose-step that nation along the road of militarism and disaster.

This autocratic concept was seized by Tojo and his militaristic clique to rule Japan and launch that nation on a course of catastrophe.

It provided Mussolini's Fascist dictatorship with its foredoomed basic military pattern.

In substance, it is the system by which the Kremlin makes the Red army a tool in its scheme for world conquest by communism.

Congress—fortunately for the Nation's strength—has resolutely rejected attempts to impose this Prussian system on our Joint Chiefs of Staff concept.

It needs the continued firm backing of an alert and informed citizenry.

The advantages of the Joint Chiefs concept are overwhelming.

First of all, this is a thoroughly American system—as American as our Government itself, with its built-in system of checks and balances against the excesses of any single individual, any single idea, any single interest.

The Joint Chiefs can bring to bear on any problem, all the military talent, the combat

experiences, the staff support, and the operational capabilities of all our Armed Forces.

With the exception of the Chairman, each member of the Joint Chiefs of Staff is the uniformed chief of his respective service.

He is in constant touch with his own service as well as with day-to-day changes in the world situation.

So when the Joint Chiefs sit down to a problem, they can pool all of their viewpoints and experiences to strive for decisions in the light of the best overall answer.

There is no super know-it-all at the top.

Naturally, differences arise among the Joint Chiefs of Staff.

This not only is natural, but highly desirable.

This is the sort of competition in ideas that has made this Nation so strong in other fields—commerce and industry, education and politics.

It supplies our Nation's defense organization with imaginative and flexible ideas.

It is our best guaranty against a deadly rigidity in military thinking.

It acts as an effective deterrent to the always-present danger of a fatal strategic blunder when a supreme authority is isolated from realities.

On the shoulder-to-shoulder solidarity of our American Joint Chiefs of Staff rests the best safeguard for this Nation's future—the lives of our sons and daughters, our resources, and our freedom.

It is an awesome responsibility, and one that Americans will not want to see sapped by the imposition of an alien Prussian system.

New Tax Idea Under Railroad Retirement That Will Prove Beneficial to Railroad Workers

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. WOLVERTON. Mr. Speaker, legislation has been introduced that will enable railroad workers to claim a deduction in filing income tax returns for moneys that are paid as a tax into the Railroad Retirement Fund. It is a new idea but worthy of serious consideration and approval.

I include as part of my remarks an editorial appearing in the Courier Post newspaper of Camden, N. J., under date of February 19, 1957, and entitled "New (and More Honest?) Tax Idea." The editorial reads as follows:

NEW (AND MORE HONEST?) TAX IDEA

Congressman WOLVERTON is cosponsor of an interesting bill to give railroad employees higher retirement and unemployment compensation benefits at no cost to themselves.

As ranking minority member of the House Commerce Committee, WOLVERTON has joined Chairman HARRIS, Democrat, of Arkansas, in sponsoring this novel legislation which may have far-reaching effects on future tax policies.

The Harris-Wolverton bill would boost retirement and survivor benefits 10 percent and would liberalize other benefits in various ways through higher retirement tax payments. It would require employers and workers to pay 7¼ percent each into the railroad retirement system (which takes the place of social security for railroad employees) on the first $400 of a worker's monthly wages. The present tax is 6¼ percent each on the first $350.

But the new and far-reaching feature of the legislation is that the entire amount of the worker's retirement tax payments would be exempted from the Federal income tax. At present, the amount withheld from a railroader's wages for retirement taxes is counted as part of his income for income tax purposes, just like the money withheld from other workers' wages for social security.

Obviously, under such a setup the railroader could afford to pay more taxes toward retirement than he does now and yet would save money instead of being out of pocket the extra amount.

The legislation is backed by the railroad unions and in fact was sought by them last year. How good a chance of passage it stands now remains to be seen.

It is hardly exaggerating to call the implications of the bill revolutionary, so far as the personal income tax is concerned.

If Congress grants permission for the railroad workers to exclude their retirement tax payments from their income in computing their income taxes, will it not be obliged in all equity to grant the same favor to everyone paying social security taxes, and exclude those payments also from adjusted net income—or whatever the technical name for it may be?

Come to think of it, would that really be a favor on the part of Congress, or the correction of a long-standing moral wrong?

Is there morality or fairness in superimposing the income tax on the social security tax as the law now does, and pretending that money which the Government takes away from him before he gets it, through the social security levy, is income?

Or is a transparent deception and an unjustifiable fraud for which the Government should hang its head?

Indiana's (Pa.) Bootstraps

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1957

Mr. SAYLOR. Mr. Speaker, success stories are a marvelous stimulant to young and old alike. I have such a story for insertion in the CONGRESSIONAL RECORD. It needs to be enshrined in the history of American Government because there it will be available as a lighthouse for other communities that may become inundated in a sea of economic despair.

Indiana's Bootstraps, by George Swetnam, appearing in the Pittsburgh Press for January 6, 1957, is an account of the fabulous business rejuvenation—brought about by the faith, spirit, courage, independence, and industry of a townspeople—which has taken place in a town which I am proud to say is a part of the congressional district I represent. I commend it to the attention of all America:

INDIANA'S BOOTSTRAPS
(By George Swetnam)

If you want to see what a hardhit community can do for itself in the American way, look at Indiana—the town and county.

It's one of the hottest spots in Pennsylvania today, growing like a whole patch of weeds. Yet only 8 years ago it was about the last area you'd figure for a boom.

There sat Indiana, a typical "coal poor" Pennsylvania town and country. Its business was on the skids, and the relief rolls were full.

During World War II, Indiana County had close to 9,000 men working in its coal mines, and things were booming.

By 1948 everything had changed. Some of the mines were worked out. Other were closed because they couldn't be profitably operated. Still others had switched to mechanized equipment or had become strippping areas, throwing many men out of work.

Only 2,300 miners had jobs. Indiana's only other industry of any size employed not more than 300 to 350 men at best. The rest of the displaced workers eked out a precarious existence at odd jobs, tried farming, or moved away.

Today more than half those displaced workers are back at solid industrial jobs, and new plants are coming into the country faster than they can be completed.

And the whole thing has been done without any "angels" any lucky breaks, any Government subsidies or miralces. Indiana has lifted itself by its own bootstraps.

It has been done with only the assets available to any other conveniently located community—unless you count an unusual degree of what we call the American spirit.

VERY INDEPENDENT

"There is a great deal of independence about Indiana," says William L. Ingersoll, who has been active in the town's revival.

Mr. Ingersoll is a former Philadelphia newspaperman, who became secretary of the Indiana County Chamber of Commerce just after its first attempt to revive business almost ended in failure.

"Indiana County people don't give up easily," Mr. Ingersoll says, "nor are they looking for somebody to do anything for them. They like to do things for themselves."

Indiana's upward climb started when things were right at their lowest, when a tool plant offered to come to the county if people would raise $6,000 for its moving expenses.

After a desperation campaign they only managed to get $5,000, but the company agreed to come to the county anyway.

After all, the county offered many advantages. It lies high in the Appalachian Plateau, but most of its land rolls smoothly enough for good building, farming, and transport. The town is located at the crossing of two national highways, 119 north and south, and 422 east and west. It is 50 miles from Pittsburgh, 50 miles from Altoona, and the same distance from the great recreational area around Dubois. It is only 8 miles from the new U. S. 22, has good connections with the Pennsylvania and Ohio Turnpikes, and is served by two railroads. These are the Pennsylvania branch to the main line at Blairsville, and the Baltimore & Ohio between Pittsburgh and Buffalo.

The tool plant was successfully located between Indiana and Homer City, one of the best industrial areas, and now employs some 500 workers.

Then, despite the near failure, the chamber of commerce decided to try again. Encouraged by Mr. Ingersoll at the helm, it set out to raise $278,000 to build a factory for a sportswear concern.

Almost any other community might have been discouraged at such a task, just after having failed in an attempt to raise less than one-fortieth as much. Instead, Indiana looked at the benefit that had come from the first campaign, and rolled up its sleeves.

The first move was to set up an Industrial Development Corporation, to raise the money, build the plant, and rent it to the new industry, which could buy the factory later if it wished.

Right away, the campaigners went to the town's three banks and laid the plan before them. After making sure it was sound, all three promised full cooperation.

Then the drive workers went straight to the people of Indiana with the plan, pointing out the benefit already brought by the tool plant, and how much more another industry would help.

The plan worked. The campaign brought in $90,000 in cash gifts, and another $77,000 invested in no-interest bonds issued by the Development Corp. The 3 banks cooperated by lending the other $121,000 on a 4 percent mortgage.

Before the end of 1952, the Indiana Sportswear Co. was in operation near the tool plant, busily making blazers and sports jackets.

The sportswear factory gives steady employment to 220 workers, with a healthy payroll. But that isn't all—it's hardly half.

Recall that the company leased the plant with an option to buy. It quickly decided to purchase the factory, on a plan that would pay it off in 10 years. Now it has increased its payments to a figure that will pay off in 7½, instead. And it has announced plans to enlarge the factory enough to employ double its present working force.

When the sportswear plant is paid off, that will release $278,000 for use in another similar endeavor. But Indiana hasn't waited for that day to arrive.

"After the sportswear project, when the community saw what it could do, they just started going," says Mr. Ingersoll.

The next thing that came in sight was a chance to attract the Robertshaw-Fulton Co., which makes heat controls and similar things. But this job wasn't going to come cheap, costing close to half a million dollars.

All Indiana did was to roll up its sleeves and go to work, and that was all that was needed. All but $170,000 of the amount was raised by popular subscription to 3 percent mortgage bonds, the rest on a bank mortgage at the same figure.

Some 3 years ago the 70,000 square-foot building was completed and occupied by the controls company, on a lease basis, with jobs for about 350 men. But already the company has taken over the mortgage and started buying the building on a 10-year payment plan. And work has been started on a second and even larger building for the same company, with plans to increase employment to around 1,000 workers.

Already the Indiana people have gone after and secured another plant, this time that of the United Door Co. A short campaign quickly raised the necessary fund of over $350,000, to assure construction of the building, which was contracted for on a 10-year purchase plan.

The factory, starting with about 150 workers, will later include also an aluminum-extrusion plant.

The people of the area look with pardonable pride upon Indiana State Teachers College, one of the livest and fastest-growing in Pennsylvania. Only a small school for years, its enrollment passed the 2,000 mark this year, and is expected to continue its increase. Its plans include five new buildings.

Along with other schools (and Indiana boasts two of the newest and most modern public schools anywhere) and with the churches, the college is a major cultural force for the area.

The boom has swept along with it the Indiana Hospital, built 40 years ago when the district was just a coal area. Improvements there include $1,300,000 for a new wing and other modernization and equipment. A drive for $600,000 cash for this cause took only 8 weeks, and ended close to $20,000 over the goal.

Surveys are now underway, too, for modernizing and enlarging the water and sewage systems. Originally planned to serve perhaps 5,000 people, they are now bursting at the seams with 5 times that load, with more calls to come.

Other late improvements have included the Jimmy Stewart Airport, named in honor of Indiana's movie hero son, and the beautiful new Mack Recreation Center, which cost $2 million, and for which another half-million-dollar building is planned.

This alone of the achievements was a gift to Indiana. It was provided by the J. S. Mack Foundation, set up by an Indiana family which has had a leading part in building up the G. C. Murphy chain.

Another windfall may come along soon. The Government is looking over Indiana County for a site for a $180,000 armory to serve as an Army school and training center for 100 men.

With so much activity, private construction also is booming. Several contractors are busy building new homes, but the one serious problem of the area today is a housing shortage.

As you look around the town and county, your mind turns back to the words of a railroad calendar on Bill Ingersoll's wall at the chamber of commerce. Something makes you feel its spirit if not the slogan has taken hold on Indiana.

It reads—"Constantly doing things better."

IS INDIANA GROWING?

Just look at this list of accomplishments in less than a decade:

Raised $5,000 to secure Syntron Co. plant employing 500.

Raised $278,000 and built plant for Indiana Sportswear Co., employing 220. Plans enlargement.

Raised $500,000 and built plant for Robertshaw-Fulton Co., employing 350. Building enlargement to 1,000.

Raised $350,000 for United Door plant, to employ 150. Enlargement already planned.

Raised $600,000 cash and building $1,300,000 addition to hospital.

Built $2 million Mack Recreation Center. Enlargement planned.

Several new college buildings completed, three more already voted by State.

Two new school buildings completed, more planned.

Jimmy Stewart Airport in operation.

Army $180,000 armory planned.

Besides rapid growth as a principal Christmas-tree center and cabbage growing area of the East.

Mr. Speaker, individuals are the components of communities, and these units of society may also find opportunity for advancement and success in patterns set by groups of forebears or by groups of contemporaries.

In an era when paternalistic governments are depended upon to a progressively greater degree, a narrative on the accomplishments of a town which, through the ingenuity and determination of its own citizenry, extracted itself from the doldrums of business stagnation and unemployment to economic effervescence and stability is especially refreshing and reassuring.

Mr. Speaker, I am confident that the community of Indiana, Pa., under the effective leadership of the chamber of commerce, will continue to grow and grow.

Brotherhood Week

EXTENSION OF REMARKS
OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, as you know, Brotherhood Week will be observed this year from February 18 to February 22. Numerous speeches will be delivered and many editorials written extolling brotherhood.

Two thousand miles from this Capitol there is an organization which is not merely giving lip service to the subject of brotherhood. It is practicing brotherhood. I would like to tell you a little about this fine old institution, the National Jewish Hospital at Denver.

Back in the eighties and nineties there was a steady procession of victims of tuberculosis from the slums of the East to the clear, healthful heights of Denver. In those days climate was an important factor in the treatment of this scourge. Many tuberculosis sufferers journeyed to the West by covered wagon. However, when they reached their destination in Denver, large numbers literally died in the streets. There were no hospitals, sanatoria, or other facilities to care for them.

In this situation the Jewish community of Denver founded the National Jewish Hospital. The first building was completed in 1892 but because of a depression the trustees were unable to open it. The building remained unused until 1899 when B'nai B'rith, the Jewish service organization, provided funds for operating expenses.

The first patient was a Catholic girl from Chicago. From that day, the hospital has never considered religion, race, or national origin in its admission of patients.

Here is a living example of brotherhood. In its patient population National Jewish Hospital at Denver has Catholics, Protestants, and Jews. It has white Anglo-Saxons from New England, Negroes from Texas, Spanish-Americans from Arizona, and Indians from South Dakota. Although Israel and her neighbors are at sword's point, Jewish nationals from Israel and Moslem patients from Indonesia receive their medication, side by side, at the famous medical center. For the tubercle bacillus which causes the dreaded tuberculosis can afflict anyone regardless of color, nationality, religious persuasion, or economic status. This organism is completely without prejudice, even as is National Jewish Hospital.

I should tell you that despite a widespread misconception and despite great progress that has been made in the last decade, tuberculosis remains a formidable health problem. Approximately 15,000 of our fellow Americans died of this disease last year and nearly 100,000

new cases were reported to public health authorities. For every reported case there were an estimated two unreported cases.

You will agree that much remains to be done in this area by the research scientists and doctors at National Jewish Hospital at Denver. Meanwhile, however, the personnel of this great, nonsectarian institution is deeply involved in other medical programs. The hospital treats all diseases of the chest. Recently it expanded its programs of treating heart defects which can be corrected by surgery. This cardiac program, like all others at the hospital, is completely without charge to the patient.

National Jewish Hospital at Denver is supported almost entirely by voluntary contributions from the public. Warmhearted citizens who practice what they preach about brotherhood make possible its lifesaving work. The hospital slogan is and always has been, "None may enter who can pay; none can pay who enter." For 58 years National Jewish Hospital has given its patients some four million days of care for which these patients paid not 1 cent.

It is appropriate to review the policies and activities of National Jewish Hospital at Denver on the occasion of Brotherhood Week. Here is a monument to brotherhood which all of us might well study and try to emulate.

No Sanctions

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1957

Mr. MULTER. Mr. Speaker, to invoke sanctions against Israel would be as unconscionable as our failure to invoke them against the actions of Russia in Hungary. In this connection, the following editorial, which appeared in the New York Journal-American of February 7, 1957, makes most interesting reading:

NO SANCTIONS

From the statements of President Eisenhower at his press conference yesterday and those of Secretary Dulles the day before there arises the implicit probability that the administration would go along with the United Nations if it voted to impose sanctions against Israel.

We agree with Senate Republican leader, KNOWLAND, that such administration action would be morally insupportable. We think it would be also a diplomatic defeat and another cheap triumph for the little Hitler of the Middle East, Egypt's Nasser.

There is no question that a primary condition of establishing peace in the Middle East is Israeli withdrawal from the Gaza strip and the Gulf Aqaba area.

It is equally basic that a primary condition of withdrawal should be the firm assurance to Israel that Gaza and Aqaba will be under the protection of the U. N. Emergency Force.

Egypt insists on a blank check withdrawal. If the administration should support a U. N. sanction vote it would be endorsing President Nasser's blank check, and it might turn out to be a rubber check as well.

As Senator KNOWLAND points out, the U. N. Assembly adopted 10 resolutions against Soviet aggression in Hungary, which Russia spurned.

Did the U. N. take punitive action against Russia? It did not.

Did the U. N. take action against India for moving into Kashmir? It did not.

Did it take any action against Egypt for ignoring the resolution on the Suez Canal? It did not.

Has the U. N. considered any sanctions on evidence that the armistice terms have been and are being flagrantly violated in North Korea? It has not.

The case for Israel is good enough to stand on its own, and against such a background of U. N. sidestepping it becomes impregnable.

The President said yesterday this Nation is committed to support the U. N. Very well. The best way to stop a sanction vote, and thus avoid the embarrassment of supporting it, is to let the U. N. know the administration's opposition, and to know it now.

Certainly the administration will not deny that its influence in the U. N. is always formidable and often decisive.

Rhode Island National Guard

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I include an item from the Evening Bulletin, Providence, R. I., for February 11, 1957. This item is a letter to the editor from Mr. Anthony A. Pelliccia, better known to me as "Sharkey," a man who has given many years of devoted service to the National Guard in my State of Rhode Island. I know that he speaks for the thousands of guardsmen in Rhode Island who deeply resent the gratuitous slur contained in the recent remarks of the Secretary of Defense. That their loyal, patriotic efforts in defense of this Nation should be so rewarded is certainly most unfortunate. I would like to take this opportunity to assure my good friends in the Rhode Island National Guard that we in the Congress of the United States are aware of the great contributions they have made and that we sincerely regret the blanket aspersion made on their organization:

CALLS FOR APOLOGY

This letter is an answer to the regrettable remarks made by Secretary of Defense Wilson, published in the Providence Journal of January 29, regarding draft dodgers within the National Guard of our United States.

In the year 1950, during the Korean conflict, I was appointed recruiting sergeant for the 169th AAA, AW, BN (SP) 43d Division. We were set up downtown at the mall in the city of Providence. Many boys and men in the age group from 17 through 40, including veterans of World War II, enlisted in the National Guard without even knowing the destination of the 43d Division.

This division was already federalized at that time. Many of these boys and men were sent to Korea after training at Camp Pickett, Va.

Mr. Wilson's remarks must make the families of those lost in action in Korea feel very good to hear their loved ones died as draft dodgers. Also, those who served honorably, were discharged, and came back to their loved ones and their country, must feel good to hear such a shameful remark.

These men served their Nation and fought for the only words we all know—freedom and democracy. I ask Mr. Wilson, were these boys and men draft dodgers?

In closing, may I say that I think it is the moral duty of President Eisenhower, who is responsible for any actions of his Cabinet members, to apologize to the entire Nation for the remarks made by Secretary Wilson.

ANTHONY A. PELLICCIA.
PROVIDENCE.

Delaying Tactics

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Boston Herald of February 19, 1957:

DELAYING TACTICS

Everybody would be happier if Israel acceded to the President's appeal and withdrew its troops from Egypt at once. But one can easily understand why it holds back.

Israel is a nation under siege. It is surrounded by frankly hostile neighbors and has known nothing else since its birth 10 years ago. Its borders have been forged in war and maintained by armed vigilance. To the Jews the invasion of Sinai was a purely defensive move. It was aimed at wiping out bases from which Egypt was raiding Israeli territory and attacking Israeli shipping. The Israeli Government is naturally reluctant to give up everything it has won without some assurance the Egyptian attacks will not be resumed.

The compromise proposals which Mr. Dulles put forward last week recognized Israel's basic position. Our Government supported the U. N. demand that Israel withdraw without condition. But at the same time it engaged to urge U. N. occupation of the Gaza strip and, more importantly, to press unilaterally for recognition of the right of free passage through the Gulf of Aqaba.

As the President put it Sunday, "Israel has legitimate grievances and should, in all fairness, see a prospect of remedying them."

The pity is that, having recognized the necessity of providing Israel some quid pro quo, we haven't provided enough to win it over. The Jewish state has had offers of moral support before. In the tripartite agreement, for example, the United States, Britain, and France guaranteed Israel's borders against aggression. And subsequently the U. N. formally asserted Israel's right to send ships through the Suez Canal. But Israel's borders continued to be violated and no Israeli ship was allowed through the canal.

Israel obviously welcomed Mr. Dulles' latest proposals. They were more generous than anything the U. N. could offer. And the Aqaba Gulf suggestion in particular seemed to open great possibilities for the Jewish state. But under close examination they didn't stand up so well.

The United States has promised to assert the right of free passage through the gulf to Israel's port of Elath. But if the Egyptians oppose, what then? When asked this question, the State Department announced that we would under no circumstances use force. Can one "assert" a right, while anonuncing in advance one will not fight for it? Perhaps one can, but it isn't the kind of assertion in which the experience-sharpened Israeli have much faith.

Surely there is something more to be said to the Israeli. If we really believe that the Gulf of Aqaba is an international waterway, we can at least state our position unequivocally. And we need not abjure the use of force if our rights are forcibly denied by countries bordering the waterway.

Technically Israel is quite wrong to defy the U. N.'s withdrawal order. But if the delay drives us and the other Western Powers to find some positive answers to Middle Eastern problems, it will have been more than justified. We should not be too quick to censure.

Organization for Trade Cooperation

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. COLLIER. Mr. Speaker, I would like to insert in the CONGRESSIONAL RECORD a letter from a resident and businessman in my district which illustrates a basic problem that undoubtedly will be multiplied if every precaution of protection is not afforded by legislation in connection with the proposed Organization for Trade Cooperation likely to come before the 85th Congress.

Certainly this case should be food for thought for every Member of Congress interested in preserving the sound foundation of equitable competitive business in these United States.

The above mentioned follows:

R. S. BACON VENEER CO.,
Chicago, Ill., January 29, 1957.

Hon. HAROLD R. COLLIER,
United States House of Representatives, Washington, D. C.

DEAR MR. COLLIER: We are advised that congressional approval of the Organization for Trade Cooperation will be sought in this session.

We would like to urge you in the strongest manner possible to act in the interest of American industry, and testify against any bill to approve OTC when it comes up for hearing.

Our business, and a good share of our industry, has been drastically affected by the tremendous flood of cheap plywood coming into this country. Over 70 percent comes from Japan, and imports have now taken more than 45 percent of the domestic hardwood plywood market.

How are we and our employees to compete with 14-cent-per-hour labor in operations with dirt floor factories and working conditions far below American industrial standards?

Again, we urge you to first retain at all costs the congressional control on tariffs; and, secondly, to consider what is happening to such segments of industry as our own during what we read in the papers is a great economic boom.

Mr. Speaker, this letter was received from Joseph F. Mertes, a resident and businessman of my district: Joseph F. Mertes, president of the R. S. Bacon Veneer Co., of Chicago.

Hunting Abuses May End With Military Land-Grab Checks

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star publication for Thursday, February 14, 1957. Investigations conducted by the House Interior and Insular Affairs Committee have shown that there are many abuses of hunting and fishing rights on lands now controlled by the military establishments.

This article demonstrates that some military commanders rule their reservations like baronial estates, reserving hunting privileges on these reservations to themselves or their privileged guests.

I am happy to report that the House Committee on Interior and Insular Affairs has had this matter under consideration for 2 years, and corrective legislation will be presented to the Congress during this session, which I strongly endorse and support.

The Evening Star article follows:

HUNTING ABUSES MAY END WITH LAND-GRAB CHECKS

(By Martin S. Hayden)

Everybody—the civilian hunter, GI's victimized by discriminatory State laws, and the Nation's wildlife—stand to gain from pending congressional action to end open warfare between military commanders and State and Federal conservation officers.

New "rules" being drafted by the House Interior and Insular Affairs Committee will simultaneously:

1. End an era of total and often-scandalous rule of vast military reservations by post commanders who have permitted hunting from helicopters and with everything from machine guns to bazookas, who have disregarded game seasons and rules protecting does and fawns, and who have, at times, threatened virtual armed action against State and Federal conservation officers who sought to interfere.

2. Open up many military reservations to controlled civilian hunters, providing individual States reciprocate by ending discrimination against and pricegouging of sportsmen in uniform.

3. Permit proper wildlife controls on military lands that are now happy hunting grounds for civilian poachers and havens for animal and bird marauders doing great damage to surrounding areas.

HITS MILITARY GRABS

The reforms are part of the campaign of Representative ENGEL, Democrat of California against what is being called the "military land grab," the uncontrolled program which has seen the Army, Navy, and Air Force gobble up—in the name of defense and modern weapons testing—some of the Nation's best hunting lands.

In two series of hearings, Mr. ENGEL has traced military confiscation of 25 million acres of public lands. He has shown that much of the land has been taken needlessly and permanently destroyed by poison gas and unexploded bombs, cartridges and missiles. Also he has documented a wildlife indictment.

He has shown that, while 40 States give equal treatment to soldiers stationed within their borders, seven do not. In Arizona, Colorado, Indiana, Oklahoma, Wyoming and North and South Dakota the GI is treated as a "nonresident" and virtually barred from hunting by prohibitive license fees.

WANTS BREAK FOR GI

Where such discrimination is continued, Mr. ENGEL's new law will provide the States cannot expect concessions from the military. Where regularly assigned soldiers are regarded like other residents, the new code will give balancing benefits to the community.

In some cases, the committee studies show, the big need is for a lot of open hunting—quick.

One such is a major Army ordnance depot in Nebraska. Successive commanders, unwilling to admit civilian hunters, have avoided trouble by also banning shooting by station personnel. The result is a plague of rabbits who happily scurry out each night to devastate surrounding farmlands and return with the dawn to their protected refuge.

Similarly, at Camp McCoy, Wis., the Army is only indirectly to blame for the trouble. The 80,000-acre reservation is completely Federal and principally used for summer training. Its skeleton winter detail cannot police it completely and it is a haven for civilian poachers who, technically, can thumb noses at State laws and game wardens.

ASSAILS ARROGANCE

Elsewhere, however, Mr. ENGEL's committee counsel, George W. Abbott, of Grand Island, Nebr., has documented cases of simply military arrogance and disregard of conservation rules.

At the Cherry Point, N. C., marine base deer have been hunted from helicopters and, in December 1953, there was a Cherry Point slaughter of does, fawns, and other protected creatures when the commanding officer approved a shoot of everything that moves.

Helicopter hunting also has been reported at Fort Bragg, N. C., where the State's official complaints were climaxed by a charge that deer were rounded up, transported by military aircraft to Fort Benning, Ga., and turned loose for the pleasures of Army hunters there.

At Fort Huachuca, Ariz., State conservation officers got a criminal warrant for the commanding general following the shooting of 58 deer late in 1955. Then, according to testimony from a United States Fish and Wildlife Service witness, the general retaliated by harassing a herd of State-owned buffalo on the reservation.

GENERAL UPBRAIDED

"One day," said the witness, "the general would move the herd to one end of the refuge and 2 days later he would have it driven to the other. That kept on until finally the State threw in the sponge. They had no other lands to move the buffaloes on so they had to have a public hunt, or public execution, because there was no sportsmanship."

From Fort Bliss, Tex., there has been running trouble with New Mexico over military misuse of game on the artillery range in that State. When State officials announced that, since they couldn't invade the reservation,

they were going to stop unlicensed Army hunters on the public roads, the angry commanding general retaliated with a counter-announcement that he would move animal carcasses to Bliss by military aircraft, or by military convoys that would run through police lines.

In an overall summary of the situation the Engel committee found that:

"On the side of the military, it is clear that Federal legislation is needed to define precisely the applications of State fishing and hunting laws to military reservations. It is equally clear that the military is unwilling or unable to recede from the position it has taken in many local-conflict areas without congressional guidance."

The Baghdad Pact

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1957

Mr. MULTER. Mr. Speaker, the following article by the Right Honorable Anthony Nutting, former British Minister of State for Foreign Affairs, appeared in the New York Herald Tribune of January 17, 1957. In his article, Mr. Nutting analyzes the rift between this country and Great Britain and prescribes measures which may help to heal this deplorable situation:

NUTTING'S PLAN FOR MIDEAST BIDS UNITED STATES JOIN BAGHDAD PACT—HE SAYS MOVE, PLUS ECONOMIC AID, WOULD STIFFEN RESISTANCE OF ARAB COUNTRIES TO RED PRESSURE

(By Anthony Nutting)

The tragic chapter of accidents leading up to the Suez crisis has revealed all too clearly the bankruptcy of Anglo-American policy in the Middle East and the very real danger of Russian penetration. The Arab bloc—as even Nasser confessed to me two years ago—is too rickety to stand on its own. If Britain and America are going to stay in the Middle East and keep the Russians out both countries must develop a common and coherent policy and stick to it.

While some of the ruling classes of the Arab world may be alive to the Russian danger, there is also a deep-rooted suspicion of Western designs. The Anglo-French action over Suez has not exactly improved matters. In our dealings with the Middle East, therefore, we must be careful not to allow our influence to appear too directly. We must work through the Baghdad Pact, the U. N. and the press and radio of our Arab friends.

This does not mean that we should leave it all to our friends, or to the U. N. On the contrary, we must invest in friendship and give our Allies the moral and material backing to go to work on our behalf. We have failed lamentably to do this. Britain by her Suez policy has strengthened Nasser's hand and weakened Iraq's. America until now has leaned too heavily on the U. N. But the United Nations is an agency and not an alibi. It cannot be a substitute for constructive Anglo-American action to build up the political, military and economic defense of the Middle East against communism.

SAYS UNITED STATES SHOULD JOIN BAGHDAD PACT

The recent success of Russian penetration has been due in the main first to the lack of organized and visible American military strength and economic aid, and second, to the lack of political defense in depth behind the Baghdad Pact. True, there have been Presidential declarations—Tri-Partite declaration of 1950 and the declarations of April and November 1956 and now the declaration of January 5, 1957. But a declaration is not the same as an organized system of defense. Western Europe could never have withstood the Communist threat these last 8 years if America had been content with a policy of defense by declaration. Europe needed NATO with America a full participant and with United States forces visibly stationed in the area. Britain could not have done the job alone any more than she can in the Middle East. The President's new policy pronouncement must become part of an organized system of defense—the Baghdad Pact—and the United States forces that are to give effect to it must be physically and visibly based in the region, that is, Cyprus. It should therefore be followed up by the United States joining the Baghdad Pact as a full member. Nothing would stiffen more the resistance of such countries as Iraq and Persia to Russian pressure.

Then there is the question of aid, economic as well as military. Iraq has had pitifully little to show for having thrown in her lot with the West, either from America or from Britain. Cairo radio has contrasted this with Russian generosity to Egypt. If we are to show that friendship pays dividends we must step up assistance to Iraq and her allies, both in arms and in technical know-how to defeat the enemy within—poverty, illiteracy, and disease.

EXPANSION OF PACT HELD NECESSARY

But the Baghdad Pact must have more than Western beneficence and support. It must have defense in depth to mop up the soft spots of Soviet penetration in its rear; it must expand. Previous efforts to achieve this, by trying to get Jordan in, have failed badly. This was largely because Britain played her hand too openly which allowed Nasser to incite the Jordan mob to rebel against British imperialist designs. If the Baghdad Pact is to be extended, it must be done by Iraq, with Western moral support, not the other way round. This means getting the Iraqi project for the Fertile Crescent off the drawing board and into production.

This project for the federation of Iraq, Syria, and Jordan has been in the mind of Premier Nuri as-Said for a long time. But so far he has made no move to carry it through largely because of a lack of the necessary backing and encouragement. I know from personal experience of him that Nuri is a very shrewd operator, not the type to leap into dubious ventures. Otherwise, he could not have survived in office and as a friend of the West for over 30 years. We must back him in putting this project into action.

There can be no security for the Baghdad Pact countries while Syria remains an ally of Nasser and a virtual satellite of Russia and while Jordan wobbles ever closer toward Nasser clutches. Britain cannot continue indefinitely to prop up Jordan as something she never can be, an independent state. The Fertile Crescent would resolve these problems by bringing Syria and Jordan into the wider security arrangement of the Baghdad Pact and by giving them the stability and prosperity of Iraqi influence and money.

SYRIA ADVANCE BASE FOR RED ACTIVITY

Time is not on the side of Iraq and her friends. Syria, whose governments go from worse to worse, is becoming the main advance base for Soviet activity in the Middle East. Syria might well try to act first, with Russian and Egyptian backing, to create an "infertile crescent" under Syrian-Egyptian dominion. This would destroy the Baghdad Pact and open the Arab world to Soviet subversion.

So far, Nasser has had the success. But if Iraq could pull off this coup it would make Nuri, not Nasser, the success story of the Middle East. The Arab world would then listen to Baghdad instead of Cairo radio and look to Iraq, not Egypt, for Arab leadership. It would be an investment in the friendship of our most stable and reliable Arab ally.

It would secure rather than weaken Israel. For the result would be part of an alliance including Britain and the United States and designed to turn Arab eyes away from the Israeli-Arab conflict and toward the Russian threat.

This realinement of the Middle East would also help Britain to make changes in the present concept of ground forces and bases in Jordan and Libya, changes which are required to divert the rising waters of nationalism. If the U. N. forces can take over the Israeli frontier and Iraq takes over the defense of Jordan, British ground forces will be superfluous. We should then make with Jordan and Libya arrangements similar to what we have with Iraq, whereby British air forces, although in effect almost permanently stationed in Iraq are technically visitors flying in to train with Iraqi squadrons.

This arrangement would, however, depend on ground forces being available in an emergency in Cyprus. And the Cyprus base is at present in a state of siege.

CYPRUS PARTITION PLAN OPPOSED

Speaking as a southern Irishman, I do not like the latest partition solution. Partition only breeds friction, and that is, after all, what we are trying to cure. A lot has been said, too, about a NATO solution. But this is, I suggest, barking up the wrong defense organization. Cyprus may be European in population, but strategically and geographically it is part of the Middle East. It should, therefore, come not under NATO, but under the Baghdad Pact. And Greece should be brought into the pact.

There have recently been increasing signs that Greece is anxious to settle Cyprus. At the same time Turkey's interest must be cared for. The root of Turkish fears is not the future of the Moslem minority in Cyprus; it is the possibility of a military base being in the hands of a Greek Communist government on an island only 40 miles from Turkey. I have no doubt whatever that Greece would agree to the Cyprus base being administered in perpetuity by the Baghdad Pact countries. This would place the base in the care of a permanent majority of Moslem countries. It would take care of Turkey's security interest and would enable Britain to settle Cyprus without letting down the Turks.

We would then be able to do the one thing the Greeks insist upon and whch Turkey has so far refused—set a term of years for the exercise of self-determination by the Cypriot population. We should then have removed this dangerous quarrel between friends and secured the base of Middle East defense.

Argentina Sponsors Ben Franklin Anniversary Stamp

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1957

Mr. FULTON. Mr. Speaker, congratulations to the people of Argentina in sponsoring the stamp commemorating the 250th birthday of Ben Franklin.

Of course, we Pennsylvanians are doubly proud of the fact that Ben Franklin was a Pennsylvanian, but he was essentially a prototype of the modern Atlantic Basin man where we all live. As a man of inquiring spirit, and friendly disposition, with the art of phrasing basic thoughts in pithy and homely words, Ben Franklin continues to live today in spirit among all of us in the Western Hemisphere.

As a Congressman who took part in the program for the celebration of the 250th birthday of Ben Franklin in Philadelphia recently, I wish to particularly congratulate our good Argentine friends for this recognition of the brotherhood of all people of spirit such as Ben Franklin, whose scientific approach and friendly spirit in troublous times are a current inspiration to all of us in the difficult time in which we of this present generation are living.

Text of Address Delivered by Lt. George W. Lee in Philadelphia at Victory Banquet Honoring Dr. Robert H. Johnson, Grand Exalted Ruler of the Improved Benevolent Protective Order Elks of the World, January 26, 1957, in Crystal Room, Broadwood Hotel

---

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. REECE of Tennessee. Mr. Speaker, a victory banquet was held in Philadelphia on January 26, 1957, honoring Dr. Robert H. Johnson, grand exalted ruler of the Improved Benevolent and Protective Order of Elks of the World. Under the leadership of Dr. Johnson and his highly competent associates, this great fraternal organization has achieved a record of service in fraternalism, educational, and civic leadership, which has contributed much toward good citizenship and good government.

The address was delivered by Lt. George W. Lee, of Memphis, Tenn., the grand commissioner of education, through whom Dr. Johnson has worked in the field of scholarship and education, in which area so much has been accomplished that reflects great credit upon this organization and its officers. Lieutenant Lee's address is of sufficient interest I feel that it should be made available to the Members of Congress and the public through the CONGRESSIONAL RECORD:

Somehow I have the feeling that I have come to a high point of a story of tragic grandeur and impassioned beauty. When I first saw Bob Johnson, it was on a drill field in the heart of Maryland. A picture of him rises before me as a last night's dream. He wasn't at that time the handsome giant of a man capable of attracting the heart of the lovely woman who today bears his name. He was then a lean, hungry-looking rookie in the rear ranks of a squad. It was during the time when war crashed suddenly against our shores and men girdled their talents and buckled their loins for the sacred work of defending their country and rescuing humanity from that strangling gulf of despotism.

I saw him grow into a full-fledged soldier with confidence in himself and confidence in his comrades. I saw him lead his squad up the rocky slopes of glory without stumbling over a stone. I was his lieutenant then—today he is my captain. His life symbolizes the spirit of America where an obscure boy can rise from the dust of the day's long road to the pinnacle of a laughing star. Bob had the genius to appropriate opportunity when it knocked. He is the recognized leader of the greatest fraternal order in the world. Great not because of its numbers, 500,000 Elks whose lodges and temples extend east to the booming crossroads of the world; west to where the Rockies lose themselves in the haze of the distance; south to the sun-kissed Everglades, Florida.

The voice of Elkdom can be heard in China where Confucius taught the golden rule 500 years before Christ, in Africa above the tomtoms that rise like winged music through eternity, in the Bahamas where night comes down on a rope of twilight and kisses the waters of the Pacific. Elkdom is great because it has great ideals and has prosecuted them with success, a million and a half dollars raised for education for young men and women of all races who lacked the opportunity or suffered from the blight of poverty. Through its department of civil liberties a fight has been made to develop a proper sense of values within the individual so that crude conduct, bad language, rock-and-roll attitudes might be thrown away so that emphasis cannot only be placed on civil rights but on civic responsibility as well. Through the shrine department the John Brown Farm has been purchased and is now being developed to inspire the desire of the Negro to sacrifice if necessary life and treasure for freedom.

As the breath of pure mountain air on the mountaintop is to the elk as he goes forth to feed in the sunset shadows, so is liberty to the soul of our leader and the order he heads; as necessary as the morning sunshine is to the wild flowers that sweeten the air with their perfumes. "As vital as the general rainfall is to vegetation that waves and waves lazily in the meadows and in the sweltering river bottoms. So necessary and so universal must freedom be to assure contentment in the hearts of Americans."

It is appropriate that we gather here tonight around our leader when treason breaks above his head like distant thunder and poison pens and poison tongues lash out to destroy him and to destroy the usefulness of this great order of ours that for half a century has prosecuted its great task of justice, charity, fidelity and brotherly love with the sagaciousness of an outstanding success.

We have just witnessed his triumph over the slavish, fawning imposters who have darkened the name of Elkdom and beshamed finer, nobler aspects of their own people. Excellence, however, from the moment of its first blooming in the human heart has never winced nor cried out at the approach of cowardice. When harnessed to true leadership it becomes the irrisistible force and its conquests are as often as its engagements.

There are several philosophies of leadership. Emerson in one of his essays gives us the essence of one in a line which says, "See how men worry themselves into nameless graves while here and there a great unselfish soul forgets himself into immortality." Jesus gave a picture of true leadership when He said, "If I be lifted up I will draw all men unto Me." Judas gave another picture when he said, "I will get mine and then retire."

The Bob Johnson type of leadership has kept the Elks as a meeting ground for all men, a community of fellowship where the banker meets the porter, the doctor meets the garageman, and the woman from the the washtub mets the woman from the dressshop in an atmosphere of complete democracy and where youth meets age, youth as brown as the evening sun, as dark as night's soft shadow, as fair as the snows on the mountain. All have their place without being penalized about how they look or what they are.

History looking about for something that has endured will pick up the broken pen of promise and write the names of a half dozen leaders who have lived their brief hour then passed on leaving the world richer with the fruits of their labor. It will write the name of Douglas the advocate who in impassioned eloquence cried justice so loud that the cheeks of the world were made to blanch. It will write the name of Washintgon, the educator who dipped his pen in the blood and sweat of slaves and wrote into the curriculum of time, industrial education. It will write the name of Robert S. Abbot as the crusador who inspired the exodus of 2 million people of color to northern communities as a protest against their subjugation in the South.

It will write the name of J. Finley Wilson who inspired united action. Because of unity among black people today, Negroes are riding in unsegregated buses, trains, and all sorts of travel. As we view our progress on the civil rights front our faith mothers the belief that justice still lives in the minds of the descendants of the Founding Fathers who met in Philadelphia a long time ago and declared all men are created equal.

It will write the names of Bob Church and Robert Vann who led the protest against the Hoover administration for making the southern race policy the policy of the Republican Party of that day. Bob Church wrote his immortal letter of condemnation of the Hoover administration and Bob Vann his scorching editorial on There Stood the One Hundred. The editorial which pointed to a hundred Negroes standing in front of the White House while the eloquent Roscoe Simmons cried, "Speak, Mr. President, speak." A political revolution was started that shook heaven and earth and almost dismembered the Republican Party.

It will write the names of DuBois, Walter White, and Thurgood Marshall for developing in men of color the greatest emotional urge to throw off their oppressors since John Brown assaulted the arsenal at Harper's Ferry.

It will write the name of A. Phillip Randolph who inspired an era of Fair Employment Practice and Martin Luther King whose spiritual vision has accomplished much in the field of religion.

What the judgment of history will be on the leadership of Robert H. Johnson is in the lap of the future, but when history speaks it will say he took over an empire left by Finley Wilson and extended its frontiers to undiscovered horizons. I believe history will say that he saw the gathering storm against the Constitution rising in the southland. He launched a successful natiowide registration campaign to register 6 million Negroes and by this organized vote to force the political party in power to protect the Negro's rights and Congress to pass adequate civil-rights laws.

I believe that history will say when Bob Johnson heard the cry of the people of China, the people of Africa, and other lands against the shame of subjugation, he threw the weight of his organization behind a program to destroy colonialism in the world. He pointed out to the President of the United States that so long as colonialism exists all talk about stopping the reds is futile. He asked the President to propose a conference

with our allies for the purpose of maping out a plan for its elimination. He made sagacious observation when he said there are some 800 million people in the world who are not committeed between communism and democracy, America can win these people if it takes the lead in a plan to end colonialism.

Standing here today we can appreciate Bob Johnson's firm grasp of the international picture and the important part Africa will play in the future in assisting America to its rightful place of world leadership. Africa has the people and the raw natural resources to give the forces of the free world a needed power and strength against the eastward flow of communism. A large percent of the manganese with which America makes its steel comes from the Belgian Congo. The greatest supply of uranium known to the world is in Africa. Our chrome, cobalt, tin, rubber, and tungsten come from sections of the earth inhabited by dark people who are waiting to see if America will lead the way to a free world.

Bob Johnson in the lodges and temples of this great order is carrying the torch of first-class citizenship to sections of hate and oppression not in hatred but with determination to break the shackles of enslavement everywhere. May God give him strength and courage to carry on until every man, woman, and child within the American borders can truly say, "I am free."

Citizenship

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, February 21, 1957

Mr. HENNINGS. Mr. President, I would like unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by Col. John J. Griffin, vice president of the First National Bank of St. Louis. The address was on the subject of Citizenship, a subject of unusual interest to all legislators. The address was delivered before the Lemay Kiwanis Club.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CITIZENSHIP

(Address by Col. John J. Griffin)

The definition I like of a "citizen" is the one given in Webster's: "A person, native or naturalized, who owes allegiance to a government, and is entitled to protection from it." I think that definition probably fits everyone in this country, qualified. So, let us look into the record and see how they who are today enjoying the blessings so abundantly showered upon them in this great country are measuring up to the responsibilities imposed upon them by the acceptance of these blessings.

There is no doubt in my mind if anyone were to accuse over 50 percent of our population of the crime of not being a good citizen, they would find a reaction from those so accused that would not be pleasant. But are they good citizens?

My definition of a good citizen is one who not only accepts the protection this great Government offers him, but realizes that with the acceptance of such, there comes a responsibility upon him to meet the obligation that the acceptance of such blessing brings. What are these obligations? Under the laws of this land, you are entitled to the protection of your rights, and it is the duty and the obligation of the Government to so protect your rights that they shall not be infringed upon; but with this also comes a direct obligation upon you, as a good citizen, of obedience to the laws as prescribed in the particular community, State, and Nation, so that you shall not violate the rights of others.

Unfortunately, today there are too many people in this country who have disregarded completely all law and are living a lawless, selfish existence for their own benefit and their own benefit only, in defiance of both the moral and legal law.

That, of course, you may say, is a far-fetched statement. Nevertheless, the record shows the statement to be true. So, let us again consult the record. Uniform Crime Reports, as published by J. Edgar Hoover, Director of the Federal Bureau of Investigation, report that every 5 minutes during 1950 someone in the United States was feloniously assaulted or killed; during each day of the year 1950, 146 persons were robbed, 458 cars were stolen; 11,029 places were entered by burglars; and every 30 seconds throughout the year a larceny was recorded. During that period of time, the crime record has increased in percentage figures from 1½ to 10 percent above the 1949 figures.

The sad part of it is that the record also shows that in 41 percent of those arrests for major violations, age 21 predominated in the frequency of arrests, and, believe it or not, 9.6 percent of the total were females. I am merely outlining and sketching this report, but if you wish to make a more detailed study, by city, town, and State, you can write to J. Edgar Hoover and I am sure he will be happy to send you a copy. A study of the figures in these reports will show an alarming trend of the people to utterly disregard the law. That is an indication there is much opportunity and need of an educational program to bring people back to living in reality under the laws, honestly and decently, which after all, are the only worthwhile things in living. Since 1950 all crime has continually increased. In 1955, it was 26 percent above 1950 while the population increase in the same period is 9 percent.

Of course, you can say to me that "I do not violate any law; this doesn't apply to me." That may be true, perhaps there is no record of your having violated the law, but examine your conscience, and you will find there are many, many times that you have been violators and have not been apprehended. When you drive your car, are you considerate of your fellow travelers on the highway? Do you observe the speed laws? Do you observe the stop signs, and are you careful of the safety of the pedestrians, particularly the observance of the traffic regulations surrounding the schools? Violent deaths on the highways would not indicate an increase of law observance.

Now, there are many ways in which you can become an indifferent citizen, and, therefore, by inference, not a good citizen by failing to do the things that good citizens should do.

It is an alarming situation wherein we find ourselves when we realize that in the last national election, only approximately 60 percent of the people of this Nation, eligible to cast a ballot to elect the President of the United States, were sufficiently concerned to go to the polls and cast such a ballot. Therefore, by their indifference, and neglect, they disfranchised themselves—they, the people, individually—the only ones under the law with the power to disfranchise themselves—did so. They failed to exercise the blessings of an American by going to the polls, and without fear of reprisals of any kind, cast a ballot of freemen in the process of picking and choosing the type and kind of men whom, in their opinion, were qualified, competent, and able to assume the tremendous responsibility placed upon them for the governing, operation, and control of this Government at a time it is facing one of the greatest crises in its history. Particularly, is that true now.

Never a time in the history of our Nation was it more necessary to elect men to office, whether it be in high or low places, who are more concerned about the safety and security of this Nation than they are with personal gain or party success. And to my way of thinking, the people who were eligible to vote and did not vote, either through indifference or neglect, cannot be called good citizens because they failed in an obligation placed upon them to exercise the right of suffrage, to express their choice of the type and kind of men to represent them in the operation of this Government. And, remember, you will get the type and kind of government you ask for—no better, no worse, and you only, personally, and individually are responsible and must answer to, not only yourself, but your fellow citizens for any and all disappointments which come through your indifference and neglect.

As a good citizen, it is a duty and responsibility which not only cannot be shirked, but should be performed with pride and a prayer of thanksgiving in your hearts that today you still have the right to express your likes or dislikes at the ballot box. There are millions of people behind the Iron Curtain who would gladly and willingly change places with you, and who, I am sure, would not fail their responsibility in this respect.

You may tell me you are not interested in politics; that all politicians are crooked; that all politics is dishonest—therefore, you do not vote. By your very neglect and indifference, you are contributing to whatever fault you may find in the operation of your government, whether it be local, State, or national, because you have done nothing to protect it.

Of course, you may say to me (and truthfully so), "I have not violated any of the laws; I have not failed to exercise my right of suffrage, and that does not apply to me."

Now there is another phrase of good citizenship equally important in the exercise and just as disastrous in the avoidance—and that is jury duty. I would venture to say that were an officer of the law to appear in this room tonight and serve jury summons on everyone here, requesting them to present themselves before a court to qualify as jurors in a trial, greater than 50 percent of those present would make every effort to avoid such jury service. The judges of your courts can give you the answer to that. It may not be as prevalent in the small community as it is in the large city; but how many times do you find people who are too busy; who haven't the time; who are going to be out of town; who use political influence, and who even attempt to get medical certificates to avoid jury service—that, in my opinion, is not a mark of good citizenship.

If and when you are served with a summons to appear to qualify for jury duty, before attempting to avoid such service, stop and ask yourself this question: If I, personally, were on trial, would I want the better class of citizens avoiding the duty imposed by a law of granting me a trial by a jury of my peers? Why is it that your professional men, your businessmen, your outstanding citizens are too busy to give the few hours a year they would be called upon to give, to uphold the laws of the land, in granting to a fellow citizen, no matter what his status in the social or financial world might be, an opportunity of a trial, of being judged by 12 men, chosen by the court for such purpose, without any attempt of any of the 12 to evade the responsibility?

I have just scratched the surface of how one can, through indifference and neglect, take unto himself the title of bad citizenship. This description, of course, could be expanded and would require not only hours

but probably days and weeks, to go into its entirety.

You might say, "What are we going to do about it?"

One of the first things we must do is to take our place on the firing line of civic responsibility and assume the obligation of performing the duty imposed upon us by acceptance of the honor and privilege of being a citizen of this country. Let us not forget that if every community in America were to clean up its own local situation; and if each and every citizen in each small community in America were to assume the responsibility of citizenship that is imposed upon him, then the major problems in America would become minor, because the government is you. The United States is merely a gathering together of all the small communities into statehood, and all the States to make the national picture. As each community meets its responsibility, then the State must meet its responsibility and that in turn, assures us of a national picture that is healthy, wholesome and secure.

We must, in our system of education, train youth in such a way that they will have a thorough knowledge and understanding of the responsibilities they assume as citizens. Teaching the youth in our schools to recite the Declaration of Independence and the Bill of Rights verbatum, word for word, does not answer the question because you could teach a parrot to do that. But teach them the meaning of that Constitution and that Bill of Rights; what they mean to them; what it cost this Nation in the sweat and blood of our forefathers to preserve them intact as a heritage to hand down—that is important and will plant the seeds of good citizenship in the youth of this land, where it will find fertile growth.

It is a peculiar situation in these times of increasing crime and violence in our Nation, it has been declared unconstitutional to teach a child in the schools about God, and the things that God stands for. But it has not been declared unconstitutional to teach them there is no God.

As we look forward, do we realize the great danger we are in—of losing everything we hold sacred and dear?

Our enemies must receive tremendous consolation as they look at the crime record; as they examine the sorry spectacle of our indifference and neglect in exercising our right of suffrage; as they gleefully enjoy our avoidance of jury service, adding these up—they take it for granted there is a complete breakdown of the moral law in this land. What pleasure they must derive from it, because to them it looks as though the democracy of free men has failed; that it has disintegrated, they look with joy and glee to the day they can become victors, not by force and violence, but by the disintegration of the moral fiber of our people, and the most insidious enemy we have—defeat from within.

I think it would be well if all of us were to obtain one of the small circulars Uncle Sam is distributing to promote the sale of savings bonds—to bring into your home the message of a soldier who asks you to look out your window onto your front lawn and see there a fox-hole with a cold, tired, and hungry soldier—alert, defending your home.

That is exactly what every man in every war has done.

Now what a mockery it would be if you and I, through our neglect, cause those defenders of our homes to lose here what they fought for over there. It is your community, it is your State, it is your Government—yours, personally and individually. It will be as honest, decent and great as you wish to make it, or it will degenerate to the depths you force upon it through your neglect of exercising the rights that are granted to you to participate in the operation and the support of your Government.

Joint Committee To Evaluate Fiscal Requirements of Executive Agencies of United States Government

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1957

Mr. LIPSCOMB. Mr. Speaker, the usual furor, concern, and dismay that annually surrounds the creating and adoption of a new budget is upon us again following the submission of the proposed budget for fiscal 1958 to the Congress by President Eisenhower.

The job of determining what will be the final form and size of the budget now rests solely in the hands of Congress. We can adopt a good budget or we can adopt an ill-advised budget. Many of us believe that the budget as proposed is too high and needs to be trimmed or reduced if we are ever to make progress in the way of tax reductions. Few would or could, for that matter venture to say with certainty exactly how or in what way the budget should be cut.

The making of a budget and the planning of Federal expenditures is an extremely complicated process and is becoming more so. Not only does it involve the expenditure of vast amounts of the taxpayers money with myriads of items to be considered, but more and more the decisions to spend money involve considerations of a complex technical nature, or involve complicated and far-reaching social, economic, and foreign policy considerations, to name but a few.

Though the Appropriations Committees as presently constituted and organized, perform their difficult tasks ably and commendably, it is becoming increasingly clear that these committees, and the Congress in general, should be equipped with additional machinery to cope adequately with the complicated job of planning and evaluating Federal expenditures.

On January 3, 1957, I introduced H. R. 1169, the purpose of which is to provide for more effective evaluation of the fiscal requirements of the executive agencies of the Federal Government. This bill would create a Joint Committee on the Budget, composed of 24 members, to be drawn from both the House and Senate Appropriations Committees and from the House Ways and Means Committee and the Senate Finance Committee.

It would be the duty of the joint committee to make a detailed study of the annual budget of all the Federal agencies and furnish the Appropriations Committees of both Houses with information on items contained in such budgets as may be necessary for the committees to give adequate consideration thereto.

The joint committee would also study the President's messages on the state of the Union and economic report, all information relating to estimated revenue, essential programs, and the general economy, and would report to the House and Senate Appropriations Committee its findings concerning budget estimates and revisions in appropriations required to hold Government expenditures at a minimum consistent with the requirements of Government operations and national security. It would also report its findings on revenue matters to the House Ways and Means Committee and the Senate Finance Committee.

In addition it would report to appropriate standing committees of the House and Senate with respect to existing laws and their effect on the efficiency and economy of the Government, and would make reports and recommendations to standing committees of either House on matters relating to deviations from basic legislative authority, matters relating to appropriations approved by Congress which are not consistent with basic legislative authority, and matters relating to cutbacks in previously authorized programs which require appropriations.

The joint committee would employ a staff and be authorized to utilize the services of experts from business, industry and commerce, and in addition it would have subpena powers. Staff members would have the right upon authority from the chairman or vice chairman, to examine fiscal records of any Government agency.

Mr. Speaker, in connection with this proposed legislation, I would like to bring to the attention of the Members a very interesting and informative editorial by Mr. David Lawrence which appeared in the February 8, 1957, issue of the U. S. News & World Report entitled "The Budget That's Too High."

In this editorial Mr. Lawrence presents a searching analysis of the budget-making process of the Federal Government and concludes:

Someday Congress should set up large enough committees with proper staffs—perhaps a joint committee of both houses—to study continuously throughout each year the workings of the budget system and gather the necessary information to guide Congress.

Because of the pertinence of the editorial to this proposed legislation, and also because it is material at this time when Congress is deeply involved in budgetary and fiscal matters, I submit the entire article for inclusion in the RECORD.

The editorial follows:

THE BUDGET THAT'S TOO HIGH

(By David Lawrence)

Seventy-two billions of dollars is a big sum of money for a Federal budget. It is an amount difficult, even for Members of Congress, to evaluate. They cannot possibly familiarize themselves with the wide variety of items in a budget.

Someday the American people will demand that the system of budget making be reformed. Today's methods are absolete and inadequate. The Government is too big to be run as it was 36 years ago when the present budget law was passed.

For the truth is Congress created a Bureau of the Budget but made it a subdivision of the Office of the President. It gave no power to the Budget Director himself to change the estimates furnished by heads of departments and other governmental agencies. It made the Budget Director only a sort of information gatherer for the President. It did not even require the Budget Director to be confirmed by the Senate.

No member of the Cabinet—not even the Secretary of the Treasury—has the official duty of reviewing the whole budget to determine what items should be included or eliminated.

The President receives estimates from each department or agency and depends on the Director of the Budget for explanatory data. But the decision in the last analysis as to how much shall be included must, by law, be made by the President himself.

Does anybody believe for a moment that any President can make a detailed examination or review of a present-day budget of the Government of the United States and do anything else?

There are, of course, items that do not change from year to year—obligations that grow out of existing laws or previous commitments. The President cannot, for instance, assume that certain laws will be repealed even though he may dislike them, yet they involve recurrent expenditures of many billions every year.

A President, to be sure, is the head of the Government and represents the national interest. He cannot be biased in favor of this or that special interest or locality. He must weigh judicially the demands of pressure groups. He must be sensitive to public opinion—for the continuance of his party in power depends on whether he has in general satisfied the wishes of the electorate.

When the budget law was passed in 1921, it was recognized that officials of the various departments might not be satisfied with the sums allotted to them in the budget and might complain to Congress. Strict regulations—which are still in force—were, therefore, issued by the President forbidding executive department employees from going to Congress to obtain higher appropriations than those set forth in the budget. This has been ingeniously circumvented by Congress itself. Officials are usually invited to testify at congressional hearings, and from them is elicited the information on which champions of particular causes base their demands for enlarged appropriations.

The voting of about a billion dollars more than the President and the armed services themselves asked for at the last session of Congress was so transparently the result of political demagogery and collusion with overzealous advocates of larger spending within the executive departments that the incident makes one wonder whether strong laws rather than mere regulation should not hereafter govern the behavior of executive employees who connive with Members of Congress to lobby for increases in the budget.

In all fairness, however, it must be said that the armament-spending group doubtless felt it was as much entitled to the taxpayers' money as the groups pressing for some of the so-called welfare items in the budget.

But who is to weigh all the facts and say for what the taxpayers' money shall be spent? The budget recently presented by the President was, according to his own admission, very high. He said he hoped it could be cut.

Congress has the sole duty of deciding what the final budget shall be. Under the British and Canadian system, the budget is submitted by the Prime Minister and then the Parliament must accept or reject it as it is, for both the executive and the legislative branch are controlled by the same political party. In America, where divided Government prevails today, the people pay a high price for their failure to fix responsibility in a single party.

Someday Congress should set up large enough committees with proper staffs—perhaps a joint committee of both houses—to study continuously throughout each year the workings of the budget system and gather the necessary information to guide Congress.

Nobody likes the size of the new budget—neither the President nor the Congress. Certainly the taxpayers don't like it. For they see the Federal budget going higher and higher, with no relief in sight from heavy taxes on the incomes of individuals and businesses.

How much longer will taxpayers tolerate such a haphazard system of budget making as we have today?

Shades of Chamberlain's Munich

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. ROOSEVELT. Mr. Speaker, as background to the President's address to the Nation last evening, and as further background for the discussions which I hope the Members will join with me in conducting next Tuesday or Wednesday, the following article by Constantine Brown in the Washington Evening Star of February 19, 1957, is most thought-provoking. The lessons of history certainly deserve our closest scrutiny at this time, and Mr. Brown has done a distinct service in reminding us of an important part of it:

SHADES OF CHAMBERLAIN'S MUNICH—UNITED STATES ATTEMPTS TO AVERT WAR IN MIDEAST COMPARED TO SUDETENLAND CRISIS OF 1938

The tenseness of the international situation has been described to this reporter by an important figure in the Government as "very similar to that which existed in Europe in 1938." The locale only has changed from Munich to New York.

Then as now the great Western democracies were hankering for peace at any price in their dealings with dictators. They accepted Hitler's promise that once the Sudetenland (German-populated portion of the Czechoslovakian Republic) was handed over to the Reich he would make no further territorial demands and would cooperate for the establishment of lasting peace.

In the Middle Eastern conflict, which at this moment is confined only to the Egyptian-Israeli disputes, President Nasser is not giving even a vague promise.

Israel has asked us to give positive assurances that the international waters of the Gulf of Aqaba would not be denied to Israeli shipping and that the international forces would be stationed in the Gaza strip to prevent further incursions of guerrillas into its territory.

The United States has answered that after Israel has fully complied with the United Nations resolutions providing for complete withdrawal from Aqaba and Gaza it will use its efforts and prestige in the U. N. to see that both just demands of the Israeli Government are satisfied. But our Government is not willing to spell out how it intends to make Colonel Nasser live up to our promises. He has never indicated that he indorses our point of view regarding freedom of navigation in the Gulf of Aqaba.

Secretary of State Dulles favors economic sanctions against Israel in the U. N. in the event that country does not withdraw its forces unconditionally. Last week it was pointed out to him that such a step would be opposed by two Republican leaders, Senators KNOWLAND and BRIDGES, who are on record as favoring sanctions against Israel only in the same measure as applied to all other nations which have flouted U. N. decisions. He is reliably reported to have answered that the two legislators are wrong since sanctions against the U. S. S. R. would mean war while sanctions against Israel would mean peace.

The fact that the views of BRIDGES and KNOWLAND are being strongly favored by a large majority of both Houses of Congress and also by a large segment of the American people has not impressed either President Eisenhower or the Secretary of State. They maintain that even the highest ranking legislators do not have the proper perspective of the international situation.

The contention of the administration policymakers is that unless Israel is made to yield—and hope for the best we can do for her after she has complied with the U. N. resolution—we may have a situation with unforeseeable consequences to the peace of the world on our hands."

The fear of another conflict is paralyzing the minds of at least some policy makers in the administration. And they seem inclined to think that by yielding, another world catastrophe can be averted. They point out that America has assumed far greater global responsibilities than Britain had in 1938 when the consensus was that a conflict with the Nazis could be localized to a European war.

The international situation is shaky all over the world and Europe is less threatened than Asia and the Middle East. The Communist forces are poised to strike at Korea and Formosa; Indian forces are reportedly massing on the border of Pakistan; and Soviet intrigues have made the Middle East the tinderbox of the world. Any ill-advised movement on our part—regardless of how just the claims of Israel may be—might set the spark to the powder keg in that section.

Russia is less directly involved than we are. But she is providing at this very moment the hardware the Egyptians and Syrians need to start a conflict. Her agents under the Nationalist—not Communist—camouflage are extremely active in Iraq, Jordan, Iran, and Yemen. Who can say what far-reaching results may come from another armed clash between Israel and her neighbors, ask our almost panicky policymakers in the executive branch.

Military experts admit that the Israeli Army could cut to pieces once more the forces of Egypt, Syria, and Jordan. But what after that, ask our diplomats? Unless we take strong military measures to stop Israel, won't we have the whole Arab world, including the present friendly Iraq, against us?

Expediency, say policymakers in the State Department, might be distasteful to the men on the Hill. But diplomatically, they say, it is the only thing we can do at present. Moreover, they add, we could compensate materially the economically hard-pressed Israel for all the discomforts it may suffer from the actions of Egypt in the Suez Canal and the Gaza strip.

The lessons of history that we cannot avoid the worst by making concessions to dictators do not seem to have made a dent on our diplomats, who find themselves in the same position Prime Minister Chamberlain and his advisers were in in 1938.

Ships Now Are Good Risks

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1957

Mr. TOLLEFSON. Mr. Speaker, one of the stumbling blocks to ship construction in the United States for many years

has been the lack of private capital available for financing such construction. This block has apparently been removed by legislation presented by the House Committee on Merchant Marine and Fisheries which was enacted into law by the 84th Congress. The law provides for 100 percent Government insurance on ship construction mortgages. There is no cost to the Government, and the law is now operating to make millions of dollars of private capital available for ship construction and conversion. An interesting article in the Maritime Reporter of February 15, 1957, so indicates:

SHIPS NOW ARE GOOD RISKS

Recently the Bowery Savings Bank of New York proudly announced that it had made a mortgage loan of $2,625,000 on the passenger ship *Leilani*. The money was used to help finance the purchase of the ship from the Government and to modernize and rehabilitate her for the Hawaiian Steamship Co.'s, passenger service between the west coast and Hawaii.

At the same time, the bank said it had under consideration another ship loan of $16 million on a new 60,000-ton tanker, that would be built for service under the American flag.

The bank did not make the loan on the *Leilani* nor is it considering a loan on an American-flag tanker as a solely patriotic gesture toward building up the Nation's active merchant fleet. The main factor in the loans is the element of sound investment at an adequate interest rate.

It was not so long ago that ship owners were finding it impossible to arouse any interest among financial houses in advancing loans on ship construction. Yet today, when credit is acknowledged to be tight all over the world, we hear that all sorts of investment funds are available for mortgages on ships. Sources include insurance companies, pension funds and some of the most conservative banks.

Why have American ships suddenly become most attractive investments?

When the Merchant Marine Act of 1936 was adopted, it provided two methods for financing new tonnage. The first was for the Government to build ships and to sell them to eligible steamship companies on the installment plan, with the Government holding the mortgages; the second was for the companies to purchase the vessels with the aid of private financing.

Until the Eisenhower administration there was scarcely any thought of using the second method because banks and other lending institutions did not consider American ships good risks for mortgage loans.

The Republican administration, pledged to getting the Government out of business as much as possible including the investment business, sought to induce private loans on ships by guaranteeing 90 percent of any mortgages made by private investment firms. Although no steamship company had defaulted on a Government loan since the 1936 Merchant Marine Act was passed, the result was still a complete lack of interest.

Maritime Reporter was one of many industry spokesmen that called for the Government to raise its guaranty to 100 percent. As one of its final acts last fall, Congress took this historic step.

The full Government guaranties of ship mortgages have not only aroused interest among financial institutions in salting their funds away in loans on merchant vessels, they have stimulated renewed interest in building ships and operating them under our flag.

The National Budget

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1957

Mr. GAVIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following from the Reynoldsville (Pa.) Star of February 14, 1957:

(By Bill Wescoat)

Everyone has been, to some degree I would guess, sort of "national budget" conscious since the President made his request for the record $71.8 billion deal, and not without good reason.

As you may know, the $71.8 billion will be a record peacetime expenditure. There have been only 4 other budgets higher in the Nation's history—3 during World War II and the 4 during the Korean conflict. It is little wonder that economists in particular and some high officials in general are "viewing with alarm" this tremendous burden the taxpayers are being asked to shoulder.

With Washington's Birthday just ahead we might remind ourselves—and our Government—of a few of the many wise words uttered by that gentleman. Washington is quoted as saying, "As a very important source of strength and security, cherish public credit. One method of preserving it is to use it as sparingly as possible."

Washington's thoughts on this probably constitute a part of the reason the proposed increase to the budget is being opposed in some quarters. Most of us are inclined to believe that the increase is caused by military spending in the interest of national security. This isn't quite true.

The proposed spending for 1958 is some $6 billion greater than in 1955, with the military spending only $2.7 billion greater. The Government is spending more and more on its domestic programs—which seems to be the logical place for economy, if economy is to be achieved.

As far as the burden of paying taxes goes, it makes little difference to the taxpayer whether his dollars are being used for defense costs or civilian programs. The money is just as hard to ante up, regardless of how the Government plans to spend it.

It seems logical to assume that if the expenditure for domestic civilian purposes had been attacked during the years 1953 to 1955 with the same vigor as was displayed in dealing with the military and other national security purposes, some 20 percent would have been cut out of this part of the budget.

This would have reduced the total spending for 1955 from the actual $64.6 billion to approximately $60 billion * * * a sizable savings. The truth is, however, that neither Congress nor the administration has been successful in reducing or eliminating civilian programs.

Besides raising the hair on the necks of the taxpayers the whopping big budget and its increased appropriations for domestic spending, is not making friends among the States. Opposition has arisen to the noticeable expansion of Federal grants to the States.

State officials and business organizations are voicing disapproval of encroachment by the Federal Government in the affairs of State and local communities. Economy-minded Congressmen believe many of the welfare programs present fields for economies, and contend that many civilian activities carried on by the military can be cut back without affecting the military program.

Everyone knows and believes that with the tense world situation, our country must be both militarily and economically strong, and they are willing to provide the money to see that this is so. But if we are not domestically strong, how can we discharge the responsibilities of international leadership which we have assumed.

Perhaps the administration had better take a long look at drastically pruning unnecessary Federal expenditures. This is the only way taxes can be reduced, and the growth of business encouraged. As a member of the administration's official family is reported to have said, "you can't spend your way to prosperity."

Hoodlums Threaten Law and Order in the South

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I insert several editorials from Virginia newspapers with reference to the spectacle that Walter E. Hoffman, judge of the United States District Court for the Eastern District of Virginia, is making of himself in his philippics in the handling of segregation cases before him.

The great tragedy of the bitter controversy rising in the South as a result of the segregation decision of the Supreme Court and the pendency of the civil-rights bill is that the leadership in the solution of racial problems is passing out of the hands of men of good will and of sound reason and into the hands of hoodlums.

As the men who are responsible for violence against Negro citizens are hoodlums, so, too, are those, including members of the Federal judiciary, who do violence to the orderly administration of justice.

The editorials follow:

[From the Richmond News-Leader of February 13, 1957]

MAXIMILIAN ON THE BENCH

Norfolk's remarkable Judge Walter E. "Beef" Hoffman wound up a busy 2 days yesterday. On Monday, without leaving the bench, he decreed an end to segregation in the public schools of Newport News. Yesterday, without leaving the bench, he decreed an end to segregation in Norfolk. In both cases, he went beyond the bounds of mere adjudication, in order affirmatively to suggest the sort of legislation he thought desirable. He fawned upon his masters of the Supreme Court of the United States, and he got in another swat at the General Assembly of the State of Virginia.

His Eminence, it is plain, does not comprehend the separation supposed to exist in this Republic between legislative and judicial powers. Just as plainly, he does not comprehend the separation of State and Federal powers which lies at the very basis of our Constitution. His bad temper is ex-

ceeded only by his bad law. Listen to the man:

"When the Supreme Court rendered its decision in *Brown* v. *Board of Education* on May 17, 1954, and thereafter supplemented the same in 349 U. S. 294, it apparently did not contemplate that the various State legislatures would enact laws taking away from the local school boards the right to make assignments of pupils, as well as providing for the automatic closing of schools in the event of any mixing of races and the automatic cutting off of State funds if the mixing of races occurred in any school, whether by action of a pupil placement board or by any court order."

What possible difference does it make what the Supreme Court did or did not contemplate in this regard? Local school boards, His Eminence to the contrary notwithstanding, have no inherent "right" to make assignments of pupils. They have had, in the past, the power to assign pupils; and that power was granted to them by the General Assembly of Virginia, which body assuredly has both the right and the power to take it away. Similarly, the State of Virginia stands under no Federal compulsion to operate any school system; not even the Supreme Court itself has suggested—thus far—that a State could not choose to abandon schools rather than to integrate them. The High Court did not hold that schools must be integrated; it held they could not be segregated.

His Eminence does not comprehend this, for he continues:

"Now that this situation has been presented, this court cannot believe that the Supreme Court intended that the effect of its decision could be completely destroyed by action of the State legislature. If this court is incorrect in this conclusion, the Supreme Court decision is meaningless and may be disregarded. If this court is correct in its ruling, then it follows that [local school officials] are held responsible for the good faith implementation of the Supreme Court's decision."

What Judge Hoffman is saying here is that local school officials, regardless of the limits placed upon their authority by the General Assembly, must "implement" a race-mixing decree. They must exceed the authority vested in them by the State, he implies, or go to jail for contempt. And looking over the bench yesterday, Judge Hoffman assured these local officials he would give them "complete protection" if they would follow his commandments and integrate Norfolk schools anyhow.

We are reminded in reading Judge Hoffman's opinions of the Emperor Maximilian, "whose passion," said Gibbon, "was the love of power, and who neither desired present tranquillity nor future reputation." So vast an arrogance has not been seen on the Federal bench in this State since Chase presided over the trial of Callender nearly 160 years ago.

So Hoffman will protect local officials from Virginia? Who, we may inquire of the Governor and the Assembly, will protect these officials from Judge Hoffman?

[From the Richmond News-Leader of February 15, 1957]

LET THERE BE CHAOS

Among the exhibits offered to Judge Walter E. "Beef" Hoffman in Norfolk on Tuesday was an affidavit by J. J. Brewbaker, the city's superintendent of schools. Judge Hoffman gave the exhibit no more than a nod and a bow before tossing it to one side; inevitably, the affidavit received small attention in the news.

Yet it is worth resurrecting, because Mr. Brewbaker had some things to say that merit sober consideration by the people, white and Negro alike, whether or not Judge Hoffman chooses to heed them. Mr. Brewbaker is 61 now. He is a native of Botetourt County; he started as principal of Buchanan High School, went to St. Paul High School in Wise County, and then to Norfolk in 1927. He became superintendent there in 1949.

Mr. Brewbaker began his statement with a detailed comparison of white and Negro schools in Norfolk over the past 20 years. It made a dramatic story.

In 1936–37, the average teacher's salary in Norfolk was $1,365 for white teachers, $880 for Negro teachers. By 1950–51, the salaries were almost equal. In 1955–56, the white teachers' average was $3,704, the Negroes' $3,863.

In 1936–37, Norfolk spent $56.88 per white pupil, $33.40 for each Negro child. Last year the white per pupil cost was $229, the Negro per pupil cost $237.

Twenty years ago, the teacher load was 30 pupils for each white teacher, 33.3 for each Negro teacher. Today the difference is negligible—24.7 for white, 25.1 for Negroes.

In 1936–37, Negroes represented 35.3 percent of Norfolk's school population, and occupied school buildings representing 18 percent of the value of school property. Today Negro pupils make up 31 percent of the school population; their property is almost directly proportionate, at 29.3 percent.

Curriculum offerings are virtually identical in white and Negro schools. Instructional materials—audiovisual aids, textbooks, supplies, and library services—are supplied on an exactly equal basis without regard for race. The same supervision of curriculum and instruction is provided white and Negro schools. Norfolk maintains a large night school program; the courses offered are practically the same and might well be identical, for any course is offered in the white or Negro night school whenever as many as 12 students apply for it.

In brief, the Negro children of Norfolk have equal facilities, services, and excellently trained teachers. Public education is maintained at a high level for them no less than for white students. And yet, regrettably, a profound difference in educational achievement exists between the two races.

Three-fourths of the white sixth-grade pupils make higher scores on the total achievement test than three-fourths of the Negro sixth grade pupils. Similarly, three-fourths of the white eighth grade pupils attain a higher rank on the total achievement test than three-fourths of eighth grade Negro pupils. This means that in the sixth and eighth grade, one-fourth of the Negro children rank with the upper three-fourths of the white, while three-fourths of the Negro children rank with the lower one-fourth of the white. * * * Since the facilities, services, and appurtenances are of uniform high quality, the cause of the lack of achievement must be found elsewhere; for example, the degree of cultural and home environmental development.

What would be the result if integration were ordered in Norfolk? Mr. Brewbaker's reply was blunt and to the point: "Under the existing State laws, the result would be chaotic."

If the city of Norfolk is compelled to admit white and Negro pupils to the same classroom, in order to satisfy Federal judges, the city of Norfolk will lose the State aid it now receives. This amounts to some $2,360,000 annually, Mr. Brewbaker said, or about 23 percent of total school costs. By reducing the teaching staff by 25 percent, the city's school system could achieve an annual saving of nearly $1,700,000. To cut expenditures by an additional $660,000, it would be necessary to eliminate most of the supervisory program, all coordinate activities (nurses, doctors and dentists), all funds for equipment, all adjustive services, all expenses for night school and special education. Instructional supplies would have to be cut by 50 percent, and the program of education for homebound children abandoned. With these and other smaller economies, Norfolk might keep integrated schools open on local and Federal funds alone.

Yet if this were to happen, said Mr. Brewmaker "I dread to think of the type of school system that could be operated. I do not see at this time how it could be done at all. * * * Any locality that is forced to make the change under these conditions is bound to commit irreparable damage to its school system."

Even in border States, in which Negro population is small and no social tradition of racial separation exists, "we find the transition has required many years." In Norfolk, where the Negro population is large and the tradition is deeply ingrained, steady efforts have been made by interracial committees and faculty groups to study school problems and achieve a community of interest.

"I feel that both races will benefit if we are allowed to continue working in this manner on the adult level," said Mr. Brewbaker. "It is my opinion that neither race is ready for integration in this community, and that any attempt to commence integration in the near future will greatly retard, if not destroy, the progress which has been made by a voluntary course of action over the preceding years."

That was the affidavit of a thoughtful, temperate educator, with 35 years of intimate experience in the schools behind him.

Judge Hoffman's answer was for Mr. Brewbaker to get his schools integrated by next September or go to jail for contempt.

[From the Strasburg (Va.) Northern Virginia Daily of February 13, 1957]

DON'T PUNCH JUDGE HOFFMAN

Consider this a plea for coolness at a time when tempers can justifiably run hot.

Please, don't punch Judge Hoffman in the nose.

This week Federal District Judge Walter E. Hoffman with two quick raps of his power-crazed judicial gavel stamped into the records the time when Newport News and Norfolk public schools must desegregate. The date he set was August 15 of this year in both cases.

Virginia will appeal both decisions and thus delay the effectiveness of the decision by at least another year. But Judge Hoffman's intent is plain. If it were left up to him, he would immediately integrate by injunction the public schools within his jurisdiction.

Judge Hoffman would do this despite the overwhelming evidence placed before him pointing up the evils of such a move.

In the Newport News case all of the top local officials pleaded for more time and requested Judge Hoffman to follow the decision of Judge Sterling Hutcheson who refused to set any time for desegregation in Prince Edward County because the county was not yet ready for desegregation. Two Negro parents testified for the NAACP at Newport News stating that they had sought admission to white schools and admission had been denied. The NAACP introduced but one other witness, the clerk of the school board who verified the petitions.

For the State and the locality those who testified were the city manager of Newport News, the chairman of the school board, the superintendent of schools, the mayor and the chief of police.

According to the news dispatches of the hearing, Judge Hoffman treated these witnesses as gruffly and discourteously as he treated the Virginia attorney general, J. Lindsay Almond, who has appeared before him previously.

Judge Hoffman needled each witness asking him to name a lapse of time that the witness thought sufficient. Of course, this is

a ridiculous question because no man can forecast such things. What should have been clear to Judge Hoffman, however, is that Newport News is not now ready for integration, it will not be ready on August 15 and perhaps it will not be ready for many, many years to come. This also holds true for Norfolk.

It is quite easy to get angry at a man so blind to the realities of life, a judge so callous to official pleas, a drudge so servile he will obediently follow an erroneous decision of a higher court with no attempt to modify, to correct its unfairness.

The decision of Judge Hoffman in the Newport News and Norfolk cases is enough to anger all Virginians, especially those who reside in that great tidewater area of our State. The superior air, the nasty and snide remarks which the judge has uttered from the bench are more than enough to irritate the concerned people of the entire South.

But, please, don't anyone lose his temper and punch the judge in the nose.

For if Judge Hoffman is punched in the nose, he will become a northern integration martyr molested by rowdy southern segregationists. The South cannot afford such adverse publicity. The judge does not deserve such notoriety.

Resolution by Mid-Peninsular Dental Society

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1957

Mr. GUBSER. Mr. Speaker, at the request of one of my constituents, I submit for the attention of my colleagues a resolution passed by the Mid-Peninsula Dental Society, composed of 124 members:

RESOLUTION TO SUPPORT THE JENKINS-KEOGH PROPOSAL

Whereas self-employed persons, due to the Internal Revenue Code, are now unable to obtain tax benefits as do corporate officers and employees with their pension and retirement plans; and

Whereas there seems to be no relief for the self-employed individuals in this discrimination; and

Whereas the Jenkins-Keogh bill sets forth a means to correct this inequity in the Internal Revenue Code; and

Whereas the above-mentioned bill, over a period of more than 6 years, has gained the approval of both political parties, the President, prominent tax experts, a great many private organizations, and millions of the self-employed; and

Whereas a proposal closely alined to this one is proving to be a success in Great Britain; and

Whereas it would help greatly the Federal Government's anti-inflation program by encouraging retirement plans: Therefore, be it

Resolved, That the Mid-Peninsula Dental Society does approve the Jenkins-Keogh proposal and asks the Congress to make it law at the earliest possible time; and be it further

Resolved, That the Mid-Peninsula Dental Society requests Senator WILLIAM KNOWLAND, Senator THOMAS H. KUCHEL, Representative J. ARTHUR YOUNGER, Representative CHARLES S. GUBSER, Representative JERE COOPER, Chairman of the House Committee on Ways and Means, and Senator HARRY F. BYRD, chairman of the Senate Finance Committee, to use their utmost effort to have this proposal enacted into law at an early date.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1957

Mr. GARMATZ. Mr. Speaker, on February 16 Americans of Lithuanian ancestry commemorated the 39th anniversary of the founding of the Republic of Lithuania. All over the world, Lithuanians gathered to renew their efforts and to encourage one another to continue to work for the independence of their homeland. In Baltimore, the Council of Lithuanian Societies also observed this anniversary with a large rally and dinner, which it was my privilege to attend. On this occasion, the following resolution was unanimously adopted:

At the annual banquet, commemorating the 39th anniversary of the founding of the Republic of Lithuania, sponsored by the Council of Lithuanian Societies of Baltimore, Md., held on the 16th day of February 1957, at Lithuanian Hall, the following resolution was unanimously adopted:

"Whereas during the past year Soviet leaders in the Kremlin have had serious disagreements among themselves as to the methods, doctrines, and accomplishments of their former idol, Joseph Stalin; and

"Whereas unrest and uprisings in Russian satellite nations have demonstrated that the yearning for freedom still burns strongly in the hearts of the people of subjugated countries existing behind the Iron Curtain; and

"Whereas in particular the spontaneous October rebellion in Budapest, Hungary, against Kremlin rule certainly indicates that Soviet imperialism is in trouble; and

"Whereas many thousands of Hungarian refugees, leaving behind their martyred companions, escaped from their homeland rather than submit to Soviet tyranny and found haven in the United States of America; and

"Whereas the spirit displayed by the Hungarian people in their fight for freedom from Soviet rule is a shining example to the subjugated people of Lithuania and their Baltic neighbors, Latvia and Estonia; and

"Whereas the Hungarian cause of independence is essentially the same as and synonymous with the Lithuanian cause; and

"Whereas the signs of disintegration of the Soviet regime hold out a new ray of hope to people everywhere to strive unceasingly until liberty and freedom are again achieved: Now, therefore, be it

"*Resolved*, That the leaders of our country be urged to continue to maintain the fight for peace, justice, protection, and freedom for all people; and be it finally

"*Resolved*, That any new immigration laws to be enacted by Congress take into consideration that loyal Lithuanians are just as desirous of finding freedom and refuge in the United States of America as the patriotic Hungarians."

In Lithuania the bright flame of freedom which lighted that nation with such promise and progress has been darkened by the bitter night of communistic tyranny.

Thirty-nine years ago, Lithuania stood forth as an independent, democratic republic with a happy, prosperous people who faced the future with confidence in their destiny.

Today, the bright star of Lithuania's freedom has been clouded over by the violent storms of oppression. We gaze with sadness upon the advancinng tragedy of sacrifice to ruthless Russian imperialism that has enveloped Lithuania.

The world does not know all the terrible details of what has happened and is still happening to Lithuanians behind the dark, impenetrable Iron Curtain. However, we do know that behind that dreadful Iron Curtain, hundreds of thousands of God-fearing Lithuanians have been liquidated, martyred for their patriotism, their religious faith, their steadfast resistance to tyranny.

Hundreds of thousands of good Lithuanians, just as the unfortunate people in Poland, Czechoslovakia, Hungary, and other satellite nations have been torn from their families and their homes for service as slaves in Siberia. It is slave labor that the Communists are using to equip Russia for further expansion, for further despotism, for further persecution, and perhaps even for war.

Certainly we cannot continue and must not continue to close our eyes to this injustice, to close our ears to the calls for help, to close our hearts to the suffering we know is going on behind the Iron Curtain.

Without losing our honor, we cannot much longer ignore the human tragedy the Iron Curtain conceals. We cannot much longer hold up our heads in self-respect, if we continue to give silent approval to a group of atheistic political leaders who have demonstrated themselves to be devoid of Christian humanity and sense of Christian justice.

The cause of Lithuania and the other small nations is a challenge to the moral conscience of this Nation and the United Nations to establish the great, basic principles of freedom and liberty for all peoples.

To rally the support that we ourselves must have from God-fearing nations of this world, we must openly state that we will work for the liberation of all countries that have been enslaved by the Red Russian imperialism.

There is no other course to follow if Christian peace and freedom is to be retained on this earth. With the help of Almighty God and the persevering sacrifice of all Christian peoples, I believe that all of us will see the dawn of a new era of freedom and peace for Lithuania and the world.

May that day be not far away.

Free Will and the Academic Criminologist

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. RABAUT. Mr. Speaker, in the June 1956 edition of Federal Probation, there is a most intriguing and thought-provoking treatise on the power of free will in our modern society. The following article, written by Father Edward Coogan, S. J., chairman, Department of Sociology, University of Detroit, shatters a great many misconceptions that have

been long accepted in the field of modern criminology:

FREE WILL AND THE ACADEMIC CRIMINOLOGIST

(By the Reverend John Edward Coogan, S. J.)

The story is told of an inebriate who, finding a large tree in his path, carefully felt his way again and again about its trunk. Finally, giving up in disgust, he exclaimed, It's no use; I'm walled in. Is the almost boasted impotence of the determinist more objective? Is his denial of free will the consequence of more compelling observation? Of course determinism is the mode among many social scientists today. And, as Dr. Arnold W. Green, of Pennsylvania State, remarks: "Probably more than any other group of social scientists, students of criminology are acutely aware of this."[1] Is not this eagerness of the academic criminologist to repudiate freedom of the will astonishing? The long-term convict in his cell can think of nothing so glorious as freedom. And yet the determinist criminologist hems himself in by his own theories as closely as is a fly in amber. With the last act of the free will he renounces freedom—a voluntarist suicide.

CRIMINOLOGY TEXTBOOKS COMMONLY ASSUME DETERMINISM

Examples of such renunciation we have in such declarations as that of Dr. Maurice Parmelee that "the progress of science has destroyed for all practical purposes the theological and metaphysical doctrine of a free will. * * * In view of these ineluctable facts * * * freedom of the will fades away into nothingness."[3] That Dr. Harry Elmer Barnes makes the same renunciation is, of course, well known. It has been a generation since he could approach the free-will concept without mingled impatience and amusement; this because "Modern physiological chemistry, dynamic psychology, and sociology have proved the free moral agent theory of human conduct preposterous alike in its assumptions and its implications.* * * * There is not the slightest iota of choice allowed."[4] Donald Taft even charges that in some "important and basic way" the religious stand for free will and human responsibility makes the church a factor in the causation of crime.[5] And Professor Shalloo, University of Pennsylvania, accuses the belief in free will of having "probably set back our understanding of human conduct at least 500 years."[6]

This academic trend toward determinism is especially highlighted in the recent Criminology: A Book of Readings. The volume contains three selections concerned with human responsibility; all are deterministic. Apparently it was thought well not to let the student see more than the one side. Hence we have Enrico Ferri telling us that "the illusion of a free human will (the only miraculous factor in the eternal ocean of cause and effect) leads to the assumption that one can choose freely between virtue and vice. How can you still believe in the existence of free will, when modern psychology armed with all the instruments of positive modern research, denies that there is any free will and demonstrates that every act of a human being is the result of an interaction between the personality and the environment of man?"[7] Professor Arnold W. Green is the second cited antivoluntarist, asserting the "effective refutation of all free will theories of personality."[8] The third selection is from Dr. Sidney J. Tillim, psychiatrist, proclaiming flatly that "The assumption that man functions by a 'free will' is a myth thoroughly exploded."[9]

Such deterministic denials are usually by gratuitous assertion. Hence the article, Concept of Responsibility, by Robert A. Fearey, in the May-June 1954 issue of the Journal of Criminal Law, Criminology, and Police Science, was in this respect a refreshing exception. But that author cited no single established scientific fact against voluntarism. He treated the age-old controversy without reference to its literature or to any contrary opinion. The attempted justification of the determinist stand consisted of rhetorical questions, surmises, and affirmations in which the author forever assumed the determinist conclusion where a single voluntarist response would have proved fatal.[10] In a sense, all that I shall say here is reply to that attitude. But in partial but specific rejoinder let me cite the English philosopher, A. D. Ritchie, University of Manchester: "When an elaborate, theoretical argument is used to show that something that appears to be a plain statement of fact is really an illusion, it is generally safer to conclude that the argument is untrustworthy than that the apparent fact is an illusion, unless we have direct evidence that our faith in the fact deceives us. That men are free, within limits, to choose what they will do, is such an apparent fact." Ritchie concludes strongly: "This theory (complete determinism) seems to me to be pure dogmatism without any sort of foundation in experience or reason. It is generally supposed to be a consequence of our faith in physical laws, but I fail to see any logical connection."[11]

FREE WILL FREQUENTLY MISREPRESENTED

Not content with assuming the death of free will, the usual academic criminological determinist leaves at the bier a nosegay of misconceptions of the very meaning of free will and its implications. Thus Dr. Barnes tells us the concept means "that man was perfectly capable of choosing any type of behavior, irrespective of the peculiar circumstances of his biological background and his social environment. Entirely independent of his ancestry and training, it was held that any person was at any time perfectly free to decide, for example, as to whether on a Sunday night he would enter a church with an air of piety and penitence or remain outside to cast stones at the structure in derision."[12] Dr. Parmelee gives us much the same concept of free will, declaring that its teaching of only partial or no responsibility in the immature and deranged is "totally inconsistent with the belief in a free will, for if the will is indeed free it must be independent of merely material conditions, and could not be influenced by such inconsequential matters as physical and mental immaturity, an undeveloped or deranged nervous system, an organism poisoned by alcohol, drugs, etc., and other unimportant physical conditions over which the spirit should ride triumphant."[13] Other common misconceptions of the free will concept are that it means motiveless and uncaused willing. Sixty years ago William James was complaining that "caricatures of the kind of supposition which free will demands abound in deterministic literature."[14]

What then is the meaning of "free will"? A sociologist need not go farther than his own Dictionary of Sociology to be told: "The capacity to govern personal behavior by choice among two or more possibilities. The capacity to balance one stimulus or impulse against another, and to select the one which is believed to be preferably from the point of view of the major interest of the individual concerned. The concept of will carries the implication that human behavior is something more than the result of a mere parallelogram of forces and that the ego has the power to give arbitrary weight to one impulse in preference to others * * *"[15] As obvious a source of information as the Encyclopedia Britannica, in an able article by Dr. Abraham Wolf, philosopher of the University of London, adds that "No one means by free will that any man is free to make any choice at any time. Obviously there could only be freedom within limits. A man's choice is limited by his heredity, by the conditioning to which he has been subjected, by social pressures, by his opportunities, by the means at his disposal."[16] The Dartmouth professor of philosophy, Wilbur Marshall Urban, sums up the matter by saying, "Freedom means simply the ability to have conscious motives, to understand the meaning of our actions, and to have the power to modify them in the direction of some end or ideal. Both responsibility and freedom must, by their very nature, have degrees."[17] That the free-will concept does not imply "burplike" willing, uninfluenced by circumstance, and that consequently the "limited free will" or "no free will" conceded by the voluntarists in the case of the immature and the disturbed is not, as Dr. Parmelee has charged, a belated and self-contradictory dodge of discredited theology and metaphysics, we may see from the following reference to Thomistic teachings some 700 years old: "A thing is said to be under our control through the reason and will; and therefore the more the reason and will do anything of their own accord, and not through the impulse of a passion, the more is it voluntary and under our control * * * sometimes * * * passion is not such as to take away the use of reason altogether. In that case reason can drive the passion away by turning to other thoughts, or it can prevent it from having its full effect."[18] These Thomistic limitations on free will, a Dominican commentator on St. Thomas thus briefly sums up: "Ignorance puts a shroud over the eyes of the intelligence; malice twists and distorts its vision; and passion interferes with the clarity of its judgments."[19]

VOLUNTARISM FINDS SUPPORT IN AMERICAN PHILOSOPHY

Few determinists seem to think that even this limited voluntarism has any standing today in the world of ideas. Many would subscribe to Dr. Barnes' assertion that "free will has not been accorded any respect by reputable contemporary philosophy, grounded in realistic psychology and science."[20] The philosophic fact seems to be that instead of being tried and found wanting, the voluntarist idea still commands respect where the evidence is given serious consideration. Where the idea has lost ground the reason frequently is that today, as Santayana has complained, "Ideas are abandoned in virtue of a mere change of feeling, without any new evidence or new arguments. We do not now refute our predecessors, we pleasantly bid them goodby."[21] But let us poll a fair list of competent philosophers, confining ourselves to our own America in deference to the limits of time and space. Beginning in the East of an earlier day and advancing in time as we move West: Charles Sanders Peirce, of Harvard, charged that even the determinist believes in free will "when he is not theorizing."[22] Peirce scoffed at the idea that determinism is a "postulate of scientific reasoning." Moreover, to "postulate a proposition," he insisted, "is no more than to hope it is true."[23] The Yale professor of philosophy, George T. Ladd, was as uncompromising: "Metaphysics and ethics cannot properly dictate their facts and conclusions to the science of physiological psychology; but, in turn, this science cannot properly dictate to metaphysics and ethics the conclusions which they shall draw from facts of consciousness, by giving out its myths and fables in the garb of well-ascertained history of the cerebral processes."[24]

Prof. James Bissett Pratt, of Williams College, protests against the determinist robotlike concept of human conduct: "We are not

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

theaters within which impulses struggle with each other * * * until the stronger defeats the weaker. * * * We can and often do reinforce the weaker by the strength of our wills and thereby defeat the stronger. * * * The investigation as to whether or not this is the case plainly cannot start out by defining the stronger impulse as that which eventually wins; to do this (and it has often been done) would be a ludicrously patent and naive case of begging the question." Pratt here points out how to avoid that ingenuous deterministic assumption: "If we are to distinguish a weaker from a stronger impulse at all, plainly the only way * * * is to appeal to introspection. The stronger impulse is the one that immediately feels stronger; for 'as a psychic existent feels so it must be'." [25] The Princeton University professor, Henry Norris Russell, presents the determinist with a dilemma: "This much at least we may say. If our personal freedom and responsibility are illusions, so is the blue sky above us and the solid earth beneath our feet. * * * Our freedom is at least as sure as sunrise, as solid as rock, as immovable as the everlasting hills, and need we ask more?" [26] The following short but outspoken commitment to free will is from the Columbia University professor of philosophy, William Pepperell Montague, who takes his stand with those who "from Epicurus back in ancient Greece down to our own Charles Peirce and William James, have held that freedom, at each present moment, to modify and supplement our past by a spontaneous effort not predetermined by that past, is both morally essential and physically real. * * * Each present moment has for its prerogative the thing we call free will. That freedom is the living, fighting front of life itself. It robs fate of a final victory and lights our path with hope." [27]

PRESENT-DAY THINKERS CONVINCED OF FREEDOM

In the Harvard of today, the philosopher John Wild in no uncertain voice speaks for indeterminacy: "Man alone is free because he understands his end, as such, and the necessary means to his end. Furthermore, he is free, because he is left to devise and to choose his own contingent means, meeting his own individual circumstances, making his own way through the mazes of concrete, human history, toward or away from that ultimate goal of perfection which every man and every woman at least dimly understands." [28] Harvard's Raphael Demos, too, is insistent: "The experience of choice is there demanding recognition—to be naturalized rather than deported; and the judgments of practical reason are bound up with our life in all its phases, not to be brushed aside simply because they appear to be inconsistent with the judgments of theoretical reason. Our practical beliefs enter into our practice; and [here Demos hits hard] a philosophy which refuses to impute validity to them lays itself open to the charge of insincerity." [29] From Boston University, its professor of philosophy, Edgar Sheffield Brightman, points out: "We are directly conscious of freedom, purpose, and value in nearly every moment of experience, of freedom, it is true, less continually than of purpose and value. Spiritual facts are as directly experienced as are sense data." Brightman discerningly concludes: "When I choose to pick up a red rose rather than a green leaf, I experience my free choice as directly as I experience the red of the rose or the green of the leaf." [30]

The following citation from Yale, too, meets the determinist head-on; it is from Douglas Clyde Macintosh: "The scientific mind tends almost inevitably to assume that as a matter of course all events must be completely predetermined. But of course this is dogma, not science." Macintosh will not permit himself to be misunderstood: "Complete predterminism cannot be demonstrated inductively, nor can it be proven deductively. The attempt to deduce it involves either a begging of the question in the beginning or a non sequitur in the end. Psychologically considered, it is the outcome of the rationalization of jealousy for the scientific method." [31] The Middle West, too, can speak plainly, as we see from the following words of Joseph Alexander Leighton, philosopher of Ohio State University: "Mechanistic behaviorism is a sheer rationalistic dogma that gains its plausibility from the general prestige of physical science." Leighton then clearly points out the voluntarist position: "True freedom consists, as James rightly says, in the capacity of the self to hold in the center of consciousness a thought, an ideal of value, which the self chooses to emphasize until it dominates and crowds out all incompatible ideas and impulses; and so all the warmth and dynamic of the core of selfhood supports it and makes it go." [32]

We next consult a philosopher-become-judge, Jerome Frank, of the United States circuit court of appeals. This is his verdict on free will: "To be free we must employ our intelligence, we must first study our situation to discover, as well as we can, what chances exist for the accomplishment of our aims, what is and is not open to us, and then step out wisely into the open spaces." Judge Frank finely concludes, "When we so act, we are free; we manifest 'determination' as distinguished from 'determinism'." [33] Another very competent and outspoken midwestern champion of free will is W. H. Werkmeister, philosopher of the University of Nebraska. Werkmeister scores the easy determinist assumption: "The determinists * * * must show how it is possible for man to be thoroughly and completely determined and yet to feel free. Merely to say that our feeling of freedom is an illusion is no explanation. * * * Our feeling of freedom, our feeling of authorship and responsibility, and our sense of guilt—intertwined though they are—are unmistakable facts of first-person experience; and that is the reason for accepting them as evidence." [34] Our last witness in the field of philosophy we choose from the University of Southern California. Ralph Tyler Flewelling gives the determinist a quiet warning: "However much the philosophers, or the scientists for that matter, may deny freedom, it will continue to be the commonest of human experiences and beliefs." [35]

PSYCHOLOGISTS RESPECT FREEDOM WHEN THEY DON'T IGNORE IT

But one might ask, why should not our first witnesses to the fact of free will have been psychologists? As Francis Aveling, psychologist of the University of London, reminds us of the problem of free will, "All the data for its solution must evidently be derived from introspection." Aveling adds, however: "Psychologists, and especially experimental psychologists, as a rule carefully avoid this problem and make no pretence of attempting to solve it. Fearful, perhaps, of compromising themselves as professors of an empirical science, they leave it to the philosophers as a problem of ontology or ethics, and shut their eyes to the patent fact that it is essentially a psychological problem." [36] With that explanation the Encyclopedia of Psychology essentially agrees, asking frankly: "How could this ambitious young science hope to enter the academy of the sciences with an uncaused 'will' as the ground of character?" Earlier psychology had been less purely experimental, making considerable use of philosophy; but now "psychology has largely broken with its parental discipline * * * As a result of this break, many of our scholars look askance today at anything smacking of metaphysics or introspection, call philosophical psychology obsolescent." [37] Consequently, "The position of most psychological writers is," as the Harvard psychologist, Gordon W. Allport, remarks, "one of naive determinism." [38] Dr. Boring, also of Harvard, puts himself on record with the frank avowal: "I doubt if the psychologists know anything about [free will]. They think they do; they think there is none. But they are not experts. It is a problem that is prior to their field and which they are not competent to examine. They assume determinism, most of them, and go ahead from that premise." [39]

Among American psychologists there is even the unwillingness to treat of "will" as pertinent to character. This attitude is in sharp contrast to the European. Dr. Leonard Carmichael, the Tufts College psychologist, calls attention to the abundance of such studies, especially in Germany and England. [40] Thus the University of London psychologist, Dr. Aveling, is notable for his researches regarding will activity. In reply to the question of its freedom, he declares, "Quite apart from any consciousness we may have of freedom, the answer must be 'Yes'; and for this reason * * * we have the power not only of apprehending our experience but of transcending it." He flatly places the appeal for personal freedom to "personal experience." [41] Consequently he declares the conviction of free will is not only "the persuasion of the unsophisticated person," but "despite the difficulties raised against it by metaphysical postulates such as that of the uniformity of nature, it is the pragmatic principle upon which every one of us acts, both as a private individual and as a member of the social community." [42] His English psychologist-confrere, Joseph Rickaby, adds that "The determinist, in England at least, shuts his determinism up with his books; and, in active life, uses his free will vigorously." [43]

We shall end these testimonials from psychologists with two citations from Harvard University, one of our own day, the other of happy memory. Our contemporary, Gordon W. Allport, remarks that while the axiom of determinism is useful in the psychological laboratory, outside the scientist customarily rejects it: "He proceeds, for example, on the assumption that he and his fellow men have freedom of choice respecting their conduct. He praises and blames, admonishes and exhorts, judges and punishes, consults his conscience and puts forth effort—none of these activities consistent with the axiom of determinism." [44] And finally we give this rejection by William James of the entire materialistic, mechanistic, deterministic position: "I can, of course, put myself into the sectarian scientist's attitude, and imagine vividly that the world of sensations and of scientific laws and objects may be all. But whenever I do this, I hear that inward monitor * * * whispering the word 'bosh.' Humbug is humbug, even though it bear the scientific name, and the total expression of human experience, as I view it objectively, invincibly urges me beyond the narrow 'scientific' bounds." [45]

DETERMINISM DESTRUCTIVE EVEN AS THEORY

Heretofore in our discussion we have been concerned to establish free will as a fact. Now we would show that the opposing theory, determinism, is harmful even as a theory. Here we have Dr. Barnes again as a forthright opponent. He contends that according to the free will conception, a child born of the finest parentage and given every educational opportunity "yet might at any time burn down an orphan asylum or rob the

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

vaults of the Salvation Army."[42] We have only to turn to William James for a direct rejoinder to Dr. Barnes: "A favorite argument against free will is that if it be true, a man's murderer may as probably be his best friend as his worst enemy, a mother be as likely to strangle as to suckle her first-born, and all of us be as ready to jump from fourth-story windows as to go out of front doors, etc. Users of this argument should properly be excluded from debate till they learn what the real question is." But wherein lies their error? "Free will," James insists, "does not say that everything that is physically conceivable is also morally possible. It merely says that of alternatives that really tempt our will more than one is really possible * * * Persons really tempted often do murder their best friends, mothers do strangle their first-born, people do jump out of fourth-story windows, etc."[43]

Under the free-will concept of human nature, no matter what the heredity, even the offspring of Bill Jukes and Sadie Kallikak, born squarely on the wrong side of the tracks, of a broken home drenched in alcohol, and raised on horror comics, even such a one can face the future with grim assurance. For, provided only he is brought to appreciate the fact that there is an alternative, law-abiding course for which he sees an adequate motive, he can without presumption affirm, "I have what it takes to make good." Be the past what it may. Be the force of habit, passion, associates what they will, he is not merely the "tail end of the tapeworm of ancestry," nor the synthetic product of the mistakes of chance. In future crises, he need not meet life lying down. And representatives of the law can without falsehood assure him that in every future crisis of his salvaged life the decision can be made on the side of decency provided only his awareness of the possible choice and adequate motives be maintained. That this is so, even the determinists logically concede when they testify frankly to what happens in their own deliberate decisions. For, as the determinist psychologist, Prof. Max Wertheimer, has acknowledged, "Fortunately, men believe in their will, and even if they are philosophically convinced of determinism, they will not make use of it in actual situations."[44]

The achievements of any of us depend upon our concept of what for us we deem possible. As Professor Hocking of Harvard insists, "The first task of education is to bring (the child's) full will into existence."[45] Gordon W. Allport remarks that "an adroit mind will readily perceive that the degree and type of freedom a man has depends in part upon what he believes. If he thinks he is hopelessly bound he will not exert himself, and if he fails to exert himself he will not improve his lot."[46] This is the warning the Duke University psychologist, William McDougall, insisted upon as so vital and by the determinists so ignored. According to determinist theory, "My conduct will be what it will be, the issue of conditions that existed and determined it in every detail long before I was born; therefore it would be foolish of me to take pains to choose the better course and to make efforts to realize it. This is the real crux of this dispute. This is the legitimate inference from determinism. This is its moral difficulty, which has seldom been squarely faced by its advocates, and never overcome by them * * * One may suspect that the determinists, most of whom try to put aside this difficulty by some scornful reference to Oriental fatalism, are in general really afraid of it, and have entered into a conspiracy resolutely to ignore, since they cannot dispel, this dark shadow on human life."[47] So destructive does this determinism seem to Dr. Fleming, the University of Southern California philosopher, that he warns us, "All our political and social institutions are built upon the presumption of freedom. Without it civilization would perish. What is written so deeply into social necessity and the common understanding of man we have no hesitancy in proclaiming to be a fact."[48] And Dr. Wolf, philosopher of the University of London, addressing himself to the needs of criminology, asserts: "The view of freedom as partial self-determination offers a sound basis both for the deterrent and the corrective conception of punishment, as well as for that humane conception of the partly preventive and partly curative treatment of offenders which advancing civilization increasingly favors."[49]

Denial of free will is one of those things which the Harvard Psycho-Educational Clinic has found among "Causes of Mental Ill Health Among College Students": "The first reaction is one of disillusionment, with its consequent self-depreciation at the thought of being so gullible in the past, accompanied by an intense dislike for those people and institutions that had led him along blindfolded for 20 years. * * * The second reaction is generally an intense feeling of worthlessness, a feeling that man is but an animal slightly higher than the beasts of the field."[50] The psychiatrist, Dr. William Sadler, speaking from 30 years' experience, concurs regarding the importance of the free will concept for mental health. "It is," he says, "in the treatment of various types of disorders of the personality that the physician is brought to realize how much harm is done by the teaching that determinism, and not free will, rules life. * * * The training of the will by self-denial and self-control is extremely important. * * * Here is the secret of the increasing prevalence of neurotic symptoms in recent years."[51] Dr. Sadler need not go farther than to William James himself for an example of this importance of the free-will concept for mental health. In James' Letters we read that before he broke the stranglehold of determinism upon his mind by daring to assert free will, "suicide seemed the most manly form to put my daring into." A year later, delighted with the change the free-will assumption had worked in him, he exclaimed, "Bless my soul, what a difference between me as I am now and as I was last spring, at this time. Then so hypochondriacal * * * and now with my mind so cleared up and restored to sanity. It's the difference between death and life."[52]

VOLUNTARISM THE INSPIRATION OF THE FREE WORLD

We need be little moved by the warning that the scientific spirit requires us to bar freedom of the will. Sorokin, taking the long view, points out that the determinist credo was particularly fashionable in the 19th century but as a mere "mentality fashion" which "like any fashion comes, blossoms, and fades away. At the present time even in the physiochemical sciences a belief in an iron determinism is over, melted down into a mere theory of probability."[53] The distinguished physicist, Arthur H. Compton, gives point to this reminder by championing free will no matter what may be the fact regarding determinacy in physics; and this because—as he says—"My experience of the effectiveness of purpose is more direct and cogent than any logical argument based upon scientific generalizations. * * * That it pays to try is more basic in our psychology than is even the will to live."[54] Under the freewill concept man maintains his position of unique value, with no disparagement of science. For free will is consonant with much determinism in nature, whereas determinism is destructive of all freedom.[55]

Today America is spending itself to inspire the free world to dare all for its freedom. The enemy is not content to face us with the greatest peacetime military force the world has known. He must prepare us for defeat by first weakening us in things of the spirit. As the jurist, Jerome Frank, warns us: "We live in the midst of a world-wide struggle for mastery in the field of ideas. Determinism is one of the powerful contending ideas. It has infiltrated into American education. In America it is opposed by the American tradition of individual and group free will. Those of us who believe in that tradition must fight for it. Neither our victory nor our defeat is predestined."[56] In the name, therefore, even of our common patriotism as well as of science and commonsense, we must insist that we are not "graven images, pushed from behind," nor are we "molecules in the (red) wave of the future." Our future is largely of our own making; and—as Judge Frank inspiringly says, "we must make good." For the determinist the first step toward that making good is a heeding of the friendly warning of the Harvard Psychologist Edwin G. Boring, that "The problem of freedom of the will is still with us, and the deterministic psychologist (or criminologist) who denies it may be said to shut his eyes to an obvious fact of mind."[57]

Declaration

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. BROYHILL. Mr. Speaker, during the many activities connected with the inauguration of President Dwight D. Eisenhower and Vice President RICHARD M. NIXON, a cultural event of more than passing interest took place at Constitution Hall. At the official inaugural concert on January 20, the National Symphony Orchestra under the baton of Dr. Howard Mitchell presented the world premiere of a new symphonic composition, based on the beginnings of the United States through the American Revolution and the Declaration of Independence. Written by noted composer conductor Morton Gould, the work is entitled "Declaration." It was entirely fitting that Declaration be performed for the first time at the inaugural concert.

Declaration is considered by Dr. Mitchell to have lasting merit and will be performed regularly by the National Symphony Orchestra. It is unusually significant that this newest work by an important composer was commissioned by the NBC owned radio and television stations in Washington, D. C., stations WRC and WRC–TV. In the past, the custom of art patrons commissioning music composers to write works for specific celebrations or occasions was not unusual. However, the commissioning of Declaration by WRC and WRC–TV is an unusual situation for modern times. NBC vice president Carleton D. Smith, general manager of the stations, has established a precedent by sponsoring creative artistic efforts which other business leaders might well emulate.

Early in 1956, WRC and WRC–TV staff members James E. Kovach and Jay Royen conceived the idea of setting the Declaration of Independence to music for broadcast use each July 4. Mr. Smith encouraged development of the idea and promised financial backing to the extent of several thousand dollars. Dr. Howard Mitchell was approached and was immediately enthusiastic. Dr. Mitchell further suggested that Morton Gould would be the best possible composer to undertake the work as a commission by WRC and WRC–TV. The stations, in turn, expressed hope that the work would be performed for the first time by the National Symphony Orchestra in Washington.

Composer Gould accepted the commission with enthusiasm and completed his composition only a few weeks before the inaugural concert. Declaration is in the form of a speaking narrative for orchestra, two solo speakers and a speaking male chorus. Baritone Paul Arnold of WRC was selected to narrate the role of a Tory and Tom Kelly of the Catholic University was chosen as the town crier for the premiere performance. The 13 voice male chorus, representing the original American colonies, was played by the Singing Sergeants of the United States Air Force.

The movements of Declaration are Liberty Bell, Midnight Ride, Concord Bridge, Summer '76, Statements, Credo and Celebration. Plans are being made for a major recording company to make a record of Declaration so that it may be used by WRC and other radio stations throughout the Nation, as well as in our Nation's schools.

This new interest in early American history, through the medium of symphonic music, is certainly a worthwhile activity on the part of the stations of the National Broadcasting Co. As a cultural and patriotic gesture it is an activity for which WRC and WRC–TV are to be highly commended.

These stations have been serving the Washington area since 1923 and 1947 respectively. It is noteworthy that both stations have performed many other outstanding public service activities for the benefit of the people of the Washington area, including Maryland and Virginia. For several years now, WRC–TV has been in the forefront of efforts to end the pollution menace in the Potomac River. Through extensive radio and television publicity the public health menace in the Potomac has been brought before the public and much has been done to alleviate the situation. This unselfish pioneering work by WRC and WRC–TV will certainly deserve the thanks of future generations who may enjoy the recreational advantages of a clean Potomac river.

It also comes to mind that WRC–TV is one of the Nation's first commercial television stations to make a contribution in the field of educational television. For over 4 years, WRC–TV cooperated with the District of Columbia public school system to produce and telecast daily lessons into Washington public school classrooms. These daily hour-long lessons in music, history, science, civics and other subjects provided valuable information on television teaching techniques not only for Washington area teachers, but also for educational systems throughout the country.

The cultural, educational and civic activities of both WRC and WRC–TV indeed represent the finest traditions of the American broadcasting industry.

Entered here now is the script of Declaration as presented at the inaugural concert on January 20, 1957:

DECLARATION

(By Morton Gould, commissioned by stations WRC, WRC–TV of the National Broadcasting Co.)

(The excerpts from the Declaration of Independence used by Mr. Gould are included in secs. V and VI)

I. Liberty Bell (Passacaglia), orchestra.

FIRST INTERLUDE

Town Crier: Hear ye! Hear ye! News from the Colonies. Things are stirring all over and there's trouble afoot. Up Massachusetts way Sam Adams says more King's soldiers are debarking daily. Rumor is they are ready to march and arrest committee leaders, and seize all supplies. Sons of liberty and minutemen are calling for volunteers—and warn all members to be on the alert, and hold themselves in readiness. Mr. Revere, the silversmith, will bring the news and spread the alarm.

One if by land—two if by sea. Hear ye! Hear ye! News from the Colonies.

II. Midnight Ride (Scherzo), orchestra.

SECOND INTERLUDE

Tory: Bad times. Bad times. These are bad times. Agitation up and down the land. No respect for proper constituted authority. Loyal citizens of His Majesty are victims of scurrilous attacks.

Mobs are destroying property—dumping merchandise in the ocean. Oh, bad times. The country is full of rabble rousers, radicals, traitorous rebels. Well, they've got their heads in a noose this time. The King's troops are out—they'll round up the disloyal lot of them. Those loud-mouthed trouble-makers and their farmers' militia won't dare to stand up to His Majesty's army. If they do, it means armed insurrection. Death and destruction. Bad times—bad times, I tell you. Bad times——

III. Concord Bridge (memorial), orchestra.

THIRD INTERLUDE

Town Crier: Hear ye. Hear ye. The committee has called a special Congress this summer. Delegates are riding in posthaste from all the Colonies. New arrivals every day—taverns and inns are full up—hardly a room to be had in town.

The report is serious disagreements and arguments amongst the committeemen. A lot of independence talk in the air.

Alamanac says a warm July and good crops.

Hear ye. Hear ye. Special meeting of Congress.

IV. Summer '76 (serenade), orchestra.

FOURTH INTERLUDE

Tory: Bad times. Bad times. Bad times. The last peaceable summer we'll see for years to come. Revolution. That's what is happening, what these committees are brewing. And all this rubbish about independence—and United Colonies. What has a Boston trademan in common with a South Carolina planter? Imagine a Vermont farmer taking orders from a Virginia colonel. And a rank amateur soldier at that—their Mr. Washington. Rebellion and treason, I say, hiding behind high-flown propaganda and crackpot ideas. All these seditious acts stem from disloyal malcontents—inciting each other, setting neighbor against neighbor to further their own tyrannical power. Mark my words, if this movement is not suppressed, these poisonous thoughts will spread and overthrow and destroy established order—not only in this country but on the Continent as well.

Bad times. Bad times.

Town Crier: Hear ye. Hear ye. Hear ye. The Congress has been called to session. The delegates are arriving from all the Colonies. Young Tom Jefferson is come to Philadelphia with his own special writing desk. Franklin and Adams are on the way. Representatives from the Thirteen Colonies are gathering for the rollcall; New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia.

V. Statements (Fugato), speaking chorus and orchestra.

Speaking chorus: We have suffered just grievances. Over many years now we have petitioned for redress to no avail. We cannot tolerate the worsening conditions—and call ourselves freemen.

We have suffered repeated injuries and usurpations, all having in direct object the establishment, by the present King of an absolute tyranny over these states. To prove this, let facts be submitted to a candid world.

He has refused his assent to laws the most wholesome and necessary for the public good.

He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and when so suspended he has utterly neglected to attend to them.

He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature, a right inestimable to them, and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the repository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved representative houses repeatedly, for opposing with manly firmness, his invasions on the rights of the people.

He has refused, for a long time after such dissolutions, to cause others to be elected, whereby the legislative powers, incapable of annihilation, have returned to the people at large, for their exercise; the State remaining, in the meantime, exposed to all dangers of invasion from without and convulsions within. He has endeavored to prevent the population of these states; for that purpose obstructing the laws for naturalization of foreigners; refusing to pass others to encourage their migration hither, and raising the conditions of new appropriations of lands.

He has obstructed the administration of justice by refusing his assent to laws for establishing judiciary powers.

He has made judges dependent on his will alone for the tenure of their offices and the amount and payment of their salaries.

He has erected a multitude of new offices and sent hither swarms of officers to harass our people and eat out their subsistence.

He has kept among us, in times of peace, standing armies without the consent of our legislatures.

He has effected to render the military independent of, and superior to, the civil power.

He has combined with others to subject us to a jurisdiction foreign to our Constitution and unacknowledged by our laws; giving his assent to their acts of pretended legislation.

He has constrained our fellow citizens, taken captive on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands.

FIFTH INTERLUDE

Town crier: Hear ye, hear ye. July 3, this year 1776, the Congress is met. They are declaring for independence.

VI. Credo (recitative), speaking chorus and orchestra.

Speaking chorus: When, in the course of human events, it become necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that whenever any form of government becomes destructive of these ends it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience hath shown that mankind are more disposed to suffer while evils are sufferable than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of these colonies; and such is now the necessity which constrains them to alter their former systems of government.

We, therefore, the Representatives of the United States of America, in general Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the name and by the authority of the good people of these Colonies, solemnly publish and declare that these united Colonies are, and of right ought to be, free and independent States: and that as free and independent States they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent States may of right do. And for the support of this declaration, with a firm reliance on the protection of divine providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor. (John Hancock, Benjamin Franklin, Thomas Jefferson, Samuel Adams, John Adams, Stephen Hopkins, Edward Rutledge, Benjamin Harrison, Philip Livingston, Robert Morris, Francis Hopkinson, Richard Henry Lee, Benjamin Rush.)

SIXTH INTERLUDE

Town crier: Hear ye! Hear ye! All is well in the 13 independent and united States. A new nation is born. There will be celebrations through the land. Sing Hallelujahs and blow the bugles. Ring out the bells.

All is well. All is well. All is well.

VII Celebration (chorale and fugue), orchestra.

Farben Pays

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. SHEEHAN. Mr. Speaker, time moves inexorably forward. Man cannot return and erase the blots of the past. He can, however, obliterate them with the brilliance of present deeds. Recently, men of good will representing the remnants of Europe's largest industrial monolith and the remnants of a persecuted people met, without sanctimonious fanfare and of their own volition, to reach an agreement to compensate, inasmuch as is humanly possible, victims of the brutality engendered by the Nazis.

On February 6, 1957, representatives of the I. G. Farben in liquidation, the officials designated by the victorious allies to liquidate the old I. G. Farben combine, and the Jewish Material Claims Conference—speaking for free world Jewry—concluded an agreement whereby the conference would receive some 27 million marks—about $6,750,000—for distribution as compensation to the more than 3,000 former Jewish inmates of the Nazi concentration camp at Auschwitz who were compelled by the Nazi SS to work in I. G. Farben installations during World War II.

The chiefs of I. G. Farben in liquidation, although disclaiming any legal responsibility, have no doubt felt a moral obligation toward those whom the Hitlerians compelled them to use as forced labor in their facilities. They have met on an equal basis with the 22 Jewish organizations representing Jewry in the free world, and together they have reached an agreement for equitable compensation for some of the horrible wrongs committed during the Nazi era. The hatreds of the past are best buried. Both the Jewish Material Claims Commission and I. G. Farben in liquidation are to be congratulated for this significant contribution to the renascence of international conscience.

The Chicago Daily News, the Chicago Sun-Times, and the Milwaukee Sentinel have all expressed editorially their thoughts on this matter, as evidenced from the following.

The editorial of the Chicago Daily News of February 7 is as follows:

FARBEN PAYS

The extent to which the present leaders of West Germany are seeking to wipe out the

stains of the Nazi era is illustrated in an agreement signed yesterday in Frankfurt.

Under its terms, the liquidators of the mammoth I. G. Farben Co. are setting aside about $7.5 million to pay former concentration camp victims who were forced by the Nazis to work in the Farben plants. Many of these victims now live in the United States.

Of this total, about $6.5 million will be distributed by the Conference on Jewish Material Claims Against Germany. The remainder will be paid directly to non-Jewish claimants.

The I. G. Farben agreement, which is over and above any compensation undertaken by the Government, marks a significant step toward healing the wounds left by the infamous Hitler regime.

The editorial of the Chicago Sun Times of February 7 is as follows:

CARTEL WITH A CONSCIENCE

More than 3,000 former inmates of Auschwitz concentration camp who were forced by the Nazi SS to work as slave laborers for the I. G. Farben chemical cartel will receive $7,140,000.

An agreement to this effect was signed yesterday in Frankfurt by liquidators of the company and the Conference on Jewish Material Claims against Germany, which is made up of 22 Jewish organizations from all over the free world.

The payment has no relation to the official German government compensation to Jewish victims of the Nazi regime. This is a separate private payment that is an effort to make up, at least financially, for the misery and human indignity suffered by some of Hitler's slaves.

There is a test case for such compensation in the German courts, but the liquidators of the company, although claiming they have no obligation to do so, have decided to pay off before the case is decided. They want to clear their conscience as well as their books.

That such a private settlement can be made without government pressure is a sign of the new spirit in Germany which seeks to make redress for the wrongs of the Nazi era. It is a spirit the rest of the world should know about and appreciate.

The editorial of the Milwaukee Sentinel of February 10 is as follows:

IN CONSCIENCE

One of the most significant, encouraging, and important events since the formal cessation of World War II took place, in relative quiet, in Frankfurt, Germany, last week.

It was the signing of a historic agreement between the trustees of the former I. G. Farben chemical combine and the Conference on Jewish Material Claims against Germany.

The Conference is composed of 22 Jewish organizations within the non-Communist world.

Under this signing, the liquidators of the Farben cartel agreed to set aside about $7½ million with which to compensate those who survived the horrors of slave labor at the Farben plant near the infamous Auschwitz concentration camp during World War II.

The Conference on Jewish Material Claims will distribute about $6½ million of this sum to the more than 3,000 Jewish survivors.

The rest will be received directly by non-Jewish claimants.

Many of these survivors now reside in this country.

This settlement becomes all the more significant, encouraging, and important when it is noted that it has come not as a result of action of any government, but is purely the result of individual human beings who have acted, in deep conscience, to somehow endeavor to erase the brutal marks which Hitler-aroused racial hatred etched upon the history of man.

Indeed, this is an outstanding example, particularly in these days in which governments continue to clash with governments, of what individuals of faith and good will and of mutual understanding can do by themselves if they but choose to do so.

It is, then, a great ray of hope on a world scene which all too long has been darkened by hatreds and oppressions and by failure to recognize God-granted human dignity.

Drought Has Been Disastrous

EXTENSION OF REMARKS

OF

HON. GEORGE H. CHRISTOPHER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. CHRISTOPHER. Mr. Speaker, Secretary Benson's recent decision that the State of Missouri did not belong in the drought-disaster area is very difficult to understand. We in Missouri have suffered 5 consecutive years of very subnormal rainfall, and we now have an accumulated moisture shortage of 60 inches, or 5 feet, of water for this period below the 10-year average. Could it be possible that the way a majority of Missourians voted in November 1956 fails to meet with the approval of the Secretary, and that this has become a contributing factor in his complete lack of cooperation?

[From the Missouri Farmer of February 1957]

DROUGHT HAS BEEN DISASTROUS—CAN ANYONE CALL IT A BLESSING?

(By Fred V. Heinkel)

Almost every day for the last 4 years letters have reached my desk from farmers over the State, bringing out drought problems which they were facing. Your Missouri Farmers Association has had a representative serving on Governor Donnelly's State Drought Committee since its formation in 1953. This committee has continued to function because of the drought problems which had to be dealt with every year since 1953.

Though I do not believe this condition warrants the conclusion that Missouri is becoming a permanently arid State, I do feel that we should study the happenings over the past few years as a basis for our future planning.

The interrelation between drought problems and economic problems facing farmers is obviously so close that one set cannot be considered without the other. Consider for a moment some of the economic factors in the United States over the past few years, from 1952 to 1955.

According to a Department of Labor report, industrial stock prices were up 62 percent and corporate profits (after taxes) were up 32 percent. Nonfarm income was up 14 percent. But net farm income was down 23 percent.

Furthermore, as evidence of low farm prices and drought conditions, farmowners borrowed $2.4 billion on farm mortgage security in 1955, the largest amount since 1923. And the total farm debt reached $18.5 billion by the end of last June, with total interest payments expected to reach $1 billion by this year.

THEN ADD DROUGHT TO THIS

Now, against the background of these figures which indicate the farmer's economic plight nationally, consider the effects on Missouri farmers caused by the extended drought, and consider too what measures have been taken to combat these disastrous effects.

We remember all to clearly the latter part of 1953, when the devastating summer and fall drought left us with very little grain produced in some sections of the State and with virtually no hay and roughage in any part of the State. After months of making surveys, and in response to repeated requests, the Federal Government made available a limited surplus grain program in some sections of the State, which was certainly helpful to those eligible to receive it.

FEDERAL ACTION DELAYED

At the same time repeated requests were made to Secretary Benson to initiate a roughage program. However, no action was taken until after Governor Donnelly had called a special session of the legislature at which $6½ million was appropriated to provide aid to Missouri farmers by paying half the transportation cost of importing hay and roughage from outside the State. The railroads, you will recall, reduced freight rates by one-half on hay coming into Missouri.

Finally, after the State had appropriated the $6½ million and hay was already arriving from other States, only then did the Federal Government contribute $1,604,000 to the program.

Early in 1954 it became evident that the available funds would not be sufficient to meet the need, and a second special session was called, when an additional $2,750,000 of State funds were appropriated.

The purpose of this program was to save the livestock and dairy industries of the State of Missouri, and I am proud to say your Missouri Farmers Association not only gave full support to the program, but also served importantly as an agency in providing farmers in Missouri with thousands of tons of hay and roughage at a price they could afford to pay.

The amount of Federal aid was so little and granted so late that had the State not taken positive action many livestock and dairy herds of Missouri would have had to be liquidated. Such a loss would not only have thrown hundreds of farmers into bankruptcy, but would have disrupted the economy of the entire State.

Under the roughage program, some 82,000 drought-stricken Missouri farmers purchased over 700,000 tons of hay at a price not in excess of $22 per ton.

Late in 1954 and through the early spring of 1955, after many surveys and repeated requests, the Federal Government advanced $500,000 for an emergency hay program in Missouri. Under this program, in which the Federal Government paid one-fourth of the transportation costs, some 15,000 farmers purchased approximately 85,000 tons of hay and roughage.

THIS SPRING NORTHWEST MISSOURI HARD HIT

In the spring of 1956 the northwestern and central sections of Missouri received practically no rainfall until the latter part of June. Winter wheat dried up, oats did not germinate, and corn did not come up. Ponds and creeks were dry, and pastures were nonexistent.

After numerous surveys and repeated requests by the Governor, a personal representative of Secretary Benson made a survey of the area. On the basis of his report, only four counties in the entire area were designated drought counties, and only for the grazing of soil-bank reserve acreage, most of which was as barren as the middle of the road.

Last September, October, and November we experienced the driest fall in the history of Missouri weather records. Farmers in many sections of the State started feeding both grain and roughage. In some sections they

had to start as early as July. This was particularly true in southwest Missouri, where they had suffered 5 schorching years, and where as of December 1, 1956, there was more than a 5-foot deficit in rainfall.

DROUGHT COMMITTEE RECOMMENDS AID

On October 8, the Missouri Drought Committee recommended to Governor Donnelly, who in turn recommended to Washington, that 93 counties in Missouri be declared drought disaster counties. On October 10, Secretary Benson visited Missouri and met with the drought committee. Before leaving, he promised an immediate reply to the Governor's request.

Besides his request for drought designation of 93 counties, Governor Donnelly recommended:

1. Allow the pasturing of soil-bank reserve acres.
2. Provide funds to initiate a program of seeding small grain for pasture on a cost-sharing basis.
3. Provide funds to renovate farm ponds which were dry.
4. Provide funds to accelerate Bangs eradication program.
5. Expand the beef purchasing program.
6. Instigate a coordinated hay, roughage, and surplus grain program.

Secretary Benson kept his promise and replied to Governor Donnelly's request within a few hours. However, he rejected every request except one. He even rejected the request for a surplus grain and hay program, the need for which was serious at that time and has since become critical. The only request approved was permission to graze soil-bank reserve acreage in 93 counties, which meant very little.

Two of Secretary Benson's personal representatives spent a week in Missouri, and not only saw the conditions, but at a series of meetings, heard hundreds of farmers in southwest Missouri describe their farming conditions and outline their needs. Farmer after farmer explained that with 4 or 5 years of drought added to worsening economic conditions, he was just about through unless surplus grain was made available at reduced cost and a roughage program set up to aid him.

FARMERS WITHOUT PASTURE

Many testified they had no fall pasture because drought conditions had prevented their wheat, barley, and rye from germinating and growing. They had already started to feed both grain and roughage in increased amounts—some as far back as July. Their supply was exhausted, or would be by January 1.

I ask you, how could any human being, with anything warmer than "icewater" in his veins, see these conditions at first hand and hear hundreds of farmers describe their sorrowful plight, and still reject all requests for help * * * even for the surplus grain which is supposedly held by the Federal Government to meet such emergencies.

What can be the reason why the Secretary of Agriculture, instead of using the surplus grain to help farmers recover from drought damage, prefers to give it to a foreign nation, or else hold it while it deteriorates and while he raises a continual hullabaloo about storage charges?

Can it be that Secretary Benson sees the disastrous conditions as a blessing which can reduce the number of farmers to the point where only the large farmers—his so-called efficient operators—will be all who survive?

To this end, at any rate, he is being successful, as the recent census of agriculture shows. Some 600,000 farmers in the United States have been forced off the land since 1953 * * * 28,431 of them in our own State of Missouri.

Needless to say, I cannot share this view. To me, the drought is a disaster, spreading and deepening the depression in agriculture. And its results are tragic insofar as farmers are being forced off the land. Each time another farm family has to leave, it is to me another tragedy, and so unnecessary. Steps could be taken to change this trend, and I certainly hope they will be taken soon.

Ronne's Ship Battles 70 Miles of Ice in Week

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 23, 1957

Mr. TOLLEFSON. Mr. Speaker, an excellent article concerning the activities of Capt. Finn Ronne in the Antarctic appeared in the January issue of the Evening Star.

Capt. Finn Ronne is one of the only two Americans who will be wintering in the Antarctic for the fourth time. He is military commander and scientific leader of the Ellsworth International Geophysical Year Station.

In 1948 he led his own expedition which resulted in discovery of new land in the Antarctic larger than the State of Texas. Flights into the unknown proved the Antarctic is one continent. Three-quarters of a million square miles were covered by aerial photographs and investigations were conducted in 11 branches of science.

The article follows:

RONNE'S SHIP BATTLES 70 MILES OF ICE IN A WEEK

(By Capt. Finn Ronne)

ON BOARD THE ICEBREAKER "STATEN ISLAND" IN THE WENDELL SEA, ANTARCTICA.—Ours is the first American ship ever to enter the Weddell Sea and the first of any nation to smash through the heavy floes of 8-foot-thick icerafts that have sealed off this desolate bay for more than a year.

The obstacles to navigation have been fearful. In over a week we have navigated only 70 miles and now we are encased in tremendously heavy ice off Gould Bay, still 370 miles from our destination, Bowman Peninsula in Edith Ronne Land where we hope to set up the station where we will live for the rest of 1957. Yet we may be forced to set up our base nearer at hand.

Something of the loneliness and heartbreak and heroism of Arctic exploration was brought home to us this week as we paid a visit by helicopter to the eight men at the British base in Shackleton Bay.

This group, led by Ken Blaiklock, lost their stores and fuel on the treacherous bay ice last year and were forced to winter over in tents with a temperature down to minus 64 degrees. Only 2 months ago were they able to complete building a hut, where we sat around a stove and watched their elation at seeing new faces. In a few days they will be joined by the group under Dr. Vivian Fuchs and Sir Edmund Hillary aboard the supply ship *Magdan*.

FIRST VISITORS IN YEARS

On New Year's Eve Capt. Edwin MacDonald and I flew by helicopter to another isolated British base where we were the first visitors in more than a year. Here at Halley Bay I met again my old friend Dr. V. David Dalgleish, in command of a nine-man party. We took his aide, George Lush, of Portsmouth, England, back to the *Staten Island* for an X-ray of a broken wrist that was found to be healing satisfactorily in spite of the 10 different casts it had in 4 months.

I say New Year's Eve—but of course at this time of year the sun shines 24 hours a day, and work goes on around the clock. It was at 4 a. m. on January 2 that we lost a helicopter in an accident that miraculously spared the pilot, Walter Strait and Walt Disney Cameraman William Fortin.

The 'copter had engine failure at 8 feet off the deck, flipped over and ground up the deck with its rotor blade. The machine and Fortin's CinemaScope camera were damaged beyond repair.

While our two ships, steadily battling the ice, moved slowly forward toward our ultimate destination, the remaining 'copter flew Captain McDonald and an Argentine observer, Lieutenant Dansel, to the Argentine Belgrano Base, 17 miles away. During their visit with eight Argentines, their leader, Gen. Hernan Pujato, expressed his desire to meet me, which request Captain McDonald radioed aboard.

As my 'copter, piloted by Lt. Edgar Newall, approached the barrier cliff I saw a small beaver plane, 10 sled dogs, 4 weasels and radio masts which were visible. One man popped up, seemingly from nowhere, and greeted me most heartily in Spanish. It turned out to be the general himself.

OLD MAGAZINES POPULAR

Others were soon on the surface, including Captain McDonald, who returned to the ship in the 'copter which had brought me. The Argentine doctor, who spoke English well, led the way to a small boxlike opening where we climbed down a vertical ladder to a landing, where a low tunnel led to their living quarters, buried deep into the barrier. Although congenial General Pujato had been here continuously since his base was built in January 1955, it was only a few weeks ago, during a reconnaissance flight, that he learned the existence of the nearby British Shackleton Base.

The eight Argentines had explored southward in Edith Ronne Land and discovered a 130-mile-long glacier, mountain ranges as high as the Alps and gathered scientific data.

Since we are the first ships to arrive this year, none of the men at these three bases has seen outsiders in more than a year. They heartily welcomed our visits and devoured our old magazines.

We are now breaking our way, foot by foot, westerly through treacherous pressure ice and narrow leads. Southerly cold winds which previously cleared our way of ice have suddenly shifted to warm winds from the north and caused a tight pack which is impossible to penetrate. Knowing well the shifting mood of the ice, Captain McDonald has decided to await southerly winds and a slackening of the pack before attempting another onslaught.

EIGHT HUNDRED YARDS IN 10 HOURS

On one occasion the icebreaker made only 800 yards in a 10-hour period. Continual poundings did not rock the mighty barriers of rafted ice. These rafting and pressure ridges measuring more than 20 feet above the crushed, upheaved, tattered and jumbled icefields are all around us.

On all of my four expeditions to the Antarctic I have never experienced the size and mass of ice that surrounds us here. No hope for a change is in sight until southerly winds break up the pack.

Captain MacDonald has tenacity of purpose and a tremendous drive to get the Ellsworth station set up. He will keep on plugging, and believes we will get there before the winter darkness closes in around us. However, if conditions do not change by January 20, it is planned to establish the base near our present position at Gould Bay. The

ships must depart about February 15 for home.

This is the area where in 1913 Filchner's ship, the *Deutschland*, was beset in the ice for 10 and a half months and where in 1915 Shackleton's ship, the *Endurance*, was so crushed by the intense pressure that she eventually sank.

We can feel the cruelty of the Weddell Sea while still marveling at the beauty it can produce. Last week I witnessed the most beautiful awe-inspiring sight of my four expeditions while steaming southward in the ice-free, mirror-reflecting water along snow-white Luitpold Coast with flowing gleaming tabular icebergs, sheer walls of ice, 100 feet high, and higher brilliant sun-lit snow-hills in the background.

It made me feel as if I were in dreamland on another planet and it is as good a reason as any as to why men return to the Antarctic.

Brotherhood Week

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. VANIK. Mr. Speaker, the week of February 17 to February 24 is being observed throughout America as Brotherhood Week. It is sponsored by the National Conference of Christians and Jews and is designed to spread the spirit of brotherhood throughout the land.

Throughout America, under the sponsorship of the National Conference of Christians and Jews, every community is conducting an event set aside to stimulate our national struggle against intolerance. Intolerance is the greatest enemy of our democratic institutions and has no place in our American democracy. The National Conference of Christians and Jews renders a tremendous service in organizing the fight against intolerance and clearing the way for a stronger and more sturdy union of the American people.

Every year the National Conference of Christians and Jews designates recipients of the national human relations award granted by the conference to some individual distinguished for his devotion to brotherhood.

On Sunday, February 24, Mr. A. M. Luntz, president of the Luntz Iron & Steel Co., of Cleveland and Canton, Ohio, will be awarded the national human relations award of the National Conference of Christians and Jews at a civic dinner which will be attended by over 1,000 persons at the Hotel Carter in Cleveland. The award, the highest honor of the conference, is being made for Mr. Luntz' lifetime of devotion to the cause of the brotherhood of man under the fatherhood of God and his assistance to all peoples regardless of religion, race or nationality.

The dinner will also mark the close of the 1957 Brotherhood Week under the national chairmanship of another Clevelander, Louis B. Seltzer, editor of the Cleveland Press. It is the first time in the history of the National Conference that both the national award winner and the National Brotherhood Week chairman come from the same city. Cleveland also has the distinction of being the only city in the United States to have three citizens who have received the National Human Relations Award. In addition to Mr. Luntz, John A. Greene, president of the Ohio Bell Telephone Co., won the citation in 1956 and Mr. Seltzer in 1951.

Addressing the Luntz dinner will be national personages from every walk of life including Senator John F. Kennedy, of Massachusetts, Senator Frank J. Lausche of Ohio, Henry A. Roemer, board chairman of Sharon Steel, Gov. C. William O'Neill of Ohio, Mayor Anthony J. Celebrezze of Cleveland, Mayor Carl Wise of Canton, Ohio, Dr. Everett R. Clinchy, National Conference president, Rabbi Abba Hillel Silver of The Temple, Cleveland; Rt. Rev. Nelson M. Burroughs, bishop of the Ohio Episcopal District; Msgr. Albert J. Murphy, pastor St. Ignatius Church, Charles F. McCahill, senior vice president, Forest City Publishing.

We in the Cleveland community are proud of Mr. Luntz and the honor which will be bestowed upon him for his devotion to the cause of brotherhood. We are also proud of the tremendous service which has been rendered by Mr. Louis B. Seltzer, editor of the Cleveland Press, as national chairman of the National Conference of Christians and Jews.

REA Cooperatives

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. CHRISTOPHER. Mr. Speaker, the propaganda advertising of the private electric power monopoly is going to unheard of lengths to discredit and destroy public power and REA cooperatives. The private-power companies had many years in which to take the blessing of electric light, power, and refrigeration to American farm homes. They not only failed to do this, they did not even attempt it. Now they brand public power and the REA cooperatives as socialistic, but the fact remains that without REA co-ops, the American farmer would still be in darkness without either refrigerator or power.

Some of their propaganda is silly to anyone who actually knows conditions as they exist. Millions of dollars are being spent on radio, television, and full-page ads in their attempt to discredit and destroy the public-power programs that have made electricity an almost universal servant in the American farm home. These ads are very costly, but they are not paid for by the private-power companies as they claim. They are paid for by the consumers of the electric current generated and sold by the private-power companies. Much of the current used by REA cooperatives is purchased from private companies—so the REA users themselves are paying a part of the cost for this propaganda barrage designed to destroy REA cooperatives.

The following letter from Clyde T. Ellis, general manager, National Rural Electric Cooperative Association, is very revelatory and contains information with which every Member of the House should be familiar. I suggest that my colleagues read this letter:

NATIONAL RURAL ELECTRIC
COOPERATIVE ASSOCIATION,
Washington, D. C., February 11, 1957.
Hon. GEORGE H. CHRISTOPHER,
House Office Building,
Washington, D. C.

DEAR MR. CHRISTOPHER: Attached for your information is the latest ad in the propaganda series of the power companies. We wrote to you on this matter with a copy of an earlier ad on December 31.

We want to call to your attention the following part of the ad:

"These companies can have this power ready when you need it because they don't have to wait for an act of Congress—or for a cent of tax money—to build the plants. The same experience, imagination, and enterprise that electrified the Nation in a single lifetime are at work shaping your electric future. That's why in the years to come, as in the past, you will benefit most when you are served by independent companies like the ones bringing you this message."

These statements are simply not true.

When the power companies say that they don't have "to wait for an act of Congress—or for a cent of tax money"—they are implying, and falsely, that they do not receive any subsidies from the Federal Government. The facts are that they have already received certificates entitling them to interest-free loans of $1.4 billion and ultimate subsidies of $4.7 billion under section 168 of the Internal Revenue Act of 1954, and they stand to obtain benefits far in excess of those amounts under section 167 of the same act.

When the power companies attribute to themselves the credit for electrifying "the Nation in a single lifetime," they are rewriting history by denying credit to local and State governments for activities along this line which date back to 1882, and they are erasing the ugly record of most of the private companies in excluding rural people from receiving modern electric service until rural people and the Congress through the rural electric systems with funds and technical assistance from the Rural Electrification Administration did most of the rural job and forced the power companies to move into the field.

Placed against the background of the long propaganda campaign of the power companies, using funds supplied by electric consumers, this ad is pointing to a bright future and propagandizing against the Federal power program, State and local electric systems, and the rural electric program, i. e., against all enterprise in the electric industry except private monopoly.

We do not question the right of any American to free speech. We do question the privilege exercised by utility monopolies to spread false and misleading propaganda against our program. And we wish to protest as strongly as polite language will permit the right of the power companies to finance this kind of propaganda out of funds collected from electric consumers, including a majority of the consumers of our own member systems. And we protest the privilege the power companies exercise in declaring such expenditures to be a part of the legitimate expense of serving people with electricity, and deducting these expenses from their profits before taxes. Since electric

utilities operate, in effect, under cost-plus contracts with the electric consumer, they should not be permitted to add the cost of misleading propaganda to the ratepayers' bill and reduce their income taxes simultaneously.

We sincerely hope that the Congress will take action affirmatively to prohibit these activities, leaving the officials and owners of the power companies free to say whatever they please as individuals, provided they do it at their own expense.

Sincerely,

CLYDE T. ELLIS,
General Manager.

Statehood for Alaska

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 10, 1957

Mr. DAWSON of Utah. Mr. Speaker, as a Member of Congress, as a member of the House Interior and Insular Affairs Committee, and as a Republican, I have during all of my service in Congress supported statehood for Alaska.

I have done so with the expectation that Alaska, after being granted statehood, would send Democrat Senators and a Democrat House Member to Washington. I have also sponsored legislation to permit Alaska to elect its own governor with the knowledge that this too would mean that a member of the Democratic Party would in all probability become Alaska's first elected chief executive.

The issue of statehood—the question of whether residents of Alaska should be represented in Congress by voting members—should, I feel, be above politics. I have so conducted myself in supporting this legislation.

For this reason, I am greatly disturbed by some newspaper accounts of the action of the Democrat-controlled Alaskan Territorial Legislature. The headline story of the Anchorage, Alaska, Daily Times of February 5, 1957, reads as follows:

THIRTY-SIX TURNED DOWN BY LEGISLATURE—POLICE BOARD HIT HARDEST BY SOLONS

JUNEAU.—Acting Gov. Waino Hendrickson was faced today with the task of nominating 36 persons to 28 Territorial agencies who will be more acceptable to the Democratic majorities in the legislature than his original choices.

The heaviest shucking came on Hendrickson's nomination to the Territorial board of police commissioners. The senate and house—in voice votes—refused to confirm any of Hendrickson's nominations to the commission which sets the policy for the Territorial police.

Here is another story from the same newspaper:

CURB ON POWERS OF NEW GOVERNOR URGED BY KAY

JUNEAU.—Wendell Kay, Anchorage, retiring speaker of the house, has called for the stripping of the appointive governor's patronage powers in order to frustrate the aims of Republican leaders in Washington.

Mr. Speaker, I do not know to whom he refers when he says "Republican leaders in Washington." I certainly know of no Member of Congress who has plans afoot to build a Republican machine in Alaska. I suspect that the Democrat leader is trying to justify actions taken by his party to embarrass the appointees of our Republican President, actions that are clearly political in intention and scope. I am perfectly willing to recognize the Alaskan Legislature's right to object to some nominees for State positions submitted to it by acting Governor Hendrickson. But for the members of the legislature to reject, in sweeping voice votes, 36 nominees to almost all of the Alaska governing boards is nothing but politics and politics at its vindictive worst.

In supporting statehood for Alaska, I have assumed that the residents of that State had achieved the political maturity to govern their own affairs wisely and well. The actions of the Democrat majority of the Alaskan Legislature have shaken this assumption. As a Member of Congress who must vote on the issue of statehood, both in committee and on the floor of the House, I intend to keep a close watch on the developments in Alaska. As a Republican, I deeply resent political reprisals against duly constituted authority in the Territory of Alaska, solely because the authority happens to be a Republican also. Let the Democrat members of the Alaskan Legislature weigh this observation while they are passing resolutions urging me and other Republican Members of Congress to vote them statehood.

No Sanctions Against Israel

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. ANFUSO. Mr. Speaker, all of us are deeply concerned over the situation in the Middle East. We are concerned over the fate of Israel and its security and survival as a free and independent state. We are concerned over the attitude of some of the Arab countries, especially Egypt, because of their friendly relations with Communist Russia and for enabling that country to obtain a foothold in this vital area. We are concerned over Russian efforts to gain control of the Middle East, capture its oil resources, weaken the West and endanger our whole position. Most particularly, are we concerned lest events in this area might lead to a new world war with more dire consequences than in the past.

Unfortunately, our country has pursued a policy of drifting and stalling in recent years as far as the Middle East is concerned. We have not acted with firmness, as befits a world power such as the United States. Today, Nasser of Egypt and others of his ilk are dictating the terms and putting forth the demands—instead of the United States telling them what to do in the best interests of the free world. Many of these countries are dependent on us for foreign aid, then they turn right around, flirt with the Russians, purchase arms from them and keep the whole Middle East in turmoil.

The State of Israel could no longer withstand the constant provocations from Egypt and the raids by Arab gangs across its borders, and was forced to march into the Sinai Peninsula to wipe out the attackers in defense of its population. Britain and France could no longer stand idly by while Nasser seized the Suez Canal and disrupted their commerce, and they sent troops to occupy the canal. What did we do? Did we pursue a policy of aiding our friends and allies? No, we criticized them severely and condemned them in the United Nations. We insisted that Britain and France leave the Suez Canal at once. We helped maintain Nasser in power from which he was about to topple—and now we have a worse mess in the area.

Then we insisted that Israel give up the Sinai Peninsula, withdraw to its previous borders, and relinquish the Gaza strip, which never belonged to Egypt anyway. Now that Israel asks for firm guaranties for its shipping in the Gulf of Aqaba and protection against the renewal of raids from Gaza, we are talking about applying sanctions against Israel in order to strangle this little state, the only true democratic state in the Middle East.

Many of the leaders of both parties in Congress have warned that imposing sanctions against Israel is not only immoral and unjustified, but that it would be a most shameful way of meting out punishment to the weak and small states. Soviet Russia was permitted to get off scot free for her acts of murder and brutality against the people of Hungary. India has taken over Kashmir, while completely ignoring world opinion. Egypt seized the Suez Canal, has obstructed passage through the canal to the detriment of Western Europe, is agitating its neighbors to rise up in arms against France, and has carried on a constant state of war and provocations against Israel—but not a word from the United Nations or the United States to apply sanctions against her.

Is it right that there should be a double standard of morality, one for the weak and another for the strong? Can sanctions against Israel be justified, if no similar measures were taken against Soviet Russia, India, and Egypt? Can the United States, which is recognized far and wide as the moral leader of the free world, still continue in that role if we support sanctions against Israel?

It is high time for the United States to point out the hypocrisy involved here, or else be branded in the eyes of all the little and weak nations as being on the side of the bullies and the demagogs. I should not like to see our country placed in the same category with such preachers of morality as Russia's Khrushchev and India's Nehru. The world, the right-thinking people in this world, sized them up for what they are a long time ago.

The United States has the power to stop any harsh and foolish action in the United Nations which can only serve the purposes of Communist Russia in keep-

ing the Middle East stirred up. Let us not be a partner to such deeds which we may regret for many years to come and which may take a long time to rectify. Sanctions against Israel, whether moral, economic, or military, will not bring its people to their knees; it will only make them more miserable, more bitter, more desperate. What may come out of a situation of this kind is not difficult to understand.

I earnestly hope that this country will not allow itself to become involved in supporting the double standard of morality as currently practiced in the United Nations. In the long run, it will prove more dignified and more secure for our country to defend the rights of the little countries. It may also help save the United Nations from its present ineffectiveness and make it a valuable instrument of peace, instead of tearing it down completely.

Our policy now should be: No sanctions against Israel. Let us state it in clear and unequivocal terms.

Max Abelman

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the New York Sunday Mirror of February 10, 1957, and which was written by Ken Rosenberg:

An able man at raising a dollar for any worthy cause is Max Abelman, 35 Tennis Court, Brooklyn. In his 50 years of fund-raising the stocky septuagenarian has raised more than $100 million, including almost $44 million in one gigantic Liberty Bond rally during World War I. He has just concluded a substantial effort in a Jewish charity's fund drive.

"We staged a big Liberty Bond show featuring Irving Berlin and opera star Eleanor Cisneros," Abelman retaliates, "and then Eleanor and other celebrities sold kisses to the people buying bonds. It was really funny to see the way some of our richest men rushed forward to buy kisses."

From 1932 until his retirement in 1954 Abelman served in various official capacities at the Jewish Hospital of Brooklyn, an institution which he helped to set on its financial feet in his first real fund-raising campaign in 1909.

The Rumanian-born Abelman was introduced to fund raising in a novel way in 1907. "My father, who was a contractor, needed money to continue a project, so I went directly to one of the richest men in the city to ask his assistance," he recalls.

"Not only did he help my father, but he sent me to Nathan S. Jonas, the president of the Brooklyn Federation of Jewish Charities, who gave me a temporary job as a clerk," Abelman recounted.

By October of 1909 he had turned his temporary clerk job into the post of executive director of the federation, and he stayed until 1923 when he resigned to become an officer of the Manufacturers Trust Co. One of his presentations for the federation which featured Violinist Fritz Kreisler netted $1 million in 1 night.

"At another of our offerings," he remembers, "we had an orchestra of 200 and some of the greatest voices of the operatic world vying with live canaries singing throughout the room."

On the philanthropic front Abelman was instrumental in founding the big brother and big sister movements, and has been active all told in the affairs of some 300 organizations including the Boy Scouts and the Red Cross.

Abelman had a heart attack last year. He is under doctor's orders to take it easy, but nevertheless he was a prime figure in the recent Federation of Jewish Philanthropies campaign.

"We've got to keep active to help the needy," explains Abelman, who has operated under a motto which has summed up his work down through the years: "From each according to his ability, to each according to his needs."

Another Tribute to Congressman Albert Morano

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1957

Mr. PATTERSON. Mr. Speaker and distinguished colleagues, I wish to call your attention to an article that appeared in the Bridgeport (Conn.) Post on February 16. This article shows the high esteem that is held for my distinguished colleague from Connecticut, Congressman ALBERT MORANO.

I should like to add that I too have been an eyewitness of the outstanding work done in Congress by ALBERT MORANO. He is a tireless worker for the cause of his constituents, and their welfare is his constant goal. Mr. Speaker, the great people of Connecticut's Fourth Congressional District can certainly rest assured that their Representative in Congress is down here doing a great job in their behalf.

I ask unanimous consent to insert here in the CONGRESSIONAL RECORD the article from the Bridgeport Post of February 16:

MORANO BOOMED BY OHIO SOLON—W. H. AYRES ADDS MUSIC TO LINCOLN DAY TALK IN STRATFORD

"Congressman ALBERT MORANO is the one man who could give your present governor a real run and beat him," Congressman WILLIAM H. AYRES, of Ohio, told an audience of more than 350 persons attending a Lincoln Day dinner last night in the Stratford Masonic Temple.

Said Congressman AYRES, "I know him well; I have watched him at work in Washington for the past several years. I know how sincere he is and how capable and qualified he would be to head your government here in Connecticut. He has appeal, and the Republican Party would do well to seriously consider his capabilities when selecting the next candidate."

During his address, in which he said that the days of party hacks as candidates has passed and that the Republican Party must place before the people candidates who can sell themselves, the speaker asserted. We should have learned from the last campaign that the people liked Ike, but that there were an awful lot of others on the ticket they didn't like.

LAUDS WOMEN'S EFFORTS

The speaker lauded the women for their work in the last election, declaring, "If it hadn't been for them, we wouldn't have elected the Republicans we did."

The speaker said that the party workers must consider the candidates as products and themselves as salesmen, if you like the product, then you can sell it.

Discussing the national situation, he asserted, "With all the criticism of our foreign policy by the Democrats, it was well to take stock and realize that the true test of foreign policy is, Are we at war or are we at peace. When we think of that we can thank God for Eisenhower. There was a period in the past when every time we sat down to talk with the Russians we came up with a piece of paper and they with another piece of land, but that is not today under President Eisenhower."

The First Hungarian Refugee

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1957

Mr. MULTER. Mr. Speaker, the following article, written by Miksa Frankl, the first Hungarian refugee to receive a United States visa, appeared in the Jewish Digest of February 1957. It is "must" reading for all freedom-loving people:

THE FIRST HUNGARIAN REFUGEE

(By Miksa Frankl)

In can sleep at night. That's the main reason I'm so happy to be in the United States. I can sleep and stop worrying that someone is watching me. I escaped from the jaws of death, and I am free.

This is not my first experience with barbarians. My first wife and our two children—one 8 months old, the other 3—died in Auschwitz at the hands of the Nazis.

After liberation I returned to my home in Sopron, Hungary, and tried to make a new life for myself. Living was a bit harder than it was before the war, but anything was better than living under the Nazis.

I got a job as a porter in a railroad station. Later, I remarried.

Things were not too bad, but as the months went by, they became worse. Everything produced in Hungary went to Russia. Russia gave us nothing—that is nothing but false promises.

Prices started going up and even everyday necessities became scarce. Soon it took a half month's pay to buy a suit of clothes. I had to work for a whole month to buy a coat.

By 1950 I had been made a conductor on the railroad. My salary of 5,200 florins (about $43) wasn't enough to maintain for my family above a near-starvation diet. We could buy some food and had to pay the rent—but we still didn't have enough for clothes, even for the children.

When the revolt came in October, I heard that people were getting across the border into Austria. I took my wife and three children and fled during the night.

Since I came to the United States, many people have asked me why Hungary chose communism. Our leaders were fooled by the Russians. The people did not elect a Communist government. The Russians—

through their occupation forces and the police—slowly worked their way into positions of power, and after a while we had no choice

I hope people know that we Hungarians were not Communists, and that even now most are not Communists; that we love freedom and that we will fight and die for this freedom.

To return to my story—my job as a railroad conductor was not too hard, and the wages were not too bad compared to many of my fellow countrymen. But still I could not afford to eat even lunch in a restaurant, and my wife brought me my meals.

Party members lived well, though. The lowest paid party member made almost twice as much as I did.

My first real idea of what the Russians were like came in 1948. In that year I, and many other Jews in Hungary, aided Rumanian Jews who had left their homeland to cross the border into Austria. Most of us were arrested and imprisoned. I spent 8 months in jail. My wife was jailed for 3 months. A relative took care of the children.

When I was released, I was allowed to return to my job, but I started thinking of leaving the country. I gave the idea up, though, because I knew there were mines and barbed wire at the border. I could make it, maybe, and perhaps my wife could. But, I couldn't take a chance with the children.

There were ways of leaving Hungary "legally," but I couldn't do that, either. The Russians announced that some persons over 50 years of age could apply for exit permits to leave the country. But there was always the danger that you would be considered disloyal to the regime and thrown in jail if you applied. They asked a great deal of money—I don't remember how much—and I didn't have it. I wrote to my brothers and my sister in New York, but they were not well off and could not help much. Even if I had the money, I probably could not have left. They asked so many questions and made you fill out so many forms that it made it almost impossible to leave.

On last October 20 I heard that some students were planning a demonstration in Budapest against the Russians. Four days later I heard that the demonstration was held and that there was fighting in the streets. I knew that there could be a lot of trouble ahead.

On November 4 I heard that Russian troops were 8 kilometers from our city. I left my job, went home, and told my wife to get ready. We packed only a few extra things for the children. I wore my conductor's uniform because it was the warmest and only complete suit I had.

Sopron is only 12 kilometers from the Austrian border. We walked all the way. It took us 5 hours and it was cold. When we arrived at the border, the Hungarian police said my wife and children could cross, but that I had to stay in Hungary. I told my wife to take the children and go to Austria, and I went back.

I met a group of men and together we decided to try to cross the border through the woods. We waited until dark. Then we walked quietly through the woods. It was freezing cold and the ground was iced up. It took us 3 hours of slipping and sliding, but we finally came to Austria.

I went immediately to the nearest village and there I found my wife and children.

We slept in a farmer's barn that night. The next morning one of the townspeople told us to go to a displaced persons' camp near Vienna. We had a choice of walking the 75 miles to the Traiskirchen camp or spending part of the little money we had for bus fare.

The children were tired and cold and we decided to take the bus. We boarded the bus and I held out money to the driver. He refused to take it. "You will be my guest," he said. I later found out that our Hungarian money was worthless in Austria.

We were in Traiskirchen that afternoon. Though it was crowded, we were given clean quarters. We were given food, too. That night we slept our first night in a free land.

The next day a man came from Hias (United Hias Service, the worldwide Jewish migration agency) and questioned me about my relatives in the United States. Two days later the man came again and took us, this time to Vienna.

In the Vienna office of Hias, we filled out forms and were told that my sisters and brothers in America had been notified that I was safe. The Hias people said my relatives could not afford to sponsor me, but that Hias would attend to that detail. I was asked to go next door and talk to the Joint Distribution Committee people.

The Joint Distribution Committee found a place for us with a Jewish family in Vienna. Two days later, 5 o'clock in the morning, I was awakened by a telephone call. The Hias man asked me to report with my family to the American consulate at 9 o'clock in the morning. I was there 2 hours early.

Mr. Gerety (Pierce J. Gerety, deputy coordinator of the United States refugee relief program) was presenting visas. Since I had been fully processed by Hias, I was first in line, and I received the first visa. That night I was on a plane for America. It was the first time I had flown, but I was so excited I don't remember much about the flight.

When we landed, we were greeted by Government officials and then taken to Camp Kilmer, N. J. We filled out papers, and 6 hours later we boarded a bus which took us to the Hias Shelter in New York.

At 10 o'clock that evening, the bus arrived at the Hias Building and my family and I stepped off. I heard a scream and saw a woman run toward me. At first I didn't recognise her, but then I knew it was my sister, Laura, whom I hadn't seen for 35 years. I threw my arms around her and then I cried. I am not ashamed to say it. I cried. I went into the building and there were my brothers, Henry and Leslie. I hadn't known such happiness for so long, it was hard to remember when.

A Hias man came up to me and said there was food waiting for us. We all went into the dining room and ate and talked. At midnight we went to our rooms in the building and finally fell asleep, from sheer exhaustion.

I was up at 8 o'clock. I found out that it was some sort of an American holiday—Thanksgiving, they called it. What an appropriate holiday for someone like I who had so much to be thankful for.

We had turkey. I had never tasted turkey because it was so expensive in Hungary, but I knew what it was. The children had never even heard of it. But we loved it, and we ate much—too much.

Later that day, a Hias man asked me if we would like to go on a television program. We went to the program and I won $1,000 in prizes. They wanted us to go on more programs, but I did not want it. There are other people. We had received so much already.

My family and I stayed at the Hias Building for a few days and then we moved to an apartment in Brooklyn. I got a job washing store windows. It is not hard work, and I like it. I am making very good money, and I will make more as I learn more.

Our children are happy—and I am glad that in February we will have an American citizen son or daughter born into our family.

Transition of a Stock Yards in 70 Years

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1957

Mr. PRICE. Mr. Speaker, there have been many changes in American life over the past half century or more. As new generations come along, unless those in the older group pass down the history of the years that they have lived much of what we should know about the past will be lost.

It is always interesting therefore when some of the veterans in our various walks of life impart to others the experiences that they have had. Much history has been made at the National Stock Yards in East St. Louis and in many other stockyards throughout the country. It reads best and found most interesting when recalled by one who has lived through it. For this reason, I would like for my colleagues to have the benefit of the years of experience of Mr. John Wolfe who has spent almost 70 years working in some capacity at the National Stock Yards. Mr. Wolfe recounts in an interesting article which appears in the St. Louis Daily Livestock Reporter on Monday, February 11, 1957, follows:

JOHN WOLFE, NATIONAL STOCK YARDS OLDTIMER RECOUNTS EARLY DAYS

One of the real "oldtimers" around National Stock Yards reached another milestone Monday. John Wolfe is 87 years old and almost 70 of those 87 years have been spent around the yards.

John commented on a recent visit to the Livestock Reporter, for which he worked as mat boy, that the stockyards opened in 1870, the same year he was born. "I came to National Stock Yards from Flora, Ill., when I was 15 years and 18 days old."

He began recounting history of the yards. "When the yards opened it handled mostly Texas and Oklahoma cattle and a few years later some native stock began coming in. I think that was about the time Swift and Armour moved into the yards. I do know that Armour was the first company to start buying calves by weight.

"The western calves were selling then by the carload at $6 to $8 a head.

"Then the longhorn Texas cattle came by trainloads, and there was so many shippers accompanying them that the Terminal Railroad built cabins on the tender of the engine to take care of the shippers."

Telling of some of the past glory of National Stock Yards, Johnnie said, "I saw the largest horse and mule market in the world here. I saw it come and I saw it go.

"During my time at the yards, I have driven a lot of cattle—I really don't know how many—with my dog and pony. Most of the cattle were driven by day, but I drove some by the light of the moon at night."

He recounted a story of one of his daylight drives, saying: "One day Thomas White sent me over to Johnnie McClain's ferryboat with eight big old whitefaced Texas sausage bulls.

"It was a very hot day, and one of the bulls did not want to stay with the lot. I was driving them, and one of the bulls went up on a porch and a woman fainted. I got

him off the porch and a little further on my way to the boat this same bull went into a yard with a clothesline.

"My pony ran under the line and it caught me under the chin and dragged me off the pony. I was lucky that my pony was gentle and stopped.

"I finally got the bulls down to the ferry and drove all of them on. When we got a little way from shore, this same bull jumped off and swam the Mississippi River behind the ferry. He was so tired when we got to the other side that he was ready to join the others on the riverbank."

Mr. Wolfe recalled the names of some of the prominent men at National Stock Yards. "In the early days, Charlie Jones was general superintendent of all departments. Other superintendents were Rudolph Hunsigar, cattle yards; Yank Thomas, hog house; and Louis Farris, sheep house.

"Later on when the horse and mule business moved off of Broadway in St. Louis, Mr. Jimerson was made superintendent of that department.

"Most of this happened when there was only one exchange building and the restaurant was in the basement. At that time there was only one girl working in the yards and she was Rosie Summers, cashier in the restaurant."

Mr. Wolfe went on to recount more of the old days at the yards, "In 1892 or 93, A. G. Godair and his father moved in from Chicago and opened a firm and for a time handled nothing but western cattle and calves."

It was this firm that Mr. Wolfe worked for as yardman. He said, "Mr. Godair was manager, W. B. Stickney worked in the office, Nelson Emerson was cattle salesman, and Godejohn also worked for them."

"Did they handle lots of western cattle!" he commented. "The western cows and steers came in by the trainloads. Later on when they got to handling native stock they put Jim Pearce from Mexico, Mo., to selling the hogs."

Mr. Wolfe continued, "When Nelson Morris began buying hogs here, Warren Nichols was his head buyer and I was his assistant. Then a boy was sent down from Chicago to take my place with the firm.

"In those days, there were no pens allotted to anyone and there were no parking charges for automobiles—there weren't any. There were big shedded pens in B alley for horses and buggies and there was a hitching rack in front of the Exchange Building for tying up the horses.

"I wonder what has happened to all the western business. Nowadays the long trains of western cattle don't circle the whole yards. And they tell me that no western ponies or buffaloes are coming in."

Mr. Wolfe goes down to Dyer, Tenn., every couple of months with his son and daughter-in-law to visit her parents, E. K. Flowers.

He told how, on a recent trip, he took a copy of the Livestock Reporter with him. He was chatting with the farmers around the courthouse in Trenton, Tenn.

"I gave a Reporter to two farmers to read and one said to me, 'There are no horse and mule quotations in the paper.' The farmers remembered how they had shipped plenty of mules to National Stock Yards at one time.

"I told them that the horse and mule days are gone," Mr. Wolfe said. "There aren't any horse and mule quotations now."

Mr. Wolfe lives at 526 North 29th Street in East St. Louis now and is still quite active. Though retired, he still likes to come over to the yards and see how they're running things.

A Statement by the Honorable Wilber M. Brucker, Secretary of the Army, Regarding the Accomplishments of the United States Army

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. VAN ZANDT. Mr. Speaker, on January 28, 1957, Secretary of the Army Wilber M. Brucker appeared before the House Committee on Armed Services and submitted the following report on the accomplishments of the United States Army during the past year:

STATEMENT BY SECRETARY OF THE ARMY HON. WILBER M. BRUCKER BEFORE THE COMMITTEE ON ARMED SERVICES, HOUSE OF REPRESENTATIVES, ON JANUARY 28, 1957

Mr. Chairman, members of the committee, last year when I testified before your committee in respect to the United States Army, I spoke in terms of plans and hopes for the future. This year I am happy to report many concrete accomplishments and much significant progress. You are interested in whether our country is receiving the maximum return for its tremendous investment in defense. You wish to be assured that it is financing the kind of an Army which meets our day-by-day responsibilities and which also reflects the rapidly changing technology of warfare. I am able to answer this question definitely and emphatically in the affirmative.

The active Army of fiscal year 1958 will consist of a million young men and women in uniform. There will be 17 combat divisions, 9 regiments and regimental combat teams, a few atomic support commands, and about the same total number of antiaircraft battalions as in the preceding year. I will leave to General Taylor the detailed presentation on the strength, organization, and deployment of these forces, and particularly the new Pentomic structure of the Army's divisions. I have seen the Army around the world and I assure you that our country has never put into the field a more thoroughly equipped and superbly trained Army than the one which is now stationed along the outposts of the free world. These forces, together with our strategic reserves at home, are unmistakably ready to fight now if the need should arise. This readiness is an impressive deterrent against aggression and a powerful force ready to fight if deterrence should fail.

The United States Seventh Army—the most splendidly trained operational army the United States has ever had in time of peace—is deployed across Western Germany. With its ever-increasing atomic power, the Seventh Army is the keystone of NATO's ground defenses. Its major forces consist of 5 crack divisions—2 armored, 2 infantry and 1 airborne—together with 3 armored cavalry regiments. These are backed by units armed with Corporal guided missiles, Honest John rockets, and 280-millimeter guns, all capable of delivering atomic warheads. Also, an Army regiment in Berlin is solid evidence of America's military might to the citizens of that heroic island of freedom, and ever-present reminder and warning to the surrounding Communists that America means business. These forces in Germany are supported by a line of communications from the Bay of Biscay across France that constitutes a logistical pipeline. It is as modern and fully equipped as we can make it.

In northern and eastern Italy, the Army's Southern European Task Force provides atomic support for NATO divisions defending that vital area. Equipped with Honest John rockets and Corporal guided missiles, this task force is the forerunner of a number of atomic support commands specifically designed to reinforce our Army with the most modern weapons.

In Korea the Eighth Army, a corps of two United States combat divisions is deployed along the demilitarized zone, helping to guard against a renewed attack by the Communist forces in position on the other side of the narrow armistice corridor. Here the Army also continues to aid—with equipment and training—the 20 divisions constituting the valiant army of the Republic of Korea. Army troops are supporting other mutual defense agreements in the Pacific area which involve Japan, the Nationalist Chinese on Taiwan, the Philippines, Australia, New Zealand, Thailand, Vietnam, and Pakistan. The combat readiness of Army forces stationed in Japan, in Korea, and in Hawaii, and their ability to move rapidly within the Far Eastern areas if trouble should arise, give material substance to our national intent to preserve the peace.

Here in the Western Hemisphere, the Army provides for the continental defense of the United States against airborne or seaborne troops. Nine Army combat divisions are held in strategic reserve in order that we shall be able to reinforce our overseas garrisons if the need should arise. From far up in Alaska, where the Army is manning our northernmost outposts, all the way to the Caribbean, Army troops are protecting the hemisphere approaches. Likewise, they are guarding the Panama Canal. Army antiaircraft units—a majority of them armed with the powerful and effective Nike Ajax guided missile—night and day share responsibility for the defense of major cities and industrial areas in the United States against air attack.

The United States is associated with 45 other nations in the most powerful system of collective security ever created. The Army stands guard shoulder to shoulder with the troops of our allied friends along the Iron and the Bamboo Curtains as a potent reminder that we are ready to honor our international agreements promptly. In support of our mutual defense alliances and other arrangements, 40 percent of the million young men and women in our Army is stationed overseas in 73 countries. Army missions in 44 countries of Europe, Asia, and South America are busy with the continued strengthening of our allies. Thousands of highly qualified Army troops are directly engaged in helping to train more than 200 allied foreign divisions—a sizable part of the free world's military strength.

On the other side the Soviet-Sino bloc has a gigantic military machine consisting of 8½ million men in its ground forces. The Soviet Army ground forces alone number over 2½ million men organized into 100 rifle divisions, 55 mechanized divisions, 20 tank divisions, and supporting units. Most of these divisions are located in the border regions of the U. S. S. R., except for 22 divisions in East Germany, 2 divisions in Poland, and 2 in Rumania. The normal garrison of 2 divisions in Hungary was reinforced by about 5 more divisions from the

...the effectiveness of the Nike missile ... Reserve under the provisions of the Reserve ... against which progress can be measured and

U. S. S. R. and Rumania for the suppression of the revolution.

The Soviets last year made much of an announced intention to reduce their armed forces (ground, sea, and air), by a total of 1,200,000 men. So far we have no evidence to show that such reductions have been made.

The Soviet ground forces have been in large measure reequipped since World War II. This reequipment program has provided them with a complete new family of small arms, new artillery pieces, new trucks, medium tanks, and amphibious vehicles, as well as helicopters. As an example of the extent of the reequipment program, we estimate that about 28,000 of the new T-54 medium tanks have been produced. Soviet forces in East Germany have received approximately 4,000 of these.

The Chinese Communists also maintain large army ground forces—2½ million men organized into approximately 150 divisions plus supporting units. This army has been undergoing an important reorganization and modernization program since 1952 to include standardization of weapons, increased service and support units, and a vastly expanded military school system. The North Korean and Viet Minh armies add to Communist military capabilities in the Far East. In Eastern Europe the satellites maintain fairly large armies, but, in view of the recent developments there, we believe that the majority of these forces would not be sufficiently reliable for offensive operations against the West.

The savage purge of liberty in Hungary, the unmistakable attempts of the Soviet Union to establish a foothold in the vital Middle East, the increasingly brazen efforts of the Kremlin to foment discord, exploit unrest, and sap the power and resolution of the Free World have sounded a clarion warning. They have used the threat of force to exert the pressure of political domination on world affairs. There is no reasonable doubt as to what would be in store for us if we should fail to man our own defenses with strength, determination, and constant vigilance. We must be ready to counter aggression not only in general war but also in any form. There is a corresponding need to proportion our force to the threat in whatever form it may take.

It must be our consistent aim to prevent the outbreak of a general war which can have no other effect than global devastation. This is the philosophy and the background upon which is based the Army's budget request for fiscal year 1958 of $9,721,000,000. This is a sizable financial outlay that must of course be justified in detail before your approval can be expected. I can only point out at this time that the Army's budget request represents months of detailed study and the considered opinion of the most mature military leadership that this country has to offer. It is drawn in the light of the many-sided threat confronting us.

The Army programs for fiscal year 1958 represent the activities and functions essential to the security of our Nation. These programs are mutually supporting. The curtailment of one necessarily affects the others—and each bears on our overall effectiveness. I trust that the Congress will see fit to support the Army by approving the budget request which has been submitted for fiscal year 1958. Any reduction in this budget would considerably handicap us in our efforts as a member of the defense team to provide adequately for the security of the United States.

We have made progress in many fields during the past year in organization, business management—research and development of new weapons and materials—in our general state of readiness, in our morale and well-being, in our reserve programs and in many other fields. We are in a state of rapid transition to new weapons, new concepts, and new and greater capabilities. At the same time we have kept a steady grip on present-day realities.

I am proud to announce that the Army is now in the process of a major reorganization of its principal combat units the purpose of which is to improve our ability to fight effectively under conditions of atomic warfare without loss of capability to conduct so-called conventional warfare. This is the culmination of many years of planning, testing, and experimentation. This decision marks the first real progress in organization for ground combat since World War II.

We are also organizing atomic support commands which are particularly suitable to provide atomic support for the forces of our friends and allies abroad. This year for the first time we are activating additional atomic support commands along the lines of the Southern European Task Force—SETAF—which backs up NATO forces in Italy with its nuclear weapons. Next year additional atomic support commands will be formed.

RESEARCH AND DEVELOPMENT

We are requesting $400 million to finance our research and development program in fiscal year 1958. During this period we will concentrate on developments in the field of missiles, target acquisition devices, faster and better communication systems, and mobility through aerial vehicles. We intend to keep the Army fully effective in carrying out its ground and antiaircraft combat mission. All of our weapons and weapons systems must be closely integrated with the needs of the field commander.

As a result of ever-increasing emphasis in the field of research and development, we are stocking our arsenal with an adequate variety of atomic weapons precisely tailored to our needs and which can be used with discrimination against close-in, as well as far-distant targets with complete accuracy, day or night, despite rain, snow, fog, or other weather conditions. Thirteen years of pioneering experience in the missile field is paying rich dividends.

At the same time we are not overlooking the importance of continued development of conventional weapons which are needed to accomplish a great many tasks for which atomic weapons would be totally unsuitable. We are continuously developing lightweight material and equipment with an aim toward ever-increasing mobility. We are looking forward to the day when we can augment the capability of the tank, the truck, and other heavy and relatively slow vehicles with lighter airborne equipment and more effective aerial vehicles.

Illustrating our efforts to move forward as rapidly as possible in the modernization of the Army is the continuing high proportion of our procurement and production appropriation to be devoted to guided missiles and guided missile equipment. Of the $1.9 billion obligated in fiscal year 1956 under the procurement and production appropriation, approximately 23 percent was for guided missiles and related equipment. Of the $1.7 billion estimated direct obligations for fiscal year 1957, 45 percent is for these items; and of the $1.4 billion planned for fiscal year 1958, 48 percent is for this purpose. This transition to guided missiles and atomic weapons requires the creation and maintenance of new types of production facilities in our production base. Wherever possible, existing Government facilities are being utilized.

One great source of satisfaction is the fact that the Research and Development Program has decisively moved out of the promise into the progress stage. During the past year the R&D Program introduced—

The greatly improved Nike-Hercules.

The M56 self-propelled 90mm gun.

A new general purpose machine gun, cal. .30 M60.

A new lightweight ¼ ton jeep, XM 151.

The mechanical mule.

An improved version of the M48 medium tank with greatly increased combat range.

New aircraft, such as the H-40 Utility Helicopter, the H-37 Transport Helicopter, and others.

A new communications system.

One recent development project of which we are proud is the Army's first nuclear power plant at Ft. Belvoir which is rapidly nearing completion. It is anticipated that dedication ceremonies marking the completion of this atomic reactor will take place in late April. Subsequent models of this atomic reactor power plant are under consideration for remote military installations.

We have under development smaller, lighter nuclear powerplants which can be broken down and transported by air. These plants are designed to supply electrical power for remote and isolated stations.

In order to assure the development of an intermediate range ballistic missile at the earliest possible date, the Secretary of Defense has authorized the Army to continue for the time being the development of the Jupiter missile, although the employment responsibility for that weapon has been assigned to the Navy and to the Air Force.

The Army Ballistic Missile Agency at Redstone Arsenal has recently achieved some outstanding progress in connection with the Jupiter IREM. We are well ahead of schedule and tests to date indicate that this missile will meet the criteria established for it.

AIR DEFENSE

We are proud of the increasingly important role of the Army in the air defense of continental United States. The responsibility for defending the United States against a possible sneak attack rests, of course, with the continental Air Defense Command, of which the Army's antiaircraft command is a major component. Army Nike missile units of the Army's Antiaircraft Command are joined with the forces of the Air Force and the Navy in the unified and integrated air defense system. By the end of fiscal year 1958, approximately 70 percent of the antiaircraft battalions assigned to continental air defense will be Nike missile battalions. By 1960 we hope that the National Guard will man 25 percent of the Nike sites in the United States. The ultimate goal is to have Reserve components of the Army manning 50 percent of the Nike sites in the continental air defense system.

Last year we spoke extensively about the imminent development of an improvement of the original Nike antiaircraft missile which at that time we identified as Nike B. I am sure that you will be pleased to hear that development of this missile, which we now call Nike Hercules, is now nearing completion. This missile is presently undergoing tests at the White Sands Proving Ground and will soon be added to the national arsenal. We estimate that a Nike Hercules battalion will be many times as effective as current missile battalions.

You can easily understand that a group of Nike batteries stationed in a circle around one of our cities require intricate coordination so that two missiles will not engage the same target. This formidable problem has been solved by development by the Army of an elaborate electronic system called the Missile Master which will produce information necessary for Army units to obtain the most efficient distribution of fire against the available targets. The Missile Master can operate independently or in conjunction with the Air Force Sage system when that system becomes operational. The first Missile Master is now being installed at a key installation in the continental United States. The employment of Missile Masters will greatly

increase the effectiveness of the Nike missile defense.

CAREER INCENTIVES

The Army is forever seeking means of making a military career more attractive to both its officers and enlisted personnel. We will continue to do everything possible to encourage qualified men and women to stay with us and to recognize the value of their service to this country.

I am sure that you are interested in knowing whether or not the various career incentives which the 84th Congress enacted into law have produced the desired effect. Certain of these measures have not been in effect for a sufficient period of time to permit a complete evaluation. We believe, however, that the legislation providing additional medical care for dependents will have a pronounced and beneficial effect over a long period. We believe also that the servicemen's and veterans' survivors benefits will be viewed by the great majority of military personnel as an additional attraction of military service.

The provisions of readjustment pay for members of reserve components who may be involuntarily released from active duty cannot help but improve morale. We have high hopes for the ultimate effect of the Regular Army augmentation program which will reduce the high rate of turnover in the officer corps while increasing career security.

Other aspects of the career-incentive program have been in effect long enough so that we are able to properly and fully evaluate their effect. We know, for example, that legislation continuing authority for retirement in the highest temporary grade has had an extremely beneficial effect, encouraging a number of highly capable officers who otherwise would have left the Service to stay on active duty and continue to offer their valuable services.

We also know that there has been a marked improvement in the situation with respect to medical and denal officers since the enactment of the doctors' incentive-pay legislation. During the last 6 months of 1956, applications for appointment in the Regular Army from among doctors and dentists increased by 65 percent over the same period in 1955. While other factors may have contributed to this increase, we believe that the improvement is mostly due to increased pay.

No picture of incentives would be complete without mention of the family housing situation. Here, the Capehart Act has been extremely helpful. We will reduce our housing deficit by 23,000 units in fiscal year 1957 and 28,000 in fiscal year 1958. All but 6,000 of these units will be Capehart housing.

Some of the most appealing features of the service are intangibles which cannot be counted in dollars or measured in privileges. In this connection we have initiated procedures to continue the lineage of our famous regiments, regardless of the forms which our future tactical organization may take. We shall institutionalize these regiments and, as our Army changes between peace and wartime, vary the number of their component units. By perpetuating the organizations associated with such names as Valley Forge, Gettysburg, San Juan Hill, Chateau Thierry, Normandy, the Pusan Bridgehead, we can make every man feel the link with the past, as well as his identity with progress.

In recognition of the basic importance of "belonging to an outfit" we have revised our concepts for handling replacements.

RESERVE FORCES

A vital and integral part of our Army team is its Ready Reserve which stands ever ready in the event of emergency to put aside civilian pursuits and participate with the active forces. Our splendid National Guard, traditionally the backbone of our reserve strength, is large and well equipped. At the same time we are building a dynamic Army Reserve under the provisions of the Reserve Forces Act of 1955. Since the passage of the act—a little over a year ago 48,200 young men have entered the United States Army Reserve to take advantage of the 6 months active training program. The number enlisting the past week was 1,158. To obtain these results the Army has conducted the greatest publicity campaign in its history to focus attention on the provisions of RFA–55.

The quality and intensity of the publicity campaign was attested to by the award to the Army of the Silver Anvil trophy by the American Public Relations Association for the best public relations program conducted by any governmental agency during the year. The Army worked closely with 370 national organizations in obtaining support for the Reserve programs, including the American Legion, the Veterans of Foreign Wars, the United States Chamber of Commerce, Boy Scouts of America, and numerous academic, industrial, and trade groups.

An Assistant Chief of Staff for Reserve Components has been established as a part of the Army staff here in Washington. A Deputy Commanding General for Reserve components has been established at Headquarters, CONARC, at Fort Monroe. Each of the six Deputy Continental Army Commanders has been designated to coordinate and supervise Reserve affairs.

By January 25, 111,834 men had enlisted under the various provisions of the act since its inauguration in August 1955. Over 10,000 personnel, 17 to 18½ years of age, have completed the 6 months training program and approximately 20,000 are in training right now.

The fiscal year 1958 budget provides for a steady and important increase in the size of the Army Reserve. The number of Reserves in drill pay status will increase from 256,000 at the end of fiscal year 1957 to 300,000 at the end of fiscal year 1958. The National Guard will continue on at 400,000.

We are emphasizing quality in the Reserves by a vigorous screening process. Although we may have some minor legislative proposals to make, we are generally satisfied with the act.

Our objective is to have a well-organized, highly trained, and effective mobilization-Ready Reserve of moderate size rather than merely large numbers of partially trained, partially equipped units and individuals. The Army is going forward with the program that requires all enlistees to have 6 months' active duty training. Since all personnel entering the United States Army Reserves already is required to have this training as a minimum, it is essential that our first line reserve forces, the National Guard, adhere to the same standard. We are confident that unit and organizational effectiveness of the National Guard will be greatly enhanced by such active duty training.

MANAGEMENT

The Army firmly believes that good management cannot be overemphasized. Any waste or inefficiency in the employment of money, materiel, or manpower is directly reflected in reduced combat power—and combat power is the root and branch of the Army's ability to carry out its historic responsibilities for national security. In this field we are continuing to make notable progress in managing our worldwide complex of commands and facilities.

The Army Command management system integrates previously separate basic Army business management processes of programing, budgeting, accounting, performance analysis, and manpower control, so that they are fused into a single management system. This integration assists greatly in producing a cost-of-performance budget, which is not only a financial forecast, but is also an operating plan of performance and costs, against which progress can be measured and workload controlled. This system will be completely installed throughout the Army by January 1, 1958.

The use of electronic and other automatic data-processing systems has also been substantially increased during the year.

We are impressed with the advantages of the so-called Single Manager System, which has been instituted under directives of the Department of Defense. Under this system, the Secretary of one military department becomes the Single Manager for a common service or for wholesale supply of a certain commodity to all of the military services. He receives gross requirements from each of the services, computes net Department of Defense requirements, and initiates procurement. He finances all wholesale stocks from a revolving fund, and each service purchases its needs from him.

The Army has been made the Single Manager for subsistence, clothing, and textiles, and traffic management.

Since the system provides one manager for the computation of net requirements, procurement, distribution, inventory accounting, etc., and makes interservice supply virtually automatic, and since it provides for more effective utilization of transportation resources, it will undoubtedly result in increased effectiveness and economies.

Although we are happy with the progress which has been made in the past year, there is no tendency in the Army to rest on our oars. In the next year we will continue to work toward our goal of making Army units faster moving, harder hitting, and more self-sufficient. We will complete the reorganization of our divisions into smaller, extremely mobile pentomic divisions—five element units geared to atomic warfare, but also fully capable of fighting nonatomic battles. At the present time we are conducting intensive field tests of this new concept and expect to learn a great deal that will lead to further progress.

The Army visualizes continued progress in fiscal year 1958—progress that will make the United States Army an even greater power for peace and deterrent to aggression.

Congressman Dollinger's Annual Report

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

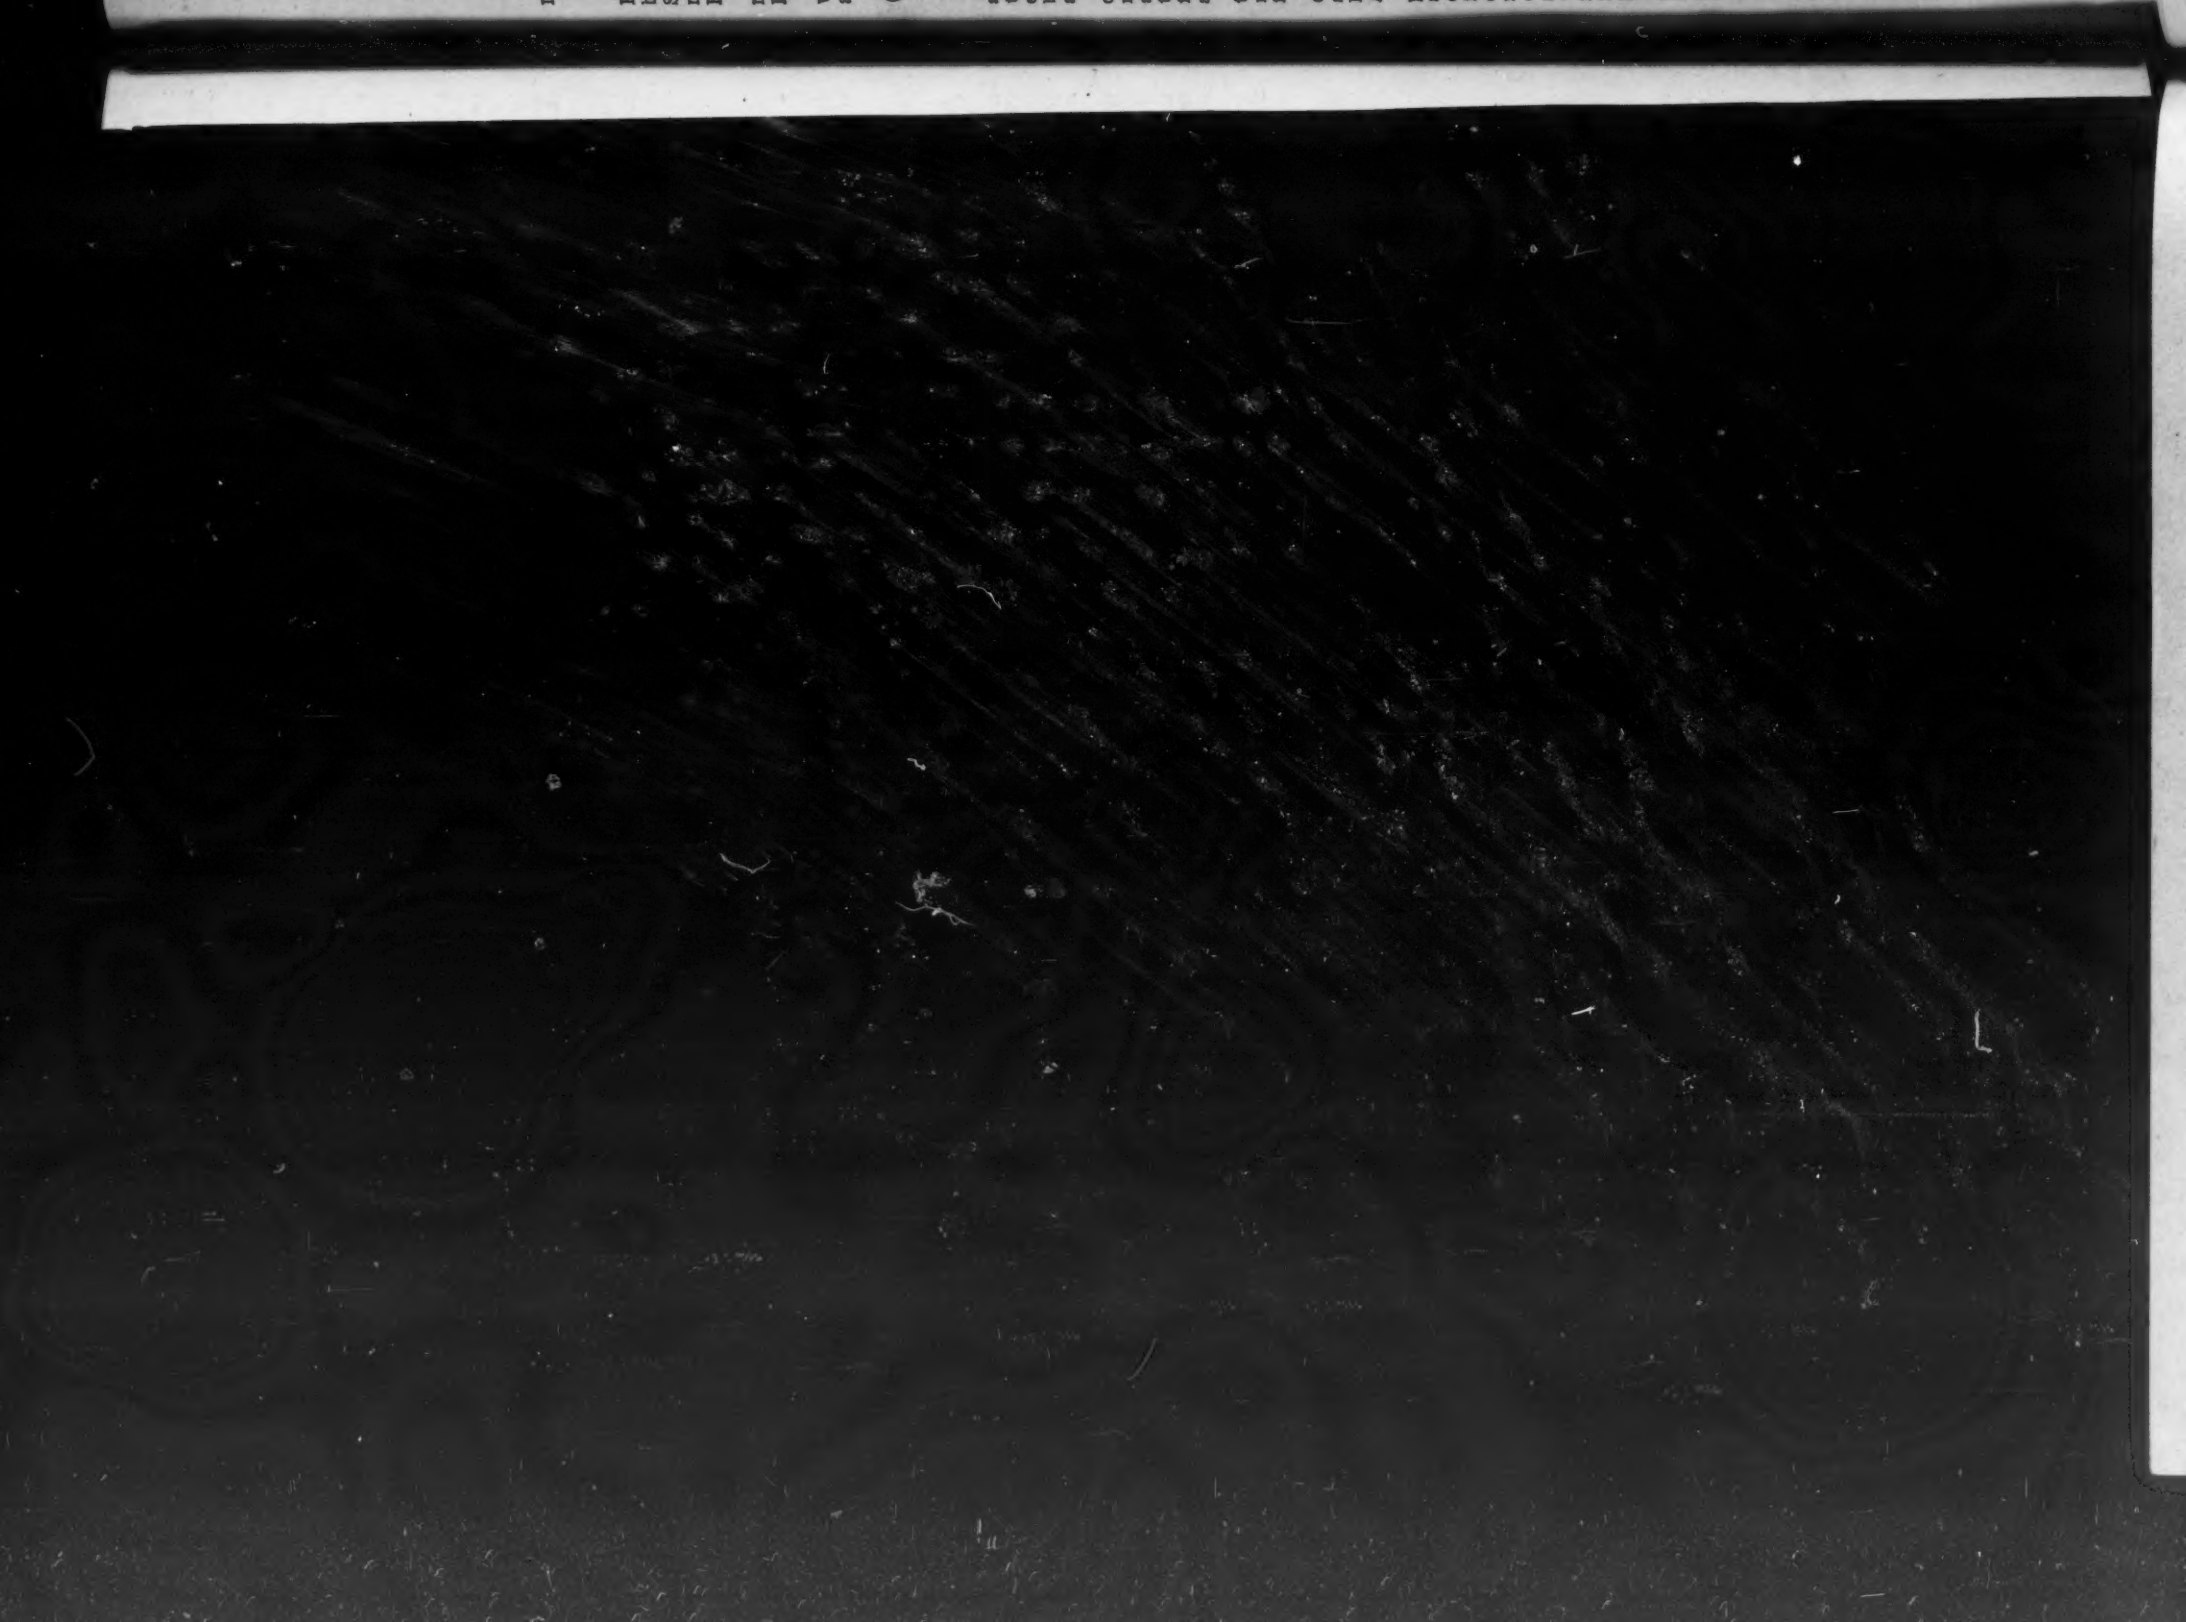
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1957

Mr. DOLLINGER. Mr. Speaker, it is my practice to send a report to my constituents at the close of each session of Congress. When the 1st session of the 85th Congress ends, I shall include in the RECORD my report covering legislation and accomplishments of the Congress during the session. I feel that it is important that the people I represent be given such information.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.



Appendix

Looking Ahead on Forest Policy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, February 22, 1957

Mr. HUMPHREY. Mr. President, on February 13, 1957, I delivered a speech before the Washington section of the Society for American Foresters. My remarks were entitled "Looking Ahead on Forest Policy."

I ask unanimous consent that my remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LOOKING AHEAD ON FOREST POLICY

(Address by Senator HUBERT H. HUMPHREY, Democrat, Minnesota, before Washington section of Society of American Foresters, February 13, 1957)

It is a pleasure to have this opportunity to appear before your Washington section of the professional Society of American Foresters, founded here just over 50 years ago by Gifford Pinchot. His ideals still inspire and guide us today.

Our forest programs which assure us of our present-day timber supplies, are in large measure due to the dedication of Pinchot and his fellow foresters to the philosophy that government has an active responsibility for the custodianship of our God-given resources.

All of us concerned with conservation need to keep that philosophy to the forefront, and make sure our Government does not neglect its responsibilities.

Fortunately, ever since Pinchot's time foresters have continued to give strong leadership to the conservation movement. They have earned a distinguished place among the American professional groups.

Foresters have stood four-square in the public interest against those pressures from seekers of privilege who would corrupt governmental processes for personal gain. Never in the history of the Forest Service, which employs large numbers of you and which is responsible for custodianship of billions of dollars of national assets, has the breath of scandal touched a professional forester. In the widely publicized Al Serena case which involved national-forest timber, not a single forester was involved. It was, in fact, a deal put over in spite of your opposition.

I sincerely hope the American people realize and appreciate your unselfish devotion to an ideal. And I hope that this great tradition among professional foresters in their devotion to the public interest will continue unchanged, despite mounting pressures from those seekers of special rights in the property belonging to all citizens.

I was particularly happy to hear, tonight, that your society is sponsoring a discussion next month of both the pros and cons on the wilderness bill which I have sponsored. That is as it should be.

Foresters as a profession must look farther ahead than most groups in American life, because of the time involved in growing trees. Perhaps that is one of the reasons you are a group of men with real vision and idealism. Too often today there is a tendency to fall into the rut of conformity and to consider differences of opinion as unpleasant—or to allow personalities to blind us to the issues.

Discussion, debate, and dissension are the very stuff of which American democratic life is made. I have often referred to them as the "Three D's of Democracy." Never be afraid to dissent from popular ideas. History reveals that the unpopular dissenter of today is often the prophet of tomorrow.

But do not make the mistake of thinking you will keep free from political turmoil, or that it is professionally undignified or unethical to stand up and be counted at a time when courage and decision are called for. Preservation of a weak neutrality, at a time when the public interest is threatened, is equivalent to lining up on the wrong side. Pinchot could not do it in the Bollinger case, and it can not be done today. And these are times in the conservation movement when the men are separated from the boys.

In recent years, some have come to think that the battles over control over our natural resources have no application today. Perhaps we have lulled ourselves into a sense of false security because we have made great achievements in the widespread application of soil conservation, reforestation, and wildlife management measures. These technical applications are vital to sound conservation. Nearly everyone today agrees that proper soil, water, and forest conservation techniques should be applied extensively.

But that is only a part of the conservation battle.

Pinchot observed 50 years ago that control over natural resources gives control over the economic and political life of the Nation.

Make no mistake, gentlemen, the conservation battles of the last 4 years have been over the control of our national forests, waterpower sites, and oil-underlain wildlife refuges, rather than over the technical applications and practices to the resources.

This is a never-ending struggle.

It should certainly surprise no one that this struggle becomes reflected in American political life, for political action is a means of achieving our aspirations and objectives in a democracy.

The fact that conservationists want the cooperation and support of elected officials or administrative officers of both political parties in our country should certainly never become a bar to recognizing and approving what a political candidate stands for or does that is right, nor to recognizing and repudiating just as firmly whatever a political candidate or administration stands for that is not right.

For example, whatever our political affiliation, I think that we would not be honest if we did not recognize that the New Deal gave new impetus to the conservation movement that had lain dormant since Teddy Roosevelt's day.

And whatever our political affiliation, I think that all of us interested in the conservation movement had a right to be shocked by some of the excesses and deterioration of resource programs during the past 4 years.

Believe me, I am not just being partisan when I express my own conviction that the great tradition of your profession was quite properly advanced into the last political campaign when leading foresters, soil conservationists, wildlife management specialists, and others in the conservation movement, concerned about what was happening under the existing administration, left their nonpartisanship behind and organized a political committee in behalf of the Democratic presidential candidate.

These men could have stayed home and avoided some of the diatribes which I understand were levelled at them. Instead, they answered a high call to public duty. One of the functions of an American political campaign is to air issues of public discussion—and this committee of conservationists did their job with dignity and responsibility. Not one of their nine charges of misdirected resource policy was ever met, or denied by the Republican administration. They made their charges stick. And make no mistake—the effect of this committee's charges were not lost on the administration, which is now giving signs of attempting to amend some of its past follies. You may have noticed in the papers that certain proponents of a partnership program were soundly defeated last November 6 at the polls.

We need more, not less, emphasis on these vital resources issues in our political campaigns—and we need conservation leaders with courage enough to speak out boldly when they see the public's interest being ignored.

And, gentlemen, as one spokesman for the Democratic party, I want to assure you that if we ever get into a situation involving mismanagement of our public resource programs, I hope you will give us the same treatment. We will have it coming. But rest assured I shall do my best to prevent that kind of a situation from ever developing.

Now, let me make it clear that I am not professing to come before you as a forestry or resource expert. You are the experts. I am just a conservation-minded public official having to rely, to a great degree, on you experts and technicians for advice and guidance. However, I do have a responsibility of helping establish resource policies which I do not treat lightly.

As a United States Senator from the great State of Minnesota which has 20 million acres of forest land, including 2 of our oldest national forests—the Superior and the Chippewa—I have made it my business to learn something about forestry, wildlife, water, and soil conservation.

We in Minnesota have in some degree most of the forest problems found fairly generally over the United States. We have large paper and other wood cellulose converting plants and many sawmills supplied by thousands of small farmer-loggers who depend upon pulpwood and other forest products for part of their winter income.

Our forest-fire control and reforestation programs are making real headway in restoring commercial forests to the barren cutover lands left after the first wave of logging. Our State- and county-owned and managed forests of the north are steadily supplying industry with needed raw material, while at the same time assuring an independent livelihood to many of our people. Thus, we in Minnesota face not only Federal, State, and county forest management problems but those of private owners—small and large—which are in most respects similar over the country.

Forest policy is a broad field to try and cover in a limited time, so primarily tonight

I am going to outline what I feel should be some of the important objectives in forestry which we in our generation should reach—and to suggest some of the policies which I feel will work in the direction of assuring adequate timber supplies, watershed protection, wildlife, and other recreational benefits from our forest land resources.

We are the posterity which Pinchot, Teddy Roosevelt, Franklin Roosevelt, and other foresighted leaders prepared for when they set aside the National Forests, extended fire protection programs, put unemployed boys to work planting trees and improving timber stands.

Now, upon our shoulders, rests the task of providing for the posterity of the year 2000. And, gentlemen, we have no vast forests of virgin timber to bequeath our grandchildren. We must grow timber—lots more of it than we are today—if they are to continue to enjoy the fruits of our high American standard of living. And a timber cropping economy takes some real effort, as you foresters are only too well aware.

According to figures which I have seen from the Forest Service's Timber Resource Review, we are going to need a lot more timber to supply our rapidly expanding population—almost half again as much as we now have when the year 2000 arrives.

Either we begin to grow this timber today, or our children will have to pay absurdly high prices for what little there is left by then.

I realize that the style lately has been a scoff at Pinchot's prediction of a timber famine.

But if we look at timber production figures, which have stayed nearly constant for 50 years while prices have risen much faster than for other commodities, I think we will find Pinchot closer to being right than his critics.

Of course, the decision on how much timber we will need is one for the foresters and economists to make. But it is up to those of us in political life to translate those goals into policies and programs which you men can carry out.

Our political economy is so complex today that in this field, as in most others, we need to have the advice of technical people in making our decisions. I hope that foresters will not shun this duty under some sort of mistaken assumption that it is improper to advise your Congressmen and Senators, or to take a position in favor of what you believe to be sound forest policy.

In making our plans for the next 50 years in forestry we have to develop one set for use on the greater areas of public forests occupying one-fourth of our forest land, and another set for the large area of private forest land. The first calls for direct action by public agencies, while the second, for cooperative working relationships with private owners—large and small.

We in the Congress, and in the State legislatures, too, must continue to assure that sufficient funds become available for management of public lands, including tree planting, protection from insects and diseases, and stand improvement measures. We must make sure that the Federal Government's share of the cooperative programs with the States for fire protection, nurseries, and extension work are properly met—and on a scale which will expand tree growth to meet our future needs.

But the job does not stop with Federal appropriations, and the Government is not in the business of dictating to private owners what they should do.

The proper role of Government toward private forest lands seems to me, in our democratic political economy, to be one of providing a favorable economic and social climate for individual owners to do those things on their forests which are in the public interest.

Both the public forests and the larger industrial tracts are apparently being fairly well managed, and such management will improve as your professional techniques improve. But I am told that lack of a solution of the small-owner forestry problem is one which is giving foresters much concern. And well it should, for such lands make up the majority of our commercial forest area.

Apparently more experimental research along the lines of cooperative action is needed to achieve a solution. I should like to offer my help for sound proposals which include research efforts on this difficult problem, at any time it is possible to do so.

The plain facts are, gentlemen, that none of us have clear-cut answers to the small-owner problem. The Congress is willing to do all it can to help, but the ideas must come from the forestry profession. One thing seems clear: If we are to have a strong and vital forest economy, greater research effort must be given to the problems of the small owner and independent logging operator. For example, forest-products marketing data were almost absent from the USDA 1954 Yearbook on Marketing. I might be so bold as to suggest that one reason you are so far along in the solution of your public and industrial forestry problem is because you foresters have done an excellent job in those fields. But, conversely, your lack of success with extending to small ownership is because you are devoting comparatively little research to this problem.

Because it does embrace several millions of small owners and thousands of independent farmer-loggers, our forest economy is a vital part of rural America.

It represents one of the remaining parts of our economy which has not been swallowed up by huge combinations of corporate enterprise. I hope it will never be.

Our forest industries, even the large ones, are highly decentralized and provide markets for the products of the self-employed logger. Our public forests and those under the ownerships will continue, I hope, to assure that this great group of independent woodsmen will have free access to raw material which will not have to be cleared through a Washington bureau office or a New York corporation office. If that ever happens, I think America will have lost more of her free and independent spirit than I care to contemplate.

That is one reason I introduced my price-reporting measure last year in Congress. I know of instances in Minnesota where farmers have worked hard all winter to produce pulpwood at a certain price quoted by a dealer or buyer, only to find in the spring, when the farmer was ready to ship, that the buyer could not pay his figure—saying that the price had dropped. How is the farmer-logger to know whether or not he is just being taken?

A price and market program for forest products would have kept such a producer regularly informed of price changes and the demand. He would know whether it paid him to cut his timber or just let it grow. I am sure, gentlemen, that forestry will have to pay its way or you will not have much forestry. If a man does not know what price his timber will bring, he will never get very interested in growing it.

We have heard a lot of talk about free enterprise over the years. It has become a catchall slogan which means many things to many men, but is seldom defined. Let's think for a minute what free enterprise in forestry means. To most people it means freedom to buy and sell at the market place without crippling interference by Government or by monopoly. It means further that buyer and seller have equal access to market and price information.

So it sems to me that independent forest owners and timbermen have a right to such information as well as farmers, stockbrokers, packinghouses and papermills. Yet this simple information is being denied them.

If we are to have a free-forest economy, price data should be available to buyers and sellers alike, and I cannot understand why some of those who give lipservice to free enterprise go to such efforts to deny this rightful information to a large group of people.

These same groups have opposed adequate forest-fire appropriations, the farm forestry cooperative program, tree planting in the soil-bank law, and now price reporting—everything that would help the small owner and operator.

All through our debates in the Senate, and later in conference with the House, heavy pressure was put upon us bemoaning the tremendous burden which would be placed upon the small operator.

I think you know what groups were behind the great flurry of telegrams which reached conferring Congressmen—and whether or not their real concern was to help the small operator. The groups which went to such lengths to block price reporting by distorting its intent and purpose may have a representative or two here tonight. I hope that they will use better judgment in the future and argue this issue on its merits, rather than try and mislead Members of Congress. You will recall that some oil and gas interests which used inspired telegrams to Congress ended up thoroughly discredited.

But I will tell you what the real worry of these groups was and is. They are afraid that objective price data in the hands of small timbermen will stiffen their bargaining hand in future transactions.

Too often one large buyer can take advantage of many small sellers under conditions where the buyer has all the information. If that is free enterprise, then the definition has been badly abused.

Other things that we need to shore up the small-forest economy are better access to credit and research in marketing to find out more about how timber products are bought and sold. All of these measures and programs have ben available to agriculture for years, and there is no longer any reason for withholding them from forestry owners embarking on a timber-farming program. I would hope to see more foresters speak up for these very necessary programs.

So far, I have discussed primarily some of my views on objectives for public policy in relation to private forests. Let's now consider our public forests.

Generally, our Federal forestry picture looks better now than it did 2 years ago. In my opinion, the 84th Congress deserves the credit for this. The record seems crystal clear that during the last 4 years the executive branch has not requested the funds needed for the expanded role our national forests and other Federal forests are now required to fill. The record also shows the Congress increased the funds.

There are still some weak spots in our Federal programs, and these should be corrected.

First, foresters need to convince the top-level people that certain minimum expenditures are necessary. Future generations are entitled to receive our Federal forests with the benefits of conservation management plainly evident on every hillside. This is the duty of our generation.

Further, these forests can be profitable to us today—providing industry with the sinews of trade, recreationists with enjoyment, and our people with pure water from unsilted streams.

We also need to reduce the duplication and waste of productive effort that exists because our Federal forestry functions are not consolidated. I am glad that last year the Congress endorsed again the principle of consolidation along the lines of the Hoover Commission report. I think that the President should send up a consolidation plan—

and if he fails to, the Congress should act.

Let me say quite frankly, however, that I feel it would be far better for the President to use the authority he has under the Reorganization Act so that he has a full opportunity to iron out all the wrinkles himself.

In the operation of our public forests there is a growing need for greater sensitivity to the needs of small business. Our Federal forests came out of the custodial era not so much because they grew in stature, but because private timber has been diminished. During the custodial period, many small-business men cooperated with the Federal agencies. They brought public timber in small sales and helped the forester rid the land of diseased and dying trees. Even if this had not often been the case, our policy must preserve the ability of small business to grow and foster in a competitive economy.

Our forest policy now should be directed toward obtaining the full sustained yield cut from the forest. In doing this we must get more timber access roads, adequate, properly compensated personnel, and develop the highest efficiency in administration.

New demands are being felt already, and as more and more mills turn toward our public forests, these problems will be aggravated.

Overcutting and allocation of timber will be urged, and acres set aside for special uses will be marked for elimination. I think that these three factors form the hub upon which our Federal forests policy will spin for the next several years.

Let me discuss these points briefly. First let me say that I believe these problems will occur mainly in the Far West, where the forest industry is vigorous and often geared to use four times the timber that grows in a year. In addition, it is out there where Federal timber is such a big factor that it will be a target.

As local communities near Federal timber find that adjacent communities which have run out of private timber are coming over to bid upon the Federal timber near them, the demand to allocate timber or restrict bidding will probably rise.

In other communities, with productive capacity beyond the ability of private and public timber combined, as the private timber is cut out, some may seek allocation or they may seek to overcut the Federal timber.

It is going to take strong administration and well-informed public opinion to insure that conservation principles and our faith with future generations are not breached.

I am not down here tonight to deal in platitudes but to talk about policy, and policy must be fashioned in the face of the realities that exist. You cannot put up a tree farm sign then make a speech about more timber and presto there it is. So I say to you that the foresters administering public land are going to be subjected to pressures to overcut that their predecessors never fully envisioned or experienced, as private timber disappears into the mills and the green gold of the national forests stands as the sole salvation for many of the 3,000 hungry sawmills of the West.

And thus in any consideration of Federal policy we come down to a discussion of why did we create our national forests; and what uses do we envision will be made of them. As foresters, I am sure you will agree these forests shall not be sawed down as rapidly as possible. When the forests were created, the Congress, with some wisdom, set forth their purposes: To improve and protect the forest and waters and to furnish a continuous supply of timber.

In the process of operating the forests certain sound use patterns have been developed. Foresters have coined the phrase "multiple use" to describe it. In operation, multiple use has never meant that on every acre of the forest we will obtain timber, water, forage, and recreation. Many areas provide only one or two resources. Water is produced from every acre, yet very often immediately after logging there is a temporary change in the quality and yield. As the forest is replaced the water picture continues to change. Before the forest is cut it may contain many ideal undeveloped recreational areas. After logging picnic areas are changed, vistas altered, game populations may climb, and fishing of some types decrease. Grazing may result in some soil compaction which adversely affects water or logging may change grazing capacity. In some areas, sheep, cattle, and hogs, if admitted to the forest, may do damage to young trees. While in other places this may not be true. Therefore, "multiple use" is not applied to every acre, but to a large forest area.

Foresters have set aside special areas where they have recognized one use as superior to other possible uses.

Western communities and 600 hydroelectric plants depend upon the national forest for water. There are 21 million acres irrigated by water from the national forests. These users must be protected, and lumbering, grazing, and recreational use must be compatible with water production.

On the Mount Hood National Forest a huge watershed is set aside and recreation is even excluded, although perhaps it need not be. The Forest Service here is conducting a cooperative experiment with the city of Portland to determine how this watershed can be logged without damaging soil and streamflow and even increasing water supplies.

In addition to numerous campgrounds in our national forests, there are some 79 areas embracing 14 million acres set aside for specialized types of recreation. These 14 million acres, less than 8 percent of the national forests, are the network of primitive, roadless, wilderness and wild areas where to varying degrees recreation is the primary use. When the areas were originally created, the national forests were operated mainly on a custodial basis, and there was no problem of conflicting use. Today this is not true.

Senator MORSE was telling me not too long ago that in the 1940's a company acquired a large timber tract in the Willamette National Forest near his home that had gone begging on the market for some time. Today, they have yielded to demands made to reduce the nearby Three Sisters Wilderness Area by 50,000 acres to make more timber available locally. I have not heard of a case that more dramatically illustrates the change that has taken place.

This brings me to the avenue of approach to getting more timber that, in my judgment, will be widely tried.

For example, Rayonier, Inc., has been sponsoring ads in national magazines as a part of its private campaign to get more timber. They recommend a reduction of the size of the Olympic National Park.

Those of us in the Congress who are vitally interested in multiple use and conservation are worried, and I think with good cause. We see the pressure that is coming, and as elected representatives it is our clear duty to do something before the horse is out of the barn. There seems to be a crisis every day in the world in which we live, and the only way we are going to change this is by looking ahead and taking timely action.

That is what my wilderness bill proposes that we do. Instead of waiting until the crisis has engulfed us, I proposed that we make secure the preservation of those areas that do now, in fact, constitute our national wilderness system—the areas that are now, in fact, being handled as wilderness, even though they serve other and consistent purposes also. Doing that now means providing security for what we already have. This will perpetuate the multiple purpose programs we now have on these areas, but it will make sure that multiple purpose on these lands always includes wilderness preservation.

Let's look at the bill. The preamble describes the impending problem, declares a policy, and defines wilderness type areas. The bill then lists all of the present areas.

I would like to say here—and note this well—the national forest areas have all been set aside by the Secretary of Agriculture on what he deemed sufficient authority in the broad language of statutes that do not mention wilderness as such.

What one Secretary thinks he can do another may think he cannot do.

Secretary Chapman thought, at the very lease, he did not have to issue the Al Sarena mining patents until the claimants complied with the administration practices procedures. Assistant Secretary Davis brushed this contention aside and issued the patents without a word to even the Secretary of Agriculture.

Similarly, a future Secretary of Agriculture could brush aside the position adopted by the several secretaries that preceded him. If you doubt me, listen to what Assistant Secretary Peterson recently said to the Association of State Foresters when he spoke of conservation. I quote:

"To me there is one thing it doesn't mean—preservation. Resource conservation means resource use. It does not mean locking up—no use. Our great natural heritage has no meaning and significance except as it is used to provide the materials and services which as a people we must have to enlarge and enrich our living. In a very real sense our very lives depend on our basic natural resources. Resources unused are sterile—of little value."

I quote no more. I hope Secretary Peterson recognizes that, as far as our areas of wilderness are concerned, preservation is use—the very best use that we can possibly make of these particular areas of outdoor America. If he does not so recognize, I say to you that his statement is a clear warning that we may be closer than we think to the danger of having our entire system of national-forest wilderness areas thrown out the window to satisfy our desires for material things.

You know, I read this in the same issue of American Forests with a letter to the editor from Professor Chapman in which he wrote that the persons associated with the wilderness bill, and I quote:

"Had no confidence whatever in the integrity, wisdom, or public spirit of trained forestry executives."

I say to you that this is not true. I have the highest confidence in our foresters. This would indeed be shaken if Assistant Secretary Peterson's words were the words of the Chief of the Forest Service. But they are not. This is the word of a political leader in the administration, and the Chief of the Forest Service is responsible for carrying out the policies that he directs be carried out.

The fact is the wilderness bill has been prepared in accordance with the wilderness policies, programs, and practices of the Forest Service, and in admiration for them. The bill is designed to strengthen the Forest Service's hands in carrying out these policies and programs.

The national forest areas that will be included in the wilderness system are those that have been designated by the Forest Service as wilderness, wild, primitive, or roadless. And the bill provides that these areas shall be administered under regulations that would be drawn up in the Forest Service.

The wilderness bill, I emphasize, will not interfere with, but will perpetuate, the present multiple-purpose administration of these national forest areas. Its central concept is that our present areas of wilderness can be preserved within the existing land-management pattern if this preservation purpose is made a matter of fundamental policy.

Rather than upsetting the multiple-purpose program of the Forest Service, the effect of this legislation will be to prevent the upset in this program that will result if the wilderness areas are not protected from the uses that would destroy them as wilderness.

Now what are the bogey men in this bill?

The bill authorizes all the existing wilderness and wild areas and provides for the addition before January 1, 1966, of the primitive areas, but only after the Forest Service has determined what their boundaries are to be.

Section 2—(a) and (f)—states that the Secretary of Agriculture can make additions, modifications, or eliminations—and I repeat additions, modifications, or eliminations—to the system, and that these will take effect within 120 days unless either House of Congress passes a resolution opposing the proposed action.

In a nutshell, this bill then does these things. It sets forth a policy that will protect the wilderness system, and it provides a sound procedure for making changes. It gives the technicians full authority to recommend whatever action they feel is warranted, and it prevents abuse by the executive heads.

It gives the people a chance to secure a real referendum through the action of their elected representatives, and protects them from the whims of a political appointee who does not have to face the voters.

It maintains the wilderness areas as integral parts of the national forests, serving their important multiple purposes just as they now do.

Finally, as regards the wilderness bill, I wish to make clear that it is in no sense in conflict with, or in competition with forestry for forest products. On the contrary it actually is dependent on foresters for its success. If ever the American people come to the borders of our wilderness areas with a need for timber that cannot be met elsewhere, then, gentlemen, I say to you our wilderness areas are doomed. It is to the foresters of America and their effective programs for sustained yield cutting, on our production forests, that we shall have to look eventually for success in wilderness preservation. We recognize this, and we face our present program in a spirit of cooperation and with a feeling of dependence on the intelligent foresters of America for support.

I think that all true conservationists should consider the bill in this light. In my judgment it will provide a means for making orderly changes in our wilderness system so that these areas will truly fulfill our needs and not one bit more. It will give us a chance to provide a really sound wilderness system by truly democratic processes.

In summing up my discussion, I want to emphasize my conviction that the policies and objectives which I have advocated are consistent with the ideals set forth by Gifford Pinchot—and are necessary, in fact, if we are to live up to the goals he set for us.

Let me just give you a brief quotation from Pinchot's autobiography, Breaking New Ground, which I accept as my guide for resource policy:

Conservation policy, Pinchot said, has three great purposes:

"First, wisely to use, protect, preserve, and renew the natural resources of the earth.

"Second, to control the use of the natural resources and their products in the common interest, and to secure their distribution to the people at fair and reasonable charges for goods and service.

"And, third, to see to it that the rights of the people to govern themselves shall not be controlled by the great monopolies through their power over natural resources."

That is the end of his quote. His advice is as urgently needed today as it was 50 years ago. We would do well to heed it better than we have. I urge each of you, tonight, to reread the warning contained in the last chapter of Pinchot's autobiography—and apply it to conditions we face today.

Conservation is where it is today because so many people have made genuine contributions to this unselfish course. Over the years we in the Congress have helped fight the battle for conservation along with the technicians who have made solid advances in the field.

Team work is a part of everything we do, and it takes dedicated people in the field backed up by conscientious and farsighted people in the top offices of the executive branch, the Congress and our courts, too, to forge ahead on the road to a better future for America.

I would like to close on this note, and to assure you that forest policy will receive increasingly more considerate attention by the Congress. We are proud of you foresters in public and private employ who are so dedicated to our Nation's priceless heritage. We will back you up with the needed improvements in forest policy.

The Southwest Drought

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, February 22, 1957

Mr. JOHNSON of Texas. Mr. President, back in Texas I have a friend to whom I frequently turn to get my bearings on questions involving farm life, in general, and the great Southwest drought, in particular.

My friend, Henry Fox, is a farmer, and, in his own words, one who is drought stricken. He is an articulate man; he is a writer and a wit, although sometimes his laughter is a little sad when he talks about the drought.

I recall his reaction to a much-discussed magazine article last year which referred to pampered tyrants and country slicking back on the farm. My friend, Henry Fox, replied:

All I've got to say is I sold a hog last week that had $20 worth of corn in him, plus $7.45 worth of supplement, for $23.71, and what I'd like to do is get my hands on the farmers who have country slicked us into such a situation.

Henry Fox is a frequent contributor to the newspapers of central Texas. In the Taylor (Tex.) Daily Press he signs his articles "The Circleville Philosopher." I was particularly impressed last week with a letter he wrote to the Daily Press editor, and I ask unanimous consent that his letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CIRCLEVILLE PHILOSOPHER BAFFLED BY EXPERT'S OPPOSITION TO DROUGHT LEGISLATION THAT MIGHT NOT WORK

(EDITOR'S NOTE.—The Circleville Philosopher on his Johnson grass farm on the San Gabriel has been doing some drought-stricken thinking, if you want to call it that, his letter this week indicates.)

DEAR EDITOR: I was reading along in a news article out of Washington last night with my mind sort of idling when suddenly I went back over the same item because something in it had slipped up on me and shocked me awake.

There it was in the second paragraph. It was a statement by an agricultural expert who was opposing a drought-relief bill in Congress on the grounds that it "would create more problems than it would solve."

This brought my feet down off the chair they were propped on and set me to thinking hard.

This is one of the strangest reasons for opposing anything I ever heard of.

If people are going to stop passing bills or thinking up inventions or doing anything else just because they'll create more problems than they solve, we might as well call off Congress, close up the State legislatures, shut down the colleges, and outlaw the automobile.

Take the automobile, for example. In view of the fact more people have been killed in car wrecks than in all the wars we have ever fought, who is there to say the car has not created more problems than it has solved? But also who is there to say the car ought to be outlawed, right when most people haven't got theirs half paid for?

Or take Taylor. Anybody knows there are more problems on the piece of ground occupied by Taylor now than there were when it was still in cultivation. Parking problems, traffic problems, paved-street problems, sewer problems, water-main problems, fire problems, school problems, juvenile delinquency problems, tax problems * * * obviously the people who built Taylor created more problems than they solved, but I have an idea you'd be the last person who'd be in favor of abolishing the place.

You set up the standard that every move mankind makes has to solve more problems than it creates and modern civilization will come to a halt.

Drought legislation may create more problems than it solves, but to a man in the middle of a drought, having some problems he can't solve is standard fare, nothing new to him in that, and if anybody wants to legislate in favor of a drought-stricken man, you won't hear him complaining. It's pretty hard to take a long-range view on short-term credit.

Fund for the Republic Award of Honor to Representative John B. Orr, Jr., of Florida

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, February 22, 1957

Mr. NEUBERGER. Mr. President, the courage to stand alone for what is right is the most sublime of all forms of valor. Christ stood alone against persecution and tyranny. Ever since, mankind has honored this finest manifestation of the immortality of the human soul.

On February 21, the Fund for the Republic honored a man who, in our time, stood alone. His name is John B. Orr, Jr. As a member of the Florida Legislature, Representative Orr stood alone in opposing proposed legislation to preserve and continue racial segregation in Florida's public schools. The vote in the Florida house on this bill was 89 to 1. Representative Orr risked political extinction, financial ruin, and even personal danger.

The case of Representative Orr was selected from among many distinctive deeds in behalf of freedom throughout our land. The panel of judges who chose the example of Representative Orr was itself headed by a great man whose bravery and courage are a symbol of true Americanism, the illustrious Gen. William F. Dean, of the United States Army, who won the Congressional Medal of Honor for his heroism in Korea, when he defied the torture and humiliation inflicted upon him by his Communist captors.

Other members of the panel of judges were as follows: James Carey, president, International Union of Electrical Workers, AFL–CIO; Mildred McAfee Horton, former president, Wellesley College; Henry L. Nunn, retired president, Nunn-Bush Shoe Co.; Rt. Rev. Henry Knox Sherrill, presiding bishop, Protestant Episcopal church; Judge Samuel I. Rosenman, counsel to Presidents Roosevelt and Truman; Most Rev. John J. Wright, Catholic Bishop of Worcester, Mass.

Mr. President, it was the privilege of Mrs. Neuberger and me to attend the dinner in honor of Representative Orr and others at the Mayflower Hotel on February 21. Many Members of Congress were likewise in attendance, including the veteran and distinguished Speaker of the House of Representatives, SAM RAYBURN, of Texas, and the distinguished chairman of the Senate Committee on Interior and Insular Affairs, JAMES E. MURRAY, of Montana.

The chairman of the banquet was the famous public-opinion analyst, who is chairman of the board of the Fund for the Republic, Elmo Roper. Presentation of awards was made by Judge Samuel I. Rosenman, of New York City, who served as counsel to both the late President Franklin Delano Roosevelt and to President Harry S. Truman. The Pulitzer-prize historian of the Civil War, Bruce Catton, delivered a most inspiring and scholarly address on the course of freedom and liberty in the United States from the time that Thomas Jefferson first raised his eloquent voice and pen against the iniquitous alien and sedition laws.

I ask that there be printed in the Appendix of the RECORD the complete account of the personal and political courage of Representative John B. Orr, Jr., of Florida, as it was included in the program of the American Traditions dinner which was held in Washington, D. C., on February 21, 1957.

There being no objection, the account was ordered to be printed in the RECORD, as follows:

FIRST AWARD WINNER

The story of the Honorable John B. Orr, Jr., has been selected for first prize by the panel of judges for the American traditions project.

Mr. Orr is a native of Florida, a graduate of Duke University and the University of Florida, is a practicing attorney, a veteran of the Air Force, and a member of the Florida House of Representatives. He is 37 years old.

Six entrants wrote to the American traditions project about Mr. Orr's record as a champion of free speech and of the other basic freedoms guaranteed in the Bill of Rights. The first prize therefore will be divided among the six entrants.

The writers of the six letters that led to the awards cited Mr. Orr's consistent efforts on behalf of minorities and in defense of civil liberties against attempts at suppression and denial.

These qualities and convictions were displayed dramatically during a special session of the Florida Legislature in 1955, called to consider resolutions designed to preserve racial segregation in the State's public schools. A freshman legislator at the time, Representative Orr stunned his colleagues by taking the floor in opposition to the measures and by casting the only vote against them. In mild and patient terms he told the members of the house:

"I believe that * * * had we devoted as much energy, time, and talent to discovering means to live within the law instead of defiance of it, we could have found a way * * *.

"Perhaps the most dangerous byproduct of our activity in this special session is the attitude of disrespect for our laws and the principles of common decency that is developing. To defy the highest Court in our land is unthinkable to me. * * *

"I hope that God gives us the wisdom and strength to conquer prejudice and bigotry and to renew our faith in our Constitution."

His address promptly brought calumny, insults, and threats of violence. It was taken as a foregone conclusion that Representative Orr, who at the time was a candidate for reelection, had committed certain political suicide—that he could not, as one correspondent predicted, get enough votes "to make pallbearers at your political funeral."

But by setting this example of free speech, Mr. Orr encouraged others who had been stilled by fear, and he stimulated public discussion of what had been virtually a forbidden topic. Community leaders and plain citizens who previously had been silent, wrote to express their agreement with his views; and many civic, fraternal, church, veteran, and other groups invited him to speak openly on a subject that had been taboo. This he did during his election campaign—reasonably, candidly, understandably, and without heat. And when the election returns were in, Representative Orr had been reelected by 27,000 votes.

Apparently the voters in his district shared the view of another member of the Florida Legislature who, though disagreeing with Mr. Orr on the issue in question, rose on the floor of the House to tell his colleagues:

"I want you to know that I respect this man. He refused to compromise with his conscience. If I am ever faced with the same problem I hope I have the same courage."

Representative Orr reinforced and strengthened the American tradition by refusing to remain silent on a question of civil rights in the face of overwhelming opposition; by risking his political life to remain true to his beliefs; by giving heart to many others of like conviction but lesser courage; by contributing to the free and open exchange of views which is at the heart of the democratic process; by giving the public the right and opportunity to hear both sides of a controversial subject; by proving once again that freedom of speech and discussion are held dear by the American people—that an elected official can break with prevailing popular opinion, take issue with a local custom of long standing and, in so doing, earn the respect and the votes of his constituents.

Trouble Spots in the World

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, February 22, 1957

Mr. SPARKMAN. Mr. President, while the eyes of the whole world seem to be focused on the complex problem in the Middle East, it is obvious that we must not forget that other areas of the world contain trouble spots—trouble spots that could spring into an explosive situation.

The Tuscaloosa News, in its Saturday, January 26, 1957, issue, calls attention to the need of keeping watch on trouble spots in other areas of the world. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WORK NEEDED ON OUR FENCES

The tense situation in the Near East during the past few months has caused the eyes of the world to turn from the always simmering, sometimes boiling pot of the Western Pacific area and its many problems.

One of these problems becomes apparent when a map of the general area is examined and United States military defense bases are point out. These bases extend from a northern point in Japan to Manila and include installations throughout Japan, on Okinawa and central Luzon. They form a bulwark facing the bulge of Red China's eastern coastline and are a vital and integral part of the United States farflung defenses.

They are formidable installations and most impressive with their arrays of huge bombers capable of carrying atom bombs thousands of miles and with many jet fighters sitting on ready. There are huge supply depots, warehouses, and mountains of equipment ready for any possible emergency.

This is a comforting picture of military preparedness essential to meet the ever-present threat of Communist aggression. But shadows have begun to darken the picture and a troubling note of uncertainty creeps in which questions the precise military value of the entire system of bases.

The first indication of this came from Japan when the United States proposed the extension of certain of its airbases there to provide adequate facilities for improved and late model jet bombers. The Japanese Government gave the green light to the proposed projects, but when plans actually got underway, public reaction, sometimes violent, completely, and effectively stopped the extension and revealed most clearly that sentiment was against United States military tenancy in Japan.

Other incidents followed—in Okinawa where economic factors entered into the picture in the form of disagreement over rentals to be paid by the Army for military bases, and in the Philippines where disputes arose over title, acreage, and legal jurisdiction on United States bases.

It becomes apparent that the lessening of tension in this area of the world has given rise to an increased feeling of nationalism and the idea that the various governments and countries involved are no longer so dependent on United States military might

that they can afford to be generous with their welcome.

We do not mean to infer that the United States is in danger of losing its positions in the western Pacific defense arc. But it is obvious that a reexamining of the situation is badly needed and an effort must be made to more thoroughly understand the viewpoint of host countries. This would lead to a better working arrangement with our friends of the Pacific area and create a much stronger position for our country.

At the same time it would be well for the various other countries and governments concerned to reevaluate their positions and reaffirm the hard fact and basic truth that they do need the power and might of United States military forces and that, they will continue to need them.

A closer working together will go a long way toward the preservation of this most important arc of defense and may prevent the crumbling of this bulwark which could be undetermined by an increasingly hostile attitude on the part of the local populations toward the United States.

Tax and Spend—One Out of Four

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, February 22, 1957

Mr. MARTIN of Pennsylvania. Mr. President, all of us are now considering appropriations and the cost of Government. I ask unanimous consent to have printed in the Appendix of the RECORD a very able editorial entitled "Tax and Spend—One Out of Four," which was published in the Philadelphia Inquirer of yesterday.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TAX AND SPEND—ONE OUT OF FOUR

When the Department of Commerce reported a few days ago that the gross national product of the United States—the total value of goods and services—in 1956 was $412 billion, probably few people paused to reflect on an important part of the picture:

That taxes—and spending by State, local, and Federal Governments—accounted for nearly one-quarter of this sum.

The figure itself is significant—$100 billion collected from American taxpayers and spent for them by Government.

But more important is the trend. At the beginning of the century governmental units collected and spent about $1,500,000,000. That was $1 out of every $15 spent in the country. Now Government spends about $1 out of every $4 spent in the land.

If anyone is looking for the deep-down basis for growing concern about Government spending, particularly the new Federal budget, here it is. For with a tax burden of $1,900 for each American family, on the average, taxes, spending, and trends are everybody's business.

It would be misleading to suggest that we can go back to the ways of 50 years ago. We can't. Costs have risen, the economy has expanded, population has grown. It would be incorrect to blame all of the increase on the Federal Government. New records in State and local budgets are being set, in almost all areas, every year.

But it would be equally misleading to argue that the rise in Government spending and taxes is all due to international crises, the demands of security, and defense. Defense spending, according to the Committee for Economic Development, decreased in the past 4 years; nondefense spending increased. Besides, the spending of local governments rose drastically, and just about all of it was for nondefense purposes.

These are facts every Congressman ought to consider as he prepares to vote on the $71,800,000,000 Federal budget proposed for the next fiscal year. They are facts every citizen and every taxpayer should study.

For if the trend to more and more Government spending is to be halted and reversed, it will be because an aroused public recognizes the danger of letting the Government, rather than the people, decide how their money is to be spent.

Freedoms Foundation Essay Contest

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. SCHWENGEL. Mr. Speaker, today at Valley Forge, the Freedoms Foundation is honoring a number of individuals who have made a contribution to basic liberties we all prize. Among the people being recognized today is Corporal Charles V. Gallagher of the Marine Corps whose essay, "My Vote—Freedom's Privilege," was awarded first prize in a contest conducted by the foundation for members of the Armed Forces.

Far more valuable than the $1,000 cash prize which Corporal Gallagher will receive today is the knowledge that the simple eloquence of his essay speaks to all of us in unmistakable terms to reemphasize the value of the right to vote.

The essay in the form of an immigrant father's letter to his son in the service is something every voter should read. Under unanimous consent I am having it printed here:

DEAR BILL: Your mother just gave me your letter and it sounds as though you are happy at your new post. You mentioned that you will be there the rest of the time that you are in the Marines; if so, I hope that you continue to enjoy it there. You did mention one thing that bothered me, though. You implied that it is too difficult to vote there at the post. Are you sure that you are not just too lazy? Son, remember what your people had to go through to get a chance to vote. It took your mother and me years of saving to get to America, and then more years of study to become citizens. But we stuck to it. We know what can happen in a land where the people don't have a voice in the Government. It is a tragedy that we do not want to see reenacted in this our new country.

Bill, you are compelled by law to serve your country in the Armed Forces, but have you ever stopped to think why? It is not that the leaders of this great land want to break up your youth or keep you busy and out of trouble for a few years. It is to keep our country free from a dictatorial form of rule. We are carrying out a tradition started by Patrick Henry when he said, "Give me liberty or give me death." Being ready to fight and possibly die is not the only duty freedom imposes on us. No, son, there are things that are maybe not as glamorous but just as important to the protection of this country that we must all do. And one of them is to vote. Here is a little phrase that I copied out of a public-service folder that was distributed in the shop the other day. It's put in a way that you being in the service will understand: "A citizen who fails to use his vote is like a combat soldier who fails to use his weapon. He risks not only his own safety but that of his fellows." You and your buddies would have some rather strong words for such a man; but be sure they don't fit you before you criticize others. There are many men who are trying to take over this country without fighting. Your vote is your only weapon against them, son. Don't lay down your weapon; don't jeopardize your freedom and that of your buddies.

I hope these few words will give you the motivation you needed to get out and vote, son. Remember it's your duty.

YOUR FATHER.

Near East Versus Eastern Europe

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mrs. ST. GEORGE. Mr. Speaker, the following letter from Mr. James Warburg appeared recently in the Washington Post and Times Herald.

Mr. Warburg is very familiar with the problems of the Middle East and of Europe. It seems to me that he has really put his finger on a possible and untried solution of our difficulties in the area. We must, it seems, use the bargaining powers we have and we must start leading from strength, instead of standing helplessly by, threatening to do all manner of things that gradually become less and less possible of accomplishment:

NEAR EAST VERSUS EASTERN EUROPE

Once more we have allowed the Soviet Union to beat us to the diplomatic punch, this time by means of the Shepilov proposal for a mutual hands-off agreement in the Middle East.

Four of the six points in the Soviet proposal should be entirely acceptable to us. These are:

1. Maintenance of peace through the settlement of all disputes in or as to the area, exclusively by peaceful means.

2. Noninterference in the internal affairs of the Middle Eastern countries and full respect for their sovereignty and independence.

3. Mutual renunciation of the supply of arms to countries in the area.

4. Cooperation toward the economic development of the area without attempting to impose any political, military, or other conditions.

These four points should constitute a succinct statement of our own objectives, if our purpose is to neutralize the Middle East and to assure its free and full development rather than to dominate the area ourselves.

The remaining two points are:

(1) Mutual renunciation of any attempt to include the Middle Eastern countries in military packs; and (2) liquidation of foreign bases and withdrawal of foreign troops.

These two points are unacceptable because they involve a unilateral renunciation of

bases, alliances, and—in the case of Britain—colonial possessions without any counterpalling relinquishment by the Soviet Union. Russia has no bases in the Middle Eastern countries, no known military alliances and no troops other than perhaps a few technicians.

Where we have missed the bus is in our failure to take the initiative with respect to Eastern Europe, where the situation is reversed.

The obvious quid pro quo for the neutralization of the Middle East, in which the Western powers have certain preferential positions which admittedly threaten Soviet security in the event of war, is the retirement of Russian coercive power from that part of Europe which lies between the present line of demarcation and the Soviet frontier.

The problems of Eastern Europe and of the Middle East are interlocked. The Soviet Union has taken the initiative in the area where the West is weakest, because of the existing remnants of the British colonial position, the dependence of Western Europe upon Middle East oil, existing commitments arising from the Baghdad Pact and the hostile atmosphere created by the recent Anglo-French invasion of Egypt.

This observer has for months suggested that our Government should take the initiative in proposing a carefully phased withdrawal of Soviet and Western forces from central Europe, leading ultimately to a general European security agreement and the neutralization of Europe west of the Soviet frontier. This would have opened the discussions in the area where the West enjoys the strongest negotiating position.

For us to reject the Soviet proposal out of hand—which is probably what the Kremlin wants us to do—would be the height of folly. What we should do is to accept in principle the proposed neutralization of the Middle East—and, specifically, the four points first mentioned—stating, however, that we shall be willing to discuss the remaining two points only in the context of a corresponding Soviet withdrawal from Eastern Europe. Any other answer will leave us in a wholly invidious position in the eyes of the peoples of the Middle East.

JAMES P. WARBURG.

WASHINGTON.

The Keogh Brothers

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. MULTER. Mr. Speaker, they are not twins, except in their twin endeavors in every worthwhile community endeavor.

Most of us know our very distinguished colleague from New York, EUGENE J. KEOGH. Not so many have had the pleasure of knowing his able brother, J. Vincent Keogh, who graces our State supreme court with honor and distinction.

I am pleased to direct attention to the following editorial which appeared in the New York Journal American of February 7, 1957:

KEOGH BROTHERS

Seldom is a community so fortunate as to have two native citizens who have made their mark as notably as Brooklyn's Keogh brothers.

Supreme Court Justice J. Vincent Keogh and his brother, Representative EUGENE J. KEOGH, have been life-long borough residents.

EUGENE was 29 years old in 1936, when he became the "baby" of the New York delegation to the 75th Congress.

Justice Keogh began teaching at P. S. 183 at the age of 18.

The brothers traveled the road to success at a rapid pace as each added laurels to his career.

But the Keoghs, in their energetic lives, have never forgotten the Brooklyn in which they were born.

They've exhibited outstanding leadership and service to the community. The Flatbush Chamber of Commerce wants all Brooklyn to know of the Keogh brothers' untiring efforts for the borough.

The chamber will formally honor them at its 42d annual feast, set for March 19 in the Hotel St. George.

Borough and city officials will line up to shake the hands of these brothers, who are indeed a credit to their community.

We would like to tender an advance handshake to the Keoghs.

And congratulations.

Reply to Wilson Remarks

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, February 22, 1957

Mr. SPARKMAN. Mr. President, in the Florence (Ala.) Times of February 17, 1957, there appeared an article which contained a statement by Lt. Col. Vernon S. Brown, commanding officer of the 78th Antiaircraft Artillery Battalion of the Alabama National Guard, at Florence, Ala., relative to the Wilson remarks about the National Guard. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOCAL GUARD OFFICIALS REPLY TO WILSON REMARKS

Lt. Col. Vernon S. Brown, Florence, commanding officer of the 278th Antiaircraft Artillery Battalion, Alabama National Guard, today issued an open letter to the citizens of the Muscle Shoals area challenging Secretary of Defense Charles E. Wilson's statement that the National Guard provided a refuge for draft dodgers during the Korean emergency and replying to Mr. Wilson's demands that the guard accept an arbitrary 6 months' basic-training period.

Colonel Brown's letter stated:

To the citizens of the Muscle Shoals area:

Within the past month, Secretary of Defense Charles E. Wilson has seen fit to cast doubt on the integrity and courage of the officers and men of the Alabama National Guard. In addition, Mr. Wilson has issued a decree that will require all future guardsmen recruits to take 6 months training in the Active Army as a condition of enlistment. Whether by accident or design, this requirement threatens to do grave harm to the National Guard.

As commander of the National Guard unit in the Tri-Cities, I would like to present you with some of the concrete facts of the situation.

The National Guard is the oldest military organization in the United States. Before there was a United States Army, a Department of Defense, or even a United States, National Guardsmen, then known as colonial militiamen, fought and died to keep the 13 Colonies free from Indian attack and from domination by foreign empires.

National Guard units fired the first shots of the Revolutionary War and, with the Regular Army and, later, the Army Reserve, formed the nucleus of our victorious armies in every subsequent conflict, including the Korean war.

For nearly 200 years, when neither State nor Federal Government would provide adequate funds for training and equipment, the officers and men of the National Guard sacrificed of their own time and funds to make sure that at least some form of reserve military force would be available in time of need.

Now we are asked to believe that this force which has striven so nobly in its country's defense for over 3 centuries became, during the Korean war, a refuge for draft dodgers, and undependable. What are the facts?

Eight National Guard divisions and many smaller units were ordered into Federal service immediately following the outbreak of the Korean war.

When it became apparent that the entire National Guard would not be called to active service, the National Guard Association made the first of several requests to the Department of Defense that the guard be mobilized.

The purpose behind this request was to provide trained units that could be rotated, as units, into the combat zone to relieve units that had borne the brunt of the fighting.

The National Guard's request for all of its units to be called into active service was denied. Instead, the Department of Defense chose to rely on replacement by individuals, a system that already had proven disastrous to morale and to unit efficiency during World War II.

Callup of individual National Guard units continued throughout the Korean emergency. In all, 1,833,600 National Guard men served in the Korean conflict with their guard units. Thousands more volunteered for active duty and served with units of the Army, Navy, Air Force, and Marine Corps.

A large proportion of the mobilized National Guard units, including two full divisions and scores of smaller units, served in combat in Korea. One of these units, the 955th Field Artillery Battalion of the New York National Guard, is credited with having destroyed 68 enemy heavy guns, 5 enemy tanks, 16 enemy vehicles, and with having inflicted 14,000 casualties on the enemy.

Of local interest, the total Alabama National Guard was mobilized immediately, including all of our Tri-Cities units. Of the 11,082 Alabama Guard men, 11,029 were federalized. Many units were shipped to Korea within a few months of mobilization.

This is, indeed, a strange way of dodging the draft.

Of the officers and men left, a high proportion were and still are, combat veterans of World War II. What sort of draft dodgers are these?

Of the men between 17 and 18½ who were allowed to join the National Guard and become draft deferred, not one was at the time of his enlistment eligible for the Korean war draft. Each and every one of these became available for immediate Federal service. Only because of them was it possible for the United States to maintain an effective Reserve force against the possibility of a third world war, or the extension of the Korean conflict.

With this record in mind, I do not feel that any officer or enlisted man of the Alabama National Guard, even among those skeleton-size units that remained at home,

need feel any shame over his willingness to participate in this country's defense.

As to Secretary Wilson's decree that every man enlisted by the National Guard after April 1, 1957, must take 6 months' training in the active Army, the records show that the National Guard, throughout its history, has fought for some effective form of universal military training.

The National Guard has recommended that instead of the unrealistic, arbitrary, compulsory 6-month requirement, a potential recruit be given a choice between taking the 6-month training or taking an 11-week basic-training period, 1 summer, and following it up with further training at his hometown armory and summer field training and where possible with attendance at an Army service school later in his enlistment.

By this means, the high-school junior who enlists in the National Guard could, at the age of 17, complete his basic training in the summer vacation between his junior and senior years and continue his training with his own unit.

I urge all of you to visit any of our three local armories at your earliest convenience to familiarize yourself with the rules and regulations, the training program, and equipment, and above all, the men of your National Guard.

I am convinced that when you return home, you, too, will be convinced that the Alabama National Guard remains true to its proud tradition of sacrifice, accomplishment, and glory.

VERNON S. BROWN,
Lieutenant Colonel, Artillery, Alabama National Guard.
FLORENCE, ALA.

Spiraling Cost of Living

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. ANDERSON of Montana. Mr. Speaker, while farmers and ranchers of our Nation face subnormal income and mounting costs, so, too, do the people of America's cities face a critical situation as concerns the spiraling cost of living.

Somewhere, there is something critically wrong. While production prices on food and fiber of our farms and ranches spiral downward under the relentless policies of the Secretary of Agriculture, the end results in the markets of our land spiral in the other direction, always upward. Meanwhile, giant corporations set alltime profit records.

On the front pages of today's newspapers I read where the cost of living rose to a new record high for January. It was the fifth consecutive month it has set a record. Simultaneously, it was announced 1.4 millions of workers would get automatic cost-of-living pay boosts, averaging about a penny per hour. Those few pennies, however, I do not believe will materially bridge the gap in mounting costs of living.

Obviously, there is a need for Congress to determine the facts, and take action in this mounting crisis. That is why today, on the occasion of this newest cost-of-living price advance, I am introducing a measure which calls for a broad investigation of the rising costs of living and the widening spread between prices received by farmers and those paid consumers for agricultural commodities. This measure asks the establishment of a joint congressional committee to carry out the investigation, and asks also that Congress provide $250,000 annually for this purpose. The committee could make recommendations on the basis of its findings to reduce the farm-to-consumer price spread so as to increase prices to the farmers and lower them to consumers.

Contradiction of Erroneous Information Concerning Certain Military Personnel

EXTENSION OF REMARKS
OF
HON. JOHN J. RILEY
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. RILEY. Mr. Speaker, it has come to my attention that certain erroneous information concerning the activities of two of the finest generals in the Air Force, Maj. Gen. E. J. Timberlake, commander of the Ninth Air Force, and Brig. Gen. Stephen B. Mack, commander of Shaw Air Force Base, has recently been made public by way of newspapers, radio, and television. In the interest of justice and in fairness to these officers, I believe that the true facts should be given equal publicity.

I can vouch for the authenticity of the attached article which appeared in the State newspaper, Columbia, S. C., on February 20, 1957. I know personally the people, both civilian and military, mentioned therein.

I have contacted the officials of the Sumter County Citizens Council and have obtained an affidavit from two of its officers. These officials are men of the highest integrity as are all other members of the council whom I know. This affidavit states that neither General Timberlake nor General Mack has ever attended any of their meetings. A copy of this affidavit is attached.

The Shaw-Sumter Community Council, referred to in the article, has as its sole purpose the maintaining and betterment of the fine public relations existing between the city and the airbase. A similar organization has been in existence since the activation of Shaw Field early in World War II, and it was my privilege to serve as a member of this group prior to my coming to Congress. It has no connection with any other organization.

I feel that the FBI or some other agency of the Government should thoroughly investigate the source of this erroneous information and make a report of their findings to responsible officials so that there will be no repetition of such irresponsible charges. I am requesting Attorney General Brownell to order such an investigation.

The article and the affidavit follow:

SHAW GENERALS DENY POWELL CHARGE OF MEETING WITH CITIZENS COUNCIL

SUMTER, February 19.—The Ninth Air Force and Shaw Air Force Base commanders tonight denied emphatically allegations of Representative POWELL, Democrat, of New York, revealed earlier today that they had attended a meeting of the White Citizens Council in Sumter.

The denial came after Representative POWELL, 1 of 3 Negro Members of Congress, asked Secretary of Defense Charles E. Wilson in Washington today to investigate reports that an Air Force general had attended such a meeting at Sumter.

POWELL wired Wilson that he had received "confidential information" that the February 16 meeting had been attended by the Ninth Air Force and Shaw Air Force Base commanders, and that the meeting was held in Elks Lodge No. 855 of Sumter.

The telegram was promptly turned over to the Air Force.

Elks Club Manager W. Norman Chandler declared tonight that no meeting of the White Citizens Council had taken place Saturday night, February 16, or for that matter at any other time.

He pointed out that the confusion may have arisen over the fact that the Elks Club often plays host to meetings of the Shaw-Sumter Community Council, a group set up to better relations between the city and the nearby base.

General Mack often attends these meetings, which have nothing to do with States rights or the segregation issue, according to members of the group.

The last known meeting of the Sumter County Citizens Council was held Thursday, February 7, at the Edmund High School auditorium, at which time Representative JOHN BELL WILLIAMS, of Mississippi, was the featured speaker.

Prior to the meeting, a supper was held at the Elks Club sponsored by the executive committee of the Sumter County Citizens Council for the honored guests. No military personnel were present at this gathering as far as could be determined.

General Mack said tonight: "General Timberlake and I have never attended a meeting of the White Citizens Council (if that is the correct name of the group) nor have we ever been invited to do so."

A similar denial was issued by Lt. Col. H. R. KATZ, special assistant to the Ninth Air Force commander.

Timberlake is on a staff visit inspecting Ninth Air Force bases.

In his telegram POWELL had asked Wilson: "Does the Defense Department allow its commanding officers who are under Presidential Executive order to abolish all segregation to join or attend meetings sponsored by un-American groups such as White Citizens Councils, Ku Klux Klan or the Communist Party?

"Would appreciate an immediate reply following your investigation."

AFFIDAVIT

STATE OF SOUTH CAROLINA,
County of Sumter:

Personally appeared before me Robert O. Purdy III and F. E. Gibson who, each being first duly sworn, say:

Robert O. Purdy III is chairman of the Sumter County Citizens Council of Sumter, S. C., and has been chairman since November 1956. For 1 year prior to November 1956, he was recording secretary of this organization.

F. E. Gibson is chairman of the policy committee of the Sumter County Citizens Council of Sumter, S. C., and has acted in such capacity for approximately 2 years.

We are thoroughly conversant with all phases of activity engaged in by the Sumter County Citizens Council and we have at-

tended every meeting held by the Sumter County Citizens Council for approximately 2 years.

We have read the news release which appeared February 19, 1957, wherein ADAM CLAYTON POWELL, JR., Congressman from New York, charged that certain commanding officers of the Ninth Air Force and of Shaw Air Force Base, S. C., had met with the Sumter County Citizens Council at the Elks Club in Sumter and in which he accused the Sumter County Citizens Council of being un-American and classified this organization along with the Communist Party and the Ku Klux Klan.

The Sumter County Citizens Council has never held a meeting at the Elks' Club in Sumter, S. C., as charged by ADAM CLAYTON POWELL.

The Sumter County Citizens Council has never held a meeting which was attended by either General Timberlake, commanding general of the Ninth Air Force, or General Mack, commanding general of Shaw Air Force Base, S. C., as charged by ADAM CLAYTON POWELL, Jr.

The Sumter County Citizens Council has never held a meeting at which any commanding officer of Shaw Air Force Base, S. C., was present.

We are informed that the date on which this alleged meeting was supposed to have occurred was February 16, 1957. The Sumter County Citizens Council held no meeting of any kind on such date.

On the night of February 7, 1957, the Honorable JOHN BELL WILLIAMS, Congressman from the State of Mississippi, spoke in Sumter, S. C., before a gathering of approximately 1,400 citizens at a meeting which was sponsored by the Sumter County Citizens Council, but which was open to the public. Prior to this meeting, seven members of the Sumter County Citizens Council, including deponents, were present at a dinner given in honor of Congressman JOHN BELL WILLIAMS at the Elks' Club in Sumter, S. C. Neither General Timberlake nor General Mack was present at this dinner, and neither of these gentlemen was in the presence of Congressman JOHN BELL WILLIAMS at any time during his stay in Sumter, S. C.

As to POWELL's false accusation that our organization is un-American and is to be classed with the Communist Party, we merely call attention to the fact that we have never been endorsed by the Communist Party, as has the National Association for the Advancement of Colored People, whose policies POWELL so fervently supports with irresponsible, headline seeking misrepresentations.

ROBERT O. PURDY III.
F. E. GIBSON.

Sworn to and subscribed before me this 21st day of February 1957.

[SEAL] EDWARD V. ATKINSON,
Notary Public for South Carolina.

When Sanctions Weren't Imposed

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. MULTER. Mr. Speaker, the following article by George E. Sokolsky, which appeared in the New York Journal American of February 13, 1957, is most timely.

It points up the fact that the President and the State Department close their eyes to all international inequities and open them only when Israel is charged with wrongdoing, if protecting one's self can be called wrongdoing:

WHEN SANCTIONS WEREN'T IMPOSED

(By George E. Sokolsky)

During the Korean war, Red China intervened, took over the war, defeated the United Nations police (consisting mostly of American troops), and entered upon prolonged negotiations over prisoners of war, negotiations which are being continued to this very day.

Did the United Nations impose sanctions upon Red China? Not at all. Red China is not a member of the United Nations; therefore it could seize Tibet; it could take a chunk of territory out of Burma; it could create a sphere of influence in Nepal without suffering any consequences. It could stir up a war in Indochina and permit its territory to be used as a military base.

There is an enormous advantage in not being a member of the United Nations because then it is possible to engage in imperialist war enterprises and not suffer any consequences. Red China, subsequent to these acts of imperialism, conducted an active campaign to be admitted into the United Nations and has encountered considerable sympathy and support, particularly among those Afro-Asian nations which apparently favor rewarding such improprieties by permitting a country to shoot its way into the United Nations.

BRUTAL IMPERIALISTIC ACTION

Furthermore, there has always been a cynical element in the State Department which prides itself on its ultra-realism and which therefore favors Red China's entrance into the United Nations on the pragmatic ground that nothing suceeds like success and the torture and murder of American citizens are routine hazards of international relations.

So, Soviet Russia, a member of the United Nations, sent an overpowering army, including tanks which rode roughshod over women and children, into Hungary to repress an uprising of the people for self-government. Never in modern times was an imperialistic action so overt, so brutal, so frank.

Did the United Nations impose economic or other sanctions upon Soviet Russia for its genocide in Hungary? Not at all. There were about 10 resolutions concerning Soviet Russia's conduct in Hungary, but Russia flouted them all and laughed at the United Nations and its pretenses at power. Dag Hammarskjold, its highest official, wished personally to go to Hungary to see what was going on, but they would not admit him. They treated him like what he is, a paid jobholder of an international debating society.

Did our State Department threaten to vote sanctions against Soviet Russia over Hungary? Don't be silly.

Apparently there was even a denial that American radio facilities were used to encourage the Hungarians to declare their independence, although the balloons could not be denied because they are demonstrable. It pays to be a strong power in the United Nations, with a permanent seat on the Security Council and the right of veto, because then it is possible to tell anybody to go to the devil.

SILENT ABOUT KASHMIR

India went into Kashmir the way Red China went into Korea and Soviet Russia went into Hungary. The United Nations proposed a plebiscite. India rejected a plebiscite because Nehru calculated that he would lose the plecicsite. Parkistan suggested a U. N. police force to hold Kashmir in escrow. Nehru rejected that, too. In Kashmir, Nehru ceases to be the man of peace, the middleman among nations, the gentle talking merchant offering the world nirvana at a price. In Kashmir, Nehru is an imperialist, taking what he can take and sending his devil's disciple Krishna Menon, to make a 7-hour long speech until nausea overtook that body, accustomed though it is to gargling and retching.

Did the United Nations impose economic sanctions against India for its imperialism and its rejection of United Nations resolutions? Not at all. The United Nations is silent about Kashmir. And the State Department is silent about Kashmir.

It is only against Israel that the United Nations and the State Department seek to impose sanctions perhaps as a challenge to discover whether manna will truly drop from Heaven when the Israeli have nothing to eat but the sand of the Sinai Desert. It does not pay to be small and not to have oil wells and not to have blackmail powers in this current, pragmatic era.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. BEAMER. Mr. Speaker, to further express the sentiments of the people of the State of Indiana in regard to Federal aid to education, under unanimous consent, I include Senate Concurrent Resolution 6, introduced in the current Indiana General Assembly, in the Appendix of the CONGRESSIONAL RECORD:

Senate Concurrent Resolution 6

Concurrent resolution memorializing the Congress of the United States to resist the efforts of proponents of centralization of government to invade the field of education and usurp or encroach upon the right and duty of the people in the local communities to provide for and supervise the education of their children

Whereas the matter of education of the children of this State is now, and always has been of utmost concern to our citizens, both individually and collectively, and they have never hesitated to provide funds through taxation and otherwise in sufficient amount, both locally and statewide, to meet their obligation to provide proper educational facilities; and

Whereas the differential that existed between construction and/or staffing of education facilities and student population arose through no fault or lack of interest of the people but was caused by wartime stresses and conditions when all peacetime construction and career planning, of necessity, was deferred in order that a maximum war effort could be put forth; and

Whereas through thoughtful planning and economical and efficient use of available financial resources this State, and the local communities therein, have at this time, for all practical purposes, achieved an equalization between school facilities and school population without sacrificing quality of school plants or personnel, and, further, the office of superintendent of public instruction of this State, in cooperation with local school authorities has instituted an education planning program so as to provide properly for the future population growth; and

Whereas in recent years, through the efforts of certain national groups there has developed a strong movement to have the Federal Government step into or invade the education field on the pretext that the State and local authorlites are unable to cope with

the school problem, whereas the real reason therefor is to remove the whole field of education from the supervision, operation, and control of the people of the local communities; and

Whereas any such movement is objectionable upon several grounds, among which are:

(a) Any Federal program must be regulated which in turn calls for creation, establishment, and staffing of various boards and bureaus with the usual waste, inefficiency, and consequent dissipation of badly needed tax money attendant thereon;

(b) Apart from financial or economic considerations is the even greater danger that such movement could and eventually would remove from the observation and control of the people of local communities the teaching methods, philosophy, source material, and like matters, thus paving the way for a subtle insinuation of the teachings of subversive ideologies into school curriculums and resulting in the possible warping, twisting, and poisoning of the impressionable minds of children against our democratic principles and processes; and

Whereas since the very inception of this program of unwarranted, attempted usurpation of these inalienable rights and duties of the people the State of Indiana has fought it militantly and unyieldingly, as a result of which the aforesaid national groups have intentionally, knowingly, and unconscionably issued reports containing absolutely false misstatements and discolorations of fact and truth concerning this State's educational facilities and program in an insidious attempt to discredit, embarrass, and belittle it and its citizens before the Congress of the United States and the people of this country; and

Whereas such action upon the part of said national groups strengthens and confirms our suspicions that the tears they shed for the educational welfare of the children of this State and Nation are truly crocodile in nature and serve but to camouflage the ulterior socialistic motives they so poorly conceal; and

Whereas the aforesaid distortions and untruths by said groups concerning the situation in the State of Indiana lead but to the conclusion that statements concerning the educational facilities and programs in other States are equally erroneous and fallacious; and

Whereas this State, and the citizens hereof, are now, always have been, and always shall be unequivocally, incontrovertibly and unalterably opposed to any Federal invasion, encroachment, or infringement of the fundamental right, obligation, and duty of the people and their local governmental authority to provide, supervise, and control the education of the children of this State or the educational processes concomitant thereon: Therefore be it

Resolved by the Senate of the General Assembly of the State of Indiana (the House of Representatives concurring):

SECTION 1. That the Congress of the United States be and it is hereby memorialized to reject any and all efforts to obtain the passage of legislation by the terms of which money would be appropriated and made available to the States, through grants-in-aid or otherwise for school building or other purposes, which either indirectly or directly would infringe upon the rights, duties, and obligations of local and State governments or authorities to provide, supervise, and control the education of the children of this country or the accompanying educational processes.

SEC. 2. That a copy of this resolution be sent to the following:

1. The Honorable Dwight D. Eisenhower, President.

2. Marion B. Folsom, Secretary of Health, Education, and Welfare.

3. All representatives in the United States Senate and House of Representatives.

4. The governors of all other States of these United States.

5. The commissioner on interstate cooperation in each of the other 47 States.

Savings Bond Relief

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. MULTER. Mr. Speaker, since 1951 I have been introducing legislation in an effort to make United States Savings Bonds a more attractive investment. In this session my bills are H. R. 2480 and H. R. 2481, both introduced on January 10, 1957.

In this connection, I commend to the attention of our colleagues the following editorial which appeared in the New York Times of February 13, 1957:

SAVINGS BOND RELIEF

Reports from Washington this week have hinted that action may at last be near at hand looking toward improving the relative position of the savings bond holder vis-a-vis other types of investors. The fact that the current rate yielded by savings bonds isn't considered too attractive doesn't come as exactly an overnight revelation. In 1955 sales of new E- and H-bonds, for example, exceeded redemption by about $700 millions; in 1956, however, when interest rates on all other forms of investment were steadily rising, sales declined from the 1955 level of $5.4 billions to $5 billions and redemption rose from $4.7 billions to $4.8 billions.

This trend has been even clearer recently. During each of the last 5 months of 1956 redemption of these 2 types of bonds, tailored particularly to meet the requirements of the small investor, have exceeded sales. This week figures have been released showing the result of the first month of the new year, and these figures serve to dramatize the situation even more sharply than at the time a similar problem was encountered 6 years ago and resulted in raising the rate on E bonds in 1952 from 2.9 percent to 3 percent. For in January redemption of savings bonds of all kinds amounted to $547 million as compared with sales of $465 million. While the 2 situations are not completely comparable, it is a noteworthy fact that cash-ins in January 1957 were the largest of any month since March 1946.

What steps the Treasury has in mind to restore the attractiveness of savings bonds to their holders has not been officially indicated. A few months ago it might have been sufficient to change the pattern of the annual redemption values—which in the case of the early years of their life reflect an interest rate that is little more than nominal. At present, however, with the ceiling on savings accounts raised to 3 percent and with long-term Government securities selling on a yield basis of about 3½ percent, it is doubtful that such a modest program of liberalization would accomplish any real results. It would appear that at this stage of developments the Treasury can hardly stop short of asking Congress to raise the ceiling on the interest yield of these securities substantially above its present 3 percent.

The Oil Price Situation

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. GAVIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Oil City (Pa.) Derrick of February 13, 1957:

THE OIL PRICE SITUATION

Oil still is the favorite whipping boy in Washington.

That's the only conclusion that can be drawn from the hue and cry over the recent price increases in petroleum and some of its derivatives—a hue and cry that completely ignores the age-old law of supply and demand, the cost structure, and other factors that vitally affect this industry the same as any other in the economy.

Yet, it's significant to note that in the past 10 years all major industries have advanced the prices of their products with methodical precision and regeularity. There was scarcely a peep in Washington. Nary a stir followed these advances.

But the recent oil increase—the first general increase in about 4 years—loosed a torrent of abuse upon the industry and a flood of unwarranted charges of monopoly, conspiracy, and the like. In the forefront of the attackers was the coonskin-capped gentleman from Tennessee—ESTES KEFAUVER—who seems ready at all times to take pot shots at the oil industry but never loses a chance to ride the bandwagon for higher peanut and cotton subsidies.

The oil price increases can be fully justified. In fact, the increases were long overdue and, in the opinion of those in position to know the real status and problems of the industry, are wholly inadequate to permit producers to meet steadily increasing demands and replenish reserves in the face of mounting costs.

In the last 10 years crude oil prices have increased only 28 percent. During the same period average hourly wages paid in the producing industry have increased 61.3 percent, oil field machinery prices have advanced 55.6 percent, oil well carbon casing 77.8 percent, oil well alloy casing 87.5 percent, carbon line pipe 117.8 percent, finished steel products 80.7 percent, and automobiles 45.9 percent.

Just since the last general crude oil price adjustment, in June 1953, the oil-producing industry has absorbed 5 rounds of increases in basic steel prices and 4 rounds of wage increases.

In the face of these increased costs—increases that have put the cost of finding and producing petroleum 6 to 10 times higher than it was 10 years ago—the industry is expected to set new records of production to meet increasing demands and, at the same time, continue discovery work in order that proved reserves may be maintained in keeping with the growing needs and in preparedness for any emergency.

During 1956 the statistical record of the industry shows that demand and production increased approximately 5½ percent, but drilling increased less than 1½ percent. This lag in drilling was due primarily to the fact that crude oil prices remained unchanged while producers continued to absorb mounting costs.

There's a limit to the power of the oil industry, or any industry for that matter, to absorb spiraling costs. When that limit

is reached there is no alternative but to increase prices.

That's the situation in which the oil industry finds itself. The disparity of crude oil prices must be eliminated if the industry is to be able to meet demands and maintain reserves at an adequate level. The recent price increase was a step in that direction. And, despite the furor created by the boost, it's doubtful if the increase is sufficient to bridge the gap between producing costs and justifiable revenues.

A realistic view of the whole situation indicates that the oil industry, rather than being subjected to the attack now being made upon it, deserves commendation for resisting so long, and at burdensome cost, the inflationary pressures which engulfed it.

Our Share of the Budget

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Quincy (Ill.) Herald-Whig of February 19, 1957:

OUR SHARE OF THE BUDGET

There has been a lot of talk about that $71.8 billion Federal budget. It is talk that has ranged from minor key grumbling to outright screams of anguish. And it is confusing, at best, for even in this day, when talk gets around to figures like $71.8 billion; the figures are just too big to comprehend clearly.

It is interesting, therefore, to read a more localized breakdown of the budget, as prepared by the taxation department of the Illinois State Chamber of Commerce.

Analyzing budget figures, the chamber estimates that Illinois' share of the big budget is $5,356,280,000. And using the July 1956 Illinois population figure of 9,432,000, that breaks down to $568 for each man, woman, and child in the State, or $2,272 for every family unit of 4.

Going further, the State chamber calculated what each county's share of the Federal budget would be, on the basis of available indices of buying power and sales-tax collections. The results are jarring.

Getting back to the whole State's share of the Federal budget, it is pointed out that Illinois will have to dig up $354,470,000 more than it did on the last budget.

It is reported, too, that the amount to be borne by Illinois taxpayers is 6.4 times the total amount of property taxes payable in 1956 for the support of all local governments—counties, cities, schools, townships, park districts, etc. Or it is nearly 8 times the total of taxes collected during the fiscal year which ended last June 30 to finance Illinois' State government.

Getting still closer to home, the county breakdown calculated by the chamber estimates that Adams County will cough up $30,227,000 for the Federal budget, or 6.1 times the taxes collected for all local governmental units.

Neighboring Brown County, it is estimated, would provide $2,551,000 for the Federal budget, exactly 5 times the total of local budgets. Pike County would provide $7,598,000, or 4.4 times local budgets. McDonough County would pay $12,970,000, or 4.8 times the total of local budgets. And Schuyler County would provide $2,985,000, or 3.8 times local budgets.

The relationship of local shares of the Federal budget to local taxes varies widely through the State, as might be expected. Peoria County, for example, would pay proportionately the most, $109,513,000, or 7.8 times the total of local budgets. And little Putnam County would pay $1,411,000 toward the Federal budget, or only 2.8 times the total of its local budgets.

These are figures that bring close to home the cost of Federal Government. Think about them. They're worth some study.

Federal Aid for Newell School

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial in the Newell (S. Dak.) Valley Irrigator which thoughtfully expresses why the so-called Federal aid to education is not practical:

FEDERAL AID FOR NEWELL SCHOOL

Congressman E. Y. BERRY puts his finger on a matter of interest to some Newell people this week, when he writes:

"FEDERAL AID

"It appears to me that if States need assistance to carry on their educational programs or their school-construction programs, it is either because the Federal Government has preempted the tax base or the State has never had sufficient tax base to produce the needed revenue for schools."

He continues that he has again introduced legislation directing that 1 percent of the Federal income tax collected in each State be turned directly to the treasury of the State from which it is collected for school use.

"If the States need this added income for educational purposes, let's give it to them direct without any Federal strings attached. The Federal Government already has all the machinery set up for the collection, there would be no additional payroll for either the State or Federal Government and no controls from Washington"—which we believe is the most interesting and worthwhile proposal yet to come out of the Nation's Capital in regard to Federal aid for education.

Another proposal under consideration by Congress is a big-sounding $600 million Federal-aid program for our schools. Broken down, however, such aid would amount to around but $4 per capita.

In contrast, BERRY's proposal would retain in South Dakota about $800,000 or slightly more than $1 per capita.

But in case of the proposed larger $600 million Federal aid for schools and its relation to the Newell school district—if the local district could show political and economic justifications for securing even a per capita share—it is interesting to note that the total wouldn't pay the architects for designing half of our present school building needs.

Nor would it be out of line to suggest that the pittance of Federal aid resulting would fall far short of meeting costs of submitting and securing approval of local building plans by a Federal bureau which would be set up to direct such operations.

However, the principal purpose of this writing is to allay the hopes of some local citizens that the Federal Government is going to come to the aid of the Newell school district in meeting its building needs. President Eisenhower's White House Conference on Education, the largest and most representative gathering of its kind in the United States, reported in December 1955 that "No State represented has a demonstrated financial incapacity to build the schools it will need in the next 5 years."

We seriously doubt that either Berry's proposal or that for a $600 million Federal aid program for the Nation's schools will be adopted by the present Congress. Even more, we doubt, if either is adopted it will help the situation now facing the local schools. And the sooner we realize that our lack of adequate educational facilities are costing our children more than needed school buildings will cost us, the sooner the taxpayers of Newell school district are going to insist upon being given the opportunity to solve their own school inadequacies.

Flood Control by TVA

EXTENSION OF REMARKS
OF
HON. JAMES B. FRAZIER, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. FRAZIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chattanooga Times, Chattanooga, Tenn., by the Honorable Alfred Mynders, editor, appearing on February 2, 1957. This article clearly demonstrates that TVA is fulfilling the purposes for which it was established:

FLOOD CONTROL BY TVA

(By Alfred Mynders)

But for the TVA system of dams and reservoirs, Chattanooga right now would be experiencing a major flood. Local rains hereabout and up the river a piece sent the water above flood stage, but the damage is slight indeed compared to what it would have been.

The TVA has been managing the waters all the way from the mountains of east Tennessee to Kentucky Dam in west Tennessee. By spilling water from the main stream dams from Watts Bar through Kentucky Dam, TVA has kept the main stream lakes fairly low with reserve space for unexpected floodwaters and during the disastrous flood in upper Tennessee, in Kentucky, Virginia, and West Virginia, TVA has been storing water in the lakes in the tributaries to the Tennessee River.

Good old Norris Dam. Its lake has been the main stopper to the Clinch River flood. A day or two ago the Clinch and Powell Rivers, twin tributaries of Norris Lake, were pouring waters down at an estimated 80,000 cubic feet per second. That would mean the greatest Clinch River flood in the 21 years since Norris Lake was impounded.

And but for the TVA dams that great wall of water would be roaring down the Tennessee River toward Chattanooga, the most vulnerable flood point in the entire TVA system.

The Holston River was sending water at the rate of 37,200 cubic feet per second into Cherokee Lake. Two upstream lakes held back some of the water from Cherokee Lake and prevented it from being a greater flood. But for the TVA dams, the Holston flood would be joining the Clinch River flood in the Tennessee River.

The flood in the French Broad River would have added to the threat to Chattanooga but for the Douglas Dam. Douglas Dam has held back that flood of 31,900 cubic feet per second.

The TVA flood-control machinery is a marvelous thing. The experts at various points on the Tennessee system are in full cooperation all along the river. Indeed, it is understood that some of the TVA personnel here in Chattanooga have been on the upper river during the present flood threat, helping check on the great waters.

What does TVA flood control mean to Chattanooga? TVA experts have estimated that the recurrence of a flood as high as the maximum flood of record, that of 1867, would do more than $105 million in damage at Chattanooga alone. The flood which TVA dams apparently have held back from Chattanooga in the present crisis might not have approximated that record flood of 1867, but it might have been serious.

The TVA estimates that the control exercised by the present TVA reservoirs could reduce the $105 million damage from the maximum flood on record in Chattanooga to about $12 million.

The Tennessee is the only river system in the world which has been so marvelously harnessed. And it should not be forgotten that the TVA Kentucky Dam Reservoir is one of the greatest things yet perfected for reducing floods on the Mississippi River.

The TVA has nearly 12 million acre-feet of storage space reserved to control floods on the Tennessee and to aid the control of floods on the lower Ohio and Mississippi Rivers.

The dramatic demonstration of the TVA flood-control system during the past several days refutes the oft-made charges by critics that the TVA is more interested in producing electricity than in preventing floods.

The TVA strictly observes the flood-control priority.

As a 1956 report shows, in 1 year TVA spilled from its reservoirs water equivalent to 560 million kilowatts of electricity in order to maintain the reservoirs at the required flood-control levels. Had power generation been the major objective, as with privately owned companies, the water would have been retained in the reservoirs for later use in generation of power.

During the flood season especially, the TVA lowers its lakes in order to leave room for floodwaters coming in. After March 15, when the flood season is nearing an end, the reservoirs are filled as rapidly as possible so as to procure maximum electricity production. Although about 2,500,000 acre-feet is always reserved for flood control, by refilling the lakes after the flood season TVA is able to release water in the dry periods of late summer and fall to maintain the flow of the stream for power production and navigation.

TVA electricity benefits every point in the seven-State Tennessee Valley Authority area. The flood-control system benefits Chattanooga more than any other town or city on the whole river.

Love those TVA dams.

Our Senior Citizens Still Have Much To Contribute

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial appearing in the Nashville Tennesseean under date of February 18, 1957. It calls attention to a new organization in the capital city of Tennessee called the Senior Citizens of Nashville, Inc. It has as its objective a service to our senior citizens who have reached retirement age. These citizens, of course, have not exhausted their usefulness. In terms of experience and knowledge they form a valuable pool. Many of them are still active and alert in business and other avocations of life.

The editorial follows:

OUR SENIOR CITIZENS STILL HAVE MUCH TO CONTRIBUTE

Fourteen million people in the United States are over 65 years of age. At present they have a life expectancy of 13.3 more years. By 1975, a man of that age can expect to live 14.5 years longer, and estimates are that there will be 21 million of retirement age.

These senior citizens do not like to think of themselves as being a problem. But in terms of the social evolution that the Nation has been going through, the compulsory retirement idea on the part of business, medical progress having added to life expectancy and failure on the part of most communities to take note of the peculiar status of these elders, they have become a problem.

One of the biggest hurdles for those who have reached retirement age is that of adjusting from a hitherto busy and rather active life to one with time on their hands and nothing to do.

The senior citizens by no means have exhausted their usefulness. In terms of judgment, stability, and dependability most can still do well as or better than younger workers. In terms of experience and knowledge they form a valuable pool. In overall performance, for instance, a National Association of Manufacturers survey of 2,500,000 employees rated 23 percent of older workers superior, 70 percent equal, and only 7 percent not equal to younger workers.

There are individual difficulties, of course, such as health and finances. For the former, medical progress continues to help. For the latter there are increasing benefits such as social security pensions, company pensions, personal tax exemptions, and such. A great many do have financial problems. But overriding this is the problem of adjusting to a changed life, and that is where the community comes in.

The Senior Citizens of Nashville, Inc., has taken a step forward in recognizing the adjustment problem, and is establishing a permanent day center for persons of retirement age. It is the first such center in Tennessee and will include recreation and health facilities as well as adult education classes and personal and vocational counseling.

In setting forth their plans, the leaders in organizing this day center have noted they are aware that these citizens want to continue to be useful to their communities; want something to do whether it is a job or a hobby; need guidance and self-assurance to step back into an active role. The center proposes to aid them.

But this is one center in one area. By location it cannot hope to serve all. It is a first step toward extraordinary possibilities, and it is hoped that this center can formulate a policy of help, a set of guiding rules and solutions that can extend its influence to other sections and other communities. By its own example, others may be encouraged to similar action and by its experience avoid the pitfalls. As a start it is a commendable example of what community leadership can do. In its success will lie large rewards both to the communities and to those persons who still have a great measure to contribute, despite age.

Arabian American Oil Co.

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. VANIK. Mr. Speaker, on Tuesday I called the attention of the House of Representatives to the reports which have come to my attention that the Arabian American Oil Co., commonly known as Aramco, has been treating its oil-royalty payments to King Saud as a tax rather than as a royalty. If payments to King Saud or the Saudi Arabian Government by the Arabian American Oil Co. are treated as a tax rather than as a royalty, the Arabian American Oil Co. can deduct the payments made to King Saud from income taxes due the United States and thereby take its profits on Saudi Arabian oil almost tax free.

The American people have made tremendous commitments of manpower and dollars to provide King Saud with economic aid and with weapons which have the principal effect of protecting the oil-production contracts of the Arabian American Oil Co. with King Saud. In the light of these developments and the tremendous commitments by our Government, the structure of the Arabian American Oil Co. and its treatment of tax obligations to the United States Government are no longer a matter of private business which can be properly concealed from the American people.

The American people have a right to know, and it seems to me that it is the duty of the Arabian-American Oil Co. to make a public disclosure of its contract with King Saud and its tax contribution to the American Government which has pledged so much to protect and preserve the integrity of Aramco's oil contract with King Saud.

Following is a letter which I have yesterday addressed to Mr. R. L. Keyes, president of the Arabian American Oil Co.:

FEBRUARY 22, 1957.

Mr. R. L. KEYES,
President, Arabian-American Oil Co., New York, N. Y.

DEAR MR. KEYES: Yesterday, on the floor of the House of Representatives, I made a statement alleging that for the purposes of United States income taxes your corporation treats oil royalty payments to the Saudi Arabian Government as tax paid to a foreign government and therefore deductible from income taxes due to the Government of the United States.

In view of the tremendous commitments of economic and military aid made by our Government to the Saudi Arabian Government, which promise dollars and soldiers to protect Saudi Arabia and the government of King Saud, it is extremely important for the American people to know what part of this tremendous investment in the Middle East flows back to the United States Treasury in the form of taxes. They are footing a tremendous bill and underwriting an obligation which may entail the lives of American citizens.

The American people, through their elected representatives, are expressing their good faith in pledging economic and military aid to stabilize the conditions in the Middle

East. It seems morally incumbent upon your corporation, which is the principal beneficiary of this situation, to make clear the intricacies of your organization and your compliance with the spirit as well as the letter of the Internal Revenue laws of the United States.

Your cooperation in this matter is very much needed to clear up the record.

Sincerely yours.

O. K., So Drop It

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD an editorial of February 17 from the Indianapolis Star:

O. K., So Drop It

Marion B. Folsom, Secretary of Health, Education, and Welfare, told a House education subcommittee the other day that Congress might as well drop the idea of Federal aid to education unless something along that line is done this year. We had not expected such quick, official confirmation of our own recent editorial remarks that, "The urge for speed in Federal action stems from an obvious cause. It's almost now or never. The way things are going, pretty soon there won't be any more problem."

The way Folsom's testimony shapes up on analysis, the only problem bothering the Federal-aiders right now is not the shortage of school classrooms about which so much has been said. Rather, it is whether the Federal Government is going to get there fast enough to beat the States to supplying the money, thus allowing the Central Government to take out its percentage for the support of an expanding new branch of bureaucracy.

With unexpected and probably unintended candor, Folsom told the House subcommittee that States and school districts throughout the United States are holding up their own school-building projects until they see whether Federal aid will be forthcoming. Folsom added, "We ought to make up our minds. If we keep holding out hope, we'll be holding back construction. If we are not going to have Federal legislation, we ought to know it now." In other words, if the Federal Government doesn't hurry, the States will build their own classrooms.

Folsom's factfinding did not go far enough. The truth is that the States are overcoming the classroom problem right now. If, as he says, there are additional projects which are being held up to see which way the Federal money bag splits, that means there is no problem at all that could not be quickly solved by dropping the whole idea of Federal aid. Classrooms now being built by States and local communities are more than twice the number needed to take care of all the children in the country who are on half-day sessions. Building programs already blueprinted will not only replace existing obsolete facilities but also keep up with expected enrollment increases.

In the last 10 years the States and local communities have been catching up fast on the school overcrowding which resulted partially from building restrictions during World War II. Building exceeded current school population growth in that period by 179,000 classrooms. The excess construction whittled down the shortage left over from war and is on the verge of overcoming it entirely, while going on to meet future needs. No wonder Folsom says Congress had better drop the whole thing if it doesn't act this year.

The absurdity of Folsom's desire to get the Federal Government into the classroom-building business is apparent. The money for Federal construction would be supplied by the same taxpayers who supply money for State and locally controlled construction. It would pass through the hands of the same local officials, but with strings attached. Nowhere would fewer people, fewer expenses, or greater efficiency be involved. Federal construction would accomplish nothing that cannot be done better at the local level. It would only stack a gigantic Federal agency on top of the already existing State and local machinery. The man who pays the bill—the taxpayer—would simply get less for his dollar.

Since the only emergency involved in Federal aid to education is the Federal fear that there won't even be the pretense of an emergency to talk about next year, Congress can do everyone's pocketbook a service by accepting Folsom's alternative and forgetting the whole business.

TVA Handles a Flood

EXTENSION OF REMARKS
OF
HON. JAMES B. FRAZIER, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. FRAZIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following reprint of an editorial from the New York Times entitled "TVA Handles a Flood," appearing in the Chattanooga Times, Chattanooga, Tenn., February 14, 1957:

NONCONTROVERSIAL

As this newspaper recently said, TVA's great demonstration of how to handle a rampaging river will cause the great valley development to be copied in more and more distant lands. Preventing an economic blow of at least $50 million in Chattanooga, TVA was fulfilling a purpose even more important than its electric power setup.

The New York Times, in an editorial captioned "TVA Handles a Flood" points out that while there are arguments about TVA power, there can be none about the advantage of preventing a major flood. The New York Times declared:

"A lot has happened since 1933, when Congress directed the newly created Tennessee Valley Authority to regulate the stream flow of the Tennessee River primarily for the purpose of promoting navigation and controlling floods. Electrical power was to be produced so far as may be consistent with such purposes. During the intervening years TVA has produced enormous quantities of electricity, and because of the pressure of the Federal atomic plants it is actually producing by steam close to three-quarters of its generated power.

"But TVA still works at its original task. It has storage reservoirs capable of holding back 12 million acre-feet of water—or nearly enough to cover the whole State of Tennessee, if laid out flat, to a depth of about 6 inches. The reason that a good part of the valley including the city of Chattanooga, has not been inundated so far this year is that waters retained in the TVA storage dams cut the flood crest from about 52 feet to about 32 feet. A little damage was actually done at Chattanooga, but TVA probably saved the city somewhere between $50 and $100 million worth of damages.

"In order to have storage space for expected flood waters the reservoirs must be drawn down to relatively low levels. The result is that some of this water is spilled without turning the generators that produce electricity. A careful balance has to be maintained. To draw the reservoirs too low is wasteful. To keep them too high is to risk expensive flooding. So far TVA has been doing pretty well.

"The establishment of the power facilities of the TVA stirred up a controversy nearly 25 years ago that is still going on—although many of us believe that one of the great strokes of luck this country had during the Second World War was the existence of an agency that could feed power into the atomic plants. But there is no controversy about the advantage of not having floods."

A Great Plains Winter Wheat Farmer Speaks

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. BREEDING. Mr. Speaker, I would like to include in the RECORD the following article I have received from Mr. Wallace R. Cleaver, one of my constituents residing in Clark County, Kans., with reference to the farm situation:

Recently, a manufacturer said to me, on learning my business was that of winter wheat farming, "You farmers have surely had a good racket for the last few years. The Government has been guaranteeing a good price for your wheat and now, in addition to this protection for your business, you are paid for another crop each year in the form of soil-bank payments. I know this is true because, for the last year I've been hearing about it on the street, at our business meetings and on the radio." My reply was, "Yes, I have been hearing these same reports and not one of them has come from a wheat farmer; now, please listen to the truth from one who has spent his entire 60 years in the Great Plains, the last 40 of them being devoted to winter wheat farming. In order to help put the record straight, let me ask you a question: If, in 1953, you found it necessary, for the next 3 years to cut your factory production one-third from its normal output, reduce the selling price of your products 10 percent and pay increasingly higher prices for everything you would have to buy, how long would you have figured you could stay in business?" The factory owner's answer was, "About 1 year." "All right, I said, we wheat farmers of the Great Plains have been for the last 3 years trying to operate under just those conditions. In order to avoid stiff penalties for overseeding our wheat acres (above allotments fixed for us by the Government program), since 1953 we have reduced our normal seeding by one-third and the price guaranty in the form of Government loan rates has been lowered each of the 3 years for the wheat we produced on our skimpy acreages. Now, in regard to the soil-bank payments, we do appreciate them in this time of extreme drought in our area, but the purpose of these payments was to induce further reduction of seeded wheat acreages and not necessarily to add anything to our skimpy incomes. It merely happened that

severe drought conditions beat the Government payments to the punch in the further great reduction of wheat seeding in our Great Plains area. So we admit the soil bank money will help us hobble along." On parting, the manufacturer and I agreed with the Indian who said something like, "Do not judge a man until you have walked in his moccasins for two moons."

But when business picks up for us again in the form of normal rainfall, and conditions, perhaps as soon as next fall, become good for seeding of winter wheat, where do we go from there? Due to the last 4 or more years of short wheat crops, together with the added punishment of wheat-acreage restrictions, hundreds of thousands of wheat farmers are like myself in that they have nothing left but mortgages, empty wheat bins, and flat pocketbooks. We have again reached the status we suffered in the miserable thirties, the only difference being we went broke then on short crops and poor wheat prices with a dollar, if we had one, worth a dollar and a half; now, we're worse than "broke" for the same reasons with wheat acreage allotments added to the misery, with a dollar, if we have one, worth about 50 cents. With the present type of farm program continuing in effect, even if we could have our weather made to order, there can be no start for us on the road to financial recovery. Whether we accept the soil-bank payments or seed our small wheat-acreage allotments, in this era of "champagne spending," we will have to continue fighting a losing game with the prospect of nothing but "beer incomes." We were promised in 1953 if we'd go along with marketing quotas and acreage allotments for 2 or 3 years, there would be ample rewards for our sacrifice; the big wheat surplus would be greatly reduced and, as a result, we wheat farmers could return to seeding our normal acreages and higher prices for the wheat we raised. We were granted the bigger crops but they were of debts and mortgages, not wheat. The higher prices came, too, but for everything we have to buy and not for wheat. Now, after all of these years of drought and acreage reductions, we are informed the great so-called burdensome wheat surplus is still with us and that smaller wheat-acreage allotments and still lower wheat prices are in store for us. As a result of 3 years of control by this ill-conceived program which proved itself ineffective after the first year, losses to us farmers of the Great Plains have been many times what we may receive in the form of soil-bank payments. The introduction of the soil-bank program was an admission in itself that the acreage-allotment program has failed completely; but we were told, "Continue to take the medicine as prescribed, for in the long run it will be good for you."

This brings us to the question: "Why have these years of restricted plantings together with short crops failed to make any appreciable dent in the Nation's wheat surplus?" To almost any farmer in the Great Plains, the answer is obvious; we did not produce it so it had to come from the great area to the east of us known as the Corn Belt. Due to insufficient rainfall, we cannot increase our wheat yields by using commercial fertilizers. However, hundreds of thousands of our farmer neighbors to the east (according to reports from many representatives of farm organizations and from farmers themselves from various Corn Belt States) have been going all out in stepping up their wheat yields during the last 3 years. Whereas before wheat allotments came into being for the 1954 crop, corn, soybeans, and other crops were much preferred; since 1953 wheat has greatly gained in favor in the Corn Belt. Frequently, yields have been more than doubled by using a field on the farm with the best soil and by a greater expenditure for commercial fertilizers. This results, in many cases, in a much greater annual production of wheat on a given farm than normally raised, even though the acreage has been rduced in order to comply with the allotment program. What has been the incentive? First, probably the prospect of higher wheat prices resulting from the acreage reduction and drought in the Great Plains area and second, the continued low prices for corn and soybeans. If acres alone filled the wheat surplus bins of the Nation to overflowing, the allotment program would have attained its objective. But since we have learned by the method of trial and error that bushels, not acres, are responsible, why don't we do something about it?

Bushel, instead of acreage allotments, is the only effective and at the same time equitable type of program, or perhaps bushel marketing quotas without acreage allotments would be a better term. For what has been going on since the present program went into effect, let's take Farmer A as a typical example in the Corn Belt. A's base wheat acreage in 1953 was 40 and his normal yield was found to be 20 bushels per acre, making an average production for his farm at 800 bushels. In line with the acreage allotment for 1954, A was reduced to 30 acres with the mistaken idea his yield would be limited to 20 bushels per acre in 1954 and future years. A plants his allotment of 30 acres on one of his better fields and applies plenty of fertilizer, getting a 40 bushel per acre yield in 1954 or 1,200 bushels, a 50-percent increase over his former normal production of wheat. A repeats this procedure in 1955 and again in 1956. Now, let's see what happens to A with the proposed bushel-allotment program. We start with his normal base production of 800 bushels and set his 1958 bushel allotment or marketing quota (regardless of seeded acreage), at 600 bushels. If A decides to plant his entire farm to wheat and have all of his farm bins filled with wheat which cannot be sold, fed or otherwise turned into cash without a severe penalty, that is his hard luck, for 600 bushels is his annual quota. With the incentive removed to increase wheat production, A will no doubt return to his old standby crops of corn, soybeans, oats, alfalfa, and so forth, and forget about wheat. The expected higher wheat price did not come; therefore, Farmer A may have received little or no reward for increasing his wheat production over that of pre-wheat allotment years; however, in these days of cost-price squeeze for practically all farmers, he cannot justly be blamed for trying.

A typical case in the Great Plains area is that of Farmer B, who operates 600 acres of straight wheatland, as tenant, paying one-third, delivered to the nearest elevator, as the landlord's share of wheat produced. B's normal seeding, before allotments, was 450 acres and the remaining 150 was summer fallowed each year. The wheat allotment set for B under the present program is 300 acres with the normal yield of 16 bushels per acre. Two-thirds of a normal yield times B's allotment of 300 acres, at the present Government loan price of $1.90 per bushel, will barely pay a year's operating expenses. With the present program continuing in effect, B's farming situation is hopeless. The soil-bank payments, if he accepts them for leaving his farm out of production, will merely offset the expense of tillage operations on the 600 acres in an effort to prevent weeds from producing new seed crops and to keep the soil from blowing; or perhaps some of the money from these payments would be used for seeding of cover crops which would be left to protect the land.

The question may arise, "Why cannot B raise maize, kafir, or other crops on his land which is not in the acreage reserve, thereby adding to his income from soil-bank payments?" The answer is that over a large part of the Great Plains area, wheat is the only profitable crop which can be produced, especially with maize and kafir around the dollar-per-bushel mark. The so-called tighter soils are not well adapted to grain sorghums but grow good yields of wheat with sufficient rainfall, hence the reason for the term "straight wheat farm." The average Great Plains farmer has only one possibility of paying his debts, new and old, and putting his farm business back in the black; that of being permitted, under a new farm program, to seed his wheat acreage each fall without restrictions and limiting him only on the number of bushels of wheat which may be marketed from his farm each year in the same manner as has been proposed for A in the Corn Belt area. Again returning to the case of B, with 450 acres of winter wheat set up as the normal seeding for his farm and the average yield at 16 bushels per acre, the base production would be 7,200 bushels per year. Like A in the Corn Belt, B's marketing quota would be reduced 25 percent from the base production, permitting B, without penalty, to sell, feed, or obtain the CCC loan on 5,400 bushels of wheat each year. His two-thirds share of this quota, 3,600 bushels, at the present loan rate at B's nearest market, $1.90 per bushel, would bring $6,840 and this could well mean $1,000 profit for the year. If B should be lucky enough in any one year to produce wheat in excess of the marketing quota, the wheat can be stored in farm bins (his and the landlord's excess); if, in the following or subsequent years B's production is less than the farm's marketing quota, stored wheat may be marketed or fed or the CCC loan obtained without penalty, up to the amount required to equal the quota. When the Nation's wheat surplus is sufficiently reduced, both A in the Corn Belt and B in the Great Plains would be favored with an increase in their annual wheat-marketing quota. They should be favored also with better prices for all their products.

What can be wrong with changing to the type of program which has been outlined? It can work no hardship on farmers in the Corn Belt, but should succeed in bringing about the reduction in the raising of wheat in that area which was intended in the first place. It will stop this continued unjust punishment in the form of acreage wheat-planting restrictions for wheat farmers over the Great Plains area who have contributed little to the maintenance of the Nation's wheat surplus during the last 4 years. And there is no reason why such a program cannot be successfully administered and supervised. During and for several years after World War II, we handled many programs through State and county agricultural agencies and a good job was done because we had to do it. Those were emergency programs and so is this one, so let's get it done. It is regrettable but true that the policy of the National Government has been and is to urge not only we winter wheat producers but all farmers over the Nation, in times of war or other emergency periods, to produce the greatest possible amount of food and fiber. Then, after a farmer has invested in more and bigger equipment and has his farm geared to maximum production, the emergency has passed and demand for his products returns to normal.

In this period of time between wars and other emergencies, to the Government, farmers appear to be considered more or less a general nuisance. Certain farm commodities accumulate in storage to the extent of a 2 year's supply and to many men in high Government positions, the annual cost of this storage seems an outrage and an almost unbearable burden on the United States Treasury. These same men, however, may not hesitate in approving a multi-billion-dollar gift to foreign nations at the taxpayers' expense. Contrary to the thinking of some of these Government officials, we old timers who have seen more of famine than of feast, firmly believe the day will come when every pound of surplus stored food and fiber will be needed badly. In the meantime, the

millions of dollars spent by the United States Government for storage and care of these surpluses stay for the most part in the United States and a goodly share of these millions goes back to the Government Treasury in the form of various Federal taxes. But practically all of the billions sent abroad apparently goes down the drain. If the American farmers, whose business makes up the backbone of the Nation's economy, could have the same consideration from their Federal Government as is afforded so-called big business, they would not, at this time, be forced to pay wartime prices for the things they have to buy and receive peacetime prices for their products.

Another feature of the present farm program which we farmers believe could be changed for the better is the "Parity Formula." We believe that using the years 1909–14 as a basis for wheat parity price, and other grains for that matter, is comparable to the United States Post Office Department using the days of the Pony Express as a basis from which to determine salaries for present day mail carriers. The average price my father received for wheat during that period was from 90 cents to 95 cents per bushel; corn, 50 cents to 55 cents; maize, kaffir, feterita and cane seed, 45 cents to 50 cents. (The higher prices mentioned were for No. 1 grade.) These are prices received at the nearest market, Bloom, Kans., 1909 through 1914. The 1956 Government support prices were approximately double the above-mentioned amounts for wheat and maize and if corn loans were being made in that area, I presume the support price would be in about the same proportion. My father, having moved to Kansas from Illinois in 1889, would plant some corn each spring but seldom raised any; he was the first man to plant maize in the area and soon learned that wheat was the only crop which could be raised profitably on that farm, as far as grain was concerned. I operate the same farm today and the same things hold true. Below is listed comparative costs of items: 1909–14 and 1956:

Comparative costs of items

1909–14		1956	
Equipment to farm 600 acres; includes 15 horses or mules, harness, new machinery; no land or buildings	$4,000.00	New equipment to farm same; includes tractor and required machinery, etc.; no land or buildings	$16,000.00
Interest on investment at 6 percent	240.00	Same	960.00
Depreciation per year, 10-year basis	400.00	Same	1,600.00
If land owned (mother owns unimproved, one-fourth tax)	15.00	Same; one-fourth still unimproved	101.64
Business trips to town, average 30 miles	50.00	Same, with mechanized farming	400.00
Telephone expense	12.00	Same	120.00
Hired labor, per day, plus board	1.00	Same, for general work	7.50
Semiskilled (repair wells, binders, etc.)	1.50	Same, driving tractor, etc	10.00
Carpenter, skilled, to build farm building, per hour	.30	Same (if obtainable), per hour	3.00
Carpenter's helper	.20	Same	2.00
Doctor's office-call fee, including pills	.50	Same, but no pills included	3.00
Doctor's call at farm, 30-mile trip	5.00	Same (if obtainable)	30.00
Hospital room, private	2.00	Same (if obtainable)	16.00
Repairs and maintenance, farm equipment, 1 year	75.00	Same	750.00
Personal taxes on farm equipment, 1 year	20.00	Same	120.00
Fire insurance, farm building and equipment	25.00	Same (including tractor, combine, car, truck, pickup, etc.)	300.00
Pair heavy denim bib overalls	1.00	Same quality overalls	3.00
Pair heavy workshoes	2.00	Same quality shoes	6.00
Federal income tax, 4 percent, probably none.		Federal, from 20 percent up and up.	
State of Kansas, none.		Kansas income tax, from 1 to 4 percent.	
Federal excise tax; automobile, truck, and pickup tax, gasoline tax; State sales tax; social-security tax; and many others, as well as taxes on money required to pay taxes, none.		All of them, and more being added.	

As can be seen from the above data, about the only similarity between farming during the 1909–14 period and 1956 is the fact that in both cases the soil is tilled. In this highly mechanized age with the farmers' operational costs being established and increased each year by the Nation's big corporations and the Federal Government, why not select a base period which would be workable for determining parity prices for farm commodities and one which is in keeping with modern times; not the horse and buggy era. In 1946 I talked to many wheat farmers over the western one-third of Kansas after the wheat crop of that summer was harvested. Wheat was bringing around $2 per bushel and a popular make of wheat farming tractor, powered to pull a 10-foot oneway plow to a satisfactory depth, could be brought new for $1,600. (At this writing, the same make and type of tractor, with perhaps a couple more horsepower, costs, new, $3,000.) Those farmers agreed, 1946 should replace 1909–14. Why not?

George Washington and the Importance of Ideas

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 22, 1957

Mr. McDONOUGH. Mr. Speaker, it seems proper and fitting that on the anniversary of the birth of George Washington we should consider the great contribution he made to mankind in promoting and advancing the idea of self-government and the freedom and liberty of man to use his own initiative in improving himself, and helping others to do likewise.

George Washington's high ideals, his great courage, his patience, and his great talents were freely given in establishing the United States, and in following the ideas of Washington we have become the greatest nation on earth.

I am including in my remarks the following article by Dr. John D. Garwood on the importance of ideas, which I recommend to all Members of Congress to read:

THE IMPORTANCE OF IDEAS

(By Dr. John D. Garwood, professor at Fort Hayes, Kans., State College)

A well-known philosopher of the 20th century observed: "The ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood. Indeed, the world is ruled by little else. Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economist. Madmen in authority, who hear voices in the air, are distilling their frenzy from some academic scribbler of a few years back. I am sure that the power of vested interests is vastly exaggerated compared with the gradual encroachment of ideas."

Victor Hugo once said that nothing in this world is so powerful as an idea whose time has come.

Another philosopher long ago said: "Tell me today what the philosopher thinks, the university professor expounds, the schoolmaster teaches, the scholar publishes in his treatises and textbooks, and I shall prophesy the conduct of individuals, the ethics of businessmen, the schemes of political leaders, the plans of economists, the pleading of lawyers, the decisions of judges, the legislation of lawmakers, the treaties of diplomats, and the decisions of a state a generation hence."

Throughout the centuries man has acknowledged that the pen is mightier than the sword, that ideas live on past battlefields and shape the conduct of man wherever he may be. It is not necessarily that an idea be right that makes it dominant, it is that it dominates the waking hours of some thinker. He in turn interprets it and puts it forth as the truth, and this truth in turn leads to a course of action among men.

Thus, reasonable and prudent men are persuaded that this idea represents the good way of life. These men include our lawmakers, our judges, our businessmen, our teachers, our laymen. It is in this fashion that a nation's economic and social philosophy is formed, changed, or maintained.

The American Revolution represented a new economic and social frame of reference. The Founding Fathers believed that: "Each of us has an inalienable right to life. The right-to-life concept requires the right to protect one's life and right to sustain that life, sustenance of life being the fruits of one's labor or, bluntly, one's honestly acquired property. The right to life without these secondary and corollary rights is utterly meaningless. To secure these rights we will appoint ourselves an agent. It shall be the duty of this agent to do for all of us collectively but equally that which we have a right to do for ourselves individually. The agent (government) shall defend our lives and our livelihoods, shall invoke a common justice, and shall keep the records incidental thereto. It will otherwise leave us free to pursue our own interests, whatever our interests may be."

These ideas were revolutionary in that the people had made themselves completely sovereign. Government was relegated to the position of a servant of the people. The individual was to keep the fruits of his labor.

The 20th century has been one of change of ideas in economics. The magnitude of the conflict in labor and industrial relations, the demand for protective legislation of various kinds, the demand for price supports and subsidies, the stupendous costs of two world wars in a generation, the concomitant problem of inflation and debt management, the stringent tax program necessitated by increased Government spending, these are forces of imponderable import on the thinking in the field of economics.

In the midst of change in ideas concerning the truth, in a half century where concepts have been streamlined and tailored to particular situations, it may be worthwhile to turn back and examine the initial premises upon which our economy was founded.

Professional economists will readily recognize the premises as those expounded by the great Scot economist Adam Smith in his epoch making book Wealth of Nations. These were the ideas upon which our capitalistic ideology was founded.

How should an economic system be organized? The classical economists of which Smith was one, talked in terms of competition as the regulator of the economy, i. e., competition as an allocator of resources, as the determinant of prices—determined in a competitive market. Thus, what is to be produced, how it should be produced, and who shall get it, all are determined by price and competition freely operative.

The classicists postulated private ownership of the means of production as a necessary ingredient if a nation were to become wealthy and powerful. Thus, private property and right of inheritance were deemed essential. Profit was visualized as the carrot to induce production and motivate activity. Firms would go into a field if a profit were possible and thus produce only those goods wanted by consumers who were willing to pay the price.

Freedom of contract and the rights and duties of contract were part of the capitalistic ideology.

The principle of laissez faire dominated classical economics. It was believed that if Government would keep hands off the economy, self-interest of individuals would lead them into channels of activity most salutary for themselves and hence most beneficial for society. It was thought that the public weal would be maximized only by a minimum of Government interference. The Government would presumably protect its citizens from foreign foes and from brigands and lawbreakers at home.

Individual freedom, unfettered economic and social activity, is the sine qua non of Smith's thinking. In his Theory of Moral Sentiments (1759) on the Character of Virtue he makes these observations:

"As he (the individual) grows up, he soon learns that some care and foresight are necessary for providing the means of gratifying those natural appetities, of procuring pleasure and avoiding pain, of procuring the agreeable and avoiding the disagreeable temperature of heat and cold. In the proper direction of this care and foresight consists the are of preserving and increasing what is called his external fortune.

"Though it is in order to supply the necessities and conveniences of the body that the advantages of external fortune are originally recommended to us, yet we cannot live long in the world without perceiving that the respect of equals, our credit and rank in the society we live in, depend very much upon the degree in which we possess, or are supposed to possess, those advantages. The desire of becoming the proper objects of this respect, of deserving and obtaining credit and rank among our equals, is perhaps the strongest of all our desires; and our anxiety to obtain the advantages of fortune is, accordingly much more excited and irritated by this desire than by that of supplying all the necessities and conveniences of the body, which are always very easily supplied.

"In the steadiness of his industry and frugality, in his steadily sacrificing the ease and enjoyment of the present moment for the probable expectation of the still greater ease and enjoyment of a more distant but more lasting period of time, the prudent man is always supported and rewarded by the entire approbation of the impartial spectator, and of the representative of the impartial spectator, the man within the breast.

"The wisdom of every state of commonwealth endeavors, as well as it can, to employ the force of the society to restrain those who are subject to its authority from hurting or disturbing the happiness of one another. The rules which it establishes for this purpose constitute the civil and criminal law of each particular state of the country. The principles upon which those rules either are or ought to be founded, are the subject of a particular science of all sciences by far the most important, but hitherto, perhaps, the least cultivated—that of natural jurisprudence; concerning which it belongs not to our present subject to enter into any detail. A sacred and religious regard not to hurt or disturb in any respect the happiness of our neighbor, even in those cases where no law can properly protect him, constitutes the character of the perfectly innocent and just man.

"Every man, as the Stoics used to say, is first and principally recommended to his own care; and every man is certainly, in every respect, fitter and abler to take care of himself than of any other person. Every man feels his own pleasures and his own pains more sensibly than those of other people. The former are the original sensations—the latter the reflected or sympathetic images of those sensations. The former may be said to be the substances—the latter the shadow."

This concept of individual well being is nowhere more striking in evidence than in the early history of our country. When the early settlers came to this country each family made the things it needed, i. e., the family grew its own food, spun its own yarn, made its own cloth and clothes, built its own house. The pioneer knew that his welfare depended upon his individual efforts.

As the number of settlers increased and towns came into being, people stopped doing everything for themselves. One man would fish, another would grow wheat. Another would make shoes.

When the fisherman traded fish for wheat and the farmer wheat for fish, each knew he was trading his own work for the work of another. Because each knew how hard he had worked, each wanted to get the most he could for his work. Hence, each would bargain very competitively. If trade occurred, it took place because each thought it to his advantage to trade. Money lubricated the wheels of trade and commerce.

Many of the early settlers came to America to get away from the force of government. The concept of the individual and his rights to act singly or in concert as he wished, was burned deep in the hearts of these people from the coasts of Europe.

In both Plymouth and Jamestown the colonies started out by putting all their food in a common storehouse and letting each family share it. The plan did not work well. Unmarried men did not like to work to support the wives and children of other men. Fathers of families did not like their wives to wash clothes for unmarried men. Lazy colonists did not do their share—and the hard-working ones did not like to raise food for the lazy.

In both settlements the people almost starved—then they stopped trying to live in common. They let each person work for himself and his family. Conditions improved almost at once. The colonists soon had enough to eat.

As trade increased, stores, warehouses, and ships were needed. Farsighted men saw that the colonists would be willing to pay for these additional trade conveniences. Thus, these men looked ahead, saved enough money to stock the stores, build the ships, and the warehouses.

For their work these men were rewarded with profits in place of wages.

The concept of the rights of private property became engendered in the minds of people. It was apparent that all profited by respecting the right of each individual to use his capacities and property as he saw fit.

Briefly, although the colonists did not speak the academic jargon and the great majority of them did not know of Adam Smith, nevertheless, experience indicated that Smith's economic philosophy worked.

Thus, competition, the free market, respect for private property, rewards for work, and limited Government action made for a hearty, prosperous, and dynamic economy. Where these principles were violated the group suffered. The colonists learned their lessons well.

Following Smith's rules of individual and collective conduct, Americans have won the highest standard of living on earth. In less than two lifetimes they swarmed across the mountains and plains to the Pacific Ocean. Everywhere they went they invented some better way to do something. They invented the cotton gin, the steel plow, the reaper, and interchangeable machine parts. They put the steam engine to work. They made the first practical use of electric motors. Each of these inventions and developments made it possible to get more work done in less time with less human energy.

At the present time in the United States machines do about 94 percent of the physical work, animal power 3 percent, and manpower 3 percent. In 1850 it was manpower 15 percent, animal power 79 percent, and machine power 6 percent. As late as 1900 it was manpower 10 percent, animal power 52 percent, and machine power 38 percent.

Use of machines means capital invested, invested capital results from savings, and savings accrue because the saver has not spent all of his money for consumption. Our economic frame of reference has created a situation where more could be produced than consumed and, at the same time, has permitted these savings to be used as the owner saw fit to use them. The end product of this has meant the highest standard of living in the world.

In 1956 the people of the United States, with a sixth of the land surface of the world, with about 6½ percent of the world's population, produced 60 percent of the world's goods. The United States gross national product in 1956 was at an alltime high of $412 billion, a figure larger than the most optimistic had hoped for.

The United States spent more on highways alone than the entire value of Norway's economy. New-home construction totaled more than the total economy of Spain. New-car construction was greater than the combined economies of Mexico, Denmark, and Australia.

Americans own three-fourths of all the automobiles of the world. They own half of the world's telephones, half of the world's radios, three-fourths of the television sets.

Two-thirds of all oil utilized is used in the United States half of the world's coffee consumption takes place in the United States. Two-thirds of the world's silk finds its way to American markets.

American factory workers earn more real wages than any worker in the world. The United States factory worker can buy about four suits of clothes with a month's wages; the Russian a half a suit.

An American worker earns about $10 in an 8-hour day, the Englishman about $4.22, the Russian under communism about 99 cents.

In the field of housing we have about 8 times as much living space per person as the people of Russia. More than half of all American families own their own homes.

Americans are so used to having enough to eat that they forget that about half of the people of the world go to bed each night hungry. The Americans are about the only large group of people in the world who never has had a famine. Until a little over a hundred years ago famine came frequently even in Europe.

Mankind has been on the earth a long time. Records go back about 6,000 years. Two-thirds of known history happened before the birth of Christ. It was 1,492 years from the birth of Christ to the discovery of America. It was almost 300 years more before our Constitution was adopted. We have been under our Constitution less than 200 years.

Our life as a nation is only a wink in the eye of history. Yet in that short time Americans have made a record that exceeded all man's previous hopes. Two of the main reasons for this almost unbelievable achievement have been individual freedom of choice and personal freedom of action.

We overlook the virtue of the old, the tried, the proven. There are some old things that made this country. There is the old virtue of religious faith. There are the old virtues of integrity and the whole truth. There is the old virtue of incorruptible service and honor in public office.

There are the old virtues of economy in Government, of self-reliance, thrift, and individual liberty. There are the old virtues of patriotism, real love of country and willingness to sacrifice for it. These old ideas are very inexpensive. They would even help to win hot and cold wars.

But some of these old things are slipping badly in American life. And if they slip too far, the lights will go out in in America, even of we win these hot and cold wars.

Rural Slums Mold Indian of Today

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include part of an article by Carl Rowan, Minneapolis Tribune staff writer, printed in the February 18, 1957, issue. Mr. Rowan presents a vivid word portrayal of the extreme poverty and hardships of everyday living experienced by the Standing Rock Sioux Indians. My home is on the Standing Rock and I can verify the dire need of many of these people. One of the greatest challenges facing our Nation is the need to improve opportunity for our first Americans. The plight of many American Indians today, approaches a national disgrace.

The article follows:

ON THE RESERVATION: SANCTUARY FOR MISERY—RURAL SLUMS MOLD INDIAN OF TODAY

You walk down what seems an endless dirt road, leaning against a chill wind that sets the dust dancing in little pirouettes. All around you, ugly brown hills hide the horizon.

A round-faced child in an oversized red dress—probably the gift from some church mission—screams as she patters barefoot along the road.

To your left stands a cluster of cabins—logs stuck together with mud. Behind them the day's wash for many families flutters in the breeze.

Four small sets of eyes peek from a hole in a one-room cabin where you stop to chat with with an old man who sits watching chokecherry patties drying under a brush tent.

The 11 persons in that cabin found cool refuge under these matted branches during the summer when the sun beat down so mercilessly on the barren prairie.

Now the bright white spire of a little church breaks the pattern of squalor and stands, with the red gasoline tank in front of the rickety post office, as the first noticeable symbols of the 20th-century America.

This is Indian country—Bullhead, S. Dak. You are on the Standing Rock Sioux Reservation.

This land is in America, but not of it. The people who live here are Americans, but they are not quite citizens.

These are Indians—frail old men, weary old women, crying little girls and undernourished little boys almost hopelessly wedded to land once forced upon them as perpetual sanctuary.

They are people tied by time to a land that was to be their refuge against the invading white man as long as the grass shall grow.

The grass grows exceedingly short here these days, and few white men seem eager to invade this sanctuary. Still the Indian stays, for this is home; the world outside has gone off and left him, unprepared and unable to prepare himself to be a part of it.

You move on to Cannon Ball, to Wakpala, to Fort Yates, and Little Eagle, and the picture is the some: 1,064,122 acres of rural slums.

Here families try to live on less than $800 a year in a country enjoying the highest standard of living known to mankind—a country where the average family lives on four times as much.

Out of every 100 families, you find 61 of them in log cabins, most of them of a single room; 15 of them in inadequate frame dwellings; 24 of them in tents, tarpaper shacks, and miscellaneous dwellings of unbelievable crudity.

Russia Wants All Without Risk

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. McDONOUGH. Mr. Speaker, experience must, or at least should, teach us that the insatiable appetite for power and control of Russia will stop at nothing to take all she can with force if necessary, without risk, if possible.

Here is an excellent article by Harold Lamb on Russia's mad drive for power and control:

RUSSIA WANTS ALL WITHOUT RISK

Once a brilliant statesman was asked the question: "What does Russian policy want?" He answered: "It's really quite simple. The Russians want anything they can get."

That was said a half century ago, but it's still the best answer to the question. With one amendment, however. They want what they can get outside their frontiers, without risk. That means without war.

The record of history shows that they move with military force only when the way is safe. During the autumn of 1939, for instance, the Red army occupied half of Poland only after the German Wehrmacht had crushed the Polish Army; Moscow pinched off the small Baltic States of Lithuania, Latvia, and Estonia only when that same powerful German Army was occupied in taking over most of Europe.

Muscovite power did invade Finland that winter, expecting Finnish resistance to be a pushover, which did not prove to be the case. Years later Moscow pushed Balkan Communist forces into war, to take over control in Greece, and when the Yugoslavs were excommunicated, that effort had to stop; the North Korean Army was utilized in Korea, to be backed up by the Chinese Communist manpower, not the Russian. Through all those years Moscow was careful to avoid risk, and it is doing the same in the Middle East today.

At the same time, however, Moscow got full control of the outer narrow Sea of Okhotsk, off Japan, by the very safe process of accepting it as a gift from us and our allies; she claimed control of the Baltic by simply occupying what had been the Polish and German Baltic coast; she tried to round out her hold on the Caspian in 1945–46 by taking over the Iranian coast but was warned off; she moved to "protect" the strategic Dardanelles Strait on behalf of her satellites, Bulgaria and Rumania, but the Turks would have none of such protection. (An American general officer at AMAT in Turkey told me a couple of years later: "We estimate it would cost the Soviet Union 750,000 casualties to fully invade Turkey.") No such attack was made.

That is one reason why the Baghdad Pact has become important. Both Turkey and Iran have a frontier of close to 1,000 miles with the Red army outposts; the Afghan-Soviet frontier stretches for 600 miles, ending in the mountainous corner of Pakistan.

Iraq does not adjoin the territory of the Soviet Union but stands between Turkey and Iran squarely in the path now sought by the Muscovites toward the great oil fields and the southern ocean. Accordingly both Turkey and Iran have old trade ties and hence economic interests with the Muscovite state.

Singly, none of the four pact-frontage nations could hope to withstand a fullscale Soviet invasion for long. United, they could make such an invasion a painful and costly experience for Moscow. With their combined frontier (except for Afghanistan, which was visited by Messrs. Khrushchev and Bulganin 14 months ago) backed as it now is by the power of the United States, the way to military invasion of the rich Middle East by Moscow appears to be blocked as long as the pact holds good. The cost outweighs the possible profits.

Accordingly the pact drew upon it the ire of Marshal Bulganin in his summing-up address of December 1955, to the Supreme Soviet, as—he proclaimed—"a military grouping" and "a manifestation of colonialism in a new form."

There must be force available to the Western Powers to use at need against Moscow's moves in the Middle East. That force must be great enough for the planners in the Kremlin to estimate the cost to them in meeting it.

With the withdrawal of the British armed forces from the region, beginning with India and ending at Egypt, this potential restraining power can only be supplied by the United States—until British prestige is restored again, which may take a long time.

The hour the equation shifts, and the profit of invasion (in any form) outweighs the risk, Moscow is capable of making use of force. That was proved late last October when the unfortunate Israeli-French-British attack on Egyptian territory was launched. Almost overnight Moscow's policy in Hungary changed from conciliation and withdrawal of troops to a return to punishing

military occupation. The lesson of Budapest must not be forgotten in thinking of the Middle East.

An American intelligence officer with 5 years' experience of countering Moscow's moves in Berlin put it this way: "I don't believe the Russians here have a fixed plan; but they are very quick to take advantage of any mistakes, including their own."

Even while the brief battle for the Suez Canal was going on, Moscow broadcast its now-famous offer to send 100,000 volunteers to Egypt's aid. Those volunteers never existed, and the offer was a bluff. But it caused a good deal of confusion at a most critical time in the councils of the Western Powers.

Radio broadcasts are cheap, and subversion in outlying countries by Moscow-trained technicians or local agents entails little risk for Moscow itself.

We are familiar enough with the efforts of Moscow to break down any western alliance, such as NATO, to attack American prestige in Middle East lands (as oil imperialists or warmongers or—of late—colonializers) and with Moscow's moves to gain a foothold on the Suez Canal, or the vast oilfields of Arabia, Iraq, and Iran. But it is not so apparent that Moscow can combine an open offer of economic aid with a concealed threat of force.

That happened in Iran in 1945–46. Iran was then a member of the United Nations; at the Teheran Conference no less a person than Stalin had pledged her economic and territorial integrity. Then, openly, Moscow requested an oil concession in the northern Province of Azerbaijan, to establish a new economic base, it was said, for the region.

More silently, members of the Soviet Embassy confided in members of the Iranian Parliament that the Soviet Union needed northern Iran as a security zone. One parliamentarian was deeply puzzled by this term, new to him. "As security against what?" he asked me. "An invasion of the Soviet Union by Iranians?" Then he thought it over. "If we concede them northern Iran, then they will require southern Iran as a security zone for the north. And after that we would have to move into the sea."

At the same time, in complete silence, Muhammid Said, the Prime Minister, was summoned to the Soviet Embassy—where Stalin and Churchill and Roosevelt had been toasting his country not so many months before—and he was told: "If the concession of Azerbaijan is not granted, we cannot answer for the consequences to your country."

It was not granted, Muhammid Said resigned, and the Parliament stalled until hard pressure by the United States and Great Britain in the United Nations forced the withdrawal of Soviet troops from the Province. The risk of seizing it had become greater than the gain in holding it.

So long as that is true of the other countries, as well as Iran, peace can be maintained in the Middle East.

Soviet Espionage and the American Communist Party

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, in the Appendix of the CONGRESSIONAL RECORD of February 5, 1957, I included in my remarks a brief account by John O'Donnell of a notable address on Soviet Espionage and the American Communist Party in the Nation's Capital on January 31, 1957, by Maj. Gen. Charles A. Willoughby before the 27th Annual Convention of the American Coalition of Patriotic Societies.

Since that time I have received the full text of General Willoughby's statement as edited by him and distributed by the American Coalition. Accompanying it is the following editorial note by its author, concerning the address and his distinguished career in the United States Army:

An impartial analysis of political, economic and military events in the critical areas of the world, derived from confidential sources, with emphasis on facts that have not been made fully public. Editor: Maj. Gen. C. A. Willoughby, United States Army, retired. MacArthur's chief of intelligence, 1939–51; instructor in United States service schools 1930–39. Attaché American Embassies in Venezuela, Columbia, and Ecuador, 1923–29; writer, lecturer, publisher, Ustad Publication Karl Marx series. Author: Maneuver in War (1939), The Sorge Espionage Case (1947), The Spanish Bridgehead (1948), Intelligence in War (1950), The Shanghai Conspiracy (1952), MacArthur: 1941–1951 (1954), contributor to Cosmopolitan, Reader's Digest, Freeman, and other publications. Awards: (United States): Distinguished Service Medal, Distinguished Service Cross, SS; LM. (British): OBE. (France): LH; MH AE. (Philippine): DSC. (Venezuela): OL. (Ecuador): AC; OM (Netherlands): CO and N. (Italy): SM and L, COI.

To make General Willoughby's valuable contribution readily accessible to responsible agencies of our Government, especially congressional investigating committees, and the country at large, under leave granted to extend, I include the full text:

SOVIET ESPIONAGE AND THE AMERICAN COMMUNIST PARTY—ADDRESS BY MAJ. GEN. CHARLES A. WILLOUGHBY, UNITED STATES ARMY, RETIRED

This report is limited to strictly personal experiences, based on eyewitness observations, as MacArthur's chief of intelligence, in the period of 1939–51. A complete documentation, aggregating over a million words, was filed with Washington security agencies and certain congressional commmittees, under the title: "A Partial Documentation of the Sorge Espionage Case," printed in Tokyo.

A condensed, popular version appeared under the title "Shanghai Conspiracy" (E. P. Dutton, N. Y., 1952) and some reference is again made in my MacArthur: 1941–51 (McGraw Hill Co., N. Y., 1954).

In time of war, military intelligence is concerned with observations of the enemy and estimates as to his potential; in time of peace, it is concerned with security, sabotage, and subversion through a counter-intelligence section—a sort of military FBI. Based on Tokyo, the field of investigation covered communism in Asia and espionage in Japan, under Soviet direction.

We made a number of important discoveries through years of painstaking research. We found international Communists, including Americans, operating from Shanghai to San Francisco. The creeping menace could not be isolated. It reached everywhere. It was global and it followed a recognizable pattern.

Under the Potsdam Declaration (as much an instrument of folly and evil as the Yalta Conferences which recently shocked the world) we were compelled to open up the Japanese jails, ostensibly to liberate political prisoners. We also liberated a fine crop of assorted criminals including a Russian espionage ring under a fabulous master spy, by the name of Richard Sorge.

The Sorge case is a classic of its kind. It revealed in detail how Russian espionage and subversion operate, in a remarkable example of infinite patience and global, long-range planning. It took the Russian over 20 years to establish his cover, his identity, as a roving journalist. In the end they succeeded in planting him in the German Embassy in Tokyo, as press attaché. Prior to that time, he worked in China, with headquarters in Shanghai, with important links with American collaborators, supplied by the American Communist Party.

Sorge's embassy position gave him access to German high-level information. But he also had powerful Japanese collaborators: Hidemi Ozaki who had access to Prince Konoye, the Japanese Foreign Minister, and Prince Saionji who moved in highest social and governmental circles. Communist infiltration in Government is now recognized as almost inevitable. We need only recall the cases of Hiss, White, Burgess, MacLean, and others.

The significant point about Prince Saionji, however, is the fact that he was associated with the Institute of Pacific Relations; then and now, he was the head of the Japanese Branch. This is where past history meets the present. This institute has been under recent congressional investigation. The Committee on the Judiciary, of the 82d Congress has indicted the institute: "as an instrument of Communist policy." It was used to promote the interest of the Soviet Union, a vehicle to orientate American-Far Eastern policies toward Communist objectives.

Sorge, Saionji, and Ozaki operated exactly in this sense—they worked for a collision of Japan and the United States. In that respect, they shaped history. Historically, Japan and Russia were competitors along the Siberian border. The Russians maintained strong forces in Siberia that were badly needed in Europe.

Conversely, certain interests in Washington worked for war with Japan. The congressional committee investigating the IPR said: "* * * A group of persons operating within the 'Institute of Pacific Relations' exerted a substantial influence on the United States far eastern policy policy—to orientate this policy toward Communist objectives—to accommodate Communist ends."

The motivation of the Japanese and American branches of the IPR were obvious. A Japanese-American war could only benefit Russia accommodating Communist ends. It worked out that way. In October 1941, the Japanese decided to move south toward Manila and Pearl Harbor. This is historically important. Freed from a Japanese threat to Siberia, Stalin moved his eastern division to the European theater and was able to stop Hitler.

Richard Sorge, the master spy, was fully advised of this plan as early as October 1941 and relayed this vital information to Moscow, to Stalin. This message changed the course of World War II. We had no such advance warning, and the surprise attack on Pearl Harbor took place. While a number of Americans were associated with Sorge at various times, there was no one to warn Washington. Likewise, Stalin made it a point not to advise London. Then and there I decided to concentrate on Sorge's American associates.

Sorge's greatest triumph was short-lived. The October message was his last. He was arrested by the Japanese police, as well as some members of his ring, his principal Japanese assistant Ozaki, and Klausen, his radio operator. His transmitter was moved frequently. It is typical of the IPR ramifications, that one Gunther Stein, a British journalist of the Manchester Guardian and

an IPR member, sheltered Sorge's apparatus for some time.

In the period 1941–44 (when he was executed) Sorge wrote a revealing set of personal memoirs; he never doubted that his Russian masters would bail him out. When they failed to rescue him, he wrote quite openly. The trial record, as well as the more important memoirs, were seized by me. A study of Sorge's papers led us straight to China, to Shanghai. There I was able to obtain a fairly complete file of the Shanghai International Police, a British and French prewar institution.

We found evidence of the communization of China, as a long-range plan, directed by the Third International, the Soviet apparatus for foreign subversion. More than 20 years ago, the American Communist Party sent their highest officials to China: Earl Browder, Eugene Dennis, W. Haskell, J. H. Dolson, George Hardy, etc. The master plan was traced to an even earlier period, to a conference in Hankow, attended by British, French, Indian, and German delegates.

Following the general Communist pattern, applied in every country, Earl Browder established a front organization, the Pan Pacific Trade Union Secretariat. We have many such fronts in the United States. Under innocuous titles, their business is sabotage and subversion. Browder's work followed a well-defined pattern:

i. Infiltration of labor unions in key industries.

ii. Organization of maritime and dock workers.

iii. Formation of goon squads, for riots and plant sabotage.

From industrial disorder to revolution is only a short step. The Soviets actually conduct special schools to train these agitators, the expert leaders of future fifth columns. That's how it was done in Spain, Greece, Korea, British Guiana, and Guatemala. The loot now behind the Iron Curtain was acquired by these postgraduates in treason and revolution. Tonkin and North Korea are the latest examples.

The virus of communism works slowly. The dates when these American Commies gained their spurs in China may sound like ancient history—but they are still with us: Earl Browder became the Secretary General of the American Communist Party. He was succeeded by Eugene Dennis, who worked with Sorge in Shanghai under the alias of Paul Walsh. H. T. Dolson operated for years in Cincinnati until the FBI picked him up recently in their arrest of second-string Communist leaders—and there were many others. But there was no one to warn about Pearl Harbor. It had to happen because it suited Russia's interest.

As we began to track down these people, we ran across a woman, the late Agnes Smedley. She had worked with Sorge in China in 1935. She was a writer of Communist literature, known as such for years. An intimate of the Chinese General Chu-Teh, she accompanied him and his army in their retreat from Chiang Kai-shek, in the thirties. She wrote a book about it. Her dedication read: "To my blood brothers of the Ninth Red Army."

What made her interesting is that she turned out to be a protegee of Harold Ickes, a former Secretary of the Interior. There is some agitation, at this time, about leftist leanings of certain tax-exempt foundations. It is no surprise, that Miss Smedley enjoyed the opulent benefits of such a foundation.

Tokyo developed the Sorge material over a period of years. By 1949, we have filed something like a million words. The documentation was complete, incontestable, checked by the best legal talent available to MacArthur's Headquarters. Copies were filed with certain congressional committees and the FBI.

After waiting for 3 years, the War Department released a minor part of this story. It became an overnight journalistic sensation. The press was waiting for details which Tokyo was entirely able to furnish. Suddenly, an incredulous Tokyo Headquarters learned that Washington had repudiated its own release.

The Army Public Relations officer stated flatly: "We have no proof to back up the charges against Miss Smedley. No names should have been used." He must have known of the successive Tokyo reports. What pressures induced him to deny their existence? But there was worse to come: the Secretary of War himself took up the cudgels in behalf of Miss Smedley. On February 27, 1949, he appeared on Meet the Press and said: "The spy release was made inadvertently. The Army should run for cover." He must have known of the successive Tokyo reports. What pressures induced Secretary Royall to repudiate his own release and the reports of a commander of the caliber of MacArthur? We challenged the Secretary at once in an open broadcast. Miss Smedley, whom the Communist Party used as a feminine front, was sufficiently encouraged to sue for libel accepted promptly and she lapsed into prudent silence.

Then Harold Ickes got into the act. This crafty politician (who hated MacArthur for some obscure reason) published a syndicated column, at the time. He delighted in being known as "the old curmudgeon," a completely phony phrase, suggesting rugged homespun, cantankerous honesty. He orated: "* * * No one who knows Miss Smedley would ever accuse this courageous, intelligent American citizen to stoop to spy for any country—not even her own, to which she is so deeply attached."

All these alarms were sufficient to scare the press away from a story that Washington itself apparently repudiated. By these maneuvers, the early exposure of international communism, involving American Communist Party, was discouraged, stopped, emasculated.

At this point, indignant congressional committees stepped in. The House Un-American Activities Committee issued a subpena for Smedley. They found that she had skipped the country, although there was a clamp on her passport and was finally traced to England. Gunther Stein, who had harbored Sorge's radio transmitter, also vanished at the same time.

In England, Smedley was engaged in writing a biography of her friend General Chu-Teh who also happened to be the Red commander of Chinese "volunteers" in Korea. When the committee applied pressure to compel Smedley's return for testimony, she died in London under mysterious circumstances, which must be regarded as an astonishing "coincidence in timing" and silenced her forever.

Indicative of her real feeling for America Smedley left her residuary estate to General Chu-Teh, the Chinese Communist commander, as "sole heir of royalties due from published works, United States Government bonds, and anything of value." Her will ordered her body cremated and her ashes flown to China, to General Chu-Teh, "there to be laid to rest at any place designated by him." Events have a conclusive way of answering Ickes and Royall.

The ashes of Ickes' protege were placed in a magnificent marble shrine, especially erected in her honor by the Red Chinese Government. This was a tell-tale distinction for an American citizen, at a time when United States troops were piling up their dead on the dismal battlefields of North Korea. Suggestive of the incredible geographical range of the Communist conspiracy, I saw a recent picture of Smedley's shrine. I spotted several individuals: D. D. Cosamby, head of an Indian delegation; Rewi Alley from New Zealand, and one Dr. John A. Kingsbury, a former relief administrator of the city of New York. I naturally raise the question of what Kingsbury was doing in China, at a time when the conscripts of his own Queens and the Bronx were fighting Chinese Reds in Korea.

The story is frustrating and somehow futile, except for the superb and relentless work of congressional committees, bipartisan committees who have done effective work in exposing the Communists, the local fellow-travelers and the gullible liberal stooges. As far as my own efforts are concerned, I am reminded of an oriental saying: "It is better to fail in a cause that must ultimately succeed, than to succeed in a cause that must ultimately fail."

(a) It is evident in my report that congressional committees intervened successfully. This applies especially to two major committees, the House Un-American Activities and the Senate Subcommittee on the Judiciary. Over the years, these committees have dug deeply into the Communist conspiracy; completely bipartisan, they have performed a brilliant though herculean job. Their reports are a goldmine of useful information. They have succeeded in exposing hundreds of Communists and their liberal stooges, from Alger Hiss to the Rosenbergs. In cooperation with the FBI, they work with small staff and modest appropriations, compared with the millions that are poured into Socialist, cripto-Communist channels by tax-exempt foundations.

(b) The chairmen of these committees have had a rough time, notably Senators McCarthy and Jenner. There is an obvious parallel between the protection Agnes Smedley enjoyed and the furtive cast of Major Peress' promotion. This protection, incidental or calculated works only for the benefit of Communist agents, sympathizers, and fellow travelers. This trend toward protection has lately become apparent in certain Federal court actions. The evolution is as interesting as it is disturbing. The recent trials and convictions of top-flight Communists—and we must regard them as the hand-picked representatives of Moscow, the American Politburo, Russian trained to take over the United States—have been based on the so-called Security Act of 1950. The act has teeth in it and the Communists of every hue have ample reason to fear it.

(c) In October 1955, the Supreme Court received a petition to repeal the Security Act; it was signed by 360 signators. This group of alleged outstanding American citizens contained a sprinkling of card-holding Commies, a fine collection of fifth-amendment refugees, a large number of veteran Communist fronters, and the usual appendage of gullible joiners that will sign anything. The press reported: Rev. Dr. Elliott White, Episcopal clergyman; William Pattson, veteran Communist Party leader; James W. Ford, perennial vice-presidential candidate on the Communist Party ticket; Prof. E. D. Burgums of New York University; Angus Cameron and Albert E. Kahn, the publishers of Harvey Matusow, etc. It will come as no surprise for the cognoscenti, that this phony petition was reinforced, around Christmas time, by a personal letter of Eleanor Roosevelt's to President Eisenhower.

(d) It is not established that the learned judges were impressed by this spurious, tainted petition. However, right on its heels, there followed a series of juridical decisions which were of great comfort to Communist agitators while adversely impeding anti-Communist law enforcement. The Court did not repeal the Smith Act under which prominent Communists have been successfully prosecuted, but they held that the act precludes State sedition laws that have run for many years. The case centered around the conviction in the courts of Pennsylvania of a notorious Communist agent, one Steve Nelson. He can be termed an American Richard Sorge; indeed, he was associated with the same Shanghai spy ring.

(e) Nelson is a trained Communist, a graduate of the Lenin School, Moscow, center

of treason, subversion, and sabotage. The alumni operate all over the world. Nelson was in Shanghai in 1933 under orders of the Comintern. He appeared inevitably in the Spanish Civil War (1936–39), as the political commissar of the Abraham Lincoln Brigade, composed of American volunteers to fight in Spain. On his return to the States, Nelson became a top official on the board of the American Communist Party. Operating in California, he established contact in 1943, with the Russian consulate in San Francisco, and specialized in the acquisition of top-secret atomic information that was relayed to Moscow; Nelson is no better nor worse than the Rosenbergs but seems to have a charmed life. He was finally apprehended in Pennsylvania and was tried and convicted under the State sedition laws. The Supreme Court set aside his sentence and no one knows how long a retrial will drag on.

(f) The latest link in what could be considered an incidental chain of events occurred only a few days ago. On January 28, 1957, the press reported that the FBI closed in on another Russian espionage ring, directed by a Soviet Embassy official, operated by East European immigrants, an ethnic group that has furnished the largest percentage of agitators and Communists who can combine the benefits of American citizenship with the betrayal of their refuge and their neighbors. The FBI worked years on that case with the infinite patience and precision for which this famous agency is known. It is merely a repetition of the Sorge case: Hang one spy and another steps in his shoes, the ranks are filled by these soldiers of the night and the war goes on. One more proof that international communism wages war against Western civilization relentlessly, without pause, without pity, without compunction.

Almost on the same day that the FBI disclosed their arrests, in the shadow of the U. N. glass house, the Supreme Court in Washington ordered a new trial for a convicted Communist, an old-time operator in the same category as Nelson, probably part of the American Communist hierarchy that is slated to rule the Soviet Republics of North America, in an orgy of blood and terror, as they have ruled Hungary, from Bela Kun to Rakosy.

We have here a shocking juxtaposition of highly efficient police investigations, consuming years of patient surveillance, practically nullified in a ruling of a few minutes by a Court that is rapidly piling up juridical precedents, that give aid and comfort to international traitors, in ivory-towered decisions that apparently take no cognizance of the clear, worldwide evidence of the Russian conspiracy that will destroy the very basis on which the security of the Court rests. Perhaps, the learned judges will face realities or find an opportunity to continue their hair-splitting legalism behind the barbed wires of a Russian concentration camp.

Lincoln Day Address by William R. Pearce

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, February 22, 1957

Mr. HRUSKA. Mr. President, on February 12 I was the guest of our colleague, the junior Senator from North Dakota [Mr. YOUNG], and of the legislature of the State at a joint session of its house and senate which was held to observe Lincoln's Birthday.

The people of North Dakota are to be commended for their splendid State capital building. It is modern in design and construction. Its planners and architects departed from the dome as the dominating feature of its design, just as in the case of the capitol in my home State of Nebraska. While tradition was thus sacrificed, many benefits were gained thereby. The overall result is highly pleasing and efficient.

I was privileged to observe some of the proceedings prior to the joint session. I witnessed the legislative business of the State being conducted with due regard for form and substance, and with fruitful result.

Mr. President, as I observed these things, I experienced feelings of renewed and even greater respect and appreciation for the wisdom and vision of this Republic's Founding Fathers in creating the Federal system of Government, with the allocation to each State of its share of responsibilities in the great American experiment in self-government. Again I express the fervent and earnest hope that there will always be left to the States their proper sphere of activity without undue encroachment from the National Government, including the part thereof which is composed of its legislative branch, of which the Senate is a part.

It was in the North Dakota Legislature and in the building where it now meets that our colleague, Senator YOUNG, served for 13 years as a member. It was in a large part the experience and the record he gained there as a legislator which have made him such a worthy contributor to the workings of our National Legislature.

Mr. President, the principal speaker on the occasion of the Lincoln Day program at that joint session was William R. Pearce, Esq., of Bismarck, a member of the North Dakota Bar. Of the many addresses on Lincoln which it has been my experience to hear or read, I would place this one high on the list, for its direct and meaningful message, its logical composition, and the clarity and the effectiveness of its delivery.

Mr. President, I ask unanimous consent that the text of the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF WILLIAM R. PEARCE

Governor Davis, Lieutenant Governor Duffy, Mr. Speaker, Senator Young, Senator Hruska, members of the legislature, ladies and gentlemen, first, I would certainly like to say that I appreciate the privilege of being asked to address you. It is seldom that I see the House from this vantage point. I can only think, as I stand here in this chamber, that in 1883, James Bryce came over from England and toured the United States. Then he wrote the penetrating comment which is called the American Commonwealth. On a day in 1883 he found himself in Bismarck, which he said was a "western town on the Missouri River." He was here for the laying of the cornerstone of the first capitol in Bismarck. The only thing he could think to ask was why they were building the capitol over a mile from the town and he was told that it was obvious that before many years the capitol would be in the center of the city. Since that time, of course, the old capitol has outlived its usefulness and is gone, and we are now if not completely surrounded by the city, at least there are now buildings on all sides of the capitol.

Mr. Bryce also remarked that the people of Bismarck, with whom he talked, thought that Bismarck, N. Dak., was the most important place in the world, because Bismarck is in the center of North Dakota, and North Dakota is in the center of this continent, and this continent is in the center of the world—therefore Bismarck must be the most important place in the world. While I don't necessarily root for Bismarck, I will say that I think the State of North Dakota is a most important place, New York notwithstanding.

It is difficult to talk about Lincoln. There have been over 5,000 books written about him and no one knows how many speeches made about Lincoln. It would be idle to recite to you Lincoln's life, the bare facts of his career, and it seems to me that in celebrating his birthday, as we do today, that we in the West have a peculiar reason for doing so, and I thing we ought to consider more why this legislature, for example, should suspend its business and meet in this type of session to talk about Abraham Lincoln. We have had many great heroes in this country—military heroes and civilian ones, too. We have had many great patriots, but I think none have been closer to the hearts of the American people than Abraham Lincoln. And I think we might examine for a moment why, because to me it explains his greatness and explains why we do, year after year, commemorate the anniversary of his birth. The bare essentials are that he came from the poorest surroundings that anyone could ask. Although he wasn't the first American President to have been born in a log cabin, he was the first to come from as low a place in the economic and social scale. He had no advantages except those that he created for himself. He had practically no education except what he got for himself. He had many disappointments and heartbreaks. He had a personal life that would, and has, driven many greater men down to the depths of despair, but he didn't bow down to despair. He didn't do a lot of things—just because he didn't do them. The story is told that one time he was at a political meeting where Senator Douglas was the host. Whether by design or otherwise, in addition to a pitcher of water on the sideboard, there was also a pitcher of liquor of some kind. Somebody asked Lincoln to have a drink. He said, "No." They asked him, "Are you a member of some temperance society?" He said, "I am not a member of a temperance society, except I don't drink." That was Lincoln. That was his way—what he didn't do, he didn't do—what he did do, he did.

Lincoln entered politics at a fairly early age, after a period of complete despair—after his prospective bride had died of fever. He was elected several times to the Illinois Legislature. He didn't particularly distinguish himself there except that he built a reputation among all who knew him for several things. One was his absolute integrity and one was exactly speaking his mind—and when I say "exactly," that is just what I mean. He had the faculty for saying exactly what he meant. There was no evasion and no circumvention. He said what he meant in language of the people and that the people understood.

Lincoln would have liked very much to have been the United States Senator from Illinois, but he never was. He did go to Congress but he went to Congress during the Mexican War. He didn't exactly ingratiate himself by proposing on the floor of the House, the so-called Spot Resolution, in which he called on President Polk to designate the exact spot where American blood had been shed by Mexicans. The Mexican

War was popular in Illinois. They were very patriotic for several regiments had performed valiantly in this war and so for a time he was called Spotty Lincoln in Illinois after his so-called Spot Resolution. In fact he disturbed and defied his popularity in Illinois. His term in Congress was only one. He came back completely discouraged and he decided that politics was not for him—that he might just as well practice law. He applied himself to the study and practice of law and of course his study of law was entirely upon his own account, with very few facilities available to him but he started the study of law with the same vigor that he started everything in which he believed. While to some people he was always a small-town, backwoods lawyer, the truth is that he soon became one of the leading lawyers of Springfield. He didn't always represent the poor and defenseless though he often did, but he also represented the railroads and other corporations. One time he had to sue the railroad for his fee, and after looking Mr. Lincoln over, they decided to pay his fee and keep him on their side.

There is nothing stated that he was directly concerned with abolishing slavery. He was never an abolishionist. He was concerned with slavery. In the Eastern part of the United States, there were many men most vocal in the cause of abolishing slavery—Charles Summer, Thaddeus Stevens, Wendell Phillips. Lincoln certainly had not declared himself for abolishing slavery because Mr. Phillips called him the Slaver from Illinois. He took a legalistic approach to slavery. He had the courage to take men at their word. Slavery was guaranteed in the Constitution of the United States, as a property right. Lincoln believed it should be declined, but not forced on the face of the country—he didn't believe that that would work. Lincoln didn't believe in force. But finally something happened—2 men that you may not remember, ran for office and in 1826 enacted the Missouri Compromise, which was going to end the free soil and the slavery question forever. They believed in those days, that a pronouncement could settle problems forever. The Missouri Compromise drew a line across the United States from the East to the West—below that you could have slaves—above that was free soil. That compromise was sacred—men sacrificed their careers to achieve it, but in 1854, Senator Acheson, who was strongly proslavery was opposed by Mr. Benton. It was a vigorous campaign and at that time it was proposed to create the States of Kansas and Nebraska. They were north of the Missouri Compromise line. Senator Acheson, apparently assisted by Senator Douglas, probably the leading man of his party at that time, coined the phrase "popular sovereignity" which provided that the people of Kansas and Nebraska, and the people of other new States should decide whether their soil should be slave or free. There was great excitement in the United States for the repeal of the Missouri Compromise. That fired Abraham Lincoln. It was against all his principles. It indicated to him that slavery was becoming more powerful and instead of dying out that it was increasing, and that it intended to encroach upon the rest of the country. He began to make speeches. He made one speech called the "Lost Speech." We don't know what he said because the man who had been taking notes of Mr. Lincoln's speeches, was so carried away that he threw down his pencil and paper. He could no longer do anything but listen to it. We would like to have had that speech—but we don't have it.

Mr. Lincoln soon made a reputation for himself among political circles as a man who spoke the same peculiar doctrine and the thoughts of the people. Lincoln had the faculty for doing that—he spoke what the people felt in their hearts, but that they themselves could not articulate, so he plunged into the fight—not against slavery, but for the country. By that time he could see evidences of disunion. To him, I think, nothing more horrible could have been in prospect than the dismemberment of this country. He was proposed as a vice-presidential candidate, but he didn't make it. However, in 1865, in the Wigwam in Chicago, after showing an amazing strength on the first ballot against William Seward, the self-proclaimed at least, leader of the Whig Party, which had become the Republican Party by that time, on the third ballot he was nominated. Pandemonium broke loose among the people. He was the people's candidate. He had enumerated his doctrine in speeches. He had spoken his mind clearly, and he had a hand in the framing of the party platform. He had written his supporters to make no commitments in his behalf. Fortunately, they didn't completely accede to that advice. Lincoln never compaigned. When anyone asked him what he stood for, he said: "I have already given that—all you have to do is look to what I have already said." He left the decision entirely in the hands of the people. Such a campaign is inconceivable today.

Lincoln was elected. It has been the misfortune of a number of Presidents of the United States to be President during a war. It has not been the misfortune of any other President besides Lincoln to have taken office only a few short days before one of his own countrymen, with pride in his heart, fired the cannon on Fort Sumter and thus began the so-called irrespressible conflict. Lincoln had outlined his stand in a series of famous debates when running for the Senate against Stephen Douglas. Opposition at that time was expressed in four presidential candidates. Lincoln did not, in that election, receive a majority of the votes of the people, yet he spoke for them. Lincoln, almost as soon as he took his seat in the White House, was faced, not with a country to administer but with a rebellion. How he met that, I think, most of you know. Times were discouraging. The North thought, as we thought some years ago when war with Japan was talked about, that it would be a matter of a week or so to go down there and win the battle. Members of Congress drove out in the carriages from Washington to watch the first battle at Bull Run, as though they were spectators in an arena. They rode so close, in fact, that some of them did not get back to Washington but were captured. This was a tremendous blow to morale in the North, but things got even worse. They went down and down. Thousands upon thousands of loyal young men and older ones, too, were cut down and family after family had someone in their family who had lost their life. The North got discouraged. Lincoln was often discouraged but some people thought he didn't appreciate the gravity of things. Some people were shocked that Lincoln often started a Cabinet meeting by telling stories for the first 10 or 15 minutes—and they were not always stories that the Cabinet members could take home with them. But Lincoln was approaching a goal. He was a man who held steadfast to his purposes, but he was willing to compromise, willing to talk and willing to negotiate. Lincoln went on several foolish errands in the hopes that he could stop the conflict. He went down to several so-called peace conferences that were dreamed up by visionaries. He was looking for promises for peace and he said, "Yes, I want peace—there is only one thing you need to do to insure peace tomorrow—lay down your arms, and acknowledge the sovereignty of the United States of America."

After 4 years, the people including the men who were going out to be killed, to be shot at, to be fed hardtack and raw bacon (and very little of that), put Lincoln back in office. People believed in him. There was only one time that Lincoln did not speak what the people had in their minds and that was after Lee surrendered his sword to General Grant at Appomatox Courthouse in 1865. Washington was ablaze; they had illuminated bonfires and torches; the populace was excited and Lincoln—when a lesser man would have exalted in his victory—would have proclaimed his part in it and would have humbled his foes—all Abraham Lincoln had to say that night (and while it disappointed the people that night, it doesn't disappoint posterity)—all he had to say that night was about his plans for binding up the wounds of the conflict; his plans for reconstruction and the rehabilitation of the broken country. And it is the great tragedy of all America that only a few days later he was cut down by an assassin. His successor, Andrew Johnson, didn't represent the people as Lincoln did. He didn't speak their language because he probably didn't hear their heart speaking. No one knows what might have been accomplished had Lincoln lived. Had he been able to apply the charity and wisdom of his belief that all men are created free.

One time Lincoln, in a few sentences wrote out what he thought of as a democracy. He said: "I would not be a slave so I would not be a master. This is my idea of a democracy. Any other idea that says much less than that is that much less than a democracy. No slavery and no masters, only a free people. That is the heritage of living left to us."

Abraham Lincoln was cut down at the age of 56. His real public career was limited to 4 years, yet in that time he has left the real meaning of America and that was the turning point of America, when the Union was saved. In the 30 years after 1865, as many people came to the United States as lived in the country in 1830. We, in the West, I think, owe our position to the fact that a man had the courage to follow his principles through—come what may—to compromise with nothing; to keep on to his main goal and with the courage and fortitude and the feeling that he had that after all the fight was over and the issue was settled—that he could then say "With charity for all and with malice toward none." With faith to do the right as God gives us to do the right and that is the only standard, I think, that we need from here on.

System of Gasoline Rebates Should Be Investigated

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. PELLY. Mr. Speaker, I am today asking the Honorable Herbert Brownell, the Attorney General of the United States, to order an immediate investigation of possible improper use of rebates by oil companies in dealing with service stations in the Seattle area.

If the trade practice outlined in the following letter from a Seattle service station operator is being followed, certainly the rebate system is vicious and discriminatory. It has the earmarks of being an indirect method of attempting to fix prices and, if legal, would surely indicate the need of legislation such as H. R. 11 to protect independent retailers.

FEBRUARY 15, 1957.

Hon. THOMAS D. PELLY,
House Office Building,
Washington, D. C.

DEAR MR. PELLY: As the owner of a service station in Seattle I must point out how badly we need legislation to help protect us from the exploitations of the oil companies if we are to remain in business.

I am vitally interested in H. R. 11 and S. 11, the equality of opportunity bill. The passage and enforcement of this bill is a necessity to prevent myself and thousands of other service station owners throughout the country from going broke.

The system of rebates, or dealer aid as it is sometimes called, as being practiced generally by the oil companies is one of the most ruthless discriminatory business practices I have ever experienced.

The practice is in no way utilized for the protection of the dealer. Rather it is a method of price fixing employed by the oil companies. By using rebates as a means of fixing prices they start, encourage and prolong gas wars. Without these rebates there would not and could not be any gas wars.

The Seattle area has been in a gas war condition for the past 4 months. Most of the dealers have been receiving rebates of one type or another. These rebates, however, vary from dealer to dealer and many dealers are not and have not been receiving any rebates at all.

I received no rebates during this gas war and as a result for a period of approximately 1½ months during November and December other service stations, even those handling the same brand of gasoline as I and those in my immediate competitive area, were retailing gasoline at less than my wholesale cost.

With a price differential such as this, made possible by the discriminating use of rebates, it has been impossible for me to compete, or maintain my customers. My wholesale cost of gasoline was 27.2 cents per gallon whereas many of the other stations including those of the same brand as mine were advertising and retailing their gasoline at 26.9 cents per gallon. (These prices are in reference to regular. Though prices on ethyl were slightly higher the comparison was the same.)

Since that time the prices have raised somewhat but many dealers, again in my immediate area and again those handling the same brand as I, are receiving rebates varying from 1 cent to 3 cents per gallon.

In order for me to get this rebate from the oil company I would have to set my retail prices at the particular price the oil company stipulates. The dealers who are and have been receiving these rebates are receiving them because they have cooperated with the oil company in this respect.

And these rebates are going to more than 90 percent of the dealers in the Greater Seattle area.

Approximately a month ago the wholesale cost of gasoline was raised 5 cents per gallon. But since most of the stations are still receiving rebates the oil company is in effect absorbing this increase. Therefore in actuality the only ones whose wholesale gasoline cost was increased are those few dealers not receiving rebates.

Because of this gross discrimination it is impossible for service station owners to operate in the black. However the entire situation would be corrected if either all rebates were eliminated or rebates were issued equally to all dealers.

My station is an average size 2-man neighborhood unit. The rebates I didn't receive would have totaled some $1,200 to $1,400 during the past 4 months had I been on the same buying price as most of the other dealers. This of course is a substantial differential for a small business.

The oil companies have expressed no desire or intention of equalizing this situation. Therefore legislation such as the equality of opportunity bill is the only way to stop this monopolistic price discrimination. Such legislation will save thousands of small-business men like myself from bankruptcy.

Please do everything posible to secure passage and adoption of this bill at the earliest possible date.

DAN FLANAGAN,
Mobilgas Service.

SEATTLE, WASH.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Ideals of the Order of Elks

EXTENSION OF REMARKS
OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, February 25, 1957

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which the Honorable RUSSELL V. MACK, Representative from the State of Washington, delivered Thursday, February 21, 1957, at a banquet of Washington Lodge No. 15, Benevolent and Protective Order of Elks, in celebration of its 75th anniversary.

Washington Lodge, since its organization in February 1882, has grown from a membership of 41 to a present-day membership of 2,213, and is still going ahead rapidly and vigorously.

Representative MACK is a leading Elk in the State of Washington, where he served as exalted ruler of his lodge, as district deputy, and as president of his State's Elks association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

IDEALS OF THE ORDER OF ELKS

(Address by Hon. RUSSELL V. MACK)

Exalted ruler, Brother Ambrose Durkin, Past Grand Exalted Ruler Barrett, my brothers and friends, we are met tonight in one of the most joyous and gala occasions in all the history of Washington Lodge No. 15 of the Benevolent and Protective Order of Elks, the celebration of its 75th anniversary—its Diamond Jubilee.

My brothers, I was honored when you invited me to be your speaker at this birthday banquet. I am grateful to you for that honor. I only hope that my remarks tonight pay adequate tribute to you Elks of today and those who preceded you in the great work of building this lodge. You have built better than you know.

Washington Lodge, truly, is the little acorn that grew into a mighty oak. When in 1882, your lodge was born it had a charter membership of only 41. Today, its membership is more than 2,200.

Once when I was a young man, a merchant sold me a new suit. He grabbed a handful of the loose cloth at the back of the coat and as was the custom of salesmen of those times and then said, "It fits you like the paper on the wall." I went out to a football game in my new suit. It was raining. In those days there were no covered bleachers. Soon, I was soaking wet. My coat sleeves climbed up toward my elbow and the pants' legs climbed upward toward my knees. I returned to town in my shrunken suit. The merchant saw me approaching in my shrunken suit and perhaps, suspecting I would seek a rebate cried out, "My goodness how you have grown."

I cannot refrain, tonight, from saying to you Washington Elks, "My goodness how you have grown."

But, extraordinary as has been the growth of Washington Elks Lodge that of the Order of Elks has been even more remarkable. When Washington Lodge came into being 75 years ago, the Order of Elks was 14 years old. It consisted at that time of only 15 lodges and the total membership of all 15 was less than 1,800.

Today, the Elks have not 15 but 1,799 lodges and its membership in 75 years has increased from 1,800 to more than 1,200,000. The entire possessions of all 15 lodges 75 years ago were valued at "about $5,000." Today, the Elks own property appraised at almost a quarter of a billion dollars. Each year the order spends more than $7 million on charitable and patriotic work.

No enterprise grows without their being a cause. There are reasons why the Elks have grown so great and been so successful.

The first of these is the Elks ritual. The order was fortunate in that for the first 15 years of its existence most members were men of the stage—actors, producers, and playrights. These pioneers produced a ritual rich in dramatic appeal, with lines as beautiful and swift flowing as those of Shakespeare. Take for example, "The Eleven O'clock Toast" which has been in the Elks ritual for more than 80 years.

Think of its dramatic appeal. A great room is filled with a multitude. There is the babble of voice, the blare of music and the confusion incident to great merrymaking. Then, suddenly a chime, at the hour of eleven, strikes. It tolls out 11 strokes. The hubbub subsides and ere the peal of the 11th stroke has died away utter quiet prevails.

Then, out of the stillness comes the Exalted Ruler's voice, saying "My brothers you have just heard the tolling of 11 strokes. This is to remind you that with Elks the hour of 11 has a tender significance. Wherever an Elk may roam, whatever his lot in life may be when this hour falls on the dial of nights, the great heart of Elkdom swells and throbs. It is the golden hour of recollection, the mystic roll call of those who will come no more."

And ,at those words there comes to each Elk's mind, as there always does to mine, memories of the faces and personalities of brothers whom we once know, loved and have lost for awhile. What finer tribute to our departed brothers than each evening keeping alive in our minds memories of them.

And then, the exalted ruler resumes, "An Elk is never forgotten, never forsaken. Morning and noon may pass him by but ere the shadows of midnight shall fall the chimes of memory will be pealing forth the friendly message"—and then in unison, we all say—"To our absent brothers."

Could anything be more beautiful? Could Shakespeare or William Cullen Bryant have written anything better? I think not.

Whether it be the "eleven o'clock toast," the opening or closing lodge services or the funeral ritual, all Elks' services are beautiful and like a good play or enchanting opera one never tires of hearing them reenacted and reenacted by competent officers. The ritual properly rendered has much to do with keeping alive the interest men have in the Order of Elks.

But there is more to the Order of Elks than a ritual. The principles for which we stand and by which we, as Elks, live make Elkdom really worthwhile. Those principles are best expressed by the three emblems at the Elks' altar.

Mankind, since the dawn of civilization, has employed emblems and symbols to express his deepest sentiments and highest ideals. Primitive man employed the sun, the moon, the crescent, and the stars, as his symbols of his belief in the immortality of the soul.

Moderns employ the cross as an emblem of their faith in Christ and their belief in a life beyond the grave. White is with all men a symbol of purity, and to all nations the dove, the emblem of peace.

A crude and commonplace piece of wood of no intrinsic worth, when fashioned into a two-headed hammer, called a gavel, in the hands of an exalted ruler of an Elks lodge or the Speaker of the House of Representatives or the Vice President of the United States as they preside over Congress becomes the emblem of constituted authority. Because we as Americans are obedient to the constitutional authority the gavel symbolizes, a democracy of the people, by the people, and for the people has worked and endured in the United States for almost 2 centuries.

At the altar before which every Elk assumes the obligations of this order, there are the three emblems of Elkdom—the flag of our country, the book of law and the antlers of friendship. To the cynic our antlers are only bone; to the atheist our Bible is but paper and to the Communist our flag is only a rag. But to you and to me and to every true Elk our order's three emblems are the symbols of the three greatest loves in every Elk's heart—the antlers for love of friend and family, the Bible for faith in God and the flag for devotion to that common mother of us all—our country.

The antlers are the emblem of an Elk's two most valued possessions, friends and family, without which life would be empty. Wealth, it is said, has wings and not infrequently vanishes more rapidly than it was accumulated. Power and place, laboriously built up by years of planning and effort, often are washed away in the returns of a single election. Only family and friends remain constant and stick with us through thick and thin, to rejoice with us in our seasons of success and to console and comfort us in hours of misfortune and sorrow. Only our friends and family write our faults in the sands and our virtues on the tablets of their love and memory. The antlers are the emblem of that intangible something that binds Elks together with hoops of steel in a great American fraternity dedicated to the betterment and happiness of mankind.

I, sometimes, have observed that some men go through life as collectors of stamps, of coins, of antiques, or even of donkeys and elephants, but the wisest and happiest collector is the collector of friendships. Friendships such as one can make in the Brotherhood of Elks can, and often do, endure a lifetime. The emblem of the antlers teaches us as Elks that the easiest and most effective way to collect friends is simply by being a good friend to others.

The second emblem on an Elks' altar is the Bible, the Good Book on whose teachings is founded justice. It is the symbol of the the man each of us aspires to be—of the man our mothers fondly believe we are. Since each of us is a human and not a god, none ever attain the perfection the Bible teaches but in the trying each becomes a better man, a better husband, a better father, and a better citizen.

The great British statesman Gladstone once said, "The American Constitution is the most wonderful work ever struck off at a given time by the brain and purpose of man." The Bible, in a very real sense, is the symbol of that Constitution for it was the teaching of this book that gave the Founding Fathers the inspiration for many of the principles incorporated in that matchless document. Among these are that the weak should be protected against the strong, that right should ever be the master of might, that justice and mercy should rule mankind and that peace is better than war. When we as Elks place the Bible on our altar we each renew our pledge to defend the Constitution against all enemies, at home or abroad, who would undermine or destroy it.

The third emblem at our Elks' altar is the flag of our country. It is the symbol of all the past glorious achievements of our Nation, of the reality of the present well-being and happiness of its 170 million people and an expression of all our combined bright hopes for the future of the Republic.

To an Elk the flag is not woven of strands of silk. To him, it is woven of the threads of the lives of the millions who so lived, so labored, and so died that they left to all Americans a heritage of liberty and of freedom and the opportunity for its fullest enjoyment. Our flag is woven of the threads of the lives of those living or dead, who in peace or in war have contributed to the greatness, strength, and glory of the Nation.

In the flag are the threads of the lives of those dauntless spirits, Columbus and others, who in frail, storm-tossed ships braved the dangers of a transatlantic voyage in order to establish in a new world a new country dedicated to liberty and freedom. Also, in that flag the threads of the lives of those rugged men who, with one hand on the musket and the other upon a plow, battled with the savages in the vast wilderness of Virginia and New England to lay the foundations of our first States.

We see in the red of the flag the threads of the lives of those who have fought, bled, and died on farflung battlefields that the principles laid down for us by the Founding Fathers might endure and all mankind might enjoy the blessings of a government of law.

As our flag fans the breeze we, in imagination, hear it whisper such immortal electrifying phrases as "Give me liberty or give me death," "Don't give up the ship," "I only regret that I have but one life to lose for my country," "We have just begun to fight," and "Damn the torpedoes; full steam ahead."

But to an Elk the flag is the emblem of peacetime achievements as well as heroic deeds in war.

We behold in it the threads of the lives of the long generations of farmers who have cleared the land, cultivated the soil, and raised the stock animals that have provided the food and fiber that has made us the best fed and best clothed people in all the history of the human race.

We see in it the threads of the lives of the woodsman and lumber workers whose labors have made Americans the best housed people of all time.

We see in it the threads of the lives of those in mines, furnace rooms, and factories and in transportation and communication who have made our Nation strong and secure in war and prosperous and happy in peace.

In our flag are the threads of the lives of the preachers, teachers, writers, actors, and others who have stimulated our minds and enriched our souls and thereby made each succeeding generation more competent of self-government than the last.

When we as Elks and Americans proudly salute the flag, that salute is not an empty, meaningless gesture to a silken banner. It is a salute to all those Americans, living and dead, who by their labors and sacrifices made the reality of our present security and happiness possible.

May we always, as we salute the flag at our altar, think of all these with a prayer of gratitude in our hearts.

The Bible, the flag, and the antlers, these three are our emblems. They symbolize the great ideals of Elkdom—for God, for country, and for friends and family. As long as we Elks are true to those ideals our order will never falter in growth or success and will go forward to greater and better anniversaries.

This is the 75th birthday of Washington Lodge No. 15 of the Elks and the 89th anniversary of the great Order of Elks. In 11 years, we will be celebrating the 100th anniversary of the order. I have a suggestion to make for that celebration.

Washington is the most beautiful city in the world. It is the heart and shrine of the entire Nation. More visitors come here to see its monuments and historic buildings than to any city.

This great American Order of Elks, now with 1¼ million members and still growing, should have in Washington, ready for dedication by the order's 100th birthday, the finest Elks temple in all our land—one that every Elk and every American citizen will want to see. It should be a temple monumental enough to be a fitting tribute to the present and future greatness of the order.

Washington lodge, alone, of course, cannot finance the construction of such a building. All Elks of the Nation should, and I believe, gladly will join in helping to build such an Elks shrine for the National Capital.

Washington lodge, of course, assisted by the lodges of Maryland and Virginia, should provide the leadership and a larger share of the funds for its construction than other lodges because it would be the home of Washington Elks as well as a monumental temple to all Elkdom.

I hope this is a dream that can be realized. What a grand 100th anniversary of Elkdom it would be if that day could be marked with the dedication by this greatest of American fraternal orders of a monumental national Elks temple here in the world's most beautiful Capital City.

Labor Racketeering

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 25, 1957

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the recent address by the Honorable James P. Mitchell before the Catholic Institute of the Press, in New York City, on February 14, 1957, concerning the important subject of labor racketeering. I commend this excellent address by Secretary Mitchell to the Members of the Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LABOR RACKETEERING

(An address by James P. Mitchell, Secretary of Labor, before the Catholic Institute of the Press, New York, N. Y., February 14, 1957)

It is a genuine pleasure for me to have this opportunity to speak to distinguished Catholic members of our Nation's news media, and to present my views on a subject which I am sure is of great concern to you as it is to me—the menace and fact of labor racketeering in the United States. As newsmen you look upon labor racketeering as a topic of great current interest. As Catholics, inheritors of the doctrine of social justice as propounded by the great Popes Leo XIII and Pius XI, you look upon it as the social evil it is. You have here, then, both a story and a cause.

Incidentally, I do not think that this is an era in which men of faith and ability should, like Gideon's men, hide their light under a basket. In spiritual darkness of a secular culture, it is incumbent upon men like yourselves to show an affirming flame. In an age searching for faith in the racks of magazines and pocketbooks, an age when popular taste is too often untempered by the moral view of man's nature and place in time, the relief of man's spiritual ills will not be found in silence and acceptance. Because you have ability and position, you are capable of asserting truth. Because you have faith, you are required to assert truth. The truth of the proper nature of society is but a part of the larger truth of the nature of man, who comes before society.

For these reasons, the Catholic members of the press have been ardent crusaders for social justice and social charity, the two ideals that Pope Pius XI identified as the rightful directing principles of all economic life.

The Catholic press in particular has a unique advantage in judging the evil of labor movement abuses. For that movement is deeply indebted to the social teachings of the church. The proper goals of a good labor movement and a good newspaper are similar in many respects. Both are instruments of social advancement—one by deed, the other by word. Both defend the individual against unlawful exploitation. Both recognize and condemn immoral abuse of power, and immoral use of wealth. An enlightened newspaper shares the same concept of a just and charitable society which animates the labor movement.

Because newsmen of good will share in the spirit that motivates American labor, the evil of abuses in labor means more to them than a good story. Especially to Catholic members of the press, who have been so close to social progress since the encyclicals of the Popes pointed the way, racketeering represents a genuine and dangerous threat to the future of American labor.

The great Pope Leo XIII said, "Nothing is more useful than to look upon the world as it really is." So let's look at the world of American labor as it really is.

Throughout its history, it has been a social movement with a cause. The cause has been, and continues to be, based on an ethical view of society like that of Leo. Just distribution of wealth, ownership of private property, recognition of the dignity of workers and their right to representation, all of these things are in the spirit—many in the letter—of the principles first laid down for workers' associations by Leo XIII in his magnificent social document, On the Condition of Workers, issued in 1891.

The pontiff declared that "workers' associations should be so constituted and so governed as to furnish the most suitable and most convenient means to attain the object proposed, which consists in this, that the individual members of the association secure, as far as is possible, an increase in the goods of body, of soul, and of property."

American organized labor has certainly been a great force for good in our land. It has improved immeasurably the welfare of American workers. It has been an important and effective social force. It has made many, many concrete advances in the fight to end discrimination in employment. It has insisted on equality of opportunity, and it has helped lift many outstanding mem-

bers of minority groups over the high walls of prejudice that confronted them.

Finally, American labor has made an immense contribution to the emergence of the American worker as a man of property. In a country where civilian employment averaged 65 million persons in 1956, 52 million American families and unattached individuals received an average personal income of $5,000 per family or person.

Seventy-three percent, or 37 million, American families owned automobiles.

Sixty percent—29 million—of all America's houses are owned by the families living in them. We have 38 million television sets, 45 million refrigerators, 31 million vacuum cleaners; 81 percent of all wired homes are equipped with television, 96 percent with refrigerators, 66 percent with vacuum cleaners, and 86 percent with electric washing machines.

This material wealth is presented here to give you an idea of the extent to which the wage earner has become a man of property.

In the particulars enumerated by Pope Leo XIII, then, the labor movement in the United States has been an effective instrument for the advance of social justice.

The second point to be considered in looking at the world as it really is, is to realize that any movement with an ethical base is bound to be the object of men with varying ethical ideas. Some of these men have been genuinely interested in human progress, if mistake on the best ways to achieve it. Such were the early Socialists with their materialistic and mechanistic view of society.

Others have been men of a different ethic—that of the jungle. They have been drawn to the labor movement for these reasons: First, the ethical nature of the movement provides an excellent and sturdy blind behind which to hide their own desires for personal gain. By acting constantly in behalf of the workers, so they say, while actually lining their own pockets, they have avoided the detection of public opinion to some extent. Secondly, the democratic structure of the labor movement with its many divisions and subdivisions provides cover and opportunity for a man of ill will. Thirdly, the wealth that has accumulated in some union treasuries is considerable and presents a great temptation to unscrupulous men.

I would like to examine these dangers—which are both philosophic and material—in greater detail.

When socialism was an experimental philosophy, a few decades ago, it seemed to some a logical answer to the imbalance in industrial society. The world was divided into the few owners and the vast majority of nonowning workers. As Pope Leo described it in 1891, "a very few rich and exceedingly rich men have laid a yoke almost of slavery on the unnumbered masses of nonowning workers."

Samuel Gompers, that great statesman of labor, was interested enough in the theory to examine it closely for a number of years. Then he spoke for the entire labor movement when he said to the Socialists, "I am entirely at variance with your philosophy. Economcially you are unsound, socially you are wrong, and industrially you are an impossibility."

Gompers and men like him put the labor movement squarely on the road to free enterprise, to private ownership, to just distribution, to the creation of standards in keeping, not with the needs of an economy but the needs of individual human dignity.

It is also interesting to note that among the very first to identify the menace of communism were the Catholic Church and the American labor movement. Pope Pius XI, disturbed by the spread of communistic doctrines, wrote in 1931: "We cannot without deep sorrow contemplate the heedlessness of those who apparently make light of the impending danger. * * *" That danger presented itself to the labor movement in short order. Working with secrecy and stealth, apostles of the communistic doctrine wormed their way into places in the movement. Some attained fairly responsible positions. A few reached policy levels.

If the cancer had been allowed to grow, it would sooner or later have infested the entire body, bringing discredit and reprisal from other segments of society and negating the brilliant work of leaders of the past. The labor movement, however, had too rich a tradition of moral strength and political wisdom to allow this to happen. Labor accepted the responsibility for cleaning its own house, and it proceeded to do so effectively. Unions that had become tainted were expelled. Phony leaders were cast out.

Today the labor movement is faced with a different kind of threat.

Labor racketeering begins when a labor leader ignores the advice of Pope Leo XIII: "Have nothing to do with men of evil principles" who, he said, excite foolish hopes that usually end in useless regrets. It is promulgated when an employer ignores the similar advice from the great Pope: "Do not use men as things in the pursuit of gain." For both these persons, Leo has a final word: "To gather one's profit out of the need of another is condemned by all laws, human and divine."

There are two types of labor hoodlums—the corrupted apostle of labor's cause and the committed criminal who, after a life of crime, attaches himself to the labor movement. The second invariable depends upon the first to gain access to the movement. Thus, the labor leader who tolerates the existence of racketeering elements in his union is himself suspect. If his crime is ignorance, it is correctable. If it is willful and results in material gain to himself, he is subject not only to expulsion by the labor movement itself, but also to trial and punishment by the civil authority.

This much is obvious—the hoodlums in labor are parasites upon an otherwise healthy body. The labor leader and union members that tolerate them, and the employer to whom financial gain and a soft union are more important than honesty and integrity, both feed the parasite and give it strength. It is well to realize that a weak man might be tempted beyond his powers to resist. It is also important to realize that a genuine gangster cannot get into the door of any labor movement unless a dishonest labor leader opens that door and a dishonest employer keeps it open.

It was, as a matter of fact, the work of the real gangster that precipitated public outrage: Larceny, murder, extortion, theft—the marks of a criminal. The creation of entire criminal segments, the threat of gang war hovered over the labor movement like a black cloud. The jackals had come to fill their bellies, but the lesser criminal, the corrupted leader who wanted only financial reward and the blind employer who wanted the same, pointed the way.

Labor racketeering will not be stamped out until the labor leaders who are criminals and hoodlums are cast out; until the labor leaders who have tolerated their existence are castigated; until the employer who sees in a racket a chance for his own gain is made to suffer the consequences; and until all union members themselves repudiate unprincipled leadership and assure themselves of the kind of leader whom they can trust and who will bring dignity to their association and themselves.

How can this be done?

In the first place by the labor movement which is accepting and discharging its responsibility in this area. I have the greatest faith, gentlemen, that labor will once again accept the challenge and clean its own house.

Today's true labor leaders have preserved and act upon the ethical principles of their predecessors. George Meany is such a man.

The great leaders of today realize that the lice that inhabit and infect a few labor unions do more than merely injure those unions. They deprive the labor movement of its very meaning. They make it a mockery. They destroy public confidence. They mitigate the progress of the past. Like the sharks they are, they devour their own substance. Leaders like George Meany know that what is at stake here is not merely the future of a few unions but the future of the entire movement.

Their response to this challenge, as evidenced in both the statement of policy and the ethical code released from Miami Beach last month, has been magnificent.

The statement calls attention to the fact that the trade-union movement is a moral one and has a responsibility not only to itself but to society in general to remain free of corruption. This wise and statesmanlike view has always been labor's greatest strength. The statement reads in part:

"No institution or agency, whether labor or business, public or private, enjoys special immunity from the equal application of the laws, from appropriate investigation by duly constituted legislative committees and from scrutiny of its operations by the members of the press or the general public."

While recognizing the right of any citizen to invoke his constitutional prerogative and plead the fifth amendment, the statement warns any labor official that if by so doing he is attempting to hide corruption, then he faces expulsion.

The tide is starting to run against labor criminals. The AFL–CIO code of ethical practices forbids labor leaders from maintaining compromising personal ties with an employer—a warning to the soft leader who opens the doors to the criminals. As to labor leaders who are criminals themselves, the code is a weapon for cutting them out of the movement.

As for the Government's part, it will enforce the applicable laws vigorously and fairly.

I would call your attention to the fact, also, that the President requested and the Department of Labor prepared legislation to protect the beneficiaries of employee welfare and pension plans by requiring registration and full disclosure of the financial operations of the plans. A bill was introduced in the Congress but no legislation was finally enacted. I look for passage of appropriate legislation this year.

Government cannot do the job as effectively as labor itself. However, Government has the responsibility to help the labor movement help itself by strengthening the hand of honest labor leaders. The present congressional investigations are healthy for the reasons pointed out in the AFL–CIO Miami statement.

As I testified before the Labor Racketeering Committee last month, however, I think that such an investigation will be healthy only if it takes into account the fact that its energies are directed against the hoodlum who has appeared in the labor movement contrary to the desires of most union leaders. This is not a case of general disease but of localized infection.

The AFL–CIO's Miami statement reflects the determination of the labor movement to intensify its drive on racketeers in its ranks. Its assurance of cooperation with congressional committees augurs well for the future.

Finally, to the force being exerted by the leadership of organized labor, by Government and by public opinion, must be added the efforts of union members themselves. They must accept the responsibility which is theirs in our democracy. They must vigorously support the course charted in Miami by seeing to it that unscrupulous leaders are uprooted from their unions and cast out. The power is theirs and in the last analysis they must use it.

If I were a labor racketeer; if I were a weak labor leader who tolerates the rackets; if I

were a weak employer who finds immorality profitable, I would not sleep with any comfort these days. Society's scrap heap is littered with the dishonored remains of such men. Their turn in the evolution of American labor toward ever richer promise has come. You might say, even, that these crooks have done labor a favor. For principles are made strong in the testing. Faith is made firm by conflict. Devotion to the ethical way as proclaimed by the great Popes Leo XIII and Pius XI is made firm in the struggle against those who would turn society and its elements away from the truth and the right.

Thank you.

Military Order of the Carabao

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 25, 1957

Mr. MARTIN of Pennsylvania. Mr. President, the Military Order of the Carabao is one of the most historic of our various veterans organizations. Its membership consists of officers who served in the Philippines during certain periods. It takes its name from the carabao, a beast of burden which was the system of transportation in the early days of the empire. Annually the members of the order have a dinner where they express good fellowship, and discuss better relationship between our Nation and the Philippine Republic.

This year, the Order had the privilege of hearing a very able address by Adm. Arleigh Burke, Chief of Naval Operations. I ask unanimous consent that the address by Admiral Burke be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BY ADM. ARLEIGH BURKE, UNITED STATES NAVY, CHIEF OF NAVAL OPERATIONS, BEFORE THE MILITARY ORDER OF THE CARABAO, WILLARD HOTEL, WASHINGTON, D. C., FEBRUARY 9, 1957

It's wonderful to be able to get together the way we are doing this evening. For 56 years now the members of our grand old organization have been meeting annually for an evening of fun and fellowship, and good feeling flows as freely as the wine.

We watch each other get a little older, a little greyer—and maybe a little wiser. And we live again the great days of years gone by—some grim, some happy—but all of them witness to our long struggle to preserve freedom and independence in the western Pacific.

This struggle goes on, muted by an armed truce, but as earnest and deadly as ever. It is now fused with the larger contest between the free world and Soviet communism. And one senses that the real issue before us is not whether we shall have peace or war, but whether we shall live like men or like sheep. These things we know: that there is no meaning in peace without honor; in security without justice; or in riches without freedom.

In the years ahead it will be of surpassing importance that we be able to distinguish between ends and means, between the true and the false, between the passing and the permanent. For we will have no single clear and certain choice between survival and extinction.

There will be only an endless succession of choices—little matters which add up to the same thing. These choices will enter every phase of our military, our political, and our economic life. They will shape our policy and our outlook, both foreign and domestic. In sum, they will register our ability to see what needs to be done, and our willingness to do it.

But it is in these little choices that our great danger lies: For it may often appear that the cost outweighs the gain; that we are risking much to save little, when the very opposite is true. There may be the temptation to yield, to skimp, to compromise on vital matters because the results of these acts may be distant and obscure.

But the reality remains that our physical strength and our moral courage are the last clear chance for freedom in our world. Every gain to communism is a loss to us, and we must know that when other peoples lose their freedom the danger to our own is increased thereby.

The free world is all one, and we shall stand or fall together.

The Military Order of the Carabao has been a symbol of this unity of freedom-loving peoples for 56 years. We have seen the people of our sister republic in the Philippines fulfill the long-range plan for their independence under the benevolent protection of our own Government. Our members fought to make that independence secure against aggression. The friendship between our peoples is a direct reflection of our joint efforts in the cause of freedom—efforts in which members of the Carabao played a conspicuous part.

May this friendship in freedom grow with the years. And may it always be a matter of lasting pride to those who did so much to bring it about—the members of our grand old Order of the Carabao.

Nineteen Hundred and Fifty-six Calf Crop Down—Texas Hardest Hit

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, February 25, 1957

Mr. JOHNSON of Texas. Mr. President, the Department of Agriculture has reported a drop of approximately 1 percent in the United States calf crop last year, as compared with the year 1955.

In Texas, the Nation's leading cattle-producing State, the calf crop showed a decline of 2 percent, more than twice the national decrease.

Mr. President, that drop in the Texas calf crop is a direct result of the drought that has plagued our State for 7 years or more. It is a reduction that reflects a heavy slaughter of cattle owned by men who could no longer feed them.

This trend toward smaller herds, as reflected in the decrease in the calf crop, is a matter of the utmost seriousness. It points up the urgent, immediate need for an adequate program of assistance for the hard-pressed stockmen and farmers in the drought area.

I ask unanimous consent that the report of the Department of Agriculture be printed in the Appendix of the RECORD, and I express the hope that at as early a date as possible, so that we may get the measure to the White House, we may have a conference on the deficiency appropriation bill which contains relief for the hard-pressed ranchmen.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

NINETEEN HUNDRED AND FIFTY-SIX CALF CROP REPORT

The United States calf crop in 1956 totaled 42,317,000 head, down less than 1 percent from the 42,566,000 head born in 1955, according to the Crop Reporting Board. The 1956 calf crop was 16 percent larger than the 1945–54 average. The decrease in the calf crop during the past year resulted from a decline in cows and heifers 2 years old and over during the year. The number of all cows and heifers 2 years old and over on January 1, 1956, was 48,729,000 head—1 percent less than the number on hand a year earlier. Cow slaughter continued high during 1956 and cow herds were reduced during the year in all regions, except the South Atlantic area.

The number of calves born in 1956 expressed as a percentage of cows and heifers 2 years old and older on January 1, 1956, was 87 percent—the same as the previous year, and 3 percentage points above the 10-year average of 84 percent. This percentage is not strictly a calving rate since the January 1 inventory of cows and heifers 2 years old and older does not include all the heifers which gave birth to calves during the year. The percentage is calculated to show the trend in productivity over a long period of time. It may fluctuate from year to year due to variations in cow slaughter and trends in breeding herd replacements.

The calf crop of 17,831,000 head in the North Central States was 1 percent smaller than in 1955, but 12 percent larger than the 1945–54 average. In the East North Central States, Ohio and Wisconsin showed more calves born than in 1955 while the other States showed minor declines. In the West North Central States, Minnesota, Iowa, and North Dakota showed more calves born in 1956 than during the previous year. All other States in this region showed fewer calves. In the North Central States the numbers of cows and heifers 2 years old and over on January 1, 1956, was 19,547,000 head, a decrease of 2 percent from the 19,877,000 on farm January 1, 1955. The calf crop expressed as a percent of cows and heifers 2 years old and over was 91 percent compared with 90 percent in 1955.

The Western States showed a calf crop of 7,110,000 head in 1956 compared with 7,221,000 born in 1955. Only 3 of the Western States, Montana, Idaho and New Mexico, showed more calves born in 1956 than in the previous year. All other Western States reported smaller calf crops. The number of all cows and heifers on farms and ranches on January 1, 1956, totaled 8,248,000 head—an increase of less than 1 percent from January 1, 1955. The calf crop expressed as a percentage of cows and heifers 2 years old and older was 86 percent compared with 88 percent the previous year.

In the South Central States, the calf crop is estimated at 10,973,000 head compared with 11,031,000 in 1955. The number of all cows and heifers 2 years old and older on January 1, 1956, totaled 13,056,000 head—a decrease of 1 percent from 1955. The calf crop expressed as a percentage of all cows and heifers 2 years old and older was 84 percent—unchanged from 1955. Texas, the leading cattle producing State, showed 4,113,000 calves born—2 percent below the 4,200,000 head born in 1955. The number of cows and heifers 2 years old and older on January 1, 1956, in Texas was 4,728,000 head—2 percent below 1955.

In the North Atlantic region, the calf crop totaled 3,098,000 head compared with 3,086,000 head in 1955. The number of cows and heifers 2 years old and older on January 1, 1956, was 3,626,000 head compared with 3,599,000 head on January 1, 1955. The calf crop was 85 percent of the number of cows and heifers 2 years old and older on January 1, 1956.

In the South Atlantic States, the calf crop was 3,305,000 head—less than 1 percent above the previous year. The number of cows and heifers 2 years old and older on January 1, 1956, totaled 4,252,000 head—only slightly smaller than a year earlier. The calf crop was 78 percent of the number of cows and heifers 2 years old and older on January 1, 1956.

Calf crop report, 1956

[1] Not strictly a calving rate. Figure represents calves born expressed as percentage of the Jan. 1 inventory of cows and heifers 2 years old and over on Jan. 1 and not the number of all cows and heifers giving birth to calves during the year.

Northwest Jobs and Electric Power

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Northwest Jobs and Electric Power," made by Mr. C. Girard Davidson, National Democratic committeeman from the State of Oregon, before the panel on water, power, and conservation on February 16, 1957. I desire to associate myself completely with Mr. Davidson's remarks.

Mr. President, at this time I should like to say to the Presiding Officer [Mr. NEUBERGER in the chair) that it is particularly apropos to request at this time that Mr. Davidson's remarks be printed in the Appendix of the RECORD in view of the fact that only a few minutes ago the junior Senator from Oregon [Mr. NEUBERGER], while on the floor, submitted for printing in the RECORD statistics in regard to the employment situation in the State of Oregon. I am very proud to have the privilege of requesting unanimous consent that Mr. Davidson's statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NORTHWEST JOBS AND ELECTRIC POWER

The Pacific Northwest is one of the richest and most important regions of the country in physical resources. But, this week United States Senator RICHARD L. NEUBERGER, Democrat, asked the Labor Department to classify Portland, Oreg., as an area of high unemployment. He asked that the second largest city in the Pacific Northwest be designated a distressed area.

Oregon's economy is now almost exclusively dependent upon lumber and agriculture. Lumber has been hard hit by the administration's tight money policy, which has crippled new housing. When housing is hurt lumber sags badly. Each day in our State another lumber mill or plywood plant closes its doors.

The situation is no better in agriculture. In 1952 net income of Oregon farmers was $197 million but in 1955 it was down to $144 million. The soil bank and price support program apply relatively little to the farm crops grown in Oregon.

Since 1952 per capita income has gone up 11 percent for the country as a whole but only 5½ percent in Oregon. We are affected by the national inflation but do not have the rising incomes to meet it. In 1952 per capita incomes of the people in Oregon were $97 higher than the national average. This past year they are $10 below the national average.

A recent report from the United States Department of Labor, November 20, 1956 says:

"A look at economic trends in the region (Pacific Northwest) indicates that the creation of new job opportunities in the region has lagged in the past 5 years. Significantly, this slow-down in the development of new jobs has occurred at the same time that the economy of the Nation as a whole has expanded dramatically."

What does this mean—is the Northwest becoming an impoverished region? Are the area's resources used up? The answer is, of course, a definite "No."

With 9 percent of the country's land area the Pacific Northwest has only 3 percent of its population. It contains 40 percent of the Nation's saw timber stands. It has 40 percent of the Nation's hydroelectric power potential and with the small fraction of electric power developed to date the area produces 35 percent of the Nation's primary aluminum. The area contains about 26 percent of the Nation's irrigated acres with a potential 150 percent larger than heretofore developed. Its Columbia-Snake River system could give the region a completely navigable stream longer than the Rhine. Its mineral resources are virtually untapped.

During the two decades from 1930–50 when President Roosevelt and President Truman occupied the White House there was a determined effort to develop the Columbia River system on a comprehensive basis for low-cost power, and maximum flood control, navigation, and recreational benefits. Bonneville, Grand Coulee, Chief Joseph, Hungry Horse and other dams were built during this period as a part of the comprehensive river control and development plan of the Army engineers and Bureau of Reclamation.

New industries rushed to the Northwest to use low-cost power so made available. From 1940 to 1950 the region's labor force increased at an annual rate of 3.5 percent while in the Nation as a whole the labor force increased only 1.5 percent. During the same period the region's population increased 34.4 percent while the Nation's population increased only 14.6 percent.

Yet our United States Senator is now asking that Portland, Oreg., the city nearest the mouth of the Columbia River, a city that could be thriving—through full use of the river's resources, be declared "a distressed area." And this for the second time since the Republicans went into office in 1952. In view of this is it any wonder that the three Republicans running for the United States Senate in the area were soundly rejected? That, in addition, Oregon and Washington elected Democratic Governors and my State picked up two new Democratic Congressmen.

Only this week our Portland papers carried news stories of large industries who wanted to settle in the Northwest but decided to go elsewhere because we no longer had enough low-cost power.

Since 1952 the Pacific Northwest has been below the national average in both population and labor force growth.

This has occurred in the region where the Columbia-Snake River system is capable of producing over 30 million kilowatts of power, and where less than one-fourth of this potential has yet been developed.

The Eisenhower administration has done less than nothing to develop the great power resources of the Pacific Northwest, and through low-cost power attract new industry and create new jobs for the area. I say less than nothing, for its action in giving away the best and one of the lowest-cost power sites in the country at Hells Canyon effectively precludes the development of low-cost power at that site. And unless the Congress or the courts stop the Idaho Power Co. from building its small dams at Hells Canyon, whose power will cost twice as much as that from the high dam, the best incentive for new industry to locate in the region will be destroyed.

As a result of the Eisenhower administration's much vaunted partnership policy there hasn't been a single new start of a dam on the Columbia-Snake system. True, because the Democrats controlled the House of Representatives and the United States Senate, Ice Harbor Dam is now under construction, but no help on this was received from the administration and the money was added to the President's budget by the Congress itself.

The license granted by the administration to the Idaho Power Co. to effectively destroy the high Hells Canyon Dam site is now before the Supreme Court of the United States. But in this fight for our economic lives in the Pacific Northwest we must depend on the Congress. We trust it will look into our plight, which is also a misfortune for the whole country, promptly, and authorize the construction of the high Hells Canyon Dam without delay.

We also trust the Congress will instruct the agencies in the executive branch of the Government concerned with the development of the Columbia-Snake River system to return to sound engineering principles, the laws of conservation, and human values, rather than a shoddy political expediency when they seek to harness the great Columbia River.

Sermon Delivered by Dr. Ralph W. Sockman, Minister of Christ Church Methodist, New York City

---

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 25, 1957

Mr. MARTIN of Pennsylvania. Mr. President, Dr. Ralph W. Sockman, minister of Christ Church Methodist, of New York City, delivered a most inspirational sermon at the National Presbyterian Church on February 17.

I ask unanimous consent that this sermon be printed in the Appendix of the RECORD, as I feel it is a message which should be read by every American.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

THE PIONEER OF LIFE

(Sermon delivered by Dr. Ralph W. Sockman at the National Presbyterian Church, Washington, D. C., February 17, 1957)

The occasion was rather an ordinary one. Beggars frequently gather at the gates of churches in eastern countries. On this particular day, a lame man was sitting on the steps of the Temple at Jerusalem, asking alms. He accosted Simon Peter and John as they were entering the temple. Peter gave the man no money, but he did restore his health. A crowd gathered and Peter made an address, which is recorded in the third chapter of the Book of the Acts.

In his sermon, Peter chided his countrymen because they had recently asked for the release of Barabbas, a murderer, and called for the crucifixion of Jesus. He said, "You killed the Prince of Life." When Moffatt translates the passage, he does it thus: "You killed the pioneer of life."

At first sound, the words "prince" and "pioneer" seem to connote almost the exact opposites of living. When we hear the word "prince" we think of that which is established. When we hear the word "pioneer" we think of that which is starting. Prince suggests rich environment; pioneer suggests rough and rugged surroundings.

Yet different as they seem to be, both words fit Jesus of Nazareth. I am not surprised Peter called Jesus the "Prince of Life." He was of the royal line of David according to the Gospel genealogy. He was regal in His bearing. He was princely in His power. Also Jesus was a pioneer. He started something so significantly new that we date our calendar from His birth. The hinge of history was on the stable door at Bethlehem.

And today I should like to focus our thoughts on this twofold translation because it suggests certain combinations which our day desperately needs to make.

First the world "prince" turns our thought to background. The word "pioneer" sets us thinking about foreground. And our day needs to make a better combination of background and foreground.

We can divide any gathering of people into two groups according to their attitude toward background and foreground. On the one hand are those who are so enamored of the past that they close their minds against anything new. On the other hand are those who are so impatient with the past that they run restlessly and sometimes recklessly toward anything new.

I do not believe Christ would have his followers go with either group. I feel that Christ would have us keep a viewpoint somewhat analogous to that given by the chauffeur's mirrow on our motor cars. The little mirror is so adjusted that the driver can see the road behind him without taking his major gaze off the road ahead. On our crowded highways it is quite as important to see what is behind us as to see what is ahead. There is almost more danger of collision from the rear than from the front. And it is most necessary to see what is behind us when we make a left turn.

In our social thinking we have the expression, "turning to the left," meaning thereby turning to the new and unorthodox. And it can hardly be denied that the 20th century has been turning leftward. It is precisely because we have been turning to the left that we need to see what is behind us, lest some old fallacy carrying a

license plate come dashing down the road to wreck us. Some of the ideologies now current overseas are old fallacies with new and deceptive names. We need a better awareness of our background, both secular and spiritual. Hence we should behold Christ as the Prince of Life to bring the past into the focus of our thinking.

We need to see the background of our secular living. If there ever was a time when we needed to study history, that time is now. It is important that we look back to see the principles and purposes on which our Nation was built. We Americans should spend more time studying what makes America and less time telling the world what America makes.

And we need to see the background of our religious faith. There never has been a genuine revival of religion in Christendom without a revival of Bible study. We must see whence came our churches. Many of our church buildings are comparatively new. We have seen how they were built. A community is settled. The people want a place to worship and a Sunday school in which to teach their children. So a plot is bought and a church is built. Then we so often think of the church as just one of the manmade community institutions like the school, the hospital, or the library. But the church is more than a community institution. It is the body of Christ enduring through the centuries, outlasting all governments. Remember that your denomination, whether it be Presbyterian or Baptist or Methodist, is part of Christ's holy church. Therefore, let us think of Christ as the Prince, the head of the church, the head of the oldest and vastest organization in the world.

But now while we think of Christ as the Prince, the head of an old and established church, we must also think of Christ the Pioneer, who leads us forward into the future. There is always danger of getting so attached to the good old days that we fail to see the good that is ahead. We must not become like the old lady who complained once to the editor of the magazine Punch that his magazine was not as good as it used to be. The editor replied, "Madam, it never was." Sometimes things do not look as good as they used to be because we are looking back to the past through a golden haze of retrospect.

This proneness to regard the past as better than the present or future is an attitude which tends to grow on us as we get older. We must beware of it. When does a person pass his prime? Physically, perhaps in his fifties. Mentally, maybe in his sixties. But spiritually a person never passes his prime until he begins to think the best is behind him. As long as a person feels as did Browning's Rabbi Ben Ezra:

"Grow old along with me,
The best is yet to be
The last of life for which the first was made."

I say, as long as one feels that the best of life is still ahead, he has not yet passed his prime. And that is the outlook which Christ helps to preserve. Jesus never talked about the golden age as being in the past. He always pictured it ahead.

John Buchan, former Governor General of Canada, said that we speak of youth as climbing the hill of the years, and then after middle age we speak of going down the hill of the years. But, said Buchan, we should remember that when we are climbing a hill we have to turn around to get the long view, but when we are going down a hill, the long view is straight ahead of us. That is the perspective which Christ the pioneer gives. He helps us to see the long vista stretching ahead even beyond the valley of the shadow of death.

Therefore, let us behold Christ the Prince to give us perspective on the background of life and Christ the pioneer to give us hope and confidence for the foreground.

Now, we turn to a second combination which this twofold translation suggests. The word "prince" suggests government, organization; the word "pioneer" suggests personal, individual effort. Think how resourceful the early pioneers were in doing things for themselves. Our day needs a better combination of organized effort and individual effort.

Surely we recognize the need of organization in our complex living. Robert Wicks reminds us that if a fire broke out in the old-fashioned one-room country schoolhouse, all that was needed was to cry, "Fire, everybody for himself." But if a fire should break out in one of our large 3- or 4-story city school buildings and the cry went up, "Fire, everybody for himself," the result would be panic, chaos, perhaps death.

Of course, we must be organized if we are to live together.

Yet while we recognize the need of organization in business, industry, labor and government, it is amazing how many do not seem to see the need of it in religion. I find many persons who say they believe in God, even in Christ, but who have little or no use for the church. Sinclair Lewis, the famous writer, once said in private conversation that he believed in religion, but he said, "Why organize it? The moment you organize religion, you kill its spontaneity."

I see Mr. Lewis' point. Organization does sometimes destroy the spontaneity of religious expression. But religion must be organized if it is to exert influence in reforming the civic life of a community. We need organization if we are to have effective religious education for our youth. And moreover, we need organization to make our worship of God more personally helpful. To be sure, we sometimes have our most intimate and vital contacts with God when we are in private or in family devotion. One of God's noblemen died recently long past the age of 90. He was Joseph R. Wilson, of Moorestown, N. J. A lawyer by profession, he gave much of his time to promoting his idea of a chapel in every home. Yet Mr. Wilson was also a devout churchman for he knew that church worship fertilizes the soil for private devotion. Not many people who never darken the door of a church keep up a vital personal devotional life.

Those persons are not realistic who say that they believe in God and Christ but have no use for the church. The church is the body of Christ and through it he makes his spirit active in the world. Therefore, let us exalt Christ as Prince, the head of the church, the vast organization which belts the globe, builds hospitals and schools, beautifies the earth with cathedrals, and enriches life with the noblest music and art.

But in thinking of Christ, the Prince, we must not lessen our emphasis on Christ, the pioneer, who encourages personal exploratory experience. One of the points we have to watch is to preserve the individual in the midst of our mass living. We Americans are much given to organization. No doubt we are all familiar wtih William Allen White's oft-quoted remark that if three Americans fell out of an airplane they would be organized before they reached the ground into a president, a secretary, and a treasurer. Yes, we multiply organizations and then try to substitute them for personal responsibility and effort.

As the organization grows, the individual tends to shrink. It is harder to keep the same per capita civic interest in a city of a million than in a town of ten thousand. It is more difficult to develop personal responsibility and activity in a church of three thousand than in a church of three hundred. One of the most baffling problems of contemporary life is how to preserve the personal in the midst of our growing cities and organizations.

The vitality of personal experience as well as the welfare of the group depends on individual effort. Nothing is really vital until it becomes personal. For instance, when I took chemistry in high school, the subject did not mean much to me while I was just listening to the teacher talk about it. The only thrill I ever got out of chemistry came when I was sent into the laboratory and told to perform some experiments. I blew up some test tubes, I burned my finger. But I caught an interest in chemistry.

Let me ask you, where do our young people so frequently drop out of church attendance? Is it not at the point where we fail to take them over the lecture stage to the laboratory stage of religion. We talk to them in classes and in junior church, but we so seldom say to them: "Here is a principle of Jesus and here is a situation. See how you can work it out." When we set out to apply a principle of Christ to a concrete problem, then our faith comes alive.

Recall how Jesus stopped his disciples about halfway through their course at Caesarea Philippi and asked them, "Who do men say that I am?" And they told him the current reports that some said he was John the Baptist, and some said he was Elijah returned to earth. And some said he was one of the prophets. Then Jesus pressed them further asking, "But who do you say that I am?" (Matt. 16: 17–18.) Simon Peter replied, "You are the Christ, the Son of the living God." And Jesus answered him, "Blessed are you, Simon Bar-Jona!" Why blessed? Listen further: "For flesh and blood has not revealed this to you, but my Father who is in heaven." That is, Peter's conviction had not come second hand from others but had come through his direct experience with God. Then Jesus went on to say, "And I tell you, you are Peter, and on this rock I will build my church." We of the Protestant faith believe that Christ founded his church not on Peter the man but on Peter's faith in the deity of Our Lord Jesus Christ. And remember, Peter's faith was a firsthand conviction begotten by experience.

The Christian church was founded and grounded in first-hand experiences of God in Christ. And if it loses that, no organizations, however large, can save the vitality of the church. But Christ, the pioneer, can go forth this very day with you or myself and help us to do something so uniquely personal and interestingly original that religion would come alive to us.

And we cannot close without glancing at a third situation which this twofold translation gives. The word "prince" suggests power over, the word "pioneer" suggests power for. When for instance we speak of a person as a pioneer in education we mean that he has been a power for it. A person becomes a pioneer by bringing others into larger ways of living.

Jesus had power over many things. Power over the mind, power over the body, power over crowds. And churches today are greatly emphasizing the power which religion can give in peace of mind and physical health. But let us remember that Jesus said: "He that is greatest among you is he that serves," and also that the "Son of man came not to be ministered unto but to minister." The power which we seek must be for service.

Herein lies a crucial issue which cuts across the world. Shall nations seek power over other peoples in order to make them satellites, or shall they seek power for other peoples in order to make them self-supporting? Here is the test between the Kremlin and the cross. And this Nation unto God must stand with Christ, the pioneer of life, who came to give life and to give it abundantly to all the peoples in the world.

Therefore, feeling ourselves "surrounded by so great a cloud of witnesses, let us also

lay aside every weight and the sin which clings so closely, and let us run with perseverance the race that is set before us, looking to Jesus the pioneer and perfector of our faith, who for the joy that was set before him, endured the cross, despising the shame, and is seated at the right hand of the throne of God."

Mystic Lincoln

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Mystic Lincoln," written by Norman Vincent Peale, which was published in the St. Paul Sunday Pioneer Press.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MYSTIC LINCOLN
(By Norman Vincent Peale)

I have been reading about Abraham Lincoln. It is hard to do all the reading I would like to do about him because more has been written about his life than about any other single figure in American history. He was, without question, one of the most amazing personalities who ever lived. Why is it that all these years after his death he continues to fascinate people of all kinds all over the world?

Is it because, although ungainly in form, born in a poverty-stricken log cabin, and self-educated, he rose to the top in our country?

Is it because he had a great heart filled with sympathy, pity, and love?

Is it because he left behind him, in the words of his speeches and public papers thoughts that are as true and important today as they were a hundred years ago?

Yes, it is all these things. But it is also something more.

Here was a man who had a hard job to do, and who did it superlatively well. How did he do it?

With his own wisdom? To be sure, he had a great deal of native, shrewd intelligence. But it was said by one who knew him intimately that Lincoln was great because he was always open to the infinite. This mystic and spiritual quality manifested itself in various ways.

The night he was elected President, he was lying on a couch resting. There was a mirror in front of him and, suddenly, he noticed that he could see his face twice: one colorful and healthy; the other ashen as death. He got up and examined the mirror and found no distortion in it; he lay down again and continued to see his face twice. The incident troubled him and he sensed a profound meaning in it. He said to himself, "Perhaps I shall live through my first administration and die in the second."

He saw other strange portents all through his life. Three days before he died, he dreamed there was a funeral at the White House. In his dream he went to the casket and saw his own face. On the afternoon of the day he was shot, he came back from a late afternoon walk with his guard, Crook. He would always dismiss Crook with "Good night, Crook." This time he said, "Goodby, Crook."

During the days of the Civil War we are told that Lincoln, night after night, would lie prone on the floor on his face, a Bible before him, telling the Lord that he did not have the wisdom to handle the great responsibilities and asking the Lord to help him. We know now that the Lord granted him the insight he needed through those tumultuous and critical days.

Lincoln was a man saturated in the infinite; open to it in every pore of his mind. His life is the best example of how to do a hard and difficult and even unpeasant job effectively: Don't try to do it all by yourself. Saturate your mind with God, open it to the infinite, let the great forces of the universe guide you, as the Bible says, in "rightly dividing the word of truth."

As Lincoln did, put into your mind that infiniteness, that quietness, that confidence which takes the strain from you and gives you an optimtistic and positive picture of the result to be obtained. There is a deep and profound subtlety in human experience. If you get into the spiritual flow of the universe with God, that which is hard becomes, if not easy, at least possible.

American Cooperative Movement

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. WILEY. Mr. President, I was pleased to note in last Friday's, February 22, issue of the La Crosse Register, the official newspaper of the diocese of La Crosse, a most thorough writeup of an important address delivered right in my home area, before the Chippewa Valley Cooperative, by the distinguished executive secretary of the National Catholic Rural Life Conference, Father Michael P. Dineen.

Father Dineen set forth six basic principles for the American cooperative movement—a movement which, in my judgment, and I am sure in the judgment of many of my colleagues, is one of the most invaluable contributions to the well-being of American agriculture and of our country as a whole.

I know that the comments will be of deep interest to my associates, and for that reason I send to the desk now the text of the La Crosse Register writeup and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OFFICIAL OF NCRLC PRAISES UNITED STATES CO-OPS IN CORNELL ADDRESS

CORNELL.—In an address before a meeting of the Chippewa Valley Cooperative here February 1, Father Michael P. Dineen warned against placing the principles of the cooperative movement in jeopardy.

Father Dineen told some 2,200 persons that co-ops make people responsible owners. "Ownership produces freedom, stability, and security," he said, "those are our strongest weapons against those isms which have invaded countries whose citizens were oppressed and despoiled."

Father Dineen, executive secretary of the National Catholic Rural Life Conference, Des Moines, Iowa, outlined six principles forming the foundation of the true cooperative.

Members of a cooperative must contribute their proportionate share to the common good, according to Father Dineen, and social justice and social charity must form the soul and spirit of the true cooperative.

He told the group coordination of local units must be secured without sacrificing local autonomy through centralized control. He added sales must be made at current rates and current prices and the distribution of the profits must be made to the patron and producer on an equitable basis.

"A cooperative also must be founded on a spirit and interest born out of knowledge and understanding of the history, purpose, and principles of the cooperative movement," he said.

Excerpts from his address follow: "A true cooperative must be founded on these principles:

"1. One vote must be allowed to each member, no matter how large the investment or how great the use of the services of the cooperative.

"This democratic procedure is quite unique in the world of business. If a cooperative were only a business, then the system of giving to all the same power of vote might well be abolished in favor of a more expeditious method.

"It is true that a cooperative is a business, and it must be an efficient, orderly, well-managed, organization. But, it does not stop there. In this it is singular for the true co-op's greatest aim is the welfare of every human being, within and without its association. It is this concept that underlies and necessarily supports the one-vote principle.

"It bears out the truth that man's best interests are served when each man has opportunity to select those who govern, direct, and serve him. You will hear objections to this one-vote rule. May we remind the objectors that the freedom we prize in this Nation has survived many struggles because every citizen has had the opportunity and responsibility to vote for the public servants who make up our Government."

LOYALTY

"2. Members must contribute their proportionate share to the common good, and only if this is done will the cooperative be of value to the individual and the group. He who joins the cooperative solely or primarily to get something for himself will cooperate only so far as he thinks it is in his own interest. His desire will be to get without giving. He lacks the loyalty essential in time or stress, and unless there are immediate returns, he deserts the cause.

"At times your dividends may be smaller because your cooperative needs to extend its services and enlarge its facilities to serve more people. This is the test time of the true member, and he should stay with the cooperative during this period of reduced dividends. The co-op member will understand that in the long run the more served, the greater the spiritual and cultural and economic wealth of the entire area.

"Eventually, even from a purely economic point of view, service will be cheaper because more will be participating and each individual's burden will be less. Elect a good board, and then believe in their decisions, for they are made with your welfare and your future in mind."

JUSTICE

"3. Social justice and social charity must form the soul and spirit of the true cooperative.

"Justice requires that every man has that which is due him. Social justice obligates individuals to help one another acquire that which is their due. It also imposes an obligation on those who have benefited from a movement such as this cooperative to contribute to and support the cooperative and assist in its program to help others.

"This support is not only financial but also moral and physical through attendance

at meetings, through discussions with neighbors, and through sugested ideas.

"Man was created for a much higher goal than material comfort. We are created for eternal happiness, and all our striving for certain material goods is but to pave the way toward that eternal goal. Certain basic material necessitites are important in reaching our eternal goal."

CONCERN FOR OTHERS

"Therefore, as one family, we must be apprehensive about our neighbor's material and spiritual welfare, for, by the very nature of things, we are social beings, working, playing, and striving for happiness together.

"Social charity in essence is love of all our neighbors and doing whatever we can for them as a group. Actually, cooperatives as well as fostering social justice, are a real form of Christian social charity, for in the words of Pope Pius XI:

" 'When all sections of society have the intimate conviction that they are members of a single family and children of the same Heavenly Father * * * then only will it be possible to unite all in a harmonious striving for the common good.'

"And as Bishop McDonald of Antigonish, Nova Scotia, has said, 'The true spirit of charity does not wait for a crisis to reveal itself. It looks for the opportunity to serve. It is constantly engaged in a positive and constructive work. It is a good thing to feed the hungry. It is a better thing to do away with hunger resulting from economic conditions.'

"This you are doing through your cooperative—all 7,000 members are truly united in a program of Christian social justice and charity. What greater motivation is needed to maintain a strong interest in your association?"

LOCAL AUTONOMY

"4. Coordination of local units must be secured without sacrificing local autonomy through centralized control. Remote and absentee control is one of the serious hazards of a cooperative.

"Under remote control a cooperative may easily be drawn into partisan politics and may be used by individuals to promote their own ends.

"The ideology of a true cooperative implies that through united loyalty and persistent effort, combined with an understanding of their problems, a group can become masters of their own economic destiny."

EQUITY

"5. Sales must be made at current rates and current prices and the distribution of the profits to the patron and producer on an equitable basis. However, it must always be remembered that as G. W. Russell pointed out:

" 'Farmers are manufacturers and as such are entitled to buy raw materials for their industry at wholesale prices. Every other manufacturer in the world gets trade terms when he buys * * * seed, fertilizer, electrical power and needs, implements and feed are the raw materials of the farmer's industry * * * Is it any wonder that agriculture decays in countries where the farmers are expected to buy at retail prices and sell at wholesale prices?' "

KNOWLEDGE

"6. Finally, a cooperative must be founded on a spirit and interest born out of knowledge and understanding of the history, purpose, and principles of the cooperative movement.

"Cooperation is no simple matter. It is born of study, of mutual trust, and of understanding. It cannot be sold on a purely materialistic basis: That is, on the basis of saving money and cutting prices. That is too shallow and does not do justice to the great spiritual content of socio-economic cooperation. Cooperation can liberate the people only if it is intelligently presented to them as a practical method of bearing one another's burdens. * * *

"The purpose of it all, of course, is the welfare of man—economic and social justice that we may better serve God. This cooperative association is an institution for people. It makes the great power of electricity accessible and available to more and more human beings. In doing so, your cooperative, like other cooperatives, preserves ownership, insures freedom, and provides security. It acts as a basis for the preservation of our way of life in this country."

HOOVER REPORT

"There is much discussion today about the direct interest our Government has in the support and furtherance of the co-op movement. There are recommendations in the Hoover report to limit and even give up entirely the REA.

"What the real motivating factors in these recommendations are, we are not sure. But of this we are certain—that the true cooperative institution has done, is doing, and can do more to preserve the rights, freedom, and opportunities for the citizens of this Nation than any other institution.

"Co-ops make people responsible owners. Ownership produces freedom, stability, and security. These are our strongest weapons against those isms which have invaded countries whose citizens were oppressed and despoiled. If our Federal Government desires greater efficiency, it must well consider not less but greater support of true cooperative institutions."

Soviet's Advantage

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article entitled "Soviet's Advantage," written by George Sokolsky, and published in the Washington Post and Times Herald of February 21, 1957. I recommend an analysis of the article by my celleagues in the Senate, in connection with the discussion of the great issue which is now before the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DAYS
(By George Sokolsky)

SOVIET'S ADVANTAGE

Soviet Russia has only one advantage over the United States and it is a tremendous one: The Russians can formulate a program of action based on a design for achievement and can put behind it all the resources of government. This the United States has not been able to do since John Hay was Secretary of State.

Current examples may suffice:

Soviet Russia made the infiltration of the Moslem world a basic policy, trained specialized personnel for it, discovered the particular individuals who would serve the Kremlin's purposes. Whereupon, by the provision of arms, Soviet Russia came into the possession of the foreign policies of Egypt and Syria, stimulated revolutionary and nationalistic movements aimed at the destruction of the last remnants of the British and French empires and the nullification of NATO, particularly the weakening of the Greek and Turkish alliances and the sacrifice of Pakistan to the ambitions of Nehru. By this program, Soviet Russia hoped ultimately to eliminate the offensive capacity of NATO, to vitiate the effectiveness of the Balkan alliance, to destroy the Baghdad treaties and, in due course, to include the entire Arab world in the Soviet universal state.

Having devised so grandiose a program, Soviet Russia moved slowly, permitting the course of events to work themselves, depending, in a measure, upon contradictory conduct of the Western Powers.

The United States has never developed a consistent policy toward the new nations which have been carved out of the Ottoman Empire. Except for the support of doctrinaire anticolonialism, the United States has supported Nasser, a dictator of the Hitler type; it has supported and opposed Israel; it has sold arms to Arab countries and withheld arms; it has poured billions into France for rehabilitation and also favored every revolution against France in North Africa; it has built the alliance between Turkey and Greece, and it has also been sympathetic toward the aspirations of Cyprus which can only lead to a war between Turkey and Greece.

Having done more than any other country to establish Israel as a separate state, it prevented Israel from rectifying its borders and has come up with a proposal for solving the Israel-Egypt situation which defies analysis and understanding. Having encouraged the separatism of Pakistan, the United States has flirted wildly with Nehru, even to the extent of ignoring his imperialism in Kashmir.

These confusions of policy in one area of the earth's surface have covered 3 administrations, 2 Democratic and 1 Republican. It can be taken, from its persistence, as characteristic of policymaking. But one can go much further back to show how characteristic this confusion is. The United States has fought two wars, at great cost in life and wealth, to save Great Britain. It has financed, out of its taxation, Britain's economic recovery, making up its deficits to the tune of tens of billions of dollars.

However, at the same time, going back to when Woodrow Wilson was President, it has been American policy to support independence in India and it can be said that the Gandhi movement would never have achieved its strength were it not for American support. Ultimately, India became a soverign country to the great damage of the British Empire. The United States has since encouraged Nehru in every way possible to build an Afro-Asian alliance which to date has served Red China but never the United States or Great Britain.

The final nail in the coffin of British imperialism was the seizure of the Suez Canal by Nasser which the United States woggled over with such unworkable devices as the users' association, ending in the catastrophic attempt of Great Britain, France, and Israel to counter Russian intrigue in Arabic countries by eliminating Nasser. This effort could have succeeded but for American intervention which has reduced Great Britain further as a power and shifted its interest from the battle against Russia to a free trade market in Europe.

The question that must arise is whether the inability of the United States to formulate policy and to maintain it is a functional failure, or a personnel inadequacy. The answer probably lies deeper. It probably lies in the basic idealism of American thinking, our incapacity to grasp the fact that the human race is not like two peas in a pod. And different kinds of men have different ideas and different ways of life.

Dr. Clarence E. Macartney

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. MARTIN of Pennsylvania. Mr. President, Dr. Clarence E. Macartney was an outstanding preacher of the Gospel. He wrote more than 50 books on religious, historic, and biographical subjects.

He was a great student of Washington and Lincoln.

He passed to his reward a few days ago, and it seemed almost predestined that he would be buried on Washington's birthday.

This significance is borne out by an article appearing in the Pittsburgh Sun-Telegraph of February 22, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BURIED ON HIS BIRTHDAY—WASHINGTON HERO TO DR. MACARTNEY

On a Sabbath morning, 8 years ago today, the Rev. Dr. Clarence E. Macartney, historian pastor of First Presbyterian Church, had this to say:

"On the 19th of December 1799, John Marshall of Virginia arose in the House of Representatives, then meeting in Independence Hall, Philadelphia, he said:

" 'Mr. Speaker, Washington is no more. The hero, the patriot, the sage of America, the man on whom in all kinds of danger every eye was turned, and all hopes were placed, lives now only in his own great actions and in the hearts of an affectionate and afflicted people.

" 'Mr. Speaker, I hold in my hand these resolutions. They are written by General Lee of Virginia. I regret that he is not here to read them:

" '1. That this House join with the President in condolence of this mournful event.

" '2. That the Speaker's chair be shrouded with black and the Members and officers of the House wear black during the session.

" '3. That a committee, in conjunction with one from the Senate, be appointed to consider on the most suitable manner of paying honor to the memory of the man, first in war, first in peace, and first in the hearts of his countrymen.' "

A FULL LIFE

On this Washington's Birthday Dr. Macartney's own funeral was held in First Presbyterian Church.

Like the service for Washington it was not one particularly of mourning but rather of general appreciation by everyone for the common good which comes of full and complete Christian lives.

CHRISTMAS THEME

The Reverend Dr. J. Robertson Macartney, Clarence's preacher brother, set that confident Christian theme a week ago.

When friends inquired about the dying man's condition, he said:

"His Lord is robing him for his coronation."

Arthur G. Ashbrok, a lay friend of Dr. Macartney, suggests the following excerpt from the Macartney First Church sermon of 8 years ago as appropriate on this day:

"What would they (Washington and Lincoln) say on the subject of universal military training if they were here and read the final report of the former Chief of Staff, General Eisenhower, in which he spoke of the dangerous conditions in the world, the possibility of a wheat harvest being destroyed by a bacteria war, and Pittsburgh and other cities which produce the heavy material of war being blotted out?

"A LESSER EVIL

"I feel sure they would say that although universal military training is undoubtedly an evil and far from the American plan of life it is not so great an evil as conquest and subjugation.

"Still the voice of Washington, speaking clearly after the passage of 148 years would say what he said in Congress in 1790: 'To be prepared for war is one of the most effectual means of preserving the peace.'

"LORD'S JUDGMENTS

"What would they say of us today on the subject of religious faith and national morality? In his sublime second inaugural Lincoln recognized the working of the moral law in the history of nations and today he would remind us again and tell us 'that the judgments of the Lord are true and righteous altogether.'

"As for Washington, he would again say:

" 'Of all the dispositions and habits which lead to political prosperity, religion and morality are the indispensable support. In vain would that man claim the tribute of patriotism who should labor to subvert these great pillars of human happiness * * *.'

"To add brightness to the sun or glory to the name of Washington is alike impossible. In solemn awe pronounce the name and in its naked, deathless spendor, leave it shining on."

TVA Bears Brunt United States Defense Power Load

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial in the Florence (Ala.) Times of February 11, 1957, captioned, "TVA Bears Brunt United States Defense Power Load." The editorial was written by Mr. Louis Eckl, the very able editor of the Times, and is most timely and challenging.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TVA BEARS BRUNT UNITED STATES DEFENSE POWER LOAD

The radical shift in the Tennessee Valley Authority's power function which has produced the current power crisis in the valley is clearly demonstrated by recent information.

From TVA's beginning until as late as 1950, TVA's main job was to furnish power to the valley, servicing a relatively minor Federal Government demand on the side. Within the past few years, TVA's main job has become one of furnishing power to the Government, servicing the valley demand on the side.

Since 1950, the normal power users of the valley, residential, commercial and industrial, have doubled their demand for power. But in the same period, the Atomic Energy Commission and other Federal agencies increased their demand by 15 times.

Whereas in 1950 Uncle Sam's agencies used about 15 percent of TVA power, last year they used 57 percent.

Whereas in 1950 the normal valley consumers used about 4½ times more TVA power than Uncle Sam in 1956. Uncle Sam used 1½ times more than all other TVA customers combined.

All the dams on both the Cumberland and Tennessee Rivers in a good wet year could supply less than half the power Uncle Sam himself takes from TVA. About 75 percent of the tremendous expansion in TVA's power generating capacity was necessitated by Uncle Sam's own essential but fantastic power requirement.

It is the suddenness as well as the enormity of the Federal defense demand which has jammed the power load against the ceiling of TVA power capacity.

Ever since the end of World War II, TVA, sole power supplier of the Tennessee Valley region, has been in a desperate race against a power shortage. The race has been literally neck and neck all the way; and in fact, during the 5 years from 1950 to 1955, the peak demand for power in the winter months has exceeded TVA generating capacity practically every year.

It appeared for a time that TVA would lose the race hopelessly sometime in the period 1957–58. No additional capacity had been authorized for 3 years. Had TVA been forced to face the coming years with only the capacity completed by the end of 1956, it would have been about 500,000 kilowatts short in 1957, 1 million in 1958, and nearly 1½ million in 1959. Fortunately, with the approval of the 84th Congress it has begun construction of new capacity to be paid for with power revenues.

If it can make those additions on schedule and if the forecast load is not increased by some severe contingency, TVA hopes to have a margin of capacity over peak load of around 1 percent in 1958 and 2 percent in 1959. This is a pale, frail margin. Private utilities like to maintain between 6 to 8 percent.

Several contingencies could easily arise to dim the picture (and possibly even the homes, stores, and factories of the valley). The schedule presumes, for example, that the Memphis steam plant will come into operation in 1958 and that its capacity will both relieve TVA of the Memphis load and provide some excess for TVA. Any real delay in activation of the Memphis plant would more than consume the 1 or 2 percent margin.

TVA is also assuming that the AEC and other Federal agencies will not up their demand for power violently in the years immediately ahead. However, a world situation which required expansion of atomic material production to safeguard the national security could swell the load not only beyond the TVA margin but even beyond the margin of the surrounding systems with which TVA is interconnected and on which it would have to draw for power.

Similarly, the forecast is based on reasonably normal rainfall in the TVA watershed. One or more dry years like 1955–56 could reduce hydro generation and therefore total generating capacity beyond the slender margin.

Even if all goes well, however, the race is by no means won; nor does the prospect permit any complacency. It takes at least 3 years to add new generating capacity. The load will continues to increase in the years beyond 1960. To meet that increase, TVA must begin additional capacity by 1958 at the rate of 750,000 kilowatts a year.

TVA cannot build that capacity out of accruing power revenue, as it is building the present additions. It is able to pay for the present program only by drawing on the reserves of profit and depreciation it has built up over the years, and by committing the expected profits and depreciation of the next several years. The normal annual prof-

its and depreciation will fall far short of the capital required to keep up with the normal growth of load.

Unless TVA obtains authority to issue its own bonds, or new appropriations from Congress, it will have lost the race against the power shortage about 1960. It will start losing the race, in any case, unless it is able to begin new capacity within a year or so.

Once more it is later in the valley than all may yet have realized.

Room for Opposition

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by Mr. Ted. R. Wylie, entitled "Room for Opposition." This editorial appears in the February 18, 1957, issue of the Northwest Arkansas Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ROOM FOR OPPOSITION

An Arkansas resident, in a letter written to a newspaper, bemoans the fact that some Senators, including Senator FULBRIGHT, of Arkansas, are not willing to go along with Secretary of States Dulles and President Eisenhower without question. The writer appears ready to trust the judgment, without question, of the President on all matters, including foreign affairs, and states that the majority of people will go along with the President no matter how or in what manner he leads.

On the other hand, Adlai Stevenson, speaking in San Francisco Saturday night, declared "The people have had enough of the administration's rock-and-roll diplomacy," which he said has brought the Nation perilously close to disaster in the Eisenhower years.

"We missed our great change, and Hungary was crushed in blood," he declared. "Russian influence has penetrated the Middle East for the first time. Israel is isolated again. Britain and France have blundered and been badly hurt. Our great alliance is tottering. NATO is enfeebled. The Suez Canal is still closed, its future unsettled. Our best friends are crippled by the oil shortage.

"And whose friendship have we won? Nasser's (of Egypt)? I doubt it.

"This is the sorry harvest of appeasing and provoking the Arabs, of misleading and exasperating our friends."

Mr. Stevenson pointed out also, that it was only "yesterday," just before the presidential election, that the President said the crisis in the Middle East appeared to be over, that NIXON said Mr. Eisenhower's leadership has prevented armed conflict over there, that Secretary of State John Foster Dulles described as "amazing" the close policy bond between this country and France and Britain.

He pointed out that after the election, Eisenhower and Dulles proclaimed the Middle East crisis unusually serious, and Dulles warned that any delay in passage of the Eisenhower doctrine resolution would mean domination of the Middle East by the Communists.

Nations of the world have lost confidence in the United States, and there is no wonder. As Mr. Stevenson points out concerning the resolution sought by the President from Congress regarding the Middle East—"The danger isn't overt Communist aggression; but covert Communist penetration: the danger isn't military aggression from the outside, but from the inside."

"The resolution doesn't protect Israel from the Arabs or the Arabs from Israel," he explained. "We won't be on the road to stability until we face real economic and political problems."

There is plenty of room and much reason in Congress for members of the opposite party to take a stand correcting the President and the Secretary of State. The people of America should be grateful for this opposition and the frankness of the Members of Congress who are not afraid to know their views when they realize mistakes of the administration.

Woe to this country if the day ever dawns when all Members of Congress and the people, too, must swallow without an effort not to, all that is cooked up by 1 man, 2 men, or even all the men in any 1 party. Democracy is made up of free-thinking people, and free-thinking representatives of the people. That is the way democracy lives. If ever we have 1 party or 1 man who can say jump and be echoed everywhere without derivation, we've had it—we'll be on the way to ruin.

Marquette Discusses Problems of the Handicapped

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. WILEY. Mr. President, I was pleased to note that 2 Mondays from now there will be held at one of the great educational institutions of America, Marquette University, a regional conferference of the President's Committee for Employment of the Physically Handicapped.

This conference, entitled "The Handicapped at Work," will bring together some of the outstanding leaders in fuller utilization of the resource presented to our country by handicapped folks.

In my judgment, America can go a long way toward resolving her skilled manpower shortage by working with industry and labor toward better use of the skills of the disabled.

Employing the handicapped pays off in every conceivable way—directly and indirectly—tangibly, and in intangible ways.

I have in my hands the text of the advance announcement of the Marquette conference, listing the very fine folks who will contribute to it.

I have also the text of a most interesting article which was carried in the January 27 issue of the Sunday New York Times, written by one of America's greatest experts on rehabilitation, the noted Dr. Howard A. Rusk.

I send to the desk the text of both items, and ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the announcement and article were ordered to be printed in the RECORD, as follows:

PRESIDENT'S COMMITTEE ON EMPLOYMENT OF THE PHYSICALLY HANDICAPPED, REGIONAL CONFERENCE, BROOKS MEMORIAL UNION, MARQUETTE UNIVERSITY, MARCH 11, 12, AND 13, 1957

THE HANDICAPPED AT WORK

Honorary chairman: Robert W. Hanson, judge, municipal court, city of Milwaukee, chairman, Wisconsin Governor's Committee.

General chairman: K. W. Haagensen, director, Public Relations Division, Allis-Chalmers Manufacturing Co., Milwaukee.

Co-chairmen: John S. Coleman, president, Burroughs Corp., Detroit, Mich.; Dwight D. Guilfoil, Jr., president, Paraplegics, Inc., Franklin Park, Ill.; Jess Hogans, director of safety, Fairbanks Morse & Co., Beloit, Wis.; Roy C. Ingersoll, chairman of the board, Borg-Warner Corp., Chicago, Ill.; William Jahn, president, Inland Steel Products Co., Milwaukee, Wis.; Dr. H. Worley Kendall, Institute of Physical Medicine and Rehabilitation, Peoria, Ill.; Gordon Kennedy, Bendix Aviation Corporation, South Bend, Ind.; B. E. Kuechle, vice president, Employers Mutual Liability Insurance Co., Wausau, Wis.; Jennings Murphy, secretary, Wisconsin Pharmaceutical Assn., Milwaukee, Wis.; Lloyd R. Norris, National Metal Trades Association, Chicago, Ill.; Harris Peristein, chairman, Pabst Brewing Co., Chicago, Ill.; W. W. Tudor, vice president in charge of personnel and employee relations, Sears, Roebuck & Co., Chicago, Ill.

Committee chairmen: Attendance—Andrew K. Wilson, vice president, industrial relations division, Kearney & Trecker Corp., Milwaukee, Wis.; exhibits—William Jahn, president, Inland Steel Products Co., Milwaukee, Wis.; L. A. Mingenbach, vice president, Hardware Mutuals, Stevens Point, Wis., institute—Dr. Russell L. Moberly, director, management center, Marquette University, Milwaukee, Wis.; program—Willet S. Main, district manager, Milwaukee office, Wisconsin State Employment Service; promotion and publicity—Sam Sherman, manager, public relations, Pabst Brewing Co., Milwaukee, Wis.

National officers: Maj. Gen. Melvin J. Maas, Chairman, President's Committee, Washington, D. C.; Vincent P. Hippolitus, National Coordinator for Regional Meeting, Liaison Officer, President's Committee, Washington, D. C.; William P. McCahill, Executive Secretary, the President's Committee, Washington, D. C.

Program

Monday, March 11, 1957

9 a. m.: Registration.

10 a. m.: Welcome and introductions.

A Nation on the March, Maj. Gen. Melvin J. Maas, Chairman, President's Committee.

11:30 a. m.: Official opening of exposition.

12:30 p. m.: Luncheon. Speaker, the Honorable Harvey V. Higley, Administrator of Veterans Affairs, Washington, D. C.

Awards presentation.

2:15 p. m.: Panel, Importance of Community Organization. (The job of increasing employment opportunities for the handicapped is the job of the community where these problems actually exist. The community is the scene of action. Here the physically handicapped worker is known. Here his problem can best be considered in relation to job opportunities available in the area. Here the employer is known. Here is where actual employment of the physically handicapped must be accomplished. Here is where organization is most important.)

Moderator: Arthur W. Motley, Assistant Director in Charge of Employment Service, United States Employment Service.

Establishing Need for Community Organization: Justin Johnson, Hughes Aircraft Co., chairman, California Governor's Committee.

Developing Community Interest: John J. Lee, Wayne State University, chairman, Michigan Governor's Committee.

Organizing the Community's Resources: Frank Starkey, Department of Employment Security, chairman, Minnesota Governor's Committee.

Community Committee Year-Round Program: Leslie Jones, Division of Employment Service, chairman, Kentucky Governor's Committee.

Tuesday, March 12, 1957

9 a. m.: Medical panel, What Are the Problems of Employing the Physically Handicapped—Personnel Problems and Medical Problems. (There are many real and imaginary problems raised in connection with employing the handicapped. These divide themselves into personnel problems and medical problems. The purpose of this panel is to bring these problems up for discussion and to bring out various solutions.)

Clifford P. McBride, personnel manager, Pabst Brewing Co., Milwaukee.

Reynolds Olson Tjensvold, staff consultant, Kearney and Trecker Corp., Milwaukee.

Arthur W. Laage, vice president, Industrial Relations, Beloit Iron Works, Beloit, Wis.

Dr. Elston L. Belknap, professor and director of the Department of Occupational and Environmental Medicine, Marquette University, Milwaukee.

Dr. Richard P. Jahn, assistant physician in charge of Milwaukee Works, International Harvester Co.

12:30 p. m.: Employer Institute luncheon. Speakers: National Representative of Business and Industry Stanley L. Hanson, assistant vice president, Liberty Mutual Insurance Co., Boston, Mass.; National Representative of Labor William F. Schnitzler, secretary-treasurer, A. F. L.–C. I. O., Washington, D. C.

2:15 p. m.: Management panel, Translating Interest Into Action. (Many times employers are seriously interested in making progress in employment of the physically impaired, but they do not translate this interest into action chiefly because they are impeded by lack of general knowledge regarding policy or of the steps to be taken in recruiting, evaluating, inducting, and supervising such workers. This panel is designed to answer many of these questions.)

Moderator: William J. Grede, president, Grede Foundries, Inc., Milwaukee, past president, NAM.

Enunciating Policy and Gaining Acceptance: W. W. Tudor, vice president in charge of personnel and employee relations, Sears, Roebuck & Co., Chicago, Ill.

Adapting Employment Practices to Policy: W. J. McGowan, director, industrial and community relations division, Allis-Chalmers Manufacturing Co., Milwaukee, Wis.; Dr. Elston L. Belknap, director, Department of Occupational and Environmental Medicine, Marquette University, Milwaukee.

Supervising the Handicapped: Robert P. Walbridge, Lakeside Bridge & Steel Co., first vice president, National Management Association.

Safety: Edward Haverberg, safety director, American Motors Co., body division, Milwaukee, Wis.

Wednesday, March 13, 1957

Exposition open to schools and general public from noon to 9 p. m.

[From the New York Times of January 28, 1957]

ALL-AROUND ADVANTAGES FOUND IN EMPLOYMENT OF HANDICAPPED

(By Howard A. Rusk, M. D.)

Last year industry made increasing use of physically handicapped workers—to the mutual advantage of both. Once-skeptical employers discovered that such employees, when properly trained and placed in the right job, are valuable company assets.

They have equal or even higher production rates, fewer accidents, less absenteeism, and much less turnover than their nonhandicapped colleagues.

In the first 6 months of 1956 State employment agences found jobs for 150,000 handicapped workers. That was nearly 32 percent more than in the first half of 1955 and more than 25 percent above the average for the first 6 months of 1951–56.

Some of this increase resulted from the general high level of employment. Much of the credit, however, goes to the President's Committee on Employment of the Physically Handicapped and State and local counterparts. The continuing efforts of these groups is having a pronounced effect on industry's attitude toward the problem.

LOWER INSURANCE RATES

Employers have learned, for instance, that insurance rates do not increase when they hire handicapped workers. In fact, the opposite is true.

The initial rate for workmen's compensation insurance depends on the type of job. Rates for clerical help are lower than those for construction workers, since their work is less dangerous. These basic rates are adjusted yearly, depending on the number of accidents and the amount of payments made by the insurance company. Studies have shown that disabled workers are not particularly prone to minor injuries, and those they do suffer are no more disabling than injuries of nonhandicapped workers.

Another factor that has aided in placing the handicapped is an increase in personnel specializing in such work in State employment offices. When one specialist was assigned to work with the handicapped in the St. Louis office of the Missouri State Employment Service, the number of placements more than doubled.

Placement specialists agree that practically any disabled person, regardless of the severity of his disability, can do some productive work if sufficient time and effort are expended in helping him. In the past, however, public employment agencies have not had large enough staffs to provide these. The situation is somewhat improved now, but if additional public funds were invested in such services the returns would be even greater.

In addition to the handicapped workers placed by public employment agencies are thousands of disabled persons who find jobs through commercial and voluntary agencies.

An unusual and effective voluntary organization devoted to placement of the handicapped is the Just One Break, Inc., in New York. Founded 7 years ago by a group of young businessmen, JOB placed 246 disabled men and women with 116 employers last year, 23 percent more than in 1955.

In seeking a short cut to the slow process of employer education, some persons have advocated that the United States adopt a program similar to the provisions of the British Disabled Persons (Employment) Act of 1944. The essential features of this program are:

Registration by the Government of all disabled persons, both employed and unemployed.

Requirements that all employers hire a certain quota of disabled persons.

Reservation of certain jobs, such as elevator operator and watchman, exclusively for handicapped persons.

But authorities in the United States have been strongly opposed to any compulsion in employing the handicapped.

Foreign Affairs—When A Moslem Land Eats Pork

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 25, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article dealing with the situation in Afghanistan. The article was written by C. L. Sulzberger, was published in the New York Times, and was written on February 19, at Kabul, Afghanistan.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOREIGN AFFAIRS—WHEN A MOSLEM LAND EATS PORK

(By C. L. Sulzberger)

KABUL, AFGHANISTAN, February 19.—Afghanistan's foreign policy is compounded of faith, hope, and geography, these three; but the greatest of these is geography. The faith is in assumed ability to accept massive aid from Moscow without losing independence. The hope is that Washington will help this nation escape too stifling a Soviet embrace. And the geography is a 1,400-mile border with the dynamic U. S. S. R.

While London ruled the Indian subcontinent the Afghans played off rival aspirations of the British and Russia Empires. But, as Britain weakened, Russia, strengthened. In 1921 nervous Afghanistan signed a treaty with Moscow guaranteeing independence for the neighboring Central Asian states of Khiva and Bukhara. Almost immediately the Soviets devoured them. All Kabul could do was protest, send a handful of soldiers and rescue from what is now Stalinabad the dissolute Bukharan Emir and his harem.

It would have been convenient for Afghanistan had Hitler won World War II and smashed Britain and Russia. Instead the U. S. S. R. emerged a superpower while the British withdrew entirely from this area, leaving India and Pakistan to squabble in Kabul's rear.

The bosses of this country have no inhibition about using the world "vacuum," so unpopular in other portions of the world. They felt a vacuum behind them sucking the Russians southward. Nervously they shopped about for a new sponsor to replace the disliked but convenient British. They turned to Washington.

But the United States displayed remarkably little interest. While building up the military potential of Iran and Pakistan, we rebuffed every Afghan effort to equip its tiny army. We maintained a moralistic

hands-off attitude on the row between Kabul and Karachi over frontier tribes. Eventually Afghanistan was isolated from the outer world by a Pakistani blockade.

A WARNING TO WASHINGTON

One of the most distinguished local leaders warned Washington: "The Koran forbids Moslems to eat pork. However, its infinite wisdom permits us to ignore this ban when it is a question of starvation. Do not force us to eat Soviet pork."

Soviet pork, unfortunately, became the diet. Since 1954 Kabul has accepted Communist-bloc committments worth about $150 million. About $30 million of this is military.

The extent of this aid can be comprehended only if one realizes that Afghanistan's total annual income is but $18 million at real exchange rates. Can the impoverished land ever repay its Soviet loans and still have any exports left for elsewhere? Has the saturation point been reached?

Prince Naim, simultaneously the King's cousin, the King's brother-in-law and the King's Foreign Minister does not think so. With an air of great sincerity he promises: "You can be sure that we accepted no conditions in our agreements with Russia. We are not the satellite of anyone. We are free and independent, and we intend to remain so."

During the past 2 years, fortunately, the United States appears to have awakened to a certain sense of responsibility in this portion of the world. We urged Kabul and Karachi to dilute the intensity of their fruitless quarrel. Pakistan's embargo has been relaxed. Afghanistan again exports its pitiful larder of goods westward over the Khyber and down to Indian Ocean ports.

RESUMPTION OF AMERICAN AID

We have also decided to resume our own economic assistance—which had bogged down after almost $40 million was poured into a dam and irrigation project without spectaculatar results. We are financing new airline connections and matching Russian engineers in airport construction. And perhaps we are on the verge of helping to extend spurs of Pakistan's maintrunk connections into this still railless land.

Possibly we may yet enable Afghans to avoid too tight a Soviet involvement. Certainly the more commerce they develop through other channels the less they need rely upon the Soviet orbit. But if we hope to help at this late hour we must move swiftly and decisively.

Will we? It is considerably more than a month since Kabul asked Washington if it was considered Middle Eastern in terms of the Eisenhower doctrine. No answer has been received. This Government would appreciate a protective umbrella and material support. It hints its policy might alter. The absence of reply is most discouraging.

Meanwhile affable Soviet technicians filter through towns and villages. Soviet steamrollers pave the capital streets. Soviet engineers build bakeries, dams, gas depots, airfields. And Soviet diplomacy endorses Afghan claims.

Nevertheless the family triumvirate that runs Afghanistan—King Mohammed Zahir, Premer Prince Daud and his brother, Prince Naim, are by inclination conservative anti-Communists. They would welcome precise assurances of American concern. Kabul wishes nothing more than to recommence its traditional balancing act between great-power influences north and south. Do we admit the obvious fact that this is part of Middle East geography? Or will lassitude and indecision let Soviet power drift unchallenged to the Khyber Pass?

Scholarship Funds

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the New York Times on February 4, 1957, concerning most important legislation proposed by the Senator from Florida [Mr. SMATHERS].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FUND IS PROPOSED FOR SCHOLARSHIPS—SMATHERS INTRODUCES BILL—FINANCING WOULD COME FROM SEIZED ALIEN PROPERTY

An unusual measure to increase the Nation's scientific brain power is pending in the United States Senate. Introduced without fanfare by Senator GEORGE A. SMATHERS, Democrat, of Florida, the proposed legislation is entitled the "Veterans' Children's Scholarship Act." It would authorize a fund of $3 million to provide a minimum of 1,500 scholarships a year for study in various fields of science.

The scholarships would be open to an estimated 2,500,000 college-age children of veterans of both World Wars and the Korean conflict. The winners would be selected on the basis of ability, citizenship, and loyalty, with wide distribution being made among the States and Territories.

The unusual aspect of the proposal:

Under the bill no appropriation would be needed to finance the educational program. The funds would come from moneys and properties seized by the United States under the Trading With the Enemy Act. Referring to these assets, Senator SMATHERS remarked:

"I think it only fitting and proper that seized enemy property be used to strengthen our country. This is particularly true since our former enemies have agreed that we keep these seized assets as our only reparations, a point that seems to be too often overlooked."

THREE HUNDRED MILLION DOLLAR BALANCE

Out of about $575 million in enemy assets, some $275 million has been disbursed. Of that amount $225 million went to the war claims fund and $50 million for administering the properties. A balance of $300 million remains, part of which must be held in trust pending the outcome of litigation over some of the vested property. Other sums have been set aside by the Alien Property Custodian for operating expenses.

The Smathers bill would make $100 million available immediately to the Treasury for investment in interest-bearing United States Government securities and also would provide for the continued transfer of additional funds to the Treasury as they became available. The resulting income would be turned over to the National Science Foundation to finance the scholarships.

The Foundation was set up by Congress in 1950 to award scholarships and graduate fellowships for scientific study and scientific work in the mathematical, physical, medical, biological, engineering, and other sciences of accredited institutions of learning." It is spending $3 million a year.

It has been estimated by the Manufacturing Chemists Association that the shortage of scientific personnel will reach 475,000 by 1965, the year of college graduation for students now starting high school. According to the organization, the Nation's technical force totals 930,000, against a need of 993,000, for a shortage of 63,000. By the end of this year, the shortage is expected to grow to 98,000 and thereafter to rise sharply

Oahe Irrigation Project in South Dakota

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two letters which I have received from seventh and eighth grade students at the Wessington Independent School, at Wessington, S. Dak.

Not only am I gratified that these young people take enough interest in their Government to be wholly aware of statements made by President Eisenhower, but also that their interest in their own community and State welfare is such that they have been prompted to write concerning the Oahe irrigation project in South Dakota.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

WESSINGTON, S. DAK., *February 13, 1957.*
Subject: Oahe unit irrigation feasibility study, and Missouri River water allocation.
To: Hon. Senator CASE.

I am a pupil in the seventh grade at Wessington Independent School. I am interested in our State's future.

We in the seventh grade listened to President Eisenhower's state of the Union message in class and heard what he said about water reclamation in South Dakota: "Advance planning studies are scheduled to continue through 1958 on the Oahe unit in South Dakota, if there is sufficient interest to justify doing so."

We are vitally interested in seeing that the Bureau of Reclamation continues the feasibility study of the Oahe irrigation unit.

We are also vitally interested in seeing that South Dakota interest in the Missouri River water allocation is protected at all times. I know you will do your best for the future voters of your State and mine.

Sincerely yours,

TERRY SIEVERS (age 12).

WESSINGTON, S. DAK.

WESSINGTON, S. DAK., *February 13, 1957.*
Subject: Oahe unit irrigation feasibility study, and Missouri River water allocation.
To: Hon. Senator CASE.

I am just a pupil in the eighth grade of Wessington Independent School, but we are interested in this State's future. You make the laws that we follow.

We are all in the eighth grade and listened to President Eisenhower's state of the Union message in class and heard what he said: "Advance planning studies are scheduled to continue through fiscal 1958 on the Oahe unit in South Dakota if there is sufficient interest to justify doing so."

We are vitally interested in seeing that the Bureau of Reclamation continues its feasibility study of the Oahe irrigation unit.

We are also vitally interested in seeing South Dakota's interest in the Missouri River water allocation protected at all times. I hope you will try to do your best, I know you will.

Sincerely yours,

JOYCE ARLENE BONESHAKE (age 14).

WESSINGTON, S. DAK.

Government Spending

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 25, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "It's Time To Back Senator BYRD in His Long Fight Against Government Buildup," published in the Edgefield (S. C.) Advertiser of February 13, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO HALFWAY MEASURES—IT'S TIME TO BACK SENATOR BYRD IN HIS LONG FIGHT AGAINST GOVERNMENT BUILDUP

There are no half-way measures in the application of science, in the splitting of atoms and in the design of electronic devices and mechanical machines.

The calculations are precise. The weights and measures run to many decimal places; the tolerances are microscopic.

But it is customary to use half-way measures in the application of honesty and good sense in the furtherance of free institutions.

Either one believes in the American system to the extent of a willingness to reduce Government spending and Government itself, or one accepts the antethesis of it.

America is going through the shadowy area of political regression. The failure to honestly draw the line, and name those who are found on either side of the political fence is taking a heavy toll among free institutions.

The outcome is not known.

Despite the view that Federal Government is helpless to reduce spending unless the people stop demanding more services, Senator BYRD of Virginia is making an effort to cut the national budget to avoid further inflation and at the same time the increasing dangers of a depression.

Cities, especially, should stop seeking Federal appropriations for pet projects. Let them do their own financing. If local taxes become too heavy a burden, then will come a demand for less Federal spending and a lowering in Federal taxes.

Political leaders must stop the ever-widening search for Government jobs for "influential" constituents.

Political power based on the number of favors that can be handed out at Government expense must be forfeited.

Families must encourage something better than an ambition for Government employment and catering after political big wigs.

It's time to back Senator BYRD in his long fight for a reduction in Government spending and Federal powers. He has been fighting for economy in Government a long time.

Oil Industry Regulation Invited

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 25, 1957

Mr. PELLY. Mr. Speaker, recently I urged that in any investigation or study of the oil industry the House Committee on Interstate and Foreign Commerce include the Pacific Northwest. In particular I pointed out the recent sharp increase in the retail prices of fuel oil for heating in the Seattle area.

A memorandum of the General Petroleum Corp. was immediately furnished me covering the so-called misinformation in my remarks, and in fairness to the oil industry, under unanimous consent, I ask to have it printed in full without deletion of any kind in the RECORD following this statement. Under unanimous consent I also ask to include the posted price chart of the Home Oil Co., a distributor of heating oils, showing the prices in the Seattle area starting January 1, 1955.

Mr. Speaker, both the consumer and the industry are entitled to a presentation of the facts in the court of public opinion. Corporations are entitled to profit as the consumer is entitled to protection in the event full and free competition in the market place does not exist.

I sometimes wonder if the situation in the oil industry is not such as to justify Government regulation similar to regulation of other sources of energy under a public utility commission. Then a fair profit and depletion allowance could be established and prices approved which protect the public. I am not prepared to say this is the answer, or even that the industry by monopolistic control of the production and supply of petroleum and petroleum products should be considered a public utility, but I do say there are indications such regulation is being invited. Every householder who has an oil furnace or heater is finding his fuel bill painfully and increasingly high. If the same people discover oil company profits are likewise climbing there will be a rising demand for Government action.

The following is a posted price chart of the wholesale and retail prices in the Seattle area starting from January 1, 1955:

P. S. 300—Light fuel

Date	Wholesale price	Dealer margin	Retail price
Jan. 1, 1955	$2.60	$0.40	$3.00
Oct. 18, 1955	2.80	.40	3.20
Feb. 8, 1956	2.95	.50	3.45
Apr. 10, 1956	3.00	.50	3.50
Nov. 26, 1956	3.50	.57	4.07
Jan. 19, 1957	3.65	.59	4.24

These prices are based on 30 barrel deliveries of P. S. 300 (light fuel oil), which is the most common type of delivery. However, there are variances in the prices according to quantity delivered.

Taking the posted price of January 19, 1957, the schedule below is, and has been for the past 30 years, followed:

Barrels delivered:	Cost per barrel
10–14	$4.45
15–25	4.37
26–49	4.24
50–99	4.16
100 and up	3.81

MEMORANDUM TO HON. THOMAS M. PELLY FROM GENERAL PETROLEUM CORP., RE PACIFIC NORTHWEST PETROLEUM PRICE INCREASES

We have noted from the CONGRESSIONAL RECORD of January 31, 1957, that on that day you announced that you have requested that the Interstate and Foreign Commerce Committee include the Pacific Northwest in any investigation of the oil industry which the committee contemplates.

In your request for this investigation you referred to information that had been given to you on added overall supply of petroleum on the west coast and recent price increases in the Pacific Northwest. We feel that you were misinformed on these two points and are accordingly taking the liberty at this time of advising you of the actual petroleum supply and demand situation on the west coast, and the facts relative to recent price increases in the Pacific Northwest.

First, you stated: "In the Pacific Northwest the situation has changed greatly in the last few years, which I think bears looking into. For example, we have added to the supply by an oil pipeline from Canada, and this connection have a new refinery at Ferndale, Wash. Also there is a new refinery at Anacortes, and a third one in the process of construction. Other companies have announced that they are putting in refineries in the near future. But the point is that the supply of oil from Canada should have increased the overall supply, and accordingly reduced the cost of petroleum products in the area."

Canadian crude oil has not increased the overall supply of oil on the west coast but has merely assisted in supplementing a growing deficiency of California oil.

Historically, the Pacific coast area has been self-sufficient in petroleum. For many years, California crude oil, refineries and transportation facilities, have supplied the demands for petroleum products in this area, plus the Pacific foreign and intercoastal markets in times of peace, and added military demands in times of war.

Now, however, the California industry has reached a point where local crude oil is no longer adequate to meet current demands. Total stocks of crude oil and products are close to minimum working level, and supplemental supplies of both are being brought into this area to meet current demand. This change has occurred principally because demand for petroleum products increased faster than the west coast industry was able to discover and develop new crude oil reserves, despite an aggressive exploration program in California.

In the last 5 years the deficiency of local supply has increased from 42,000 barrels per day in 1952 to 226,000 barrels per day in 1956.

West coast petroleum industry supply versus demand, 1952–56

[Expressed in thousands of barrels per day]

Year	Local supply	Total demand	Deficiency
1952	1,064	1,106	42
1953	1,085	1,152	67
1954	1,059	1,155	96
1955	1,056	1,284	228
1956	1,044	1,270	226

During 1956 it was necessary to import 179,000 barrels per day of crude oil and 66,000 barrels per day of finished products to meet current demands and replenish inventories which were then below the desired minimum working level. The crude oil came principally from Canada, Middle East, Far East, and Venezuela. Finished products were obtained from United States sources.

California crude oil production has declined from a peak 1,010,000 barrels per day in 1953 to a current rate of production of approximately 940,000 barrels per day. Crude oil reserves in California are being liquidated. The deficit in 1954 was 31 million barrels. In 1955 it was 87 million barrels. The figure for 1956 is not yet available, but it will be substantial. It is anticipated that in future years the West Coast will have to look to outside sources for increasing quantities of oil to satisfy the ever-increasing demands.

Refineries in the Pacific Northwest using Canadian crude are an important part of the West Coast industry program to supplement California supply. However, the two refineries now operating at Ferndale and Anacortes, and the 1 building at Tacoma when operating at capacity, will supply only one-third of the total current demand for petroleum products in the Pacific Northwest. These three refineries will have a throughput capacity of approximately 90,000 barrels per day, whereas the demand for petroleum in Washington and Oregon alone is close to 275,000 barrels per day.

While these three refineries have the capacity to supply approximately 33 percent of the total demand for petroleum in Oregon and Washington, they would not be able to supply more than 20 percent of the demand for fuel oil. The refinery yield of fuel oil from a barrel of Canadian crude oil is approximately 13 percent. Processing 90,000 barrels a day of Canadian crude oil would yield 12,000 barrels per day of fuel oil. The demand for fuel oil in Oregon and Washington during 1956 averaged 70,000 barrels per day. It is evident that even though these three refineries had been operating at capacity during 1956, there would have had to be 58,000 barrels per day, or 83 percent, of the fuel oil used in Washington and Oregon supplied by tanker from California refineries.

Second, you said: "In the face of these new developments do we find that the consumer is benefitted and the cost has been reduced? On the contrary, I have just received a strong protest regarding the enormous increase in fuel oil prices by the major oil companies and their subsidiaries in this area. In this connection I am told that fuel oil—Pacific specifications 300 and 400—prices have been raised from $3 per barrel to $4.24 per barrel within the last year. The last raise, according to my information, was 17 cents per barrel effective January 19, 1957, which is included in the total price raise shown for the past year."

The price increases referred to here (P. S. 300), from $3 per barrel to $4.24 per barrel, did not occur during the past year but actually over the past 4 years.

The price of $3 per barrel for Pacific specification 300 fuel oil at Seattle was established in February 1953, at the expiration of OPS controls.

The current price per barrel of Pacific specification 300 and Pacific specification 400 at Seattle is 85 cents and 65 cents per barrel, respectively, higher than prices in effect in February 1956. During this same 12-month period the price of California heavy crude oil, the principal crude oil from which heavy fuel oil is refined, has increased 65 cents per barrel. As the following table illustrates, justification of recent United States crude oil price increases has been well documented in the press and in hearings before congressional committees.

Date	California heavy crude oil Midway 14°	Light fuel P. S. 300 tankwagon Seattle	Bunker C fuel oil P. S. 400 Seattle
February 1956	$1.98	$3.35	$2.40
March 1956		3.40	2.45
November 1956	2.38	3.90	2.90
February 1957 (current)	2.63	4.20	3.05
Increase	0.65	0.85	0.65

The current price of Canadian crude oil (37° gravity) delivered to refineries in Washington is $3.58 per barrel. Fuel oil refined from this crude oil sells in Seattle for $3.05 per barrel (P. S. 400), and $4.20 per barrel (P. S. 300). Therefore, one grade of heavy fuel oil sells for $0.53 per barrel less than the crude oil from which it is refined, and the second grade for $0.62 more than the cost of the cost of the crude oil. The average price of these two grades of heavy fuel oil is $3.625 per barrel, only 4.5 cents per barrel more than the crude oil from which it is refined.

	Per barrel
Canadian crude (37°) delivered to Washington refineries	$3.58
Banker C fuel oil PS 400 Seattle	3.05
Light fuel oil PS 300 tankwagon Seattle	4.20
Average price of two grades	$3.625

Of course, the cost of the crude oil is only one of the many costs that must be recovered in the price of the finished products. Refining and marketing costs are major elements of total costs which are also increased due to increases in wage rates, material prices, transportation rates, taxes—all of the elements entering into costs.

West coast industry stocks heavy fuel oil have been below desired minimum working levels since July 1955. Current stock of approximately 12 million barrels are 5 million barrels below the desired level. Heavy fuel oil price increases have been necessary, not only to offset increased costs, but also to prevent excessive shipments to outside domestic and foreign markets where fuel oil is in short supply and where prices are higher than on the west coast.

Fuel oil prices at Seattle are lower than on the east coast.

	Seattle	New York
Bunker C fuel oil—P. S. 400	$3.05	$3.30
Light fuel—tankwagon—P. S. 300	4.20	5.34

The petroleum industry welcomes the availability of natural gas in the Pacific Northwest. We are intensely interested in the industrial development of this area and feel that with natural gas making all three sources of energy now available: petroleum, natural gas and hydroelectric power, new industries will be attracted to this area which will be to the general welfare of this great and growing section of the United States. We do not look upon natural gas as an unwanted competitor, but rather as a partner in sharing the burden of supplying energy for the citizens and industries of the great Pacific Northwest.

We hope that we have been of some service to you in furnishing you with this factual data on the petroleum situation on the Pacific Coast, and more particularly the Pacific Northwest. If we can be of any further service to you, now or in the future, we will consider it a privilege to do so.

West coast crude and product prices used here are those posted by General Petroleum Corp., one of the principal refiners and marketers of the Pacific Northwest.

Although petroleum products are priced on a volumetric basis rather than on a weight basis, as many commodities are, it is interesting to note that fuel oil used in Seattle which has been shipped by tankers from California refineries, 1,100 miles away, or refined from Canadian crude oil delivered to Washington refineries, via a 700-mile pipeline, is selling today at less than 2 cents per pound. Compared to the price of any other commodity with like importance to the general welfare and security of our country there is no doubt that fuel oil and all petroleum products are reasonably priced. The industrial supremacy of the United States and our standard of living, undreamed of in other parts of the world, are due largely to the ability of the petroleum industry to furnish petroleum products in quantities required, when and where needed, and at prices that encourage rather than restrict their usage.

The Wave of Mergers

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given by me before the Economic Club of Southwestern Michigan, at the Whitcomb Hotel, St. Joseph, Mich., February 21, 1957:

THE WAVE OF MERGERS

This evening I should like to discuss with the distinguished members of the Economic Club of Southwestern Michigan a matter of deep national concern—the wave of industrial and bank mergers that is reorienting our system of free, competitive enterprise.

My plan is to examine into the nature and extent of the present merger movement; the purpose of the Celler-Kefauver Antimerger Act; its enforcement by the Attorney General and the Federal Trade Commission; and finally, the necessity for additional legislation.

DIMENSION AND CHARACTERISTICS OF THE MERGER MOVEMENT

At the outset it is clear that in recent years the rising tide of mergers both in the industrial and banking fields has played a key role in hastening the reduction of competition and concentrating economic power in the hands of industry superstructures.

Let me cite a few figures to indicate the extent of this trend. Considering only the industrial segment of the economy, in the 6 years from 1951 through 1956 there took place 4,686 mergers.[1] Of this amount, 2,267 were corporate mergers and acquisitions in manufacturing and mining.[2] Beyond that, in 1956, the number of mergers in manufacturing and mining set a 26-year record and proceeded at a rate four times that of 1949. As the New York Times concluded, "The wave of mergers is now more like a floodtide so wide and pervasive has it become."

This corporate merger trend has taken many different forms. For one thing, through so-called conglomerate mergers, huge corporations, not content to dominate

Footnotes at end of speech.

one industry, are penetrating many other industries where the product or service offered is wholly unrelated to their original field. Justification frequently offered is that such activity is necessary to provide greater diversification or round out a product line. Whatever the merits of this argument, in many instances when this kind of consolidation ocurs, the sheer economic power and vast financial resources of the giant entering a new industry threatens the continued existence of smaller competitors.

The pattern of diversification is indeed a grotesque one. A leading hard coal producer announces purchase of an underwear company. A textile company enters the electronics business. A bus and engine manufacturer takes over food wholesalers and retail food chains. Little wonder that the Wall Street Journal commented that "the type of merger activity now going on strikes an old fogy with a sense of complete bewilderment. Rail equipment builders enter the road machinery and electronics field. A coal mining organization acquires oil, shipping construction machinery, and machine tool firms. A construction contractor acquires a steel mill and a paint maker."

Not only do many such mergers have serious anticompetitive implications, there are other considerations too. Frequently when a company is taken over by another, the plant of the acquired concern is closed down, people are thrown out of work and the economic stability of the entire community is threatened. The textile industry is a case in point. Because of widespread merger activity by large textile companies, many mills have been shut down, causing severe unemployment and community distress. Indeed, in many instances, the closed mills formed the economic heart of the community upon which local jobs, stores, professions, services, and churches depended for income.

I recognize, of course, that not all mergers have had these unfortunate consequences. Many—and those in the automobile industry are typical—have helped competition by strengthening the market position of the combined companies and their ability to compete more vigorously. Also on the positive side of the ledger, some corporations have averted bankruptcy in this way. And some firms have assured themselves of adequate supplies in periods when materials are scarce and of guaranteed market outlets in periods of recession.

On the other hand, many corporate acquisitions have not had such a fortunate competitive result. Certain giant corporations with a voracious appetite, which is sometimes stimulated by tax considerations and personal factors of prestige, have taken over growing, efficient, profitable and vigorously competitive businesses.

In dealing with this problem there are, I think, a few obvious fundamentals which are sometimes lost sight of, if not ignored entirely. The basic objective of the antitrust laws is the preservation of a free competitive enterprise system in which economic activity is controlled so far as possible by the market and not by men. Those who enacted our antitrust laws believed that the market should control business decisions, not business men the market. They strove to safeguard and preserve genuinely workable, effective competition, the kind where prices, output, wages and other rewards depend not on the decisions of a few but result from the day-to-day actions of rival business firms, independently motivated. This decentralized brand of decision-making, Congress believed, would ensure a maximum not only of individual opportunity, but of political liberty.

The inescapable fact is that these basic objectives have been frustrated in considerable part by mergers which have resulted in giant aggregations that have obtained economic power to control price and supply and to dominate many industries. Indeed, the long-term rise in industrial concentration in this country is due in considerable measure to what may economist friends refer to as external expansion of business, which is another name for mergers. Thus, the power of the industrial leaders in steel, copper, cans, dairy products, to name but a few, is primarily attributable to this reaching out and buying up other concerns, not to natural growth. Without overlooking the part tax considerations haye played in pushing forward the merger movement I think it significant that many major companies in this country have acquired nearly all their assets by merger.

Beyond this, many mergers have a competitive effect that mushrooms out. The impact reaches small firms which may have to compete with a consolidated corporation; it reaches customers of the acquired enterprise who have found their former source of supply cut off; it reaches former suppliers of either of the combining corporations who find that their products or services are no longer needed; and, it reaches firms who have lost an important outlet for their products as a result of the acquiring corporation's decision to have its products sold exclusively to the marketing organization of the acquired corporation.

Up to this point I have referred to the rash of mergers that has beset the industrial sector of the economy. Let me hasten to add that the financial world is likewise experiencing a multitude of bank mergers that has concentrated the Nation's banking business into fewer and larger banks. In the period from 1950 through 1956, for example, some 1,017 of the country's commercial banks have disappeared by way of mergers or consolidations in a rapidly accelerating trend that represents a major development in banking.[3]

The banking system of this country traditionally has relied for its vitality on vigorous competition by a multitude of independent banks, locally organized, locally financed, and locally managed. Unlike other countries, such as Great Britain and France, where a few institutions control nearly all of the banking facilities, the American system is based on unit banking—that is, strong, growing community banks which provide a wide range of financial services to the people in that area. Contrary to these fundamental principles, the spate of bank mergers is contributing to unprecedented concentration in our present-day banking system. There is hardly room for complacency when the 100 largest banks in the Nation now control over 46 percent of all the commercial banks in the country and more than 48 percent of the Nation's commercial bank deposits; when in each of a majority of the leading financial centers of this Nation, a handful of banks control a predominant share of all the commercial bank assets of the area. In my own city of New York, for example, the financial center of the Nation, the 4 largest banks control over 60 percent of all commercial bank assets while the 2 largest alone control over 42 percent of these assets.

Let me say emphatically that this trend presents a serious danger to the independent banking system; permitted to continue unchecked, it could have the most dangerous consequences for the entire competitive economy which depends for its lifeblood upon banking credit.

THE CELLER-KEFAUVER ACT AND ITS ENFORCEMENT

Against the background of a wave of mergers in the industrial field, the Celler-Kefauver Antimerger Act was placed on the statute books in 1950. Its principal purpose—to limit future increases in the level of economic concentration resulting from corporate acquisitions and to block resulting monopolistic tendencies in their incipiency.

This act closed a widely exploited loophole in the Clayton Antitrust Act of 1914, which existed because section 7 of that act applied only to corporate mergers accomplished by stock purchases. Companies could circumvent the law by the simple device of buying up a plant or other assets of a second concern, thus leaving the enforcement agencies virtually powerless to proceed. The new law, among other things, plugged this convenient gap by amending section 7 to forbid corporate mergers no matter if accomplished by purchase of assets of purchase of stock if the effect may be substantially to lessen competition or tend to monopoly in any section of the country.

I would add that this new law does not prohibit all mergers; nor does it prohibit mergers between competitors where the effect on competition is not substantial. Imbedded in the legislative history is the principle that consolidations which enable smaller concerns in an industry to compete more effectively are in the public interest.

The act made another significant change. It enlarged the coverage of old section 7 to apply to all types of corporate mergers and acquisitions—horizontal, vertical, and conglomerate—which have the specified effects on competition.[4] As the House report observed, this change was intended "to permit intervention * * * when the effect of an acquisition may be a significant reduction in the vigor of competition, even though this effect may not be so far-reaching as to amount to a combination in restraint of trade, create a monopoly, or constitute an attempt to monopolize. Such an effect may arise in various ways, such as elimination in whole or in material part of the competitive activity of an enterprise which has been a substantial factor in competition, increase in the relative size of the enterprise making the acquisition to such a point that its advantage over its competitors threatens to be decisive, undue reduction in the number of competing enterprises, or establishment of relationships between buyers and sellers which deprive their rivals of a fair opportunity to compete."

But passage of legislation such as this can be largely nugatory unless accompanied by vigilant, hard-hitting enforcement. For that reason most pertinent is the antimerger enforcement record of the Department of Justice and the Federal Trade Commission—agencies which have concurrent responsibility for administering the provisions of the Celler-Kefauver Act. To assess this record, our House Antitrust Subcommittee made extensive investigation and conducted lengthy hearings in 1955. Another purpose was to ascertain the dimensions of, and generating forces behind, the merger movement; and to obtain recommendations as to the need for additional legislation.

On the basis of this investigation, the committee found, in its report issued December 1955, that the merger enforcement record of the two agencies was far from reassuring. It pointed out that in the 5 years since the Celler-Kefauver Act was adopted, but 11 complaints were filed, 5 by the Department of Justice, and 6 by the Federal Trade Commission. It also found that no case had even reached the point of final decision either in the courts or in the Commission.

Viewed against the backdrop of over 3,000 corporate mergers, this paucity of proceedings led the majority of the Antitrust Subcommittee to conclude that the "Department of Justice and the Federal Trade Commission * * * made but a token gesture at enforcement"; that "both * * * agencies * * * failed to execute the provisions of law promptly, vigorously, or effectively."

Footnotes at end of speech.

Footnotes at end of speech.

The committee added that "merger enforcement activity has been seriously hampered by lack of sufficient funds which has prevented the Department of Justice and the Federal Trade Commission from assigning more than a corporal's guard of attorneys and economists to merger work." In the committee's opinion the "merger movement is too widespread and too pervasive for anything less than a full-scale, concentrated enforcement effort to produce adequate results and adequate results can be accomplished only if necessary funds are made available."

In view of these considerations, the committee recommended that "Congress make a substantial increase in its appropriations to the Department of Justice and the Federal Trade Commission, with the increase earmarked specifically for merger work."

I am happy to report that the efforts of our Antitrust Subcommittee have borne some fruit. The Congress has followed its recommendation and appropriated an additional $1 million to the Federal Trade Commission for the fiscal year 1957 with the increase specifically allocated by the Congress to merger enforcement work. Result is that about one-fourth of the money and manpower of the Commission is now designated for such work.

What is more, the Commission has stepped up sharply enforcement of the Celler-Kefauver Act. Since December 1955 when our committee issued its report on corporate and bank mergers, the Commission has started proceedings in 11 cases, which is almost double the number of cases filed by the Commission in the 5 years from December 1950 to December 1955. Moreover, since December 1955 the Antitrust Division has brought 6 new merger cases, which exceed the number brought in the preceding 5 years. Equally important, the Antitrust Division intends that merger surveillance occupy a major place in its enforcement program this year.

The new emphasis given corporate mergers is a most salutary development and one deserving of commendation.

In one respect, though, both the Federal Trade Commission and the Department of Justice have fallen down by failing to proceed against so-called conglomerate mergers. Despite the fact that the Celler-Kefauver Act applies with equal force to such transactions and that such mergers encompass over half of the present mergers and acquisitions, each agency seems to assume that enforcement action is not possible. In fact, their attitude in this area seems to be one of futility.

I do not minimize the difficulty in demonstrating competitive effects of a given conglomerate merger. But the problem is not an insuperable one. Other agencies of the Federal Government have successfully coped with far more vexing questions. It is imperative that the Commission and the Department of Justice overcome their attitude of passive acceptance of conglomerate mergers, develop appropriate standards of enforcement, and proceed vigorously in this vital area of corporate activity.

THE NEED FOR ADDITIONAL LEGISLATION

In addition to these considerations, investigation by our Antitrust Subcommittee has pointed to the need for additional remedial legislation dealing with the mounting tide of corporate and bank mergers. It has pointed to the need for a measure such as the premerger notification bill, H. R. 2143, which I introduced on January 7, 1957. That bill combines substantially the provisions of two bills I introduced during the last Congress which passed the House of Representatives unanimously and were pending in the Senate when Congress adjourned.

The first purpose of my bill, H. R. 2143, is to prevent bank mergers achieved by acquisition of assets where the effect may be substantially to lessen competition or to tend to create a monopoly in any section of the country. Section 7 of the Clayton Act, as amended by the Celler-Kefauver Act, now covers bank mergers achieved by stock acquisitions but fails to include bank mergers accomplished by means of asset acquisitions. This bill will close the gap in existing law and will provide the Federal Reserve Board and the Attorney General with the same authority to move against asset acquisitions by banks as against stock acquisitions.

The second objective of my bill is to require parties to a proposed merger to notify the Attorney General and the Federal Trade Commission or other appropriate board 60 days in advance of the transaction. Under the bill, parties to a proposed merger where the combined capital structure would exceed $10 million cannot consummate the transaction until 60 days after notice is given to enforcement officials. With the notice merging corporations would be required to furnish to the Government specifically enumerated information to enable the Attorney General or the appropriate agency to assess the merger's probable impact on competition. Willful failure to submit the notification or to furnish the required information would be subject to a penalty of from $5,000 to $50,000.

The bill sets forth 10 categories of corporate transactions which are exempt from the notification and waiting provisions of the bill. In addition, the bill requires the Federal Trade Commission or other appropriate Government agency, upon approval of the Attorney General, to establish procedures for waiving all or part of the notification of waiting requirements in categories of cases where notification and a waiting period is deemed unnecessary to effectuate enforcement of the antimerger law.

Under the bill, failure by the Department of Justice or the Federal Trade Commission to bring suit within the 60-day waiting period does not constitute approval of the transaction or prejudice the Government's right to institute proceedings at a later date to challenge the legality of the merger. Nor does the bill require in any way advance agency approval of mergers.

The third purpose of the bill is to provide the Federal Trade Commission with authority to seek a court order to prevent consummation of a merger pending the issuance of a complaint and the completion of the Commission's administrative proceedings. This amendment would give the Federal Trade Commission, which has concurrent jurisdiction with the Attorney General to enforce the merger provisions of the Clayton Act, authority similar to that now possessed by the Attorney General to seek a preliminary court injunction restraining consummation of a merger while adjudication of its legality is pending.

There follows some of the reasons why such legislation is imperative.

At present the staff of the antitrust enforcement agencies must rely upon newspapers, financial periodicals, trade journals, and other publications for information regarding proposed mergers which the companies themselves could readily supply. These procedures are unsatisfactory, especially since many significant mergers are not publicized in advance of consummation.

The enforcement agencies also are confronted with the problem of collecting elementary information about the companies involved in a proposed merger in order to determine the merger's impact upon competition and whether a full investigation should be made. While such information is ordinarily requested from the companies, at present they have no legal obligation to furnish the information requested, or to make it available expeditiously.

Not only will premerger notification ease this enforcement burden, it will afford the enforcement officials a reasonable period of time in which to study the competitive implications of a merger before deciding whether to seek a preliminary injunction restraining its consummation pending a determination of legality.

Furthermore, lack of a provision giving the Federal Trade Commission authority to seek a preliminary court injunction to prevent merger consummation has created a most serious loophole in the Celler-Kefauver Antimerger Act. Under present law, companies can obtain the benefits of a completed merger even though its legality has been challenged by the Federal Trade Commission and notwithstanding the fact that pending final disposition of the complaint, the merger may have caused the very damage to the competitive structure of the industry which the Celler-Kefauver Act was intended to safeguard. Then, too, in many mergers the acquired competitor is completely swallowed up and disappears as an identifiable entity, making it practically impossible hereafter to restore completely the preexisting competitive situation.

In this context, while premerger notification is a necessary preliminary step, it is just as important to provide the corollary power to seek an injunction preventing the commingling of the assets, management, and productive facilities to a point where they cannot be effectively unscrambled.

Despite the clear purpose of this measure, some business organizations have not only misstated its objective, but have incorrectly fostered the notion that it requires advance agency approval of corporate mergers. For instance, as Judge Hansen, head of the Antitrust Division pointed out recently:

"A survey of business opinion regarding premerger notification legislation, conducted by the Diversification Institute, Inc., came across my desk. That survey asked 500 industrial corporations, among other things: 'Do you favor legislation similar to H. R. 9424[5] described in the accompanying insert?' It, however, is dangerously misleading. For that description apparently assumed that H. R. 9424 provided, not for premerger notification, but rather for premerger approval. Thus the accompanying description averred 'approval [I repeat, "approval"] of the proposed merger would not exempt the parties from subsequent antitrust attack. Nor [and I still quote from the description] would disapproval deprive them of any defense available to them in such proceedings, in the event they went ahead with the transaction notwithstanding the disapproval.' Small wonder, then, that many questioned objected that the proposed legislation 'would give Government agencies powers that belong to the courts.'"

It is my considered judgment that should the business community be informed fairly and adequately of the details of this legislation, it would have no objection to its passage particularly since evenhanded enforcement requires notification. With that requirement incorporated in the statute, the company that tries to obey the law and seek advance clearance from the Department of Justice and the Federal Trade Commission will no longer stand by and watch its competitor, who chooses to remain silent, consummate a merger and thereafter rely on the natural indisposition of the enforcement agency to bring suit to unscramble the commingled assets at some later date.

It must also be observed that enactment of such legislation would benefit the business community itself, since disruption of business plans is lessened by agency action before merger consummation. Some companies, in fact, argue that if the Federal en-

---

Footnotes at end of speech.

forcement agencies are to proceed at all, they should sue before consummation.

Certainly there is much that an organization such as yours can do in stimulating public discussion so that the import and objectives of legislation such as this can be fully understood.

---

[1] Data recently supplied the House Antitrust Subcommittee by the Federal Trade Commission show the following number of industrial mergers for each year since 1951:

Year:	Annual total
1951	703
1952	822
1953	793
1954	617
1955	846
1956	905

[2] The Federal Trade Commission reports the following number of mergers in manufacturing and mining for each year since 1919:

Year:	Annual total
1919	433
1920	760
1921	487
1922	309
1923	311
1924	368
1925	554
1926	856
1927	870
1928	1,058
1929	1,245
1930	799
1931	464
1932	203
1933	120
1934	101
1935	130
1936	126
1937	124
1938	110
1939	87
1940	140
1941	111
1942	118
1943	213
1944	324
1945	333
1946	419
1947	404
1948	223
1949	126
1950	219
1951	235
1952	288
1953	295
1954	537
1955	525
1956	537

[3] The following table supplied the House Antitrust Subcommittee by the Federal Reserve Board shows the annual number of bank consolidations and absorptions for each year from 1921:

Year:	Annual total
1921	305
1922	394
1923	392
1924	373
1925	363
1926	462
1927	567
1928	534
1929	636
1930	769

1946	93
1947	84
1948	75
1949	77
1950	91
1951	82
1952	100
1953	116
1954	207
1955	232
1956	189

[4] Horizontal acquisitions are those in which the firms involved are engaged in roughly similar lines of endeavor; vertical acquisitions are those in which the purchase represents a movement either backward from, or forward toward, the ultimate consumer; conglomerate acquisitions are those in which there is no discernible relationship in the nature of business between the acquiring and acquired firms.

[5] H. R. 9424 is a bill I introduced last year which is essentially similar to my present bill, H. R. 2143.

Death of Rabbi Joseph Rauch

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Monday, February 25, 1957

Mr. MORTON. Mr. President, last week the citizens of Louisville, Ky., sustained a great loss in the death of Rabbi Joseph Rauch. The entire community mourns his passing. The community he loved and served in so many ways paid immediate tribute to his memory. Flags flew at half mast atop the city hall and Jefferson County Courthouse. A proclamation of sympathy was issued by the Mayor of Louisville.

Monsignor Felix N. Pitt, secretary of the Catholic school board, referred to the late rabbi as "an untiring and unpaid public servant—a man who loved the people."

Dr. Duke K. McCall, president of the Baptist Theological Seminary, characterized him as "a man of deep spiritual convictions and spiritual insights which he combined in an unusual way with hardheaded, practical commonsense."

"He threw his unusual personality into every forward movement of the community," said Methodist Bishop William T. Watkins.

Dr. Rauch was born in a small village in Austria, and came to this country by himself at the age of 12. He received doctorate degrees in theology, divinity, and law. Despite his scholarliness, he never lost the light and informal touch. To his fellow-Rotarians—and he was an eager Rotarian—he was Joe Rauch. He was 1 of 3 men who organized Louisville's first Community Chest campaign. His services to his community are too many to list here. No one has done more for Louisville, and no one will be more missed than Dr. Joseph Rauch.

To Mrs. Rauch, who was his faithful helpmate during so many years in Louisville, I express my deepest sympathy.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Louisville Courier-Journal, which is a tribute to Joseph Rauch.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GREATNESS OF SPIRIT IN A SIMPLE FRAME

It is given to few men to be both respected and beloved by an entire community. Such a rare individual was Joseph Rauch. It is hard to think of any resident of Louisville whose death could bring such a feeling of personal loss to so many and such varied people.

He was proud to be a Louisville citizen. He gave infinite time and patient effort to civic affairs, not as a duty, but as a willing tribute to a community he loved. His far-ranging civic activities brought him into close touch with thousands of people who never heard him preach a sermon at Temple Adath Israel in all his 44 years there. Other thousands who never met him fell under the influence of his warm, benign, richly tolerant nature as it was displayed on the WHAS Moral Side of the News.

It was of only secondary importance that Rabbi Rauch happened to have been born in one of the more remote villages of the old Austro-Hungarian Empire, that he was technically an immigrant, and that he belonged to a relatively small religious group in the community. If there is any significance in these facts, it is only that they demonstrate what loving service a man can bring to an adopted land and an adopted city.

Dr. Rauch's interested were world wide. His mind was an instrument of adventure and exploration down to the very last evening of his life. Yet this keen traveler in the broad realms of the intellect was happily at home in Louisville, with his well-loved wife at his side. He was never bored, never impatient, never without the humor that bubbled up from the depths of a truly kind heart.

This small, modest, self-effacing man will be remembered as a great human being.

Mount Rushmore Is Powerful Magnet

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, February 25, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial taken from the Sioux Falls, S. Dak., Daily Argus Leader, calling attention to the nearly 1 million persons who visited this national shrine during 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MOUNT RUSHMORE IS POWERFUL MAGNET

Annual meeting of the trustees of the Mount Rushmore National Memorial Society this month emphasized again the tremendous popularity of the extraordinary memorial in the Black Hills.

Close to 1 million persons visited the site in 1956, and there are possibilities that even more persons will come in the years ahead

as the extensive program of development now under way is completed.

The memorial is becoming more and more firmly established as one of the "musts" to see in the United States. Even visitors from abroad display an interest in the memorial and ask to have it included on their sightseeing trips.

All of this means much to the Black Hills and to South Dakota as a whole. Rushmore is a great attraction and one of which we may well be very proud.

Tribute to the Late Senator Norris, of Nebraska

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD portions of a tribute from the Denver Post of February 18, 1957, by the distinguished columnist, Roscoe Fleming, which highlights the illustrious career of the late Senator George W. Norris, of Nebraska.

There being no objection, the excerpts from the article were ordered to be printed in the RECORD, as follows:

GEORGE NORRIS OF NEBRASKA AMONG THE GREATEST SENATORS?

(By Roscoe Fleming)

The present United States Senate seems to me as good as any in modern times, and perhaps as good as any in history. We tend to downrate our contemporaries, maybe just because they are not glazed over with the glamor of the past.

The Senate's quality was distinctly improved in the late election, despite Ike's well-meant efforts to water it down. Such able new men as JAVITS, COOPER, MORTON, CARROLL, CHURCH, and CLARK join such able returnees as HENNINGS, HILL, MORSE, MONRONEY, FULBRIGHT, and others; though returning Republicans, unlike some of the new ones, add no luster.

A Senate committee headed by young Senator KENNEDY, of Massachusetts is commissioned to select the five greatest Senators of all time, so that their portraits may be hung in the Chamber.

Webster, Clay, and Calhoun seem already in. That is what I mean by the glamor of the past. Webster was a venal man for interests which paid him money.

No present Member is eligible, although there is only one who in my opinion might qualify as among the "greatest" and that is PAUL DOUGLAS, of Illinois. Some of the younger men might well make it though, when their records are complete.

There seems to me only one clear choice for one of the two remaining places and maybe for the title of greatest Senator, and that is George William Norris, of Nebraska.

His name is written larger on legislation and the present framework of our society than that of any other Senator in history, which should have some bearing on the matter.

Senator Norris was always the same all the way through, not veneered, and his substance was solid oak. He was a stocky, plain man with one drooping eyelid, and he had no eloquence.

We reporters used to go to his office for press conferences which were more like roundtable gabfests, and he would sit with his feet on his desk, and talk just as he did in the Senate. He had no secrets, no reservations, and no subtleties; his only judgment of a course was whether he thought it good for the whole people of the United States.

It was he who hung on like grim death to the great public works at Muscle Shoals when Coolidge and Hoover were trying to give them away in an earlier version of the partnership policy; and who was responsible more than any other one man for TVA.

Likewise for REA, which lighted the farm homes of the Nation and lightened the labors of millions of farmers, their wives, and families.

He sponsored and drove through the anti-lame-duck constitution amendment, which ended the anomaly of a whole lame-duck session of Congress after a new administration had taken over.

His name is on much constructive legislation like the Norris-LaGuardia law that outlawed "yellow dog" contracts by which a man to get and keep a job, had to promise not to join a labor union.

Outside Congress he was the father of the Nebraska unicameral legislature.

There is some criticism of him as one of the little group of willful men who filibustered against declaring World War I. But that was George Norris for you. He had the courage to follow his convictions wherever they led.

Yet George Norris may not make the list of greatest. Besides KENNEDY, the committee members are MANSFIELD, of Montana; BRICKER, of Ohio; BRIDGES, of New Hampshire; RUSSELL, of Georgia.

Why Single Out Israel for Punishment?

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. ERVIN. Mr. President, the Asheville Citizen for February 23, 1957, contained an excellent editorial entitled "Why Single Out Israel for Punishment?" I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY SINGLE OUT ISRAEL FOR PUNISHMENT?

The gravity of the Israeli-Egyptian dispute was underscored by President Eisenhower's decision to take his views to the American people in a TV-radio address.

The President stands firm in the opinion that Israel should obey the U. N. General Assembly which called upon her to complete withdrawal behind the demarcation line of 1949.

The United States has no choice but to exert pressure, Mr. Eisenhower holds, if Israel fails to heed the U. N. demand, but his view is not shared by a considerable body of congressional opinion. Senator LYNDON JOHNSON, Democratic leader of the Senate, agrees Israel should withdraw, but feels withdrawal should be accompanied by adequate U. N. action that will not leave that country defenseless.

The problem for Israel is acute. She does not trust Egypt. Without guaranties, she sees the possibility of continuance of the blockade in the Gulf of Aqaba and renewed fedayeen (commando) raids based on the Gaza strip.

The problem traces back to 1945 when seven Arab States united to prevent the creation of a Jewish state in Palestine. After the State of Israel was proclaimed in 1948, the Arab league armies invaded the new nation. The following year an armistice was signed, but economic and diplomatic boycotts and border raids declaration.

In a tripartite declaration, the United States, Britain, and France, in 1950, said they would take action if any Mideast nation violated the frontiers or armistice lines.

After that, in the same year, Egypt prohibited ships bound for Israel from using the Suez Canal. In 1951, Egypt refused to obey a United Nations resolution calling for an end to the embargo on Israel-bound shipping.

Trouble flared anew in July 1956, when Israel and the Arab States accused each other of massing troops on Israel's borders. In October Israel launched an attack on Egypt in reprisal for border raids by Egyptian fedayeen. On November 5, British and French troops began an invasion of Egypt, but under U. N. and Soviet pressure they agreed to a cease-fire and withdrawal. The U. N. sent in a police force to supervise cessation of fighting.

Israel, however, did not complete her withdrawal and expressed determination to remain in the Gaza strip and Gulf of Aqaba area until she had guaranties from Egypt that the latter would refrain from raids based on Gaza and from further blockade based on Sharm el Sheikh of the Gulf of Aqaba.

The United States, acting through the United Nations, has continued to urge withdrawal, making proposal after proposal.

The problem the United States faces is in the nature of a dilemma. Its chief allies, Great Britain and France, are sympathetic toward Israel's case against Nasser of Egypt. Yet America does not wish to alienate the Arab-Asian bloc which supports Egypt's position in the United Nations.

It appears that the Arab-Asian bloc will insist on sanctions against Israel, but no mention is made of sanctions against Egypt for failing to obey the U. N. demand of 1951 for an end to the embargo on Israel-bound shipping.

Mr. Eisenhower feels the United States must support pressure against Israel. There is a moral basis for pressure against any nation that resorts to aggression (as Israel did because of grave provocations).

But pressure against a small nation cannot be exercised from a high moral plateau when it is singled out for punishment while other nations, equally guilty, are not penalized.

It is true Israel is hurting her standing in the U. N. and in the opinion of the world. But to put the entire onus on Israel and take no action against Egypt does not appear to be based on the principle of equal justice for all.

Japanese Imports of Plywood

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated February 21, 1957, addressed to me

by Mr. Frank B. Best, manager of radio station WDIX, of Orangeburg, S. C., together with the news release which was sent with the letter.

There being no objection, the letter and news release were ordered to be printed in the RECORD, as follows:

RADIO STATION WDIX,
Orangeburg, S. C., February 21, 1957.

Hon. J. STROM THURMOND,
Senate Building, Washington, D. C.

DEAR STROM: Enclosed is a copy of a story from our news of today regarding a plant closing and loss of employment here due to Japanese imports of plywood as the principal cause.

Satisfactory import quotas on cheap foreign plywood are urgent. Thank you for what you are doing to get this and other cheap foreign labor competition under control.

This brings our warm regards.

Cordially yours,

FRANK B. BEST, *Manager.*

Orangeburg's United States Plywood is closing one of its plants. Manager B. P. "Phil" Adams said today that Japanese imports of cheap plywood is the chief reason. The old plywood plant on old Calhoun Street will close within 3 weeks. Production from the old plywood plant is the cheapest of the products made here by United States Plywood. "We have been unable to compete with low-paid labor of foreign imports," Mr. Adams states. The new plant on the Five-Chop Road will continue to operate and to expand. New equipment is being installed in a three-quarter-million-dollar addition to the new plant. United States Plywood is employing over 600 people in Orangeburg now. How many will be out of jobs due to closing the old plant, Mr. Adams does not know at this time. "We are trying to consolidate. It will take about 3 weeks before we know." Mr. Adams told employees today that the consolidation would put some out of jobs at both plants. Mr. Adams told the employees today, "I am saddened by this." United States Plywood hopes in time and with its new facilities on the Five Chop Road to rebuild employment to the present level.

Salaries of High Officials in Various Branches of Government

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a communication which I have received from James F. Hughes, past president, Central Labor Union, AFL., Lawrence, Mass., to the editor of the Labor News.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EDITOR, LABOR NEWS:

During the last session both Houses of Congress raised the salaries of Senators and Congressmen to approximately $25,000 annually. Organized labor, following out its traditional policy, favored the increase but, and I feel unintentionally, both Houses omitted including an increase in the salary of the President of the United States and so did organized labor. The President of the United States fills the most important position in the world, is responsible for the welfare of 165 million American citizens, is confronted with the chaotic conditions which prevail in foreign countries, has to make decisions which may drive us into or keep us out of war, has to administer the domestic affairs of the Nation in an impartial manner, has to discuss foreign affairs with diplomats, ambassadors (and God knows who else) of foreign countries, never losing sight of the fact America first, and he is available 365 days in the year. A rather rough assignment.

Some of the presidents of large corporations receive an annual salary of $800,000, expenses included, and are not responsible for the welfare of 165 million American citizens, whose labors keep industry rolling at top speed. Their job is to keep production at a high level, favorable markets for the products produced, and profits and more profits for the industry and the stockholders whom they represent. The President of the United States, whether a Republican or a Democrat, is the choice of the electorate of the Nation, he is entitled to the full cooperation of every citizen and for his services should receive an annual salary of $500,000, expenses included, tax free, and should, at the earliest possible moment, be given the suggested salary; he earns it; he is entitled to it.

The salaries of the governors of the States should be $50,000 annually. Lawmakers at the Nation's Capital, in the States, and organized labor must be consistent.

JAMES F. HUGHES,
Past President, Central Labor Union, AFL., Lawrence, Mass.

Representative Holt's Budget Comment

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. GOLDWATER. Mr. President, Benjamin Franklin said:

If you would be wealthy, think of saving as well as of getting.

Representative JOE HOLT, of California, made a comment the other day to the effect that both Senators and Representatives should look in their own backyards to see if they could not find a means of saving a little money in connection with the outlandish budget which has been presented. In view of the timeliness of his remarks, I ask unanimous consent to have printed in the Appendix of the RECORD an article on that subject which appeared in the Valley Times of San Fernando Valley, Calif., on February 13, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GEORGE TODT'S OPINION: JOE HOLT'S BUDGET COMMENT

"If you would be wealthy, think of saving as well as of getting."—Benjamin Franklin.

In simple down-to-earth language, Congressman JOE HOLT has gone to the heart of the problem in the matter of the controversial budget which has been submitted—with some misgivings—by President Eisenhower to the Congress.

Writing in his newsletter, Reports From Congress, of January 28, the valley Congressman said:

"The budget is high, but I am glad the President has welcomed the cutting down of his budget by Congress. I agree with him and will be very happy in voting against many of the recommended projects.

"The blame for this high budget cannot be placed entirely at the doorstep of the White House. Every Congressman has a pet project. I am equally guilty, because we have $2 million in the budget for our Los Angeles flood-control project in the West Valley. All are for reducing the budget by eliminating projects in somebody else's congressional district.

"I do, however, believe there are places where appropriations can be reduced and eliminated and I shall vote accordingly. I shall work very hard for a tax cut for the American people. The only one we have had in recent years has been under this administration, but I believe that even with the world situation requiring top military strength, there can be a tax reduction again.

"It is the best way to stop spending—take the source of revenue away."

Mr. HOLT has put his finger on the hole in our economic and budgetary dyke with the key words, "The blame for this high budget cannot be placed entirely at the doorstep of the White House. Every Congressman has a pet project."

This is literally true. And because every Congressman has his pet project, he has to play ball with the majority of his fellow legislators—and their own pet projects—if he expects to have any chance of getting his own section of the gravy train passed for his constituents at home. And if he doesn't? Well, maybe he won't get reelected the next time around.

Now, Congressmen are just as practical as the next businessman. Most of them see it something like this. If they can bring home the bacon to their homefolks—they can likely keep their jobs. If they don't—they may be job-hunting but soon. So what would you do yourself in such a case? Wouldn't you be willing to help your fellow legislators on their legitimate problems, which incidentally required cash to be appropriated from the taxpayers, providing they were also willing to help you with your legitimate problems in return? The answer is obvious. It's team play that wins.

The trouble with this approach is that it somehow resembles Santa Claus. That latter whiskered old gentleman usually turns out to be Joe Doakes, himself. And Joe Doakes knows that too many legitimate requests can break the bank. Much as he may wish to honor everyone—good guy that he is—he is at last forced to the realization that what is needed in the end is self-denial of sorts for himself and his family. But where to start? And with whom? Where does self-denial and discipline commence?

Providing Interim Assistance Through the Federal National Mortgage Association

SPEECH
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1957

The House in Committee of the Whole House on the State of the Union had under consideration House Joint Resolution 209, to provide interim assistance through the Federal National Mortgage Association in relieving the shortage of funds for home loans

pending further investigation of housing credit conditions.

Mr. FASCELL. Mr. Chairman, since the end of World War II the private home-building industry has produced more than 10 million new single-family homes in the United States. Even after adjusting for changes in the purchasing power of the dollar, it is significant to note that this total includes approximately 4 million new homes priced at $10,000 or less.

House Joint Resolution 209, which will increase the total borrowing authority of the Federal National Mortgage Association by $500 million, is not intended as a permanent solution to the problem of financing new-home construction. It will, however, help prevent the whole home-construction program from grinding to a near halt because of a collapse of the market for home loans.

The administration's tight-money policy has had a very serious effect upon low-cost privately produced housing. The FHA and VA home-financing programs have accounted for the great bulk of the low-cost housing built in the past decade. Since, roughly, 7 out of every 10 houses built for less than $15,000 are being produced under FHA or VA programs, the importance of maintaining FNMA secondary mortgage operations can hardly be overemphasized.

While the distinguished members of the Banking and Currency Committee consider what legislation may be necessary to help maintain a long-range high level of new-home construction, this resolution will help meet the immediate need for action to sustain current FHA and VA programs. These programs have proven of great value to all parts of our country. They have been of particular imporatnce to those rapidly growing areas of the South and West where the demand for credit has been very heavy, but which have developed too recently to have accumulated the large pools of private capital such as exist in New York and New England.

I am grateful for this opportunity to express my support for this resolution.

Expenses Cut Income of Members of Congress

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. DIRKSEN. Mr. President, I believe Members of Congress and the country generally will be interested in an editorial in the form of a letter recently written by John A. Kennedy, of Sioux Falls, S. Dak., who is the editor and publisher of the Sioux Falls Daily Argus-Leader.

Mr. Kennedy was inspired to write this informative piece as the consequence of a recent Gallup poll revealing that many persons in this country have a somewhat erroneous impression concerning the factors appropriately determining the compensation received by Members of Congress in this day and age. I ask unanimous consent that Mr. Kennedy's observations may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FROM THE PUBLISHER'S DESK: EXPENSES CUT INCOME OF CONGRESS MEMBERS

Mr. FRED C. CHRISTOPHERSON,
Editor, Sioux Falls Argus-Leader.

DEAR CHRIS: I was shocked Sunday by the Gallup poll figures in the Sioux Falls Argus-Leader revealing that the average American believes we should pay Members of Congress only $10,000 a year.

It makes me wonder whether we in the newspaper business are doing a good enough job in informing our readers on what goes on in Washington and what our elected representatives are asked to do for us in the Nation's Capitol.

For the past 35 years I have been watching the operations of Congress. From 1922 to 1935 I was a member of the Press Gallery covering Congress. Since then, as editor, publisher, radio and television operator, and nearly 6 years in the Navy, I have witnessed Congress at work.

Let us take up what a Member of Congress receives—and what happens to that income in the terms of take-home pay.

He gets $22,500 per year and no expense account.

The first thing that happens to the base amount is the tax bite Uncle Sam takes before the Senator or Congressman can call the money his own—just like the rest of us.

TAXES THEY PAY

If they have no children, a married couple pay $5,774 Federal income tax on an intake of $22,500 which leaves $16,726 unless they live in a State or city that has an additional income tax.

If they have children, their taxes are somewhat lower but for every child exemption, their costs are many times that figure for food, clothing, housing, and schools.

Then comes the matter of social security—actually retirement in their case—and the bite for that is substantial but unlike people in private business, they, the Congressmen, pay the whole bill themselves as the Government contributes nothing.

The Senator or Congressman has to have a roof over his head in Washington—that in addition to keeping up his residence or apartment back home.

A furnished apartment or house in Washington costs a staggering amount, the most modest probably $3,500 to $4,000 per year including utilities and other nominal charges.

WASHINGTON EXPENSIVE

Then they have to eat and buy clothes. We want them to be presentable as they move around Washington doing our jobs for us. The costs in the District of Columbia are higher than they are in South Dakota.

I doubt if any of our South Dakota Members of Congress have much in the way of independent sources of income or capital.

So they should—and probably do—carry some life, health, and accident insurance to protect their families against want.

A constituent comes to Washington seeking legislative or departmental assistance. The Senator or Representative may have time to take him to lunch in the House or Senate restaurants to sample the bean soup and other food. The bill is paid for by the legislator unless the constituent (and that, perhaps, is rarely the case) thoughtfully grabs the check.

The Congressman or his assistants have to go to the various departments and bureaus. He takes his own car—and pay the bill himself. If he were an employee in a Government bureau or department and had to come to the Capitol, the executive agency would provide him with transportation free.

OTHER EXPENDITURES

I suppose the average Senator and Congressman also has to make donations to churches, chambers of commerce, charitable, business, fraternal, and other groups. Of these, of course, only the church or charitable contributions can be deducted, but even then he pays at least half the bill out of what is left from his taxed funds.

Your guess is as good as mine as to what that amounts to per year, but I am sure it is not inconsequential.

He gets one mileage fee to go back and forth to the sessions in Washington, but when he comes back to his State or to the district unless it is in connection with some official Federal hearing being held in the State, he pays transportation, hotel, and similar costs.

WHEN THEY ENTERTAIN

I am sure our South Dakota Congressmen and Senators entertain very modestly. You and I know that when Mrs. Mundt and Mrs. Berry had a reception for South Dakota visitors for the recent inaugural, the crowd overflowed their adjacent apartments.

Mary Mundt and Rose Berry worked practically the entire time in the kitchen making sandwiches and hot bits of food while other ladies pitched in to help, washing dishes and passing trays, much as we would in South Dakota for our neighbors and friends. But even the food for that costs money. In that case the Berrys and Mundts paid for it.

I imagine our Congressmen and Senators get invitations or announcements of weddings and anniversaries in excess of perhaps a hundred per year, you can figure out what that costs them.

Also, their bill for flowers to ill and deceased friends would be sizable.

Christmas cards must be privately purchased and, as you have noticed, carry a regular postage stamp on them which means the Congressman or Senator has paid that out of his pocket, too.

STORY SHOULD BE TOLD

Maybe we should tell our readers all of these things and maybe our Senators and Congressmen could have expense accounts, not lumped, but funds to take care of legitimate and proper expenditures, and secondly, reimbursement for normal business, travel, entertainment expense just as they would if they were engaged in private practice of their professions or businesses. At least these expenses should be tax deductible, but better still, fully reimbursed.

If this were the case, I am sure we could get more people to devote their lives to public service.

The same thing goes for governors, legislators, State, county, and city officials.

You and I know, Chris, that none of our public servants get rich or save money on their jobs.

JOHN A. KENNEDY,
Publisher, editor in chief.

Free European Market and Atom Pool

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. JAVITS. Mr. President, in our concern with the Mideast crisis, we have

overlooked, to a greater extent than we should have overlooked, a very important development in the unification and integration of Europe. This was announced last week in connection with the signing of a pact for so-called free markets among the six principal free European powers; also for the creation of an atom resources pool and a European Atomic Energy Commission.

I know of no single event which is more portentous for Europe's own desire to put itself in accord with modern conditions, and to maintain its viability and strength as the second principal element of the free world, than these developments. I hope very much that all Americans will note them, and I hope very much, as we come to debate our various foreign aid and other programs this year, we may give full recognition and support to what is probably the most important step which has taken place economically in Europe, and perhaps in the free world, since the end of World War II.

I ask unanimous consent to have printed in the Appendix of the RECORD the news report from the New York Times of February 21, 1957, announcing these great events: a communique on Europe issued by premiers and foreign ministers of six member nations of the European Common Market and the European Community of Atomic Energy; also an analysis from the Wall Street Journal of February 21, 1957, as to the meaning of the free market in world trade.

There being no objection, the article and statements were ordered to be printed in the RECORD, as follows:

[From the New York Times of February 21, 1957]

SIX EUROPEAN PREMIERS JOIN FOR ATOM RESOURCES POOL AND A TARIFF-FREE MARKET—PACT SIGNING NEAR—CEREMONY TO COMPLETE UNITY PLANS EXPECTED IN ROME IN MARCH

(By Harold Callender)

PARIS, February 20—What may prove to be the greatest step so far toward the economic and, eventually, the political union of Europe was taken in Paris today.

The heads of governments of six nations agreed on the basic provisions of two treaties tending to merge their economies.

One would pool their nuclear resources under a European Atomic Energy Commission not unlike that of the United States.

The other would introduce gradually, over a period of 12 to 17 years, a single or common market without tariffs or other barriers covering both the European and the overseas territories of the six nations.

The nations, France, West Germany, Italy, Belgium, the Netherlands and Luxembourg, already are joined in such a common market for two basic commodities in the European Coal and Steel Community. Their leaders expect that the treaties to broaden this economic union will be signed in Rome in March.

STEP IS CALLED DECISIVE

In a final communique the heads of the governments of the six nations "reaffirm the will of their countries to pursue their efforts for a European integration growing increasingly closer." They described the two treaties as forming a "decisive step" toward this goal.

The leaders of the six nations did not appear to share the apparent fears of the British that extension of the common market to the European overseas territories, even on the experimental basis now planned, might hamper the British-proposed free trade zone in Europe. This zone would include the six nations, Britain and such other European countries as might care to join it.

While the states in the common market would adopt a common tariff, the others in the free-trade zone would each fix their own tariffs. The common market area would, of course, levy no tariff on goods from other members of the free trade area but would levy one against goods for nations outside both areas.

Continental leaders contended that if the common market project should fail, there would be no free-trade zone; and that if the common market materialized there would be plenty of time and scope for negotiating on the supplementary free trade zone.

They saw the common market as far on the way to reality, with ratification of the treaty later this year, while they considered the free-trade zone a project that could hardly take shape for a year or so. Therefore, they opposed modifying or delaying the common market in the interest of a still academic free trade zone.

The gradual inclusion of overseas territories in the common market raises a new problem for the free trade zone project. This is now under discussion by the 17 nations in the Organization for European Economic Cooperation.

So far as these territories eventually enter this market, they will enjoy the six nations' tariff preferences to the disadvantage of other overseas areas, notably British, unless Britain comes into the free-trade zone, which is not the British expectation.

A similar issue already has arisen over farm products, which the six plan eventually to include in the common market but which the British want excluded from the free-trade zone.

Since the inclusion of continental colonies in the common market is regarded as tentative, at least for a 5-year provisional period, the continentals did not believe tonight that this arrangement necessarily eliminated all chance of a free-trade zone.

Some suggested that Britain was so eager to associate in this way with the common market that she would find means of doing so, in spite of differences over colonies and farm products.

ADVANTAGES SEEN FOR FRANCE

The French, after a hard fight, made an apparently very favorable agreement for their colonies. Their aim was a deal by which they would gradually open their overseas domains to the trade of the five other European nations in return for help from those nations in financing economic development, and even public works, in the overseas areas.

This the French achieved. The agreement is understood to be that during 5 years the French will gradually increase the imports from their European partners into French overseas territories, while in the same period the European partners will invest in those territories about $312 million.

France, herself, will contribute $200 million in the 5 years to the common investment fund for the overseas territories of 4 nations in the common market having such territories.

From the 5 other nations the French territories are expected to receive investments beginning at $30 million in the first year and reaching $120 million in the fifth year.

While the other French territories will enter the common market step by step, as European investments in them grow, Algeria will enter the market on much the same basis as France, according to French officials. But Algerian labor will not share the freedom of movement of other labor in the six nations, nor will it receive wages or social insurance at European rates.

NEW PACT DUE IN 5 YEARS

At the end of the 5 years there will be a new agreement on overseas territories. If the experiment succeeds, the quotas for European imports into the territories will rise, as will the capital from the common investment fund.

If the experiment does not succeed to this extent, the territorial import quotas will not rise but tariffs protecting the territories will nevertheless fall, as will European tariffs within the common market.

Some observers suggest that the economic assimilation of France's African territories into the common market would bring an end to the French colonial system by placing the territories ultimately under European, rather than French, responsibility. Meanwhile, France would share with her neighbors, mainly West Germany, the capital cost of those territories. It is noteworthy that West Germany would put into the investment fund the same amount as France.

EXCEPTIONS ARE PROVIDED

The trade of the 6 countries with nations outside the common market would be subject to customs duties, which would be the same in all 6 countries. In accordance with the rules of the General Agreement on Tariffs and Trade, the 6 have agreed in general to fix their common tariff on the basis of a mathematical average of 4 tariff levels—those of France, West Germany, Italy, and the Benelux Customs Union (Belgium, the Netherlands, and Luxembourg).

But for some products the common tariff has been fixed by negotiation among the six, and will be so fixed for others. If 1 of the 6 feels harmed by tariff levels fixed in either of these ways, it may remove tariffs on fixed quantities of imports, as the Netherlands now may do for chemical products.

After the 4-year period of transition, when the tariffs within the six-nation common market are to drop 30 percent, a further step toward the common tariff against outside countries will be taken.

Where this tariff differs between any of the 6 by less than 15 percent, the average tariff of the 6 will be applied. The result will be a common tariff intermediate between the high one of France today and the low one of the Benelux Customs Union.

Logically a common market should lead to a common currency. It requires at least stable and convertible currencies among the member countries.

This has caused the report that it would necessitate devaluation of the overvalued French currency. This might prove true, but not immediately, since France will retain her import taxes and export subsidies. The Benelux Customs Union has not produced a single currency in Belgium and the Netherlands.

The nuclear union, called Euratom, will be patterned after the Coal and Steel Community. A European Atomic Commission will hold title to all fissionable materials within the six nations, except those that are diverted to military uses.

The latter will become the property of the nations receiving them. They will pass out of the control of the commission but under that of the Western European Union, which embraces the six nations and Britain with the mission of coordinating their armaments.

The prospective military use of nuclear material applies so far only to France. Jean Monnet, who contributed much to the planning of the nuclear treaty, intended that it should entail only the peaceful uses of nuclear energy. In that case the six, by signing it, would forego military uses.

This brought a protest from French military men, who had begun to plan for the French manufacture of nuclear weapons.

They exacted from Premier Guy Mollet a promise that the nuclear pool would not deprive France of the right to make these weapons, although West Germany had been deprived of that right by the treaties authorizing her armament.

Hence the treaty permits the transfer of nuclear materials for military ends. It is suggested here that the uranium so used will be of European origin, not that supplied by the United States. Most of the six nations will rely on the the United States for their nuclear materials for a long time.

M. Monnet emphasized the greater productive capacity that Europe should acquire from the common market containing 160 million consumers and from the nuclear union, which he saw as the solution of the current European problem of a shortage of power.

Prospects for ratification of the nuclear pool and common market treaties by the French National Assembly were regarded as favorable. Opposition seemed likely only from the Communists, the right-wing Poujadists, and the Radical minority led by former Premier Pierre Mendès-France.

[From the New York Times of February 21, 1957]

COMMUNIQUE ON EUROPE

PARIS, February 20.—Following is the text of a communique issued today after the final meeting of premiers and foreign ministers of the six member nations of the European common market and the European Community of Atomic Energy (Euratom):

"At the invitation of Premier Guy Mollet the heads of government and the ministers of foreign affairs of the states taking part in the Brussels conference for the common market and for Euratom met in Paris on the 19th and 20th of February 1957.

"The following took part in the meeting: For Germany, Chancellor Konrad Adenauer and Dr. Heinrich von Brentano; for Belgium, M. Achille van Acker and M. Paul-Henri Spaak; for France, M. Guy Mollet, M. Christian Pineau and M. Maurice Faure; for Italy, Mr. Antoni Segni, Dr. Gaetano Martino and Mr. Bardini-Confalonieri; for Luxembourg, Mr. Joseph Bech, and for the Netherlands, Mr. William Drees, Dr. Joseph M. A. H. Luns and Mr. Van Der Beugel.

"An agreement has been reached on the problems relating to the association of the overseas territories with the common market.

"It has been agreed that the treaty shall contain the principles expressing the will of the six states to associate with the European common market those overseas territories which are linked to them and to contribute to the economic and social investments which the development of these territories call for.

"A first convention concluded for a period of 5 years which will be annexed to the treaty will define the terms of application of these principles.

"It will fix the participation of the member states to the important investment effort which they are willing to undertake in the overseas territories. Furthermore the convention will establish the conditions under which the market of the member states and of the overseas territories will be thrown open progressively to reciprocal trade.

"Before the expiration of this first convention a new agreement will be negotiated within the council of ministers.

"Furthermore it has been agreed that the European Community of Atomic Energy will have the property rights in special fissile materials.

"At the end of this meeting the ministers took note of the fact that their work, conducted under the active impulse of M. Spaak, is sufficiently advanced in order for the results of this work to be submitted shortly to their respective council of ministers and that the signature of the two treaties can be hoped for shortly in Rome.

"The six heads of government on this occasion reaffirmed the determination of their countries to pursue their efforts for an increasingly close European integration of which the Euratom and common market treaties constitute a decisive step."

[From the Wall Street Journal of February 21, 1957]

EUROPE'S UNITY: NATIONS MOVE CLOSER TO FREE TRADE SYSTEM; MANY INDUSTRIES FRET—PLAN WOULD LOWER BARRIERS BETWEEN MEMBERS, RAISE THEM FOR UNITED STATES, OTHERS—UPSHOT: STIFF COMPETITION

(By Kenneth Miller)

PARIS.—Warning to America's foreign traders: Europe has moved a big step closer to a vast trade upheaval.

That is the significance of yesterday's agreement between prime ministers of France, Germany, Italy, Belgium, Holland, and Luxembourg. Assembled here, they informally approved a common market plan to knock down the trade barriers between their countries and erect uniform tariff walls against outsiders.

The idea behind all this is trade liberalization, but 19 months of almost frenzied give and take between high-tariff lands like France and Italy and the low-tariff low countries have produced some provisions that look remarkably like new trade obstructions—to the outsiders. Reason: In the process of fixing the same external tariff scales, some countries, notably Belgium, Holland, and Germany, will have to boost their levies.

HOLLAND AND ITALY

Some American chemical goods now skip into Holland duty free, but stagger into Italy under a 30 percent tariff load. Under the common market plan, the same goods would find Italian levies halved, but they would suddenly bump into a tariff wall as high as 15 percent, perhaps, in Holland.

That is just a sample, of course, of the shifting tariff and trade patterns likely to develop. Some other prospects: Growing commerce among European countries and, therefore, less buying abroad; stiffer competition for United States firms everywhere in the world from European companies thriving on a customs-free market larger than the United States; and new business opportunities for United States companies with manufacturing subsidiaries in Europe.

The Common Market Pact still must be ratified by the parliaments of the six member countries and some detailed differences still must be ironed out. Moreover, the common market is only a part of Europe's two-package plan for economic unity; a companion scheme, called the free trade area and bringing in a half dozen more countries including Britain, still is in rough draft form and negotiations won't be completed before July, if then.

BOOSTING THE ODDS

Nevertheless, most experts think yesterday's action greatly boosts the odds that both of these complicated, overlapping trade liberalization projects will begin working by the end of next year.

The hoped-for result: One big customs-free market for the products of a dozen or more European nations, embracing as many as 240 million consumers.

This would take time. Customs barriers would be lowered gradually. But experts predict the last of the trade barriers between member nations would disappear by 1975, at the latest.

This sounds far off in the future, but Europe's businessmen already are bracing for the shocks. Britain's Prime Minister Harold Macmillan has warned his countrymen that some national industries may "go to the wall" in the first rush of duty-free continental goods into the United Kingdom. A bulletin from the British Hosiery Manufacturers Association, for example, dourly observes that "some of our companies feel they've been given 10 years to prepare to go out of business."

CONTINENTAL COMPETITION

The big British General Electric Co., Ltd., has advised its manufacturing colleagues that the "opportunities and possible dangers are now so great" that all hands must work together to gather marketing data and study up on likely continental competition.

This company also recommends rushing reinforcements to sales forces in Europe.

The president of France's Federation of Mechanical Industries has called on the membership to "start making the necessary contacts," to drum up business in the face of stiffening competition. All over Europe, trade associations are similarly rallying their member companies.

Even in prosperous Germany, the Berliner Gesellschaft, a big commercial bank, is warning that the common market "inevitably will lead to a displacement of present commercial currents, heavy with consequences."

Despite these rumblings, the common market members now plan to sign their 250-page document in Rome next month. Getting it by all six parliaments will be no easy chore and most observers think the French will be the toughest problem. The strategy is to try to win French approval while Guy Mollet, a stout European, still is in power; there is some danger his government may topple by spring. In Germany, too, there's a now-or-never approach on the part of common market advocates since Chancellor Konrad Adenauer, also a backer of the plan, is up for reelection in September.

PROGRESSIVE CUTS

If all goes well, the plan calls for progressive whittling of all customs duties on manufactured goods produced and traded within the community. At 18-month intervals after the plan goes into effect, the partners are pledged to slash their tariffs on each other's goods by 10 percent over a 12-year period. However, in the case of dire economic difficulties, the process can be stalled up to an extra 5 years by any member. Import quotas would vanish gradually in the same way.

External tariff walls also would be readjusted in stages. High-tariff countries gradually would lower their rates, while low-tariff nations would boost theirs until they arrive at a common rate, roughly an average of today's divergent scales, for each item imported into the customs pool. But plenty of exceptions reportedly have been negotiated, mostly in the direction of keeping tariffs high for the protection of France and Italy.

The experts expect the final rules will prescribe that most raw materials from outside the market be dutiable up to 3 percent, semimanufactures about 10 percent, and finished products between 15 and 25 percent.

Dutch and Belgian industrialists, highly dependent on imported materials, claim Benelux tariffs will almost double as a result, and they're nagging their governments about the potential harm to their competitive position on home and export markets. Security Gen. A. Rom Colthoff of the Association of Netherlands Employers even worried aloud in a weekend broadcast whether common-market disadvantages do not outweight the benefits.

Over the weekend, the bulletin of the Federation of Belgian Industries issued a broadside against the negative aspects of the plan for fairly stiff external tariffs. Its adoption, the federation claims, constitutes a funda-

mental error which will rapidly prove evil for the expansion of the European economy.

Exact estimates of duty boosts are difficult, but the Dutch paper and building industries figure, for example, that levies on timber and cellulose, now admitted duty free, would climb about 5 percent and 8 percent, respectively. Duty on automobile parts imported largely from the United States for Belgian and Dutch assembly plants would be raised from 6 to 22 percent, it's calculated. American aircraft sold to Belgian Sabena or Dutch KLM would pay 19 percent duty instead of the present 10 percent, while marine engine tariffs might zoom from 6 to 18 percent in the Benelux area.

In Germany, the Dusseldorf Chamber of Commerce, representing Ruhr interests, states that some 70 percent of all German tariff schedules would rise, with production costs increasing accordingly; a memorandum calls for rejection of the common-market plan unless the worst features are eased.

Comments the big Belgian newspaper, La Libre Belgique, the plan threatens to become a collective-protectionist enterprise, not at all what was wanted.

It's worth noting that roughly two-thirds of all United States exports to the would-be common-market partners go to Germany, Belgium, and Holland, where duties are most likely to climb under the plan. For the first half of 1956, the Organization for European Economic Cooperation puts United States exports to Belgium and Holland at a total of $438 million; to Germany, $340 million; and to high-tariff France and Italy, $387 million combined.

Of course, while some tariffs are rising, nonmembers of the new market may be able to profit by shrinking duties in the high-tariff nations. For example, the duty on imports of machine tool parts, now fixed at 25 percent of value initially and up to 22 percent in France, would slide to about 10 percent for shipments from outside the six-nation pool.

Right now, the prospective partners do about 35 percent of their trading with each other; optimistic authorities believe this figure might almost double after the market gets rolling, under the stimulus of low cost, high volume production techniques.

French automakers Renault and Simca, for example, though highly modernized, are protected from the competition of Germany's Volkswagen by tariffs which push the cost of that little car in France to $1,800, compared with $1,150 in Germany. With the French duty gone, French automakers will be under heavier pressure than ever to streamline their operation, cut costs, and step up sales to fight off the challenge.

The market planners recognize that many little marginal enterprises in Europe will be squeezed out by the competitive pressure, and they've tried to ease the pain somewhat by writing into the program a provision for a Europeap investment bank. It would have a capital of $1 billion, insiders say, to finance industrial development and modernization, training and relocation of workers, and conversion of stricken firms into new lines of business.

To oversee this complex setup, the member nations plan to set up a Council of Ministers representing each of the nations, but probably guided in practice by the majority vote of France, Germany, and Italy. For day-to-day supervision of tariff cutting or boosting and other chores, a European Commission will be set up. The outfit even will come complete with a parliamentary assembly to make recommendations.

Evolution in the Communist World

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, February 25, 1957

Mr. DIRKSEN. Mr. President, on February 16, 1957, the Massachusetts Institute of Technology held its Mid-America Conference in Chicago. This great educational institution has made very important contributions to the country in the fields of radar research and the air defense system, and now in its various curriculums it is putting considerable stress on the humanities.

Dr. James R. Killian, chairman of the institute's board of consultants on foreign intelligence activities, works very closely with the Honorable Allen Dulles, Director of the Central Intelligence Agency. Mr. Dulles addressed the closing session of the conference. It was rather unusual for him to make a public speech, but he presented a rather complete, integrated picture of conditions behind the Iron Curtain. He reviewed problems confronting the Russian leaders, but at the same time, he did not minimize the dangers which still confront the free world.

I think this is an eminently significant speech, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EVOLUTION IN THE COMMUNIST WORLD

(Address given by Allen W. Dulles, Director of the Central Intelligence Agency, at the Massachusetts Institute of Technology Mid-America Conference held in Chicago, Ill., on February 16, 1957)

It is a great pleasure to have this opportunity to meet with the Mid-America Conference. Its sponsor, the Massachusetts Institute of Technology, is playing a central role in the shaping and maintaining of America's scientific genius. Like our country which it serves so well, MIT has made important and dramatic forward strides in the past half century.

Winston Churchill, at a convocation of this institute 8 years ago, spoke admiringly of MIT's resolution to maintain a faculty of the humanities. Your fruitful contacts with so many foreign students and scholars and your launching of a Center for International Studies are further examples of a broad and imaginative approach to the place of technology in the modern world.

There have, indeed, been many changes since those earlier days when MIT was a small institution on Boylston Street, Boston. America then was a young Nation relatively free of the troublesome concerns of world politics. But times do change; and we in this country have never shrunk from the challenge of changing conditions.

In fact, having generally accepted the idea that we live in a world of change, it is perhaps rather surprising that we have been somewhat slow to recognize that this principle also applies to political and social life in the Communist world.

We ascribed to Hitlerite Germany a political solidity which it never had though it took a world war to prove this. Today many of the experts on Soviet and satellite problems have been forced to revise their calculations and pay closer attention to new forces within the Communist world which have been dramatically revealed during the year 1956.

When Khrushchev denounced Stalin a year ago, he said those fatal words which destroy faith and which once said can never be explained away. The flood of self-questioning let loose by the anti-Stalin crusade has plumbed the depths of doubt about the integrity of the Communist political structure.

When history is written the Khrushchev statement of February 1956 may well be described as the Kremlin's admission of the general crisis of communism.

STALIN'S LEGACY

Stalin died in March 1953, leaving one of the most reactionary, despotic police states the world has ever known. He had given himself a name which meant steel. He expressed his views in a journal named "truth." He had concentrated more power in his own hands than had been commanded even by his own great historical idol, Ivan the Terrible. For nearly 30 years he had exercised arbitrary rule over his own and many other peoples. He had killed most of his friends, and transplanted or annihilated innumerable people.

The prospect of ruling this leviathan without Stalin awed his successors. Indeed the official announcement of his death spoke of the need to "prevent any kind of disorder or panic." This defensive note on the part of the heirs to a seemingly all-powerful state may have been the first of the many hints we were to get of the complexity of the problems faced by Russia's new rulers.

The evolution of the U. S. S. R. over the last 4 years can be explained in terms of the new Soviet leaders' response to three main problems: problems with themselves, problems with their own and subject peoples, and problems with the outside world.

A PROBLEM WITHIN THE LEADERSHIP

The first problem that the new leaders faced was an elementary one: that of clearly reestablishing their ultimate authority. This is no simple problem in a revolutionary regime with no roots in either historical traditions or popular consent. Dictatorships are rarely transferrable or inheritable, and Stalin like most dictators made no provision for the succession. He had been busy playing his lieutenants off against one another; he appears to have had no real No. 2 man—just a group of No. 3 men.

This group set up an uneasy oligarchy, the so-called collective leadership. Shortly they agreed to get rid of Stalin's police chief, Beria, and mitigated some of the worst excesses of his secret police system.

But these very changes were only to help bring to the surface internal problems that had been artifically suppressed during the Stalin era.

A PROBLEM WITH THEIR PEOPLES

One of these problems was that of restoring initiative and enterprise to a people numbered by long years of discipline and fear. Little Stalins had set themselves up at the local level throughout Russia, and the satellites, and people everywhere in the Soviet sphere had decided to play it safe.

Thus, while the system may have been functioning satisfactorily in terms of the relative increase in industrial production, it was slowly running out of steam.

Having let up a little on the stick of the secret police, the oligarchy tried to budge the populace with a carrot.

In the economic sphere, this carrot took the form of the so-called new course announced by Malenkov in the summer of 1953. This policy promised to give greater attention to the manufacture of consumer goods, which had long been subordinated to the basic Soviet emphasis on heavy industry.

In the intellectual sphere, a prominent Soviet writer called for a new turn to sincerity in literature. Writers and artists began to speak of a thaw as arrests ceased within their ranks and long-imprisoned artistic and literary figures trickled back from Siberia. The leaven of mass education was beginning to work; and while this paid off handsomely in the field of technology, it had other consequences which proved most unwelcome to the worried men in the Kremlin.

The regime soon found that use of the carrot had to be checked. In the months leading up to the Writers' Congress of December 1954, attempts were made to reassert the Communist Party's right to regulate art and literature; and Khrushchev reasserted the primacy of heavy industry at the time of Malenkov's demotion early in 1955.

However, the Soviet leaders discovered that they could not go back all the way to conditions as they had prevailed under Stalin; for they found themselves faced with the most serious of all challenges to a totalitarian regime, the revolution of rising hope and expectations.

When a tyrant gives real hope to the oppressed, then, in the long run, the position of tyranny as a system tends to become hopeless.

Rising expectations were most serious and hardest for the U. S. S. R. to control on the periphery of Stalin's empire in the East European satellites. The new economic course was taken farthest in Hungary under Imre Nagy in 1953–55; Hungary went considerably beyond the Soviet Union in playing down heavy industry in favor of consumer goods, and even deemphasized one of the most hated of all Stalinist exports, the forced collective farm.

Meanwhile, writers in Poland as well as Hungary were going farther than their Soviet counterparts in voicing the pent-up feelings of their countrymen.

Of special importance was a poem which became a cause celébre behind the Iron Curtain, "A Poem for Adults," by the Polish poet, Adam Wazyk, which was published in Poland in August 1955. Wazyk spoke with the scourging hate that both writers and ordinary people were coming to feel toward the hypocrisy of their Communist overlords.

He recalled how a forerunner of Marx "charmingly foretold that lemonade would flow in seas. Does it not flow? They drink sea water, crying 'lemonade' returning home secretly to vomit."

These were ominous rumblings. They can be read in retrospect as harbingers of the great upheavals in Poland and Hungary. However, the problem of rising expectations was a common problem throughout all the lands which Stalin had ruled. Indeed, popular expectations proved far in front of the policies of the reactionary regimes administering Stalin's colonial empire.

A PROBLEM WITH THE OUTSIDE WORLD

Throughout all their troubles, Communist politicians have to continue believing that they are riding the wave of the future. The expectation of the Communists continues to be, as Khrushchev recently put it, that "we will bury you,"—the "you" being the free world. Nevertheless, Khrushchev appears to have concluded that Stalin's policies had ceased to be profitable; that, so to speak, our "burial," the predicted doom of capitalistic society, was being unnecessarily delayed.

To shift the metaphor a little, Stalin had been piled up on the line of scrimmage in Korea, as he had been earlier in Greece and Berlin. The new quarterback was deciding that, instead of continuing to run linebucks, he should try a few end runs, reverses, and forward passes to test the enemy's secondary. Accordingly the Soviet leaders finally agreed to a truce in Korea and took a compromise settlement in Indochina.

When menacing threats of the Stalinist variety failed to prevent a continued growth in free-world unity—evidenced by the further consolidation of NATO and the adherence of West Germany—the pressure increased for drastically new tactics.

THE SMILES CAMPAIGN OF 1955

Thus, beginning in the late spring of 1955, the Soviet leaders launched their famous smiles campaign. In a remarkable series of policy reversals they sought to dispel the evil image that the world had acquired of the U. S. S. R. and to win new friends and the ability to influence people abroad.

They agreed to an Austrian peace treaty; began to court Tito with an elite pilgrimage to Belgrade; relinquished their Porkkala base in Finland; and struck friendly poses—with Molotov waving a cowboy hat to American photographers and Khrushchev and Bulganin posing smilingly at the Summit Conference at Geneva.

In a second round of activity later in the year the Soviet leaders began to deliver economic and military aid to non-Communist states, stepped up their public-relations campaign with a trip to India and Burma, and stopped their monotonous vetoing of new members' applications to the United Nations.

The Soviets seemed to be making some progress with their new policy as 1955 went into history, even though their stand at the Foreign Ministers Conference in the autumn of 1955 made it clear that they did not intend to budge on basic international issues.

As it turned out, however, these smiles and concessions may have cost the Soviet leaders dearly, for, if they did mislead some people abroad, these actions continued to feed rising expectations in the farflung Soviet Empire.

THE TWO GREAT EVENTS OF 1956

Two great events in 1956 deeply affecting the Communist world followed from the new Soviet domestic and foreign policies. The first was the attempt to persuade the leading Communists in the U. S. S. R. and the satellites that the Soviet leaders had really broken with the dreadful past of the Stalin regime. The second was the attempt by Poland and Hungary to secure the freedoms which they felt were implicitly being promised them by Moscow.

Although Stalin's heirs had downgraded his importance fairly consistently since his death, Khrushchev's secret revelation of Stalin's crimes at the 20th Party Congress in February 1956 represented a real turning point.

These revelations destroyed the myth of infallibility of the Soviet system and its leaders. It was this belief in infallibility, which—however wrong—had inspired the faithful and given them the courage to sacrifice everything including commonsense and their very lives to advance the cause of communism.

Many questions—including the obvious one of "where were you, when all this was going on?"—continue to be asked in the Soviet Union. Stalin's heirs had been morally compromised. The ideological foundations of this secular religion had been seriously shaken.

The circumstances surrounding the Khrushchev secret speech remain a mystery to this day. It was delivered at an unexpectedly summoned meeting of the 20th Party Congress attended by the 1,400 members from the U. S. S. R., but with the exclusion of visitors and delegates from the rest of the Communist world.

Apparently it was felt that it was too heady medicine for the Soviet people, since the secret speech has never been published in the U. S. S. R. and only small parts of it have been allowed to creep out in the Soviet press, though copies of the speech were distributed among Soviet and satellite leaders.

It is hard to understand the Kremlin's apparent failure to assess accurately the damage to their position from the publicity which the speech would eventually receive. Some very impelling domestic reason must have made them take the calculated risk they assumed.

Possibly they felt that such a thorough denunciation was required if initiative was to be liberated from the pall of fear at home, and if the image of the U. S. S. R. abroad was to be brightened.

The second event unsettling the Communist world in 1956 was, of course, the uprising in Hungary and Poland. When the Soviet leaders made their peace with Tito in June 1955, they implicitly recognized, as Stalin never had, that genuinely different national paths were permissible within the Communist world. This idea was given some encouragement at the 20th Party Congress, which urged Communist Parties to use different, perhaps peaceful rather than violent means in seeking to gain power in non-Communist states. During the state visit of Tito to Moscow last June, the Soviet leaders formally recognized the validity of different paths of Socialist development.

But no sooner had they done this, than the people in Poland and Hungary began to demand the right to determine their own destinies. Hardly had Tito returned home, when the workers in Poznan rose up to demand "bread and freedom."

The contagion spread to Warsaw in spontaneous meetings of workers and others who demanded an end to Soviet rule. In Hungary the people went even further in their assertion of complete independence of Moscow.

Throughout the summer Soviet policy zigged and zagged. When they were confronted with the events of late October, the Soviet leaders acquiesced reluctantly to some important changes in Poland, and temporarily appeared to do the same in Hungary before falling back on cruel repression.

Through it all, the Soviet Union was discredited internationally; and no non-Communist was left to justify the savage slaughter of the heroic Hungarian people. Small nations in Asia, which are special targets for Communist blandishments, recognized the moral of Hungary; and young countries like Burma, Nepal, and Laos voted for condemnation of the Soviet Union.

In the fact of these events, the Khrushchev position of trying to take bits and pieces of both a Stalinist and an on-Stalinist policy became increasingly untenable.

If the Soviet leaders want to increase productivity and initiative they have to lift controls still further. If they want to improve their reputation abroad, they cannot continue to act as they are doing in Hungary. But, if they go too far in conciliating the people, they fear for their own positions.

STIRRINGS IN THE U. S. S. R.

There are stirrings in the U. S. S. R. as well as the satellites. Pressures for change appear to be coming from industrial managers and professional classes, who seem anxious to gain a greater share in running the economy. These groups appear to have increased their responsibility at the expense of professional party administrators in the recent reshuffling of the planning apparatus.

Perhaps even more disturbing to the Soviet regime are the rumblings of discontent which involve the very groups which communism claims to favor: the workers and the students.

From the workers in the U. S. S. R. there have been growing indications of discontent in the past year, including several strikes and strike attempts and demands to know more about the patterns of worker administration and control which have come into being in the Polish workers councils.

Even more important, perhaps, is the increasing unrest among the students; which has been evidenced in riotous meetings and illegal handbill-type journals. The regime has staked much of its appeal to youth and the new Soviet intelligentsia which is hoped years of careful indoctrination would produce. But it has found, that, in educating large numbers of youths to fill the positions required for the administration of a large modern state, it has taught people to think and ask embarrassing questions for themselves.

The youth in the Soviet Union are suffering from boredom with the drabness of their system. This discontent cannot very logically be dismissed as a holdover from the past; and the regime cannot dismiss it all as hooliganism—the Soviet version of juvenile delinquency.

Student unrest in the U. S. S. R., like recent events in Poland and Hungary, show what many of us seem to have forgotten: That the love of freedom has deep roots.

The bravery of the youth in Budapest, who had known only totalitarian rule, serves as a reminder that modern weapons do not provide the final answer to moral forces.

There are numerous signs in Soviet intellectual life that this human desire for individual integrity and free expression is making itself felt. The major Soviet journals in the fields of history, philosophy, and literature have all come under official Communist Party censure recently for deviations from the party line. There has been a revival of interest in long-neglected writers including Dostoevski, whose major writings had been taboo under Stalin. Probably the most widely discussed single book in Russia today is a new novel with the distinctly non-Communist title of "Not by Bread Alone."

The hero of this novel is a persecuted inventor who succeeds not because, but in spite of, the system. A true individualist, he refuses to be bought off at the end by the very men who had sent him to Siberia on trumped-up charges. He hangs on them the label of "Meshchanskii (middle class, Philistine) Communist," thus bringing back to the Russian vocabulary a traditional adjective of abuse from Czarist times.

There is no pattern to tell us precisely how this intellectual ferment may affect the political development of a modern totalitarian and technocratic State. But it is doubtful indeed that these pressures for change can be satisfied merely by Khrushchev's combination of limited reforms and exhortations to observe party discipline.

In particular, the disaffection of thinking youth—their restless desire for real integrity and honesty in their society—must deeply concern a regime which needs their services and shapes its claims to allegiance on an ideology.

THE GENERAL CRISIS OF COMMUNISM

For many years now that ideology has predicted the doom of capitalism—recently with a little less assurance as to the date of doomsday. The Communist leaders have not, however, given up the dogma that World War I marked the beginning of a new epoch which would witness the general crisis of capitalism. According to all good Communists, this general crisis would embrace many individual crises caused by wars over markets and colonies, by workers' revolutions in protest against economic depressions, and by capitalist greed. These inner contradictions, the doctrine preached, would inevitably lead to the collapse of capitalism and the triumph of the Communist system.

Today, with a great deal more assurance, we can advance the thesis that it is they, rather than we, who face a general crisis. A Yugoslavian Communist, Milovan Djilas, alerted the world to this crisis of communism in his famous article of last November. He said this: "Despite the Soviet repression in Hungary, Moscow can only slow down the processes of change; it cannot stop them in the long run. The crisis is not only between the U. S. S. R. and its neighbors, but within the Communist system as such. National communism is itself a product of the crisis, but it is only a phase in the evolution and withering away of contemporary communism. * * * World communism now faces stormy days and insurmountable difficulties."

With the flood of self-questioning loosed by the anti-Stalin crusade and by the events in Hungary and Poland, the Soviet system certainly evidences inner contradictions that are harder to cope with than anything now facing the non-Communist world.

The Soviet leaders have been trying for some time now to cover up the cracks in their ideological plaster by talk of a return to Leninist norms of party life. They tell their people to avoid the cult of personality by going back to Lenin for guidance but is not this a new cult of personality? And who is to say what part of Lenin is to be kept and what rejected? Why should they not follow the advice Lenin gave in May 1917, that: "If Finland, if Poland, if the Ukraine break away from Russia there is nothing bad about that. What is there bad about it? Anyone who says there is, is a chauvinist. * * * No nation can be free if it oppresses other nations."

THE CHALLENGE TO THE U. S. S. R.

No regime could stand still in the face of events such as those of the past few years. Sooner or later, the challenge facing the U. S. S. R. at home and abroad must be met.

A well-known passage in Toynbee's Study of History is relevant to the U. S. S. R. today: "The unanswered challenge can never be disposed of, and is bound to present itself again and again until it either receives some tardy and imperfect answer or else brings about the destruction of the society which has shown itself inveterately incapable of responding to it effectively."

What is the shape of the society which might develop out of the evolutionary forces presently at work in the U. S. S. R. if the Kremlin leaders do not blindly seek to reverse them?

Domestically, the U. S. S. R. would take cognizance of human dignity in its society. Censorship of thought would be eliminated and greater emphasis placed on satisfying the economic wants of the individual. Here it must be noted that the U. S. S. R. has taken a forward step in doing away, at home, with the special tribunals and some excesses of the secret police.

In the foreign field, such a development would require the U. S. S. R. to accept a genuine cooperation with other nations as distinct from the tactical, Leninist idea of a temporary truce. It would have to concede to those lands it has occupied the freedom of political choice. It would have to assume a constructive role in the United Nations.

Of course, such an outcome is not yet in sight. The future is still cloudy, and the possibility of an atempted reversion to a hard line remains.

Nevertheless, the reality of pressures for change is undeniable, and they seem unlikely to diminish with the passing of time. An evolutionary accommodation to these forces may even be more likely than the convulsive developments which the history of the Ancien régime in France or the Roman Empire might lead one to expect.

CONTINUED DANGER

Of course, it would be folly to assume that international communism is on the verge of collapse. It continues to possess and develop increasing physical power; and we face the very real danger that it may bolster up its position in two particularly sensitive areas.

The first of these is, of course, the Middle East where a general policy of aid, infiltration, and stirring up troubled waters offers considerable prospects for creating serious mischief.

The second area of danger—which is perhaps not receiving as much public attention as it deserves these days—is the Far East. Communist China, during the past few years, has been posing an ever-increasing threat to many nations in the area which are relatively unsophisticated in the ways of Communist subversion. Within the Communist world, the prestige of Communist China has been relatively enhanced by the fact that its leaders have not been so morally compromised by the revelations about Stalin.

MACAULAY'S PROPHECY

While there is no justification for complacency in the free world, there are some real signs of hope. Sporadic success abroad will not change the basic problems within the U. S. S. R. if we correctly assume that the evolutionary process has started. And even in Communist China, as revolutionary fervor dims, the reaction may come as man's reaching for freedom and human dignity asserts itself.

In a prophetic speech in 1833, Macaulay spoke words which might well be pondered by the leaders of the Communist world as they face the problems that lie before them today. Macaulay was urging his countrymen not to shrink back in fear from the possibility that education and modernization would lead the people of India to seek independence.

"What is that power worth," asked Macaulay, "which we can hold only by violating the most sacred duties, which, as governors, we owe to the governed? We are civilized to little purpose if we grudge to any portion of the human race an equal measure of freedom and civilization. Do we think that we can give them knowledge without awakening ambition?"

And Macaulay concludes: "It may be that the public mind of India may expand under our system till it has outgrown that system; that by good government we may educate our subjects into a capacity for better government, that having become instructed in European knowledge, they may at some future age demand European institutions. Whether such a day will ever come I know not. But never will I attempt to avert or retard it. Whenever it comes it will be the proudest day in English history."

When the day of freedom for Russia and the peoples under Soviet rule may come, no one can prophesy. But when it comes, it will be the proudest day in Russian history.

If that day is to be hastened, we cannot afford to be timid in asserting profound faith in our democratic institutions, and in acting decisively on that faith. I sincerely believe that the time has come when no reasoning, thinking peoples with freedom of choice can continue to believe that communism is the wave of the future. The lasting, enduring values are in our free way of life.

The Welfare State and Honesty

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. REECE of Tennessee. Mr. Speaker, the following is an article which came across my desk the other day. I took the time to read it and I am impresesd by it. I think it should be made available to the Members of Congress and anyone who might be interested and for this reason I am inserting it in the RECORD. The American Economic Foundation, 295 Madison Avenue, New York 17, N. Y., which published this editorial, has made and is making a great contribution toward a sound national economy, without which we cannot have a sound government:

[From the Economic Facts of Life of February 1957]

THE WELFARE STATE AND HONESTY

(By Fred G. Clark and Richard Stanton Rimanoczy)

One of the most interesting developments since World War II has been the transformation of Norway under the Socialist government that took over after that country was liberated from the Germans.

There is, in Norway, an unsually well edited magazine called the Norwegian Weekly, whose Editor Trygve Hoff has been kind enough, for the last 10 years, to keep us on his mailing list to receive his editorial reprints.

Mr. Hoff is as good a reporter as he is an editor and we have never failed to find his material interesting and stimulating.

Last month his editorial reprint was entitled "The Welfare State and Honesty."

What follows is a condensation.

"The Norwegians were once considered one of the most honest peoples on earth—before the war, honesty was taken for granted—the locking of doors deemed unnecessary.

"But things seem to have changed. Some time ago a foreign businessman, of Norwegian descent, expressed his disappointment with Norwegian honesty. To sound out public opinion we staged a small-scale Gallup poll of our own, asking 'Have you the impression that Norwegians are honest?' The answer was: 'No; not since the war'."

After giving due emphasis to the actual war conditions and the drift away from Christianity, Mr. Hoff went on—"And then there are the consequences of the welfare state. Once it is accepted that everyone shall share in the good things of life, irrespective of whether or not anything has been done to deserve them, it is but a short step to the attitude that one is entitled to help oneself to what one hasn't got.

"This view has been strengthened by the confiscatory taxation policy. When it is clear that the rich are the ones who are to be fleeced, there seems comparatively little wrong in helping the process on its way. When official robbery in the form of crippling taxes is legalized, private robbery appears a less serious offense."

The impact of this change is not only a moral one: it is also economic, because when there is neither morality nor reward to stimulate an honest day's work, the full fruits of the economy will never be realized.

It is a frightening testament to the power of the something-for-nothing appeal of socialism, because for more than 1,000 years this virile race of industrious, intrepid Teutons had carved its living out of a rocky, barren peninsula that extends 300 miles within the Arctic circle.

Only about 4 percent of Norway's land is useful for agriculture.

A less hardy people would have long since perished or drifted off to easier lives elsewhere.

Their courage and fortitude under German occupation were magnificient.

Then came socialism and decay.

The moral of this piece is, Never underestimate the seductive power of a free meal.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. WHITENER. Mr. Speaker, I have been much interested in the many proposals for Federal aid to schools. In connection with my study of this problem I have read many publications on the subject which express differing opinions.

In reading the Mount Holly (N. C.) News of Friday, February 22, 1957, I was impressed by an editorial entitled "Let's Think About Federal Aid To Education." This editorial constitutes a succinct statement of the basic problems involved in any consideration that we may give to Federal aid programs in connection with the public schools. I commend it to my colleagues as being worthy of their attention, and I, therefore, submit it for the consideration of the general public and those having a legislative interest in Federal aid programs:

LET'S THINK ABOUT FEDERAL AID TO EDUCATION

We want to remark again there are great dangers to our public schools in any Federal-aid bill. We have some of it now in the guise of grants, and it is something we think this community, county, and State can very well get along without. If we pay taxes to Washington in order to get some back for our schools, you may rest assured that between one-fourth and one-half will be taken out before we ever receive it.

When President Eisenhower himself was president of Columbia University, he strongly opposed Federal aid to education. He denounced it as a forerunner of Federal control, and we believe he was nearer right then than he is now in his reversed stand.

Another great factor that stands up as an authoritative argument against Federal aid to education is the stand of the American governors. The governors at their meeting last year strongly opposed Federal grants for education. They realized full well that it would quickly bring Federal control and that this control would be hard to throw off.

One of the factors that prove the argument that Federal aid will mean Federal control is already on the board now. The Government gives our schools surplus foods. Do they give the food without strings attached? No. The school lunchroom cannot be used, right here in this community, for any function whereby a civic club or church could sell tickets to make money for a worthwhile local project. They have controls on the food and, in other words, our local school authorities have very little to do with the use of our own school cafeterias.

People should stop and think about this matter. Let's keep our schools free and operate them ourselves. To do this we will have to vote tax levies to keep them up, but it will be cheaper and better on all of us in the long run to keep our schools.

That's the "catch" in Federal aid. You send the money to Washington in taxes. The Government hires people to decide what to do with this money, where it shall be spent, and when. It hires people to approve building plans, because you can't spend Federal money without meeting Federal standards. The Government hires still other people to see that you pay wage rates set by the Department of Labor—not prevailing local wage rates, mind you.

What's the result? Not as much of your tax dollar comes back in Federal aid as you sent to Washington in the first place. Part of it was eaten away by administrative costs and Government redtape.

The plain fact is that the money the Federal Government would dole out to States in Federal aid for school construction would have to come from the people in those States in the first place. The plain fact is that a certain percentage of that money would be lost in the shuffle of Government costs and would never get back to the States.

No matter how you slice it, you are going to have to pay for your school buildings out of your own pocket. You can do it a lot more cheaply by spending your money at home instead of processing it through Washington.

California's 1956 Employment Record

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1957

Mr. McDONOUGH. Mr. Speaker, California's booming prosperity is reflected in the following report of record-breaking employment in the diversified manufacturing which is a large part of California's expanding economy.

Full employment is urgently necessary in California because of the tremendous increase in population which California is absorbing from all parts of the United States.

The employment report for 1956 follows:

CALIFORNIA: MANUFACTURING EMPLOYMENT

(Report of State of California Department of Industrial Relations Division of Labor Statistics and Research)

California factories employed more workers at year end than in any previous December in history, Ernest B. Webb, California director of industrial relations, announced today.

The manufacturing work force last month of 1,232,300 wage and salary workers was 87,100, or 8 percent. higher than in December 1955.

Almost every manufacturing industry boosted employment in the past 12 months. During the year about 34,000 workers were added in aircraft, 20,000 in electrical equipment (including electronics), 11,000 in ordnance, and 9,000 in machinery.

Employment was lower than a year ago in textiles, apparel, automobiles, and in fish canning and preserving.

Between November and December, factory employment dipped by 6,700. Seasonal declines in food processing and lumber more than offset expansion in aircraft, automobiles, electronics, and ordnance. While employment in the automobile industry in-

creased from November, the gain was not great enough to bring the employment level back to that of December 1955.

In December 1956, four manufacturing industries were at alltime employment highs: printing and publishing, ordnance, primary metals, and electrical equipment.

Employment in aircraft of 277,000 was at a postwar high and accounted for about one-fifth of the total California factory work force.

St. Lawrence Lesson

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. DAVIS of Tennessee. Mr. Speaker, as a Representative from the Ninth Congressional District, and as a member of the Committee on Public Works which considered the St. Lawrence seaway project, I was happy to vote for the bill in committee and, of course, to support the legislation when it reached the floor of the House.

For a number of years, there was much information about the importance of this seaway program. Many who did not understand the true worth of the seaway program for improved shipping and for the development of the abundance of electric power in our part of the country, thought that this development would seriously affect and bring injury to our economy. When I studied the whole matter, I came to the very definite conclusion that it would be helpful, and certainly not hurtful, to all sections of the United States. I have long believed that any improvement in the economy and welfare of one section of this great Nation would affect the general welfare of all sections of the country.

Over a long period of time, we have recognized the value of the Tennessee Valley Authority in harnessing the waters of the Tennessee River for the production of electricity, in the control of floodwaters, and in bringing about improved recreational advantages. I call special attention to an editorial which appeared in the Memphis Commercial Appeal, one of the great newspapers of the Nation, which relates the importance of the St. Lawrence seaway to the very philosophy which has made TVA so important—not only to the economy and welfare of the area which it serves, but to the Nation. It must be recognized that TVA operates within a certain geographical area.

This Authority is repaying to the Federal Treasury the amounts of money advanced to it for its construction program. Ultimately, all of the capital expenditures are reverted to the gain of the country as a whole. In other words, within 40 years its earnings, above the expenses of operation, will be returned to the Federal Government and those benefits will be shared by all of the people of the country. A great many people do not realize that all of this will be accomplished by the consumers of electricity in this limited geographical area who, by paying their power bills, will in time hand to the rest of the country a very valuable, paying business which will provide revenues to the country to be used for purposes far beyond the area served by the Authority.

The editorial follows:

ST. LAWRENCE LESSON

It seems to us there is a possibility of the St. Lawrence seaway becoming a beneficial influence in congressional consideration of the Tennessee Valley Authority.

There has been a tendency of anti-TVA spokesmen at a distance to scoff at the idea of multipurpose dams. To them TVA was designed for the power business, with some byproducts. They totally reject the idea that flood control has the loudest voice in saying how high the water stands in TVA reservoirs.

But the multipurpose dam is about to be demonstrated in upper New York State, within view of millions of New Englanders.

Beyond a doubt the main reason for the St. Lawrence seaway is to let bigger ships into Great Lakes ports. It will allow ships of 25-foot draft to sail into Detroit, Milwaukee, Chicago, and other cities. More than 14 feet of draft means a ship must stay outside now.

But the dams that deepen the water for the new locks are multipurpose dams which will also produce electricity in huge amounts. A single dam near Massena, N. Y., will produce 12.6 billion kilowatt-hours a year. That is more than the 11.6 billion kilowatt-hours produced by all 26 TVA dams during the most recent year.

The St. Lawrence will be producing really big power because of multipurpose design. Assuming that this idea is accepted when seen in action, the people will be more inclined to accept TVA.

But they are unlikely to really know the TVA situation for it is most unlikely that, after they have put the new power to work in homes, factories, and barns, Government plants will be set up to require all the new electricity.

Battle of the Billboards Takes National Prominence

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles:

[From the Wenatchee (Wash.) Daily World of February 18, 1957]

BATTLE OF THE BILLBOARDS TAKES NATIONAL PROMINENCE

The battle of the billboards is starting up again, this time on a national level.

With some 41,000 miles of interstate highways included in the Federal roadbuilding program, representing an investment of some $33 billion of American taxpayers' money, we ought to be interested. Almost everyone will have a share in the investment.

And almost everyone too has an interest in the scenery along our American highways. How to reconcile the two is the problem.

A bill proposed by Senator RICHARD NEUBERGER, of Oregon, who has long been a champion of preserving our scenic rights, would have our Secretary of Commerce prepare a code of limitations on the erection of billboards within 500 feet of the right-of-way on superhighways. He would restrict the signs to three classes.

1. Those needed for highway information and directions.
2. Those which would advertise the sale of property adjacent to the right-of-way.
3. Those advertising services to the motorist on property adjacent to the highway, and accessible from the highway.

Under NEUBERGER's bill, the Secretary would decide on the size and design of such signs, as well as the location.

There are many angles to the roadside sign proposition, but two of the important ones are scenic and safety.

With the increased speeds on our superhighways, anything that distract the attention of a motorist becomes a safety hazard. Both sides are using this argument in their campaign.

As Senator NEUBERGER says, however, speaking of some of the opposition to his proposed bill, "They tell you that if you look at the lakes and trees and mountains as you drive along, you go to sleep, but if you look at the billboards advertising whisky, gasoline, cigarettes, or automobiles, you stay awake."

He says further: "It is the motorist's money that makes the billboard site available. If the highway were not there, the signboard would not be worth a dime. Thus we have the motorist's dollar making valuable the signboard he is forced to look at as he drives along."

"Surely our Federal and State Governments owe it to the touring public to keep the magnificent American outdoors from being scarred and marred by a parade of billboards," NEUBERGER adds.

There are many motorists in the Pacific Northwest who will go along with Senator NEUBERGER on this.

One of our valuable assets in this part of the country is the outdoor scenery, and we want to keep it unmarred. Our anti-litterbug campaigns are bringing results in keeping our roadsides clean. Let's also keep the roadside signs far enough away from our roads so we won't be driving down a billboard alley as we travel through our mountain passes.

Ogden Nash's classic verse still stands.

"I think that I shall never see
A billboard lovely as a tree.
In fact, unless the billboards fall,
I'll never see a tree at all."

[From the AAA News Service]

FEDERAL PROTECTION FOR INTERSTATE SYSTEM ROADSIDES URGED BY AAA

WASHINGTON, D. C., February 19.—Prompt Federal action to protect the roadsides of the 41,000-mile National System of Interstate and Defense Highways against billboards, uncontrolled commercial development, and unlimited access from side roads was urged today by the American Automobile Association.

Harry I. Kirk, of Chicago, president of the AAA, pointed out that the national motoring body of five and a quarter million members has long urged State and local governments to protect highways from blight resulting from intensive commercial development along the roadsides. Today's recommendation asks for Federal action, but only to protect roadsides on the interstate system.

"In view of the fact that highway user taxes, collected by the Federal Government, will pay for 90 percent of the cost of this interstate network," AAA President Kirk said, "the Congress is fully justified in protecting the billions of dollars invested in these highways.

"Long and bitter experience has demonstrated that it is economically unsound to invest large sums in highway construction unless the roadsides are protected against blight that destroys a major part of roads capacity, safety, efficiency, and enjoyment.

"Unregulated development along the roadsides, including the uncontrolled erection of billboards, adversely affects the State, the community, and the motorist," Mr. Kirk went on to say. "The highway user, whose taxes pay for the huge costs of highway modernization, has every right to demand not only safeguards for his investment in the highway itself, but also adequate roadside protection."

A number of bills designed to regulate outdoor advertising along the Interstate System has been introduced in Congress. It is understood that special studies of methods whereby the Federal Government can encourage and assist the States in providing roadside protection are being made by the United States Bureau of Public Roads and that recommendations on this matter will be presented to Congress shortly by Bertram D. Tallamy, the new Federal Highway Administrator.

Snags in the Plan To Aid Poland

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I enclose an article which appeared in the Washington Star of February 8, 1957, written by Constantine Brown and entitled "Snags in the Plan To Aid Poland," which contains thoughts that the officials of our Government should give profound consideration to in connection with any negotiations with representatives of the present Government in Poland.

I also enclose a letter which appeard in the New York Times of February 9, 1957, and written by the Honorable Stanislaw Mikolajczyk, former Premier of Poland.

In the world of today, an important element of the cold war or the hot war whichever one might want to call it, is the economic aspects and the strains upon the Soviet Union. There is no question but that the Soviet Union is undergoing severe strain at the present time. Its farfetched commitments to Red China and other countries—the fact that the satellite nations must receive aid and assistance—and the Hungarian situation are noticeable symptoms of strains upon the Soviet Union. It seems to me that those strains should be capitalized for our benefit.

There are many persons who honestly feel that giving economic assistance to any satellite nation to rebuild its internal economy would be of invaluable assistance to the Soviet Union, and such persons feel that such a course on the part of our Government is unwise. There is logic to such thought. Any negotiations should be viewed with caution.

The above mentioned follows:

[From the Washington Star of February 8, 1957]

SNAGS IN THE PLAN TO AID POLAND—SOME ADVISERS FEEL ECONOMIC HELP WOULD PULL MOSCOW OUT OF HOLE

The administration's plans to send economic help to the Communist government of Poland, headed by Prime Minister Gomulka, is hitting some snags. Some of Secretary of State Dulles' advisers doubt the wisdom of such action. Their opposition is not based on the general theory that no Communist government should be helped unless it is willing to look askance at Moscow. It is based on practical reasons.

Soviet Russia continues to have serious economic difficulties. Despite the glowing terms with which the Soviet hierarchy has described the progress of the various 5-year plans, there still is a serious lack of consumer goods. While Soviet industry has made great strides and is considered second only to ours, the bulk of its production still is confined to war materials. Now the Kremlin is besieged with demands for economic help from its subject nations.

After the Soviets set up the satellites in Europe to avoid another German aggression, as Stalin explained to the gullible Western World, the Muscovites proceeded to their systematic milking of the satellite economies.

The bulk of the crops and cattle in agricultural countries such as Rumania and Bulgaria were sent to Russia. The industrial output of factories in Czechoslovakia and Poland, as well as Polish agricultural and coal products, also found their way into Russia. Factories in East Germany, besides those in West Germany, were transported across borders to Red areas. These thefts were clothed with the pompous title of "Economic Cooperation with the Socialist Countries." After the Communist conquest of China, similar cooperation with carried out in that vast area.

The economic "cows" eventually went dry. The Russian rulers find themselves now in the unpleasant position of having to help out the satellites lest there be other uprisings on the Hungarian pattern.

It has been said in this country by the advocates of unending foreign economic assistance and of the point 4 program that communism thrives on empty stomachs. This may or may not be so. But competent observers say definitely that empty stomachs among peoples subjected to Communist tyranny produce revolutions against the oppressors. The men in the Kremlin have begun to realize that people can't live on Marxist-Leninist theories.

Figures issued in Moscow last month show the Soviets have agreed to provide Poland this year with 1.4 million tons of grain on credit and grant her a long-term loan of 700 million rubles (about $150 million). Even Rumania, a large grain-producing country, is being given a loan of 450,000 tons of wheat and corn, in addition to credits to cover the purchase of urgent needs wherever she can.

Hungary, after the turmoil of last fall, is in an even more desperate plight. The shooting may be over in Budapest and other cities, but the unrest continues. There are near sitdown strikes in factories, and the farmers are reported to plant only enough for their own subsistence. Any attempt on the part of the puppet regime to use force, as in the past, is likely to be answered with another revolution. Hence, Prime Minister Kadar is making frantic appeals to Moscow to send immediately food and the bare industrial necessities to keep the country going until the revolutionary wave has been suppressed completely.

Moscow has ample machineguns and ammunition available. It can provide them in any quantities needed, not only to the satellites, but also to the Middle East. But the Kremlin is in a quandary when it comes to sending what every human being needs—a minimum of food, fuel, and clothing.

A few of Secretary Dulles' advisers believe that we should take advantage of this situation to weaken further the Soviet economic structure. By extending economic assistance to the Gomulka government, for example, we would merely strengthen the hand of Moscow in that country.

Therefore, ask some of our more realistic obervers, why not add to the Kremlin's burdens and worries by withholding economic assistance to their satellites?

[From the New York Times of February 9, 1957]

AID FOR POLAND: DISTINCTION MADE BETWEEN HELP FOR PEOPLE AND FOR COMMUNISTS

To the EDITOR OF THE NEW YORK TIMES:

The New York Times, in an article published on January 27, presented my attitude on the matter of aid to Poland as completely negative. My attitude now as in the past has always been clearly and positively in favor of aid to the needy Polish people.

I am, however, against aid of any kind which instead of helping the Polish people would help the Soviet Union and the shaky Communist economy.

I make a clear distinction between immediate help given to the Polish people and help to the Communist government in the form of long-term credits. Food, medical supplies, clothing and sizable donations from the American farm surplus, including cotton, should be granted to the Poles as soon as possible.

I favor also the granting of economic aid to Poland in the form of long-term credit. But since the Communist system is so economically destructive, since the Polish people will have to pay back the credit and since Poland is forced to bear the expenses of arming the Soviet forces stationed in Europe and is exploited by Russia through secret state agreements, such credit should be granted under the following conditions:

The Polish nation will have the opportunity to choose a system of government and an administration through free elections;

The Polish Government will disclose the terms of all its international secret trade agreements, and in the future will be free to make trade agreements based upon prices prevailing in the world markets;

The Polish Government will guarantee that credit granted for the restoration of agriculture will be used to improve the productive capacity and the equipment of the peasant-owned farms, and that any new plans to drive the peasants into kolkhozes, whatever their form, will be abandoned.

STANISLAW MIKOLAJCZYK,
Former Premier of Poland.

WASHINGTON, *February 4, 1957.*

On Federal School Aid

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. DAVIS of Tennessee. Mr. Speaker, editorial notice was taken by the Memphis (Tenn.) Commercial Appeal on a suggestion recently made by our esteemed colleague, OTTO PASSMAN, from the State of Louisiana.

It occurred to me that both his idea and the editorial are provocative of serious thought. The editorial follows:

ON FEDERAL SCHOOL AID

As Congress moves toward consideration of Federal taxes for building new schools there is at least one member with a better idea.

He is OTTO E. PASSMAN, a Democrat from Monroe, La. Mr. PASSMAN recently proposed

lowering of Federal taxes as the best way to help finance new schools. With the Federal pressure removed, State and local taxes could be adjusted to do what needs doing.

"When you go to the Federal Government for funds, before the money can be supplied the Government must collect the taxes in the States, bring the money to Washington, and then reallocate it to the States. And in this process the tax dollar collected shrinks by some 30 percent before it is returned to its original source," he says in asserting a truth now receiving more recognition.

It is a truth that includes the shrinkage of money collected by State taxes before it is returned to the communities where county, city, and school taxes could accomplish the same purposes better.

There is a consideration of even higher importance than efficiency in handling tax money. As Representative PASSMAN says it:

"Federal aid to education would give the Central Government in Washington control over the public schools of the Nation * * * Local self-government and local responsibility and independence would be bound, sooner or later, to disappear."

Federal Support for the Public Schools

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by Beardsley Ruml before the American Association of School Administrators meeting at Atlantic City on February 18. With the thoroughness and insight which has characterized all of Mr. Ruml's major contributions to the public welfare as private citizen, as public servant, as adviser to Presidents, this address cuts away much of the cloud of confusion that surrounds the issue of support of education. The facts Mr. Ruml points out are important enough, his recommendations are significant enough, to command the attention of every Member of the Congress.

The address follows:

FEDERAL SUPPORT FOR THE PUBLIC SCHOOLS

(By Beardsley Ruml)

A Federal duty to support the public schools flows both from the national interest and from the fact that access to the growing income of the country is most directly and most equitably imposed through the Federal income tax.

Support implies interest and duty. Certainly we have a Federal interest in making certain that our future citizens can communicate and can compute. These are the basics on which our society rests; and having a Federal society as we do, a Federal interest as well as a Federal duty in safeguarding the basics of education follows inescapably.

State and local bodies will add to the foundation of support built federally as their vision, conscience, and means provide. However, there is neither prudence nor equity in making plans such that the basic requirement of the public schools would have to be met from resources to which State and local bodies have access.

The phrase, "Federal support for the public schools" deliberately uses the term "public schools" rather than the broader term "education." The public schools are an essential but not an exclusive instrument in the Nation's educational program. State and local bodies, private schools, churches, families, formal, and informal voluntary agencies will have plenty to do in expressing the variety of their own insights in the general educational fabric of which the public schools are a part. Federal support for the public schools should therefore provide the more formal important substance to every community's education program without the rigidity and interference usually associated with responsible use of Federal funds.

The question immediately arises, "Can Federal support for the public schools be provided in a form that carries no danger of objectionable interferences?" I believe that Federal support can be so provided once the point of view of aid and the means test is set aside.

Most suggestions that have been made for Federal support of education involve some kind of equalization formula to distinguish between the richer and the poorer States, and also some test as to whether any particular State was doing its full part in the support of its schools.

Equalization, involving as it does, some measures and tests of need, ability, and willingness to meet need, always threatens to bring about Federal dominance or control of education. The possibility of the Federal Government coercing the States in education matters would always exist. This should be avoided and it could be avoided by distributing Federal support for the public schools on a per capita, schoolage child basis. Each State government would receive this money each year upon certification that the funds would be spent that year for the support of public schools as defined by the State.

If Federal funds are distributed on a per capita basis, the definition of public school to be made by each particular State, then the wealthier States that now pay the larger share of the Federal income tax might be expected to be able to take care of public education on any level they feel suitable, and indefinitely. This I doubt; but even if it were so, it still remains true that a child in a wealthier State is also at the same time a child of the United States and deserves equal Federal support for the basic costs of his school system.

We speak here of Federal support of the public schools not of Federal aid for education. Federal aid implies giving help where help is needed, of sharing with the poor or the less fortunate. It implies the means test, the handout.

The concept and the term, Federal aid for education takes us back to the early thirties when the means test and the handout characterized public and private programs for aiding the unemployed and people of advanced years. I well remember an incident told to me in those unhappy years of an elderly man applying at the proper bureau for assistance for himself and his ailing wife. He was asked a question proper to the times, "Do you have any money of your own?" "Yes," he replied, "I still have $83 left in my savings bank." The answer was routine. "Come back when that is gone and we will see what we can do."

The means test and the handout is no longer the conventional method of taking care of unemployment and old age security. They will not and should not completely disappear, since human life enfolds both deep tragedy and instant generosity. However, our society today is not the society of 25 years ago with respect to provisions for the aged and the unemployed. And since the phrase "Federal aid for education" implies a point of view now obsolete in other areas, the phrase should be dropped and a phrase adopted which states a modern point of view "Federal support for the public schools."

On what scale of expenditure should we think about Federal support for the public schools? This question will be deeply studied and long debated. My suggestion is that a start be made for fiscal 1958 with a per capita child in public school payment by the Federal Government of $20 and that this amount be continued in fiscal 1959. In subsequent years the amount should be raised to $80 per capita in 2 or 3 steps, reaching this figure in fiscal 1961 or 1962. The aggregate amount need only be estimated roughly at this time; the payments at the $20 per capita rate would be about $750 million and at the $80 per capita rate in fiscal 1962 would be about $3½ billion. These figures though important, are not unmanageable, particularly when account is taken of projected increases in national income. It should also be observed that no new or increased Federal taxes would be required, since these amounts can be obtained by reducing present taxes somewhat more slowly than might otherwise have been the case. Some perspective is given as to relative magnitudes when it is realized that an increase of $100 in the present exemption in the individual income tax would result in loss of revenue at present national income figures of about $2¾ billion. A reduction of 7 percentage points in the corporation profits tax, that is from 52 percent to 45 percent, would reduce tax revenue from this source at present profit levels by about the same amount, $2¾ billion. These examples showing the relation between tax rates and revenue show clearly that the suggested scale of Federal support for the public schools would constitute no significant burden to the taxpayer.

Some explanation of the suggested per capita rates and timing is in order. The $20 figure is intended to give a period of time to allow for the development of administrative, accounting, and auditing procedures. I have mentioned fiscal 1958 as the starting date in order to give time for the passage of legislation and for determination by State and local authorities as to how the funds will be distributed and used.

As to the $80 figure, some gradualism in arriving at this point is clearly desirable. If it can be reached efficiently in 2 steps, that is certainly better than 3. Time may show that the $80 figure is somewhat too low in view of rapidly mounting population at the high-school age level. Eighty dollars per capita is about one-third of the amount now being spent by the States, exclusive of interest and amortization of school building costs. If local expenditure is substantially higher by 1962, a somewhat higher Federal support figure would seem appropriate. It would seem undesirable for the Federal support figure to exceed the per capita expenditure of the lowest State.

How do these Federal support figures compare with projected public-school needs? The National Citizens Commission's report on the public schools report estimates a range of from $13.5 billion to $19.2 billion for 1965 requirements for public, private, and parochial schools. The Federal support at the $80 level, amounting to $3½ billion, would thus be between 25 percent and 18 percent of the projected estimates. Such percentages, particularly at the higher expenditure levels, still leave a very heavy financial burden for education on non-Federal sources of revenue.

The suggested level of support should be related also to projections of increased gross national product. The current figure of $412 billion is up $40 billion since 1953. Estimates of $425 billion for 1960 and $525 billion for 1965 are likely to be exceeded in the light of current trends. Federal support for the public schools of $3½ billion 5 years from now is clearly no substantial withdrawal from increased productivity.

Although at the level of broad purpose and policy Federal support for the public schools on a per capita basis offers no difficulty except the effort to get it going, there are nevertheless several sensitive points that

must be anticipated and dealt with. Of these I shall mention five.

First, the definition of what is a "public school" must be left to the individual State. The definitions will vary and will seem to some fanciful and even inconsistent with prevailing notions of what a public school really is. Some will define a public school in terms of its top controlling board, some in terms of its availability to students, some in terms of the character of its support. Some States will define parochial schools as public schools, others will not. Latitude must be given to the State to define "public school" as it sees fit. This is a prime consideration for State freedom from Federal control.

Second, there must be a definition of what is a "child in school." This is the unit in terms of which support will be given. Here are some of the questions: What is a child, that is, from what age to what age is the child to be counted as such? When is he in school, that is how many days a year, how many hours a day? Must he be on the school premises, or only under school supervision? These points as a statement of minimum standards should be a matter of Federal determination.

Third, what about present funds now going to the schools from State and local bodies? Must they be maintained? My answer here is that the maintenance of existing funds should not be required, otherwise the Federal support is not really the discharge of a Federal responsibility, and the State would be coerced as a result of a history that may or may not be currently in tune with overall needs as the State itself presently appraises them.

Fourth, what about desegregation? I feel that aid should be given to all States on a per capita basis without regard to how the administration of the public schools is currently handled. Law enforcement of national policy is in the hands of the courts. Improved educational opportunity will be a powerful force in aiding in the establishment of a rational and humane democracy.

A special problem arises however if a State defines what is ordinarily considered to be a "public" school as a "private" school for purposes of evading the intent of national desegregation policy. Should a State be permitted to define "public school" in one way for the Supreme Court and in another way for the Comptroller General? Personally, I feel that one definition is enough, and "public school" once being defined, that concept should prevail uniformly in all judicial and administrative matters where the public school as such is involved.

Fifth, what about current proposals for Federal aid to States and communities for the building of schools? The best that can be said for them is that they are harmless and a gesture of good intent. The worst that can be said is that they are wholly inadequate, expensive and that they evade the central duty of Federal support for the public schools.

Per capita appropriations to the States will permit them to finance the schools they believe they need, and to determine for themselves the balance locally desirable between educational structures and teaching functions.

Finally, the dreary question of accounting and auditing. Here I feel that the accounting should be done by the State, certified to by some high agency other than the school authority. The auditing should be done by an agency of the Federal Government, and the rules of the audit should provide whatever uniformity and flexibility in accounting the State machinery will use as its guide to procedure and to form. Such Federal supervision is not an interference with the educational program of the State, it is only the assurance that the declared policy of the State has been performed in terms that reflect Federal responsibility and accountability.

Opposition to Federal support for the public schools is rarely heard on economic grounds, that the burden on the Federal budget would be too great. It is frequently contended that the States could do more if they only wanted to, by means of reassessments, higher rates of real-estate taxes, higher general and specific sales taxes, new taxes on business turnover, and the like. There is no doubt some truth in these contentions; but what is not always recognized is that States and local communities have many public responsibilities other than the schools, and that growth and shifts of population have created many a new problem for local government. In any case catching up with school necessities and keeping up with school demands will require more State and local funds than have ever been planned for, even with moderate assistance in Federal support.

The most vocal opposition to Federal support for the public schools comes as expressed apprehension that Federal money means Federal interference and ultimate Federal control of education. The right of each State to determine what kind of education it wants is constantly asserted, a somewhat legalistic position considering the interference of the State in the educational affairs of local communities and of both in the decisions of the individual family, which after all should have some final rights as to how the children should be brought up.

It is true that the protestations of fear of Federal interference are mostly based on the assumption of an equalization formula, of the means test, hand-out policy which always presented a potential danger. If, however, the measure of Federal support is on a per-capita child in public-school basis, the only Federal concern would be to prevent false reporting or fraud of other kinds.

The opposition will now come from those who favor Federal aid because they expect at the same time to get Federal influence on local educational policies and standards. This opposition feels that working through local citizens groups is too slow and too uncertain, and that unless there is conformance to Federal standards there should be no Federal aid. Whether or not this group is large, it is extremely vocal; and recent disclosures as to what the Soviet Union has been able to accomplish educationally by means of central expenditure and central control makes this group understandably impatient with the slower policies of popular consent and popular will.

There is, however, another angle to this controversy—one that is very old and very deep. Briefly it is the question of whether the burden of social programs, such as education, should be borne by a tax on real property or by a tax on income.

This issue was brought home to me very vividly in 1931 when I was a dean at the University of Chicago. Prof. Charles H. Judd had just returned from New York where he had attended a small private meeting of businessmen and educators. The subject under discussion was increasing the required age of school attendance. I asked him how the meeting went. He said, "Fine. There was unanimous agreement that the compulsory school attendance age should be raised." I was surprised and asked him to explain. "Well," said Judd, "the educators and the businessmen have a common interest. The educators want more children to teach and the businessmen want to put the burden of unemployment on real estate."

This conflict between the income taxpayer and the real estate taxpayer or renter is not a conflict between the rich and the poor. We now have over 44 million income taxpayers, and the median taxable income on which income tax is paid is only $3,800. To make it concrete, here is a man making $100 a week who has a wife and three children. He now has $3,000 in exemptions. If the exemption allowance should be raised $100 per person, since his highest bracket is 20 percent, he will increase his income after taxes by $100. If, instead of raising the exemption, $80 is put into the public schools (on the per capita child in public school basis), his children if they are in public school will get $240 more spent for their education. Which do you think this head of a family would prefer—$240 more spent a year on the education of his children or $100 a year of his own to do with as he pleases? Well, your guess is as good as mine.

From the point of view of the national welfare the choice is clear. The $240 more a year for the better education of the three children is more desirable than $100 a year spent or saved beyond the family's present consumer status.

Obviously this is an illustrative generalization, and exceptional cases can be imagined. But the exceptions will fall on both sides around this average, and the balance is clearly in favor of Federal support of the public schools.

We are now in a time of historic change in education. The old traditions are falling apart under the pressure of the new necessities. And in a curious way the new necessities derive from a will to provide for all children the educational opportunities which the old traditions were designed to give the few.

The period from 1929 to 1939 was a period of economic disorder. The institutional pattern was no longer able to support the basic demands of production and distribution. We were confronted for a decade with the paradox of need for goods and need for work in a setting of abundance of raw materials and the highest technical competence the world had at that time known. Later the folly of war revealed the folly of the old economic and financial traditions. The reluctantly adopted palliatives of the early thirties became established as the guides to institutional economic reform.

In 1946, after 15 years that were marked by both depression and war, a national policy was formulated in the simple preamble to the Employment Act of 1946. This policy has become more creative as the years have passed. It declared that the Federal Government has responsibility consistent with a fundamental belief in free, competitive enterprise to utilize all its plans, functions, and resources for the purpose of creating and maintaining conditions under which there will be afforded useful employment opportunities, including self-employment, for those able, willing, and seeking to work.

At the time the Employment Act was passed, there were misgivings, even fear. The New York Herald Tribune on June 14, 1946, spoke of the act as "perhaps the most serious threat to free enterprise and democracy with which the country has been confronted in the 170 years of its existence." But today the act has bipartisan support at the highest levels, and all sectors of the economy recognize its policy as a necessary element in protecting the national welfare.

The period from 1949 to 1959 is a period of educational disorder. The old institutional structure can no longer contain the urgent demand for general and selective educational opportunity. The public schools in 1956 are in the same position that the banks were in 1931. In a year or two or three, more and more public schools will become educationally insolvent. Unfortunately, or perhaps fortunately, there can be no run on the schools that will force them to close. But the present inadequacies will become more apparent as the needs become more acute, and we can look forward to an Education Act of 195x whose preamble may well be a paraphrase of that of the Employment Act of 1946.

Such a preamble to the Education Act of 195x might read in part as follows: "There is a Federal responsibility, consistent with the constitutional rights, the privileges and the duties of the States, to utilize all its plans, functions, and resources for the purpose of creating and maintaining conditions under which there will be afforded useful educational opportunities, including self-education, for those able, willing, and seeking to learn."

A Place To Save Money

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. BETTS. Mr. Speaker, an editorial from the January 31, 1957, issue of the Marion Star of Marion, Ohio, I believe, accurately reflects the thinking, in at least one State, on Federal aid to education. I hope that this sensible analysis of the problem will appeal to people who are tired of Federal bureaucracy and fed up with the high cost of Federal agencies—especially when everyone is hopeful of reducing the present budgetary requests.

The editorial follows:

A PLACE TO SAVE MONEY

The only thing the Federal Government could do for schools that they sometimes have trouble doing at local and State levels is to provide more taxing power for school support.

This is the only kind of school aid from Washington that would be acceptable—the use of Federal taxing power.

If Congress merely gave back to each State a fair percentage of taxes collected under its authority, with the proviso that the money be used for school aid, that would be excellent.

But that is not what a school-aid-minded Congress would do. It would divvy up Federal funds under some school-aid formula to share the wealth between wealthy and poor States.

That is the only plan that would be acceptable to southern Congressmen, representing the bulk of the poor States.

The plan would give many States a net deficit in their own school-aid resources; they would lose in the deal. It is, moreover, a plan that would give the Federal Government a net deficit in its Treasury because no new taxes are being proposed to underwrite a school-aid program.

Secretary of Treasury Humphrey has been talking about the importance of each of us coming to grips with runaway spending in Washington. He says we as individuals have ourselves to blame for a budget that has reached $72 billion and shows no sign of stopping.

Secretary Humphrey says he and President Eisenhower have talked this over and agree that the only way to save Federal money is to save it—like that.

The Federal school-aid bill, whatever it turns out to be when the committeemen get through with it, would be a fine place to save a couple billion dollars' worth of Federal money—like that.

We predict that Congressmen will quickly realize the absurdity of talking about Federal school aid when what they mean is a scheme for sharing the wealth between States already paying the cost of education and States that have been waiting for assistance, some of them with two school systems—one for whites, one for colored.

Felix Ullrich, Jr., of Newark—An Outstanding Young Scientist

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. RODINO. Mr. Speaker, next week in Washington, we will have the 40 most promising young scientists in the United States. They have been selected in the 16th annual talent search from high schools all over the Nation to come here to participate in the 5-day Science Talent Institute. I am proud to say that Felix Thomas Ullrich, Jr., a young man from my district in Newark from Barringer High School—the same high school that I attended—is included in this outstanding group. Felix intends to become a physicist or an electrical engineer.

These young people will compete for the Westinghouse scholarship in the finals of the science talent search directed by science clubs of America which are administered by Science Service. The winners have passed difficult aptitude test, submitted scholarship records and recommendations, and written a report entitled "My Science Project." One of these outstanding young men and women will win a $2,800 scholarship and the runner-up will receive a $2,000 scholarship. In all, scholarships totaling $11,000 will be awarded to this group.

The story of Felix Ullrich, Jr., must give heart to all Americans. At 17 years of age he has already distinguished himself in the field of his choice. He is an outstanding example of a young man seeking knowledge to prepare himself for an important future in a science-minded age. On his own, he has studied theoretical physics and mathematics during his vacations. For a science project, he has designed and built a small radio frequency heating unit which he used to heat material in a vacuum. His accomplishments have led him to be elected to the National Honor Society. He is also a member of the Science Clubs of America and a mathematics club. He hopes to attend the University of California at Berkeley. The fact that Felix is a member of the Ground Observer Corps shows that he is a good citizen as well as a good scientist.

Felix Ullrich, Jr., is an example of the fine young men and women included in the Scientific Talent Institute here this week. I am sure that we are all well aware of the crucial need for scientists. The role that these young people will play in the future of our Nation is an ever growing one. The young scientists in this group are stepping forward to help their country in an era of great scientific competition. The Soviet Union is known to be placing great emphasis on scientific advancement and the nations behind the Iron Curtain are making large strides in this field. We are dependent on the young scientists of America to provide for our national survival by their contributions to a competitive and very important field. I wish to commend these young scientists on their accomplishments.

How Reducing the Corporate Income Tax Will Help Unincorporated Businesses

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. PATMAN. Mr. Speaker, many small-business people whose businesses are unincorporated are asking how they will be helped by our proposals for reducing the corporate income tax on small corporations.

I introduced in the last Congress, and again in this Congress, a bill which would substantially reduce the corporate income tax on small corporations. This bill—H. R. 7—would also reduce the tax on medium size and even moderately large corporations; it would, however, make slight increases in the tax rates on the very large, the giant, and the supergiant corporations. The increased rates which these latter corporations would pay are proposed for compelling reasons.

First, the bill is not intended to bring about any reduction in the total revenue which the Government would receive from the corporate income tax. On the contrary, the bill would simply substitute for the present uneven progression of rates, a uniform progression which is calculated to yield the same revenue.

There is, however, a second purpose to be served by a uniform system of progressive rates on corporate incomes. The purpose is to bring about a more even and equitable distribution of the actual burden of the corporate income tax and thus correct a condition of the present tax structure which is bringing about a rapid concentration of business into the hands of a few corporate giants.

PRESENT TAX RATES DISCRIMINATE AGAINST SMALL BUSINESS

As we know, the corporate income tax falls on many small corporations in exactly the same way that the individual income tax falls on an individual's income. That is to say, the corporation is left, after paying the tax, with just that much less income to spend than it would have had if there had been no corporate income tax. These are the smaller corporations. They do business under sufficiently strong competitive conditions that they cannot arbitrarily decide what their incomes are going to be. In short, they do not have a market control which enables them to shift the tax.

On the other hand, many of the bigger corporations do in reality shift the corporate income tax. This is readily admitted by many of the executives of these very corporations. These corporations do not necessarily have a monopoly in the legal sense of the term, but they do have sufficient control over the market that they can rearrange their price and production policies to accommodate the tax. They thus continue to take whatever amount of profits, after taxes, they consider to be most desirable from the viewpoint of their long run self-interest.

For example, corporations in the public-utility fields do not actually pay a corporate income tax for the simple reason that when this tax is imposed, or increased, it is the custom of the State utility commissions to allow these corporations to raise their rates sufficiently to absorb the tax. For similar reasons the giant corporations in the unregulated fields of business do not pay the tax, because they are not required to seek the permission of any regulatory body before raising their prices.

An across-the-board corporate income tax is therefore far from even and undiscriminating in its effects on corporations of different sizes. At one extreme, there are corporations that actually bear the burden, or substantially all of the burden, of the tax. In this case the tax actually reduces—and it reduces substantially—the amount of earnings which the corporation has left to pay dividends and to invest in business expansion. At the other extreme, there are corporations that can and do shift substantially all of the tax, and these are in practical effect left untaxed. And in between these two extremes there are corporations which can and do shift the tax only in varying degrees and these are in practical effect taxed in varying degrees.

At present the effective tax rate on corporate incomes—that is, the normal and surtax combined—progresses in a very curious fashion. It is, first, a flat rate on corporate incomes ranging between nothing and $25,000; then the rate progresses steeply on corporate incomes up to about $400,000; and after that the rate is flat again, so that a corporation having a net taxable income of several billions of dollars pays the same rate as a corporation having a net income of about one-half million dollars.

BIG CORPORATES SHOULD START PAYING TAXES

The result of a system of progressive rates then would be this: No matter in what general segment of the size scale an industry may occupy, the smaller competitors in that industry would pay a lesser rate than the bigger corporations, and the rates would vary in proportion to the relative size of the competitors. This would tend to prevent the bigger competitors from shifting the tax, or at least limit the extent to which the tax could be shifted. The result will be therefore that many of the giant corporations would, for the first time, actually bear the burden, or a large part of the burden, of the taxes which they have been paying, or going through the motion of paying.

HELPING UNINCORPORATED BUSINESSES.

As a result of having introduced a tax bill of the kind I have just described, I have received over the past year, and am still receiving, quite a few letters about this matter. As I indicated, many of these letters are from small-business people whose businesses are not incorporated and who ask this question: "How will reducing the corporate income tax help small partnerships and proprietorships?" On January 9 I received a letter from a small-business man who put the question in a rather typical way. I offer for insertion in the RECORD a portion of this man's letter to me, together with that portion of my reply to him which deals with taxes, in the hope that this correspondence will help clarify the matter for others who may have the same question. This will show how, under section 1361 of the Internal Revenue Code of 1954, small unincorporated businesses might take advantage of any reductions that are made in the corporate income taxes.

The letter to me reads, in part, as follows:

I, as a small retailer, have watched with considerable interest the reports of congressional aid to small businesses.

To date all references to such aid seem to mention tax relief for small corporations, although the bulk of small businesses are unincorporated by more than 10 to 1. The small unincorporated businesses need aid immediately, in matters such as tax relief, pension plans, reserves for operating capital, allowable deductions, etc., questions in which the corporations have a decided advantage over the unincorporated businesses. For example, maximum taxes in corporations is 52 percent—individual taxes, unlimited. Corporations may hold certain amounts of profits for operation or expansion of business, whereas the individual cannot.

My reply to this small-business man has been, in part, as follows:

I fully agree with you that unincorporated firms need tax relief. In fact, I believe more so than the small corporations. The corporate form of organization provides some shelter from the high and steeply progressive rates on individual incomes. This usually means that small corporations, if they are profitable, can save some money for business expansion. Executive salaries are of course deducted as any other business cost before the tax is computed.

I have been pushing for tax relief on small corporations however, for the reasons, first, because the same relief will be, or can be, made available to unincorporated businesses; and second, this seems to be the only feasible way of equalizing the presently unequal tax as between big firms and small firms.

NONINCORPORATED FIRMS MAY BE TAXED AS A CORPORATION

Most small-business people don't seem to know about it, but section 1361 of the Internal Revenue Code of 1954 gives to unincorporated firms the option of being taxed as a corporation. This means, as I have said, that if we can get the tax rates on small corporations down, unincorporated firms can utilize the advantages which would result. I should add that very few unincorporated firms have actually availed themselves of section 1361.

One of the reasons appears to be that while the Collector of Internal Revenue is supposed to issue regulations covering this section, I believe, as yet, he has not done so. The Small Business Committee, of which I am chairman, has recently recommended that this matter be reviewed for the purpose of removing any undue obstacles to small businesses' use of the section.

In addition, I have introduced a bill, H. R. 23, which would help both incorporated and unincorporated firms that want to acquire or improve business property. This would allow the firm to charge off an investment, up to $50,000, as a business cost within the year in which the expenditure is made. Or it would allow the firm to amortize the expenditure over any number of years it might choose.

The District of Columbia School System

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, February 25, 1957

Mr. DAVIS of Tennessee. Mr. Speaker, during the very thorough investigation made last fall by a special subcommittee investigating the District of Columbia school system, Hon. William Gerber, accomplished and reputable attorney of Memphis, Tenn., served as the chief counsel. It must be agreed by all thinking persons that he performed a fair, impartial, and thorough service to the committee, which had as its chairman the Honorable JAMES DAVIS, of Georgia.

It is my judgment that this committee, in making an exhaustive and factual report to the Congress, and of course, to the Nation, accomplished great good in the field of this highly controversial subject. In the limited time provided this committee, I was amazed at the amount of constructive work which was accomplished.

Recently, Mr. Henry Edward Schultz, national chairman of the Anti-Defamation League of B'nai B'rith, with headquarters in New York, released to the press, in the name of the Anti-Defamation League, a statement made by Dr. Hansen, of the District school system, wherein he made a report entitled "A Miracle of Social Adjustment." This statement and report sought to reflect unfavorably upon the work of this committee.

I have known Mr. Gerber since we were very young men. He is a fine citizen of Memphis. He was born in Russia, came to this country at a very early age and by his own efforts, supplemented by the contributions of fine parents, obtained his education. He was elected by the people of my congressional district to the important office of district attorney general, and his record as a prosecutor was outstanding. He is a former president of the Memphis Bar Association and served as president of the Memphis chapter of the B'nai B'rith. He carries the very highest rating for ability and character in the law directory. Active in worthwhile civic affairs, while enjoying a lucrative law practice, his reputation is well known in our wide area.

He wrote a very splendid letter to Mr. Schultz, in answer to his implied criticism, and I have been given permission to include a copy of that letter in my remarks because I would like to have the greatest number of people have the benefit of its reading. The letter follows:

FEBRUARY 20, 1957.

Mr. HENRY EDWARD SCHULTZ,
National Chairman, Anti-Defamation League, B'Nai B'rith,
New York, N. Y.

DEAR MR. SCHULTZ: I have just read your letter of February 15, 1957, and the press release in the name of the Anti-Defamation League of B'nai B'rith on Dr. Hansen's report entitled "A Miracle of Social Adjustment." In answer to this distortion of the facts and your continued meddling in this highly controversial matter in the name of the Anti-Defamation League of B'nai B'rith, which is resented by thousands of American Jews, I wish to make the following reply.

The NAACP and other irresponsible organizations and individuals with whom you, as national chairman of Anti-Defamation League of B'nai B'rith, appear to be in full agreement, have accused those conducting the recent investigation into school conditions in Washington of presenting a one-sided and negative picture of the school integration program in Washington.

Instead of devising ways and means of eliminating the deplorable and disgraceful conditions that were revealed through the testimony of highly reputable principals and teachers, the prointegrationists, in a desperate effort to divert attention from the findings of the subcommittee, have been desperately seeking to make it appear that a conspiracy was entered into between so-called bigots on the subcommittee and me to defame the Negroes in Washington and deliberately make a case against public school integration. This is a deliberate falsehood and no fair-minded individual will swallow that sort of tripe, whether it comes from the NAACP or the Anti-Defamation League of B'nai B'rith.

The fallacy in imputing that the members of the subcommittee from the Deep South were bigots, interested in a biased and prejudiced investigation to injure school integration is totally refuted by their appointment of me as chief counsel.

My appointment was wholly unsolicited. It was made after I had acquainted the Members of the subcommittee with the fact that I was born in Russia, that I was a Jew, that I was a past president of the local B'nai B'rith lodge, and that after admonishing some of the Members of the subcommittee that my sympathies would naturally lean toward minority groups. If they were looking for a chief counsel who would conduct a biased and prejudiced investigation, they had a number of applicants from which they could have made such a selection.

I was advised by the subcommittee that the resolution called for an investigation into public school standards and conditions, and juvenile delinquency in the District of Columbia. Not a single member of the committee either intimated or suggested that the investigation was to be focused on integration in the Washington schools, nor did any member suggest to me as to how the investigation should be conducted. The strategy for its conduct was entirely my own.

During the course of this investigation I personally interviewed approximately 500 members of the Washington school system. They consisted of all of the members of the Board of Education, District Commissioners, principals, teachers, and school custodians. There was no intimidation or coercion practiced and the power of subpena was not invoked. It was all conducted on a voluntary basis.

While you shed crocodile tears over the unwarranted charge that this was a one-sided investigation, you close your eyes completely to the campaign that was waged by the NAACP not only to stop the investigation, but to intimidate, coerce and terrorize respectable teachers into refusing to voluntarily appear and testify before the subcommittee for fear of reprisals.

You have now taken it upon yourself to propagandize, in the name of the Anti-Defamation League, a report by Dr. Hansen, entitled "A Miracle of Social Adjustment," which you say represents fair comments on your part on the basis of the facts.

This so-called miracle of social adjustment in the Washington schools since integration is a figment of Dr. Hansen's imagination created while sitting behind a desk at Franklin School and doing a lot of daydreaming and wishful thinking. His report is not supported by the facts. It ignores the statements and testimony of a large number of school personnel who were on the firing line and gave firsthand information.

As testified to by reputable school personnel, this "miracle of social adjustment" of which you seem to be particularly proud brought about disciplinary problems in the predominantly integrated schools that were described as appalling, demoralizing, intolerable, and disgraceful. Fighting, lying, stealing, vandalism, obscene writing, vulgar talking, absenteeism, tardiness, and truancy increased to alarming proportions.

Mental and physical suffering affected the health and morale of many white teachers as a reaction to these unexpected disciplinary problems. As a result some white teachers resigned, some retired before the fixed date of their retirement, and others indicated they were going to leave the school system as soon as possible.

Integration brought about a situation where teachers were required to police the corridors, playgrounds, and cafeterias, and police officers were called to many of the schools constantly.

This miracle of social adjustment brought about a curtailment of normal social activities. Plays, dramatics, and dances were discontinued. The sex attitude of the Negro was found to be dangerous and revolting. Reputable teachers reported deplorable conditions in sex contacts. Reports of attempted rape, assaults, chasing girls, and even teachers, Negro girls soliciting boys at school, sex talk, and suggestive talking and attempted fondling and feeling of white girls, sex perversion, indecent exposures of the person, and innumerable sex affronts were reported by the school personnel that was interviewed. Indeed, all this was a "miracle of social adjustment."

Dr. Hansen's "miracle of social adjustment" fails to take into consideration the report of the Department of Public Health of the District of Columbia for the fiscal year 1955. The report shows that out of 13,267 cases of venereal diseases reported, 12,621 were colored; that out of 854 cases of gonorrhea reported among children of school age, 834 were colored; that out ofg 1,184 illegitimate births reported among children of school age, 1,089 were colored; that 1 out of every 4 colored children born in Washington is illegitimate.

Dr. Hansen's statement that the exodus of white residents to the suburban areas of Virginia and Maryland is not the result of school integration is not supported by a scintilla of evidence. Teacher after teacher stated that the exodus of white residents from Washington was accelerated by the persistent agitation for integration. That the establishment of school boundaries and a forced mixing of the races caused many whites to move to the suburban areas. This is a matter of common knowledge, and you could very easily verify it by talking to people at random in Washington. The Washington school census reveals that where a few years ago there were 59,582 white students and 33,498 colored students, the school census as of October 1956 shows that the school population is now 34,750 white students and 73,723 colored students.

This "miracle of social adjustment" even saw Dr. Hansen adjusting his living conditions by moving into an area removed from the predominately integrated school districts. He testified before the committee that he would not have selected a home in a colored area.

I sometimes wonder if the creation of the theme song, "miracle of social adjustment" by Dr. Hansen, which is unsupported by any evidence, was not done for the purpose of ingratiating himself with the pro-integrationist members of the Board of Education in order that he might be considered for the position of superintendent in event of the retirement of Superintendent Hobart Corning.

The statement by Dr. Hansen that there was preparation and careful planning for the integration of the Washington schools is not supported by the evidence. On the contrary, the school personnel interviewed stated that there was not any serious consideration given or preparation made for the integration of the Washington schools. If Superintendent Corning had any kind of workable plan it was not communicated to the teaching personnel. The proof was practically unanimous that the integrated school system in Washington was not successful and that it would take many years to determine this question.

At the time the Washington schools were integrated the school administration had no idea as to the wide mental, social, and educational difference that existed between the white and colored students. If there had been any careful planning, the school administration should have given the national standardized mental and educational achievement tests before the schools were integrated. Had they done so there would not have been such a hasty decision to integrate the schools. It was not until the races were mixed and chaos broke out that these tests were given in the spring of 1956. These tests revealed that the intelligence quotient of the average white student was in the upper 5 percent of the Nation and the intelligence quotient of the average Negro was in the lower 5 percent of the Nation. That there was a range of between 2 and 4 grades in the educational achievement of the white students and Negro students. What a "miracle of social adjustment" developed when these students were hastily mixed to appease the wishes and desires of the NAACP and the politicians who were only interested in Negro votes.

The witnesses stated that the chaos and confusion created by the hasty integration of the Washington schools was a nightmare. This condition was recognized by Dr. Hansen, who, in an effort to combat the deterioration in educational achievement being suffered by the white students, created the four-track plan. This plan has for its purpose the grouping of students according to their educational achievement and ability to learn. It is a reversion to segregation. Instead of having segregation under a dual system of schools, we now have segregation under the same roof. This action, taken by Dr. Hansen, proves conclusively that his report entitled "A Miracle of Social Adjustment" is a distortion of the facts intended to cover up the true conditions in the integrated Washington schools.

I have never been a member of any organization that favors segregation in the public schools, nor have I ever expressed an opinion on the subject. I will say, however, that my experience in Washington leads me to the conclusion that hasty integration of the

public schools in any community will bring about "a miracle of social adjustment" theretofore unheard of in decent society.

Why the Anti-Defamation League should have become so saturated with its importance in this highly controversial matter is beyond the comprehension of thousands of American Jews who have not been consulted or given an opportunity to express their views on the merits of this policy. A small group of so-called leaders in the order, who are biased in favor of integration, are attempting to speak and act for thousands who do not support your views and resent reading in the press your partisan criticisms on a matter that does not come within the purview or functions of the league.

The NAACP was created for the purpose of advancing the causes and protecting the interests of the American Negro. The Anti-Defamation League of B'nai B'rith was created for the purpose of preventing the defamation of Jews. If you will let the NAACP take care of the Negroes and confine the best efforts of the Anti-Defamation League along the lines for which it was created, we will all be much better off.

Very sincerely yours,

WILLIAM GERBER.

New Industry for Central Kansas Drought Area

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to President Eisenhower, copy of which was sent me by the Lyons Chamber of Commerce, of Lyons, Kans.:

FEBRUARY 11, 1957.

President DWIGHT D. EISENHOWER,
Washington, D. C.

DEAR PRESIDENT EISENHOWER: We, the board of directors of the Lyons Chamber of Commerce, Lyons, Kans., ask that you consider the economic problems that are facing business and agriculture here in central Kansas.

As you well know, our farm income has softened considerably as a result of the drought conditions and the price structures that have prevailed the past 3 years. We have been fortunate in having considerable oil activity in this area for the past 20 years. All this has provided comfortable income to many, but we are now losing it gradually, as our oil reserve becomes depleted and our oil exploration people are moving to other more productive areas. With the loss of both farm income and oil income, our business is feeling a definite pinch.

We believe our greatest hope to increase our productive incomes lies in developing new industry in this part of Kansas. We have already exerted considerable energy in an attempt to attract industry, small and large, from the more congested parts of the United States. We have met with scant success, and have lately been directing our efforts toward locally developing industry as a means of stabilizing our productive economy. The results of this endeavor have been very encouraging, and have served to point out to us the determined desire of our people to help themselves by their own creative efforts.

We have the finest supply of potential labor to be found anywhere in the United States. Many of our farmers find they must have other income in addition to what they can expect to earn on a farm. To do this, they are willing to do any kind of honorable work to supplement their depleted income from farm work. They have a background of good character that creates a pride in workmanship, and they represent a great asset to any employer.

We believe that this part of Kansas could be beneficial to certain types of industry producing both Government contracts and commercial items, since we are located in the very center of the United States, and we believe that industry should be encouraged to consider this area for future development.

We further suggest that a Government-sponsored emergency program be established to assist existing small industries, to aid in the development of new industries in this area, and to share in the national defense program subcontracts. Technical advice, financing, aid in obtaining necessary machine tools, and Government direction in seeing that contracts are divided more evenly among rural communities of our central area is most important.

We sincerely make these proposals in the hope something can be worked out to provide this productive development, and help to offset the growing softness in our local rural economies.

Very sincerely yours,

The Board of Directors, Lyons Chamber of Commerce: Dale H. Snyder, President; Lloyd H. Buell, Vice President; W. W. Chandler, Jr., Treasurer; John M. Neely, Secretary-Manager; Raymond Biggs; Willis Fankhauser; A. B. Martin; Dr. James T. Grimes, M. D.; James Ludes; Bill King; Mrs. Helen Six; Robert F. Young.

The Late Honorable C. Wayland Brooks

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. ARENDS. Mr. Speaker, I want the RECORD to show that I was privileged to be a close personal friend of the late Senator C. Wayland Brooks, known to all his many friends as "Curly." He was such an outstanding man, who meant so much to me personally and did so much for me as a friend, that I am constrained to make certain somehow, perhaps in this way, that now and for all time the people will know not only my personal feelings but also some measure of the contribution he made to Illinois and to the country as a whole.

Whatever one's political faith, whatever one's views on a particular legislative issue, all agree that no man served in the United States Senate who has shown more courage of his convictions than "Curly" Brooks and few men had the ability with which he was endowed to express so persuasively what he believed.

As great as he was as an attorney, as great as he was a Senator from Illinois, as great and as many his accomplishments in the practice of law and the making of law, for me his real greatness was his love of his fellowman, his understanding of other people's problems, his constant efforts to help them in arriving at solutions, and his complete humility regardless of the many honors he attained.

I shall miss "Curly" Brooks. I shall miss his wise counsel and advice. I shall miss him as a man for whom I had great affection as a friend.

Echoes From Capitol Hill

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. HAGEN. Mr. Speaker, I commend to the attention of the membership of the House this article by the very able Washington correspondent for the McClatchy newspapers, Ed Dickson, which appeared recently in the Fresno Bee. The article comments favorably upon three well-known Democratic personalities who have added much to the luster of the Democratic Party. I am proud that Mike was once a resident of my district.

The article follows:

ECHOES FROM CAPITOL HILL

(By Edward H. Dickson)

California has a sort of proprietary interest in the makeup of the Democratic congressional campaign committee.

The chairman is Congressman MICHAEL J. KIRWAN, of Youngstown, Ohio. His assistant is Kenneth Harding, of Washington, D. C.

But these addresses do not tell the true California connection of the pair whose duty is to elect righteous Democrats to the House of Representatives and defeat sinful Republicans come campaign time every 2 years.

Incidentally, the virtues of the Democrats and the malfeasance of the Republicans are in direct ratio to the number of days before election.

In off election years, such as this, both KIRWAN and Harding have been known to break down and admit that after all Republicans are human, even though misguided.

But they never have been reckless enough to put this in writing.

KIRWAN, known as MIKE to all and sundry, is suspected of being of Gaelic ancestry. In fact, Joe Friday would find this out in about a minute's conversation and without asking a single "ma'am."

KIRWAN got his start in life as a worker in the oilfields of Kern County, Calif., which did not entitle him to a 27½ percent depletion allowance such as the absentee owners enjoy.

It was a beneficial arrangement for both KIRWAN and California for they formed a sort of mutual admiration society.

KIRWAN remembered years later the parched lands he saw there as a youngster. As a key member of the House Appropriations Committee he helped see that the Central Valley project received substantial appropriations.

California's wandering son is regarded as one of the great conservationists of our time despite the fact his own home Ohio district receives but little from the Interior Department's appropriation bill.

KIRWAN, in fact, regarded it as a sort of personal triumph when one year in present-

ing the Department's bill he was able to include an 80-cent item for the purchase of a new wick for a lighthouse on Lake Erie.

The California roots of Harding are planted even more deeply. Like his dad before him, the very much loved and respected Victor Harding, he is a native Californian.

While Ken takes a lively interest in the election returns from all 435 House districts, he is especially conscious of the count which comes in from San Mateo County.

That is the home ground, so to speak.

"Cap" Harding, his late dad, once taught political science at Stanford University, which is the alma mater of former Republican President Herbert Hoover.

Their political philosophies, however, varied more than somewhat.

Ken is doing fine as his dad's successor but "Cap" is regarded as having been one of the greatest keepers of the mace in all the long history of the House of Representatives.

The mace, it should be explained, is a symbolical club of authority featuring the Roman fasces.

"Cap" made the hall of fame as a keeper of the mace because he was always Johnny-on-the-spot when the Congressmen quit calling each other "able and distinguished" and referring to each other as "gentlemen" and started using those short and ugly words which make men fighting mad.

"Cap" would run up with the mace and shake it in their faces and a world crisis would be averted.

Not to mention the dignity of Congress.

The Estonian People Still Long for Freedom

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1957

Mr. REUSS. Mr. Speaker, when Estonia declared her independence on February 24, 1918, a proud and historic people gave the world renewed evidence that the true spirit of freedom can never be quenched. Even though Estonia had lain for more than two centuries under Russian domination, she was determined to build her own destiny.

It is important to recall this anniversary of Estonian independence because it reminds us of our own high resolve that the right of all nations—small or large—to self-determination shall remain one of the goals which our country must always seek. Our Nation was itself conceived on the principle that it is the inalienable right of a people to govern themselves. That principle must guide us in the future as in the past.

Despite the oppression of the Soviet tyrants today, the Estonian people still long for freedom. Those of Estonian descent who have come to this Nation to mingle with their fellow Americans from many lands have brought that spirit of liberty with them. America must open its door in hospitality to all those who seek refuge from dictatorship.

We sense today a new spirit of dedication to freedom's cause behind the Iron Curtain. I believe that this rising ferment makes it imperative that the United States take the lead in calling on the United Nations to expose for all to see the shame of Soviet tyranny over Estonia and her neighbors of Baltic and Eastern Europe. On February 24, 1957, let us be as true to democratic ideals as the Estonian patriots were true to them 39 years ago.

The Overton Waterway

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, I have repeatedly urged, during the time which I have been privileged to represent the Fourth District of Louisiana, action on our part to promote and support the construction of the Overton Waterway in central and northwest Louisiana. I have stated and have demonstrated numerous times that water navigation is of utmost importance to the continued growth and development of the Red River Valley. This project is vital and drastically needed in this Southwest area.

There are those in Louisiana who are evidently against progress in any form. Those forces which are urging the use of the Red River for navigation purposes are actually fighting to destroy the possibility of navigation in the Red River Valley. Red River, because of the nature of its shifting banks, which constantly crumble and slough off into the river, is unstable. Stabilization of its banks and navigation of the Red River are, therefore, impossible without a vast expenditure of money. The cost of such a project of bank stabilization and the other measures necessary for navigation completely rule out the use of Red River.

I want to point out specifically that the river route is 75 miles longer than the Overton Waterway project and this fact alone will increase the costs tremendously, and would increase navigation costs up and down the river, in the event efforts are made in the future to use the river channel instead of the proposed canal. The proposed Overton Canal would be only 205 miles in length, as opposed to more than 280 miles for the Red River route, and the swift current of Red River resulting in constantly changing channels and unstable banks, requiring at least 12 locks and dams, as against only 9 needed for the Overton Waterway, definitely rule out the river itself as usable for navigation.

It it were determined to use the Red River channel for navigation, the costs would run from $200 million to $300 million, whereas the Federal costs for the Overton Waterway would be less than $100 million.

In 1945 the Army engineers studied this entire matter and came up with the report that the channel of Red River is not susceptible to modern navigation. They recommended the use of a series of bayous like Bayou Pierre, Cane River and Old River as a feasible, slack water route for water travel from the lower part of Red River to Shreveport, La.

Those forces urging a study of the use of the channel of Red River for navigation purposes, disregard the findings of the Army engineers made in 1945, which have not been seriously disputed, and are out to destroy efforts to obtain navigation in the Red River Valley. Without navigation we cannot hope to have major new industrial development at Alexandria, Natchitoches, and Shreveport.

U. S. S. "Long Beach"

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 28, 1957

Mr. HOSMER. Mr. Speaker, a few days ago the Secretary of the Navy announced the first nuclear-powered guided-missile surface ship of the Navy, a cruiser, will bear the name U. S. S. *Long Beach*.

The decision to name the cruiser after the southern California city which I have the honor to represent was made after a long and careful study of many names which had been proposed for the ship by individuals, groups, and associations, all of whom have manifested the keenest interest in the remarkable new Navy being created for our country's defense.

It is a long-standing custom to name cruisers for cities of the United States, but no cruiser has ever borne the name of Long Beach before. The area for which the new ship has been named is the site of one of the earliest seaboard settlements on the Pacific coast. Richard Henry Dana, in his classic "Two Years Before the Mast" describes early commercial shipping activities in the then sparsely settled area, where Yankee merchant skippers loaded hides and tallow from the ranchos served by the harbor area.

Long Beach has long been a major center for naval operations on the West coast and the city and its suburbs have been home for many years to the officers and men of the fleet and their families. The port has expanded and been improved over the years, and now includes a naval shipyard, a naval station and serves as the headquarters for various commands both afloat and ashore. Long Beach currently is the home port of the greater part of the active cruisers of the United States Pacific Fleet.

The relationships between the Navy and the people and civic government of Long Beach have been excellent through the years. It will be remembered that last August the city joined with the Fleet Reserve Association and the Navy to organize and conduct a "Mrs. U. S. Navy" contest, which served as a means of recognition of the important part Navy wives play in helping the service to fulfill its mission.

There has been only one United States warship, a World War II frigate, to bear

the name of *Long Beach* before. Built in Wilmington, Calif., immediately adjacent to Long Beach, she served in the Pacific area during World War II with a distinguished combat record. She was taken from the Reserve Fleet in 1953, recommissioned, and is now on lease to the Japanese naval defense force.

The new cruiser is being built by the Bethlehem Steel Co., at Quincy, Mass. Her atomic reactors are being built by the Westinghouse Corp. and her ultramodern steam turbine by the General Electric Co. She is scheduled for completion in late 1960. She will have the dual distinction of being the first United States cruiser to be designed and built from the keel up since World War II, and the first surface ship to be armed with a main battery of guided missiles and powered with a nuclear powerplant.

The *Long Beach*, marking a milestone as she does with her distinction as the first nuclear-powered surface ship, will not only be a forerunner of the constructive use of nuclear power to propel not only warships, but peacetime ships across the seas as well. She will be a graceful craft about 700 feet long with a displacement of around 14,000 tons. She will have a distinctive topside appearance because of the absence of conventional naval artillery. Her long decks will be smooth and unobstructed to permit most efficient firing of her missile batteries.

The ship's $87.5 million cost, including $18.3 million for her reactors, will be recovered by the Nation not only in her value as a defense weapon in being, but also as a testing ground for the many new tactical and strategic concepts which will be developed to permit most effective use of this revolutionary development in naval warfare. At no time since Rear Adm. Alfred Thayer Mahan, United States Navy—1840 to 1914—developed the importance of sea power in his Influence of Sea Power on History and other writings have more bold possibilities for the implementation of national policy through naval instrumentalities been presented than with this, the forerunner of our nuclear-powered Navy.

For the city of Long Beach, the naming of the vessel means the coming of age of the city as a Navy town. But not only is it a matter of prestige. There are tangible benefits that go with the distinction of having a ship named after a city. Every time that ship is involved in the news, the name of the home town is publicized. As the world's first atomic powered, guided-missile cruiser, the U. S. S. *Long Beach* will be mentioned frequently in the news as long as it remains in commission and as long as naval war equipment remains significant. It is a prototype ship and will be mentioned in connection with all future ships in the same classification. They will be known as ships of the *Long Beach* class. Such national notice simply could not be purchased by the city through any kind of promotional campaign.

Almost the day plans for the cruiser were announced many civic groups and individuals in the city of Long Beach began work to claim the name. Possibly the idea was generated by Harry Fulton, a correspondent for the Long Beach Independent newspaper in which columns a suggestion of the name first appeared. The Independent Business Men's Association, the Long Beach Chamber of Commerce, the Long Beach Naval Shipyard Employees Association, the Long Beach City Council, and other civic groups were constantly alert to forward naming of the ship after the city.

The Washington correspondent of the Long Beach Press-Telegram, Virginia Weldon Kelly, carried on a ceaseless campaign among her many friends in high naval and civilian circles in Washington to gain victory in what turned out to be a high-spirited sweepstakes amongst many contending cities for the name. Not only were cognizant naval officials themselves bombarded by Mrs. Kelly, but their all powerful spouses also fell within the Kelly line of fire. Wife of a retired admiral herself, she apparently shared his homework in the science, tactics, and strategy of successful warfare, for her part in forwarding the name U. S. S. *Long Beach* was played with consummate skill, redoubtable courage, and unflagging perseverance.

However, all the hopes and aspirations of the city of Long Beach and its citizens might have gone unrealized had it not been for the magnificent assistance freely offered by some eighty Members of the House of Representatives who joined me in asking the Secretary of the Navy to designate this name. Of both parties and from all sections of the country, these eighty Members in their considered judgment believed the ship should be named the U. S. S. *Long Beach* and went on record by saying so. These men and women have the sincere gratitude of my city and myself.

In closing these remarks, I assure you that as long as the U. S. S. *Long Beach* sails she will have every assistance and support that the people of her namesake city can give the ship, and her officers and men.

Farm Credit

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a resolution sent me by Mr. J. H. Dean, of Hutchinson, Kans., who holds an office on the Wichita Bank for Cooperatives. The following resolution was adopted by the Wichita Bank for Cooperatives at a meeting held on January 28 and 29, and they request its serious and favorable consideration by Members of the House and Senate if and when any legislation might be introduced:

It was stated in the Farm Credit Act of 1953 to be the policy of Congress that increased borrower participation in the management, control, and ultimate ownership of the institutions operating under the Farm Credit Administration should be encouraged and facilitated. Then the 1955 and 1956 Farm Credit Acts covering the reorganization of the banks for cooperatives and the Federal intermediate credit banks were enacted to carry out the policy as set forth in the Farm Credit Act of 1953.

Therefore the advisory committee of the Wichita Bank for Cooperatives, being in favor of the objectives and purposes of the Farm Credit Act of 1953, hereby set forth their opposition to any amendment of the Farm Credit Acts of 1955 or 1956, which would increase Federal budgetary control over the Federal intermediate credit banks or banks for cooperatives under the Government Corporation Control Act or in any way give the Federal Government, after the Government capital in the banks is retired, a continuing interest in the surplus existing in such banks for cooperatives and Federal intermediate credit banks on the effective dates of such acts, or which would abolish the revolving funds available for emergency capitalization of the banks for cooperatives, Federal intermediate credit banks, or the production credit associations.

Two Hundred Million American Dollars for What?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by George Barnes that appeared in the Reporter for February 7, 1957. The subject matter relates to the request by the President to use $200 million in the Middle East to stop the march of communism. This article by Mr. Barnes sets out some interesting facts and I commend it to all Members who are interested in the matter of foreign-aid spending:

TWO HUNDRED MILLION DOLLARS FOR WHAT?
(By George Barnes)

So far as the economic aspect of the administration's historic gamble for the Middle East is concerned, the Secretary of State apparently means to hold his hand pretty close to the vest. Hours of questioning on Capitol Hill has failed to evoke from Mr. Dulles any real explanation of how he is going to use the $200-million-a-year fund the administration wants from Congress.

No one who knows the desperate poverty of the region and understands the irrepressible surge of its peoples toward something better will challenge the premise that the United States must respond to their needs if we hope to dissuade them from further adventures with communism. The question to which Mr. Dulles' reticence gives rise, however, is whether the administration's new economic program can actually produce the results we look for in the present crisis.

It may be, of course, that the Secretary of State has excellent reasons for his reluctance to expose his hand at this stage of the game. It is well known that money can work wonders in the Middle East if you are not too finicky about how you use it; and it is at least possible that Mr. Dulles does not intend to be finicky. If this is the case, his noncommittal attitude at this stage is understandable.

On the other hand, if the administration intends to pursue a major development program in the Middle East on the crash basis suggested by the President, Mr. Dulles' reticence may derive from the plain fact that he doesn't know what the money is going to be used for. We have been trying for 5½ years to get an effective economic-development program going in the Middle East, and we haven't had much luck at it.

WE CAN'T GET RID OF THE MONEY

The fuzziness of the administration's new program makes comparisons with this past effort hazardous. We do not know, for example, what countries or what kind of projects are to be included in the new program. The general impression is that it is to embrace a wide area extending from Libya to Pakistan and from Turkey to Ethiopia.

From all that has been said, however, it may be assumed that the main focus will be on the Arab States at the eastern end of the Mediterranean, where the greatest pressure of Communist penetration is being felt. A look at our previous efforts at economic development in these countries may serve to illustrate certain problems Mr. Dulles apparently prefers to ignore.

Between July 1, 1951, and June 30, 1956, the United States allotted a total of $136,295,000 to five Arab States—Egypt, Iraq, Jordan, Lebanon, and Saudi Arabia. Of this "allotment," which means money earmarked for a particular country, $129,627,000 was "obligated," which means earmarked for specific purposes, development assistance and technical cooperation, within a particular country. But of the obligated funds, only $73,054,000 has actually been spent. In other words, over a 5-year period, it has been impossible to spend 45 percent of the money we had planned to spend in the 5 Arab States.

Eliminate the technical assistance funds from the totals, and the picture is even less promising. For development projects alone—presumably the kind of aid contemplated by the administration's new program—we obligated $84,134,000 for 3 Arab countries—Lebanon, Jordan, and Egypt—in the 5 years between 1951 and 1956. Of this amount, only $36,487,000 has actually been expended, which is to say that 56 percent of the money we planned to spend for economic development in Arab countries over a 5-year period is still in the Treasury.

Two Arab States—Iraq and Saudi Arabia—have received no development aid at all, preferring, presumably, to rely on their own oil royalties. One Arab country has refused assistance of any kind. This is Syria, ingrown, suspicious, unstable, and now deeply penetrated by Soviet influence and heavily endowed with Soviet arms.

Parenthetically, it may be noted that for Israel, the United States development aid funds obligated during the same 5-year period totaled $252 million, of which $234 million, or 92 percent, has actually been put to work. If the amount allocated to Israel exceeds by many times the amount allotted to individual Arab States—a fact Arab leaders are fond of pointing out—the reason may be that the Israelis have had the political stability, the will, and the skill to plan and carry out development programs as rapidly as financial assistance becomes available. Washington has long wished for similar competence and initiative on the part of Israel's neighbors.

In short, there is little or nothing in our past Middle East experience to justify the contention that the administration can get real economic development under way in the region if Congress will only put up several hundred million dollars with no strings attached. There is even less to suggest that such an expenditure will deter Soviet penetration or win for us the abiding friendship of the Arab peoples. Certainly the $136 million of economic and technical aid we have allotted to them in the last 5 years has done neither.

The basic fallacy in the economic aspect of the administration's new proposal, so far as one may judge from Mr. Dulles' generalities, is that it appears to treat only the symptoms and disregards the causes of the illness that plagues the Arab world. Despite our past experience, the administration seems ready to go right on putting money ahead of the Arabs' fundamental needs—peace, stability, and regional cooperation. It should be clear by now that just spending money won't work any miracles.

DOUBLECROSSING OVER JORDAN

The Jordan Valley project is a case in point. This was a plan initiated by the United States to conserve and harness the waters of the Jordan for irrigation and power. The plan was a natural both from the engineering standpoint and as sound economic development, offering more than 200,000 people—about a fourth of the Arab refugees—a decent livelihood from irrigated agriculture in what is now an all but barren valley. But there was a joker—the project required the agreement of 4 Middle Eastern states, all of which had legitimate claim to a share of the river and 3 of which were bitterly hostile toward the fourth. The countries were Lebanon, Syria, Jordan, and Israel.

In October 1956 President Eisenhower asked Eric Johnston to go to the Middle East as his personal ambassador to try to persuade the four Jordan Valley states to agree on the project. Johnston set out with no illusions as to the difficulty of the assignment but with a firm conviction that such a plan, if carried out, would help to resolve the urgent refugee problem, establish a pattern for intraregional development, and perhaps open the way for a general relaxation of Arab-Israel tensions.

No man ever worked harder at a job than Johnston worked at this one. On the four separate visits to the Middle East over a span of three years on which I accompanied him as an adviser, I watched him argue and cajole his way through hundreds of weary hours of the most detailed and harassing negotiations it is possible to imagine. He burned the midnight oil in every United States Embassy in the area preparing argumentation and counterproposals for the next meeting with one side or the other. American ambassadors winced at his tough talk to presidents, prime ministers, and kings, watched him shatter all the rules of diplomatic exchange, and ended up with a considerable amount of admiration for what several of them now call the "Johnston technique."

In the end, his persistence and persuasiveness brought the three Arab States and Israel into agreement on the economic and engineering aspects of a plan for developing the Jordan Valley for the benefit of all four states. He had accomplished the unprecedented feat of working out a project that was acceptable to both sides.

In late September 1955 a special committee of Arab engineers reported to the Arab League that the Johnston plan, revised and refined through negotiation, was equitable, workable, and compatible with Arab interests. This put it squarely up to the political leaders of the Arab States—whether or not to assent to a project involving the expenditure of some $200 million in their countries over a 10-year period, the creation of a major new agricultural area, the development of power for industrial expansion, and the permanent settlement of several hundred thousand of their people on the land.

On the night of October 11, 1955, in the Cairo office of the Egyptian Foreign Minister, Johnston was handed a brief statement that had just been adopted by the Arab League. It requested "more time" to consider the "technical" details of the project. This was diplomatic double talk: rejection of the plan had nothing to do with technical matters. The League's action was motivated wholly by political considerations. It was a clear reflection of the obsessive hatred of Israel that pervades the Arab world. The effect of the League's action was to kill any immediate possibility of going ahead with a major undertaking that offered indisputable benefit to the Arab States themselves.

The negative vote that killed the project under the Arab League's unanimity rule was cast by Said el-Ghazzi, then Premier of Syria, who feared the possible political consequences of acceptance. Both Lebanon and Jordan, the other principal beneficiaries, were in favor of acceptance. On the following morning, an exceptionally well-informed Egyptian newspaperman told me that el-Ghazzi had acted under instructions from Nasser of Egypt, who had repeatedly assured Johnston that he would support the plan.

A PAIR OF PREREQUISITES

This case history of what happened to a sound and desperately needed large-scale Middle Eastern development project is cited to illustrate several of the realities that Mr. Dulles appears to disregard in his projections of the administration's economic plan.

One is that economic progress in the area which is of greatest concern to us in the Middle East cannot be achieved until there is peace and a reasonable political rapprochement between the Arab world and Israel. Continued military tension imposes a staggering economic burden on the economy of every state in the area, diverts the energies of the people from constructive to destructive ends, strengthens the hand of Nasser and lesser Arab demagogues, and invites further Communist intrusion. So long as Arab leaders feel it necessary to pursue the politically popular line of vengeance against Israel, United States offers of economic aid are going to run a poor second to Soviet offers of planes and tanks.

The second reality is that the Middle East can move forward economically only as a region. Its progress depends on regional integration and cooperation between the various states that make it up.

This becomes abundantly clear from even a cursory exploration of major development possibilities.

The Jordan River project, as has been pointed out, requires assent and cooperation by four governments. Development of the Tigris-Euphrates Valley would call for agreement among Iraq, Syria, and Turkey. The Nile—in spite of Nasser's emphasis on the Aswan high dam—can only be harnessed for maximum benefit through agreement and cooperation among Egypt, the Sudan, Ethiopia, and the territorial governments of Kenya, Tanganyika, and the Belgian Congo.

An expansion of tourist travel to the Holy Land would produce immediate new revenues for the hard-pressed states of Jordan and Israel, with ancillary benefits to their neighbors. It would, in addition, stimulate the construction of new hotel and resort facilities, new transport lines, new highways. Yet, here again, a regional approach is necessary if the traveler is to have free access to all that he wants to see.

One of the region's most urgent needs is a modern highway system linking the Mediterranean seaboard with inland cities and the Persian Gulf. One imaginative and practicable project would involve the construction of a modern toll road, with feeder highway, from Lebanese and Syrian seaport cities across the desert to Iraq and Saudi Arabia. Such a project would be feasible only as a joint undertaking.

The regional approach in the present state of Middle Eastern affairs is admittedly not an easy one. Not only are the Arabs still actively at war with Israel; tensions within the Arab world itself are acute. Nasser's ambitions to weld the Arab nations into an Egyptian-dominated federation have in fact

produced precisely the opposite effect. To the south, the Sudan and Ethiopia are increasingly apprehensive of Nasser's machinations, suspicious of his intentions regarding the Nile, angry at his constant propaganda aimed at their minorities. Any constructive effort to start the region along the road to greater economic well-being must begin by dealing with these pressures and conflicts which continue to plague the Middle East.

There is not the slightest doubt that a carefully planned economic attack, carried out on a regional basis under conditions of real peace, could contribute immeasurably to the progress and emancipation of the area. But the mere expenditure of a few hundred million dollars in a crash operation designed to halt Communist penetration by paying for a project here and there won't get us anywhere at all.

If this is all Mr. Dulles has in mind, he might as well save our money.

Senator Javits, of New York

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, February 25, 1957

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the February 1957 issue of the Jewish Digest with respect to the background of my able colleague from New York, Senator JACOB K. JAVITS.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIFTEEN MILLION CONSTITUENTS

(By Bernard Postal)

One out of every 11 people in the United States is a constituent of JACOB KOPPEL JAVITS, the new junior United States Senator from New York. His constituency of 15 million is larger than the population of more than half the members of the United Nations. In winning the seat vacated by Herbert H. Lehman, JAVITS polled nearly twice as many votes as there are Jews in the State of Israel.

His victory over New York City's popular Mayor Wagner by a plurality of more than 400,000 votes surprised many of the experts. But representing large numbers of people and staging political upsets are old stuff to JAVITS. He first won political recognition as an active follower of the late Mayor Fiorello H. LaGuardia in whose 1941 campaign he played a key role. Offered the Republican nomination for Congress from a district that had been predominantly Democratic for 25 years, JAVITS accepted. Everyone expected him to take a licking in the heavily Jewish 21st District of upper Manhattan.

Averaging six speeches a night, he startled his Republican colleagues and dismayed the Democrats by endorsing price and rent controls, championing higher immigration and lower tariffs, defending organized labor, and attacking the National Association of Manufactures. His surprise victory in a 3-way campaign helped the Republicans take control of the 80th Congress. When he took his seat in 1946 he represented more people than some United States Senators, since the 21st District has a population of more than 300,000. One of his constituents was Dwight D. Eisenhower, then president of Columbia University.

As a freshman Congressman, JAVITS quickly won a reputation as a liberal. He voted against the Mundt-Nixon antisubversive bill and against funds for the House Committee on Un-American Activities. He was for aid to Greece and Turkey in their struggle against communism and for the establishment of the Voice of America. He fathered an unsuccessful FEPC bill. As a member of the House Foreign Affairs Committee, he organized a group of 30 Republicans who pushed for adherence to the traditional American pro-Israel policy. With another Congressman, he toured Europe's displaced-persons camps and helped prepare a report on displaced-persons problems.

The Democrats gleefully thanked God for JAVITS because, they said, "in a tight spot we can almost always count on him for another vote." Most Republicans regarded him as a heretic and a maverick but the party leadership understood his convictions and recognized that he represented the thinking of his district. Once when JAVITS sought apologetically to explain to GOP Leader JOE MARTIN an antiparty vote, MARTIN said: "Don't worry. Your job is to represent your district. That's what you're here for. We want you back."

JAVITS was returned to Congress for three more terms. He won his second term in 1948 by bucking a Democratic landslide to defeat the brother of New York's Mayor O'Dwyer. In 1950 he was seriously considered as the Republican-Fusion candidate for mayor of New York when O'Dwyer resigned. By 1952 he was one of the leaders of the liberal wing of the House and a recognized authority on foreign affairs. He had been to Israel three times and fought hard for an American foreign policy that would give Israel a square deal. On one trip to Israel, at his own expense, he was chosen to name the steamship *Haifa*, the first vessel to carry the flag of the Israel-American Line.

In 1954, when the Democrats chose Franklin D. Roosevelt, Jr., to run for attorney general of New York no one gave JAVITS much chance as his Republican opponent. In fact some Republican leaders objected to JAVITS' nomination because of his liberal record in Congress. While Averell Harriman was leading the Democrats to a statewide victory, JAVITS surprised everyone by walloping F. D. R. Jr., by 170,000 votes. He was a cinch to be the Republican nominee for Senator until his brush with the Senate Internal Security Subcommittee, which had received anonymous charges against him of softness to communism. But again he won and the nomination was his.

During the senatorial campaign JAVITS came under heavy criticism for his support of the Eisenhower administration's Middle East policies. For a time it looked as if the Middle East situation might cost JAVITS the election. A few days before the vote, he promised to go to Israel if elected to resurvey on the spot problems facing Israel and the Middle East. And he did, carrying with him a message from Eisenhower to Ben-Gurion.

JAVITS was born on New York's lower East Side (he says that's the New York equivalent of being born in a log cabin) in 1904. His father was an Austrian rabbinical student who came to America in 1887. His mother, a native of Palestine, was an orphan. Today there's a street named for her in Safed, dedicated in 1955 by her distinguished son. The Senator's father became a pants-maker and later a tenement-house janitor, who did petty favors for Tammany Hall. The Senator's mother, illiterate until she was 50, helped support her family by peddling dry-goods from a pushcart.

The future Senator worked his way through school and later through New York University Law School as a candy-store delivery boy, bill collector, and salesman. JAVITS became a Republican because he remembered how his immigrant father had been sent vote-buying by Tammany Hall. In World War II JAVITS served in the Chemical Warfare Service, rising from captain to colonel.

During his first climb up the political ladder, JAVITS found time to be active in a number of Jewish organizations. He is an overseer of the Jewish Theological Seminary of America and a trustee of the Jewish Memorial hopsital. His son (he also has two daughters) Joshua is named for the late Rabbi Joshua Loth Liebman.

The inscription under JAVITS' picture in his high-school yearbook says: "You can't tell from first appearances." That's been the whole story of his life.

Old Santa Fe Monument

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article appearing in the Dodge City Daily Globe, Dodge City, Kans., printed in the February 13, 1957, issue, with reference to the proposed site of the Old Santa Fe Trail.

The article follows:

TREMENDOUS TONNAGE PASSED OVER OLD SANTA FE TRAIL

Long one of the most interested students of the history of the Santa Fe Trail, James P. McCollom is among the leading boosters for preservation of the traces of the old trail between here and Cimarron.

He is among those taking an active part in the effort to have the trail remains made a national monument.

In connection with the move, Mr. McCollom has prepared a well-written condensed summary of the case for the Santa Fe Trail traces as a national monument. His summary reads:

"In the fall of 1803, President Jefferson consummated the deal for the Louisiana Purchase. In the spring of 1804 Lewis and Clark were paddling their way up the Missouri River toward Fort Mandan and the Northwest Territory. Simultaneously Baptise Lelande, from Kaskaskia, Ill., with his packsaddles loaded with merchandise was plodding along the Arkansas River to Old Santa Fe in Mexican territory over a course which soon was destined to become known as the Santa Fe Trail.

"There quickly followed over the same course, other merchant traders and explorers. Zebulon Pike, in the course of his explorations, in 1806 followed the trial in western Kansas and in Colorado as far as the mountains. Those were history-making days in the expansion of the United States.

"In 1804 there were 17 States in the Union, all east of the Mississippi. In the 68 years that followed there passed over the old Santa Fe trail, in its history making, a tonnage so heavy, a march of the military so extensive, a trek of gold hunters to California in 1849 and gold hunters to the Pikes Peak region in 1859 so numerous, which all combined with the home-seeking emigrant, made a staggering total to contemplate. It never has been surpassed in history-making travels by any other trail in North America.

"Within the boundaries of the State of Kansas are approximately 700 miles of the

old Santa Fe trail, including the Cimarron cutoff route, the so-called dry trail in Ford, Edwards, and Pawnee Counties, with a few other lesser side trails.

"There are many historical places along the old Santa Fe trail in Kansas, but unfortunately only a few traces of the trail are left intact. The plow, the railroad builders, the highway builders and the city builders have erased all but a few rare traces. We have here in west Ford County and east Gray County about 2 miles of the old trail over the rolling hills, and alongside U. S. 50S and the Atchison, Topeka & Santa Fe Railway that are remarkably intact and are sodded over with buffalo and other native grasses. They should withstand nature's leveling processes for 1,000 years.

"Too, this section of the old trail is mainline travel, as there were no branches or side trails from Fort Dodge to the Cimarron crossing in Gray County and that explains the enormous wear that made many large trail traces here so visible and interesting.

"Mr. Kenyon Riddle, of Raton, N. Mex., a noted civil engineer, explorer of trails, and author of Records and Maps of the Old Santa Fe Trail, has this to say in a recent letter: 'I am certainly pleased to know that you are still pursuing the site 10 miles west of Dodge City as an outstanding example of display of the old Santa Fe Trail route. In the 10 or 12 years that I spent in preparing the maps of the old trail route, I actually inspected practically the entire distance from Kansas City to Santa Fe, making measurements, taking notes and pictures, including aerial surveys, and I believe the section of the trail you have chosen, offers the best example of study and explanation of the different aspects of trail travel that I know of.'

"This site on the trail is almost exactly midway between Independence, Mo., and old Santa Fe, N. Mex. It provides a magnificent view overlooking U. S. 50S Highway, the main line of the Santa Fe Railroad, and the Arkansas River and Valley.

"A wonderful sight, these old trails sealed with nature's sod and steeped in the 68-year history-making years of toil, sweat, and blood by man and beast. Let us erect here to the memory of the old Santa Fe Trail a national monument equal to the national monument to the Oregon Trail at Scottsbluff, Nebr."

Estonian Independence Day

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1957

Mr. KEATING. Mr. Speaker, it is a privilege to join with my friends of Estonian descent in commemorating Estonian Independence Day, which occurred yesterday.

Estonia's long history is studded with her attempts to gain freedom from various forms of political domination. Throughout these years her desire for freedom has never faltered, nor have Estonia's people lost their distinctive culture and mores.

It was 39 years ago, on February 24, 1918, that Estonia proclaimed herself a republic. For some years she thrived as a member of the family of free nations. However, in 1940, the Soviet Union, violating previous promises, marched in and occupied the country. Disregarding American protests, the Russian invaders embarked on a particularly brutal campaign to wipe out the heart and fight of the Estonian people.

It is a tribute to their faith in God and faith in the eventual triumph of freedom and justice that these brave people have not bowed down before the tactics of mass deportations, murders, arrests and other terrorist activities. No, Estonia's spirit has not been broken and her people continue to resist the Red oppressors.

There is, of course, no celebration today of what should be a joyful occasion. But it is fitting that on this 39th anniversary of Estonian independence we assure these noble people that they have not been forgotten, and that we in America hope and pray for the day when they will once again enjoy the freedom which is the birthright of all men.

Appointment of Former Congressman Ellsworth to the Civil Service Commission

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith two editorials on the subject of the appointment of former Congressman Harris Ellsworth to the Civil Service Commission.

These commendatory editorials are from the Oregonian of Portland, Oreg., and the Denver (Colo.) Post:

[From the Portland (Oreg.) Oregonian, of February 18, 1957]

ELLSWORTH RECORD GOOD

The Washington Post and Times Herald, in an editorial entitled "Why Ellsworth?" digs up the bleached bones of the Al Sarena mines case in complaining about President Eisenhower's nomination of ex-Congressman Harris Ellsworth, of Oregon, to be a member of the United States Civil Service Commission. Obviously, the Post is either not well informed on Al Sarena, Ellsworth and his record, or is carrying political bias to deplorable lengths.

The Post might consider, for example, that it was legislation proposed by Representative Ellsworth which plugged the loophole in the laws by which scores of mining claims patentees were enabled to harvest timber not needed for mining. Mr. Ellsworth's intervention with the Interior Department to clear up the Al Sarena claims, which ex-Secretary Chapman left buried in red tape and delay, was legitimate representation of a constituent's interest. But the law needed tightening, and Mr. Ellsworth sponsored the bill to do it.

There is no validity to the Post's assertion that Mr. Ellsworth's "role as a champion of private interests against public interest in natural resources administration and legislation is not reassuring." Mr. Ellsworth's honest and conscientious service in Congress for 14 years is appreciated by his colleagues and by citizens of Oregon. Oregon's Democratic Senators have said they will not oppose his nomination.

[From the Denver Post of February 21, 1957]

WHY NOT MR. ELLSWORTH?

President Eisenhower has nominated former Representative Harris Ellsworth, of Oregon, as a member of the Civil Service Commission along with Christopher H. Phillips and Frederick J. Lawton, the latter (a Democrat) for reappointment.

The Washington Post and Times Herald approves the nominations of Phillips and Lawton, but questions the qualifications of Mr. Ellsworth on grounds that "his role as a champion of private interests against public interests in natural resource administration and legislation is not reassuring." The Washington paper mentions specifically Mr. Ellsworth's part in pressing for mining patents in the controversial Al Sarena case, which involved mining versus Oregon's timber resources.

We are fully cognizant of Mr. Ellsworth's part in that case as we are with the details of the case itself. We are also aware that Mr. Ellsworth was charged with unduly favoring private timber owners who found themselves in conflict with the Forest Service, and why. But we do not believe that his views, with which we were also in varying degrees of dissent, either impugn his "general attitudes toward public responsibility and the spoils system," or reflect adversely on either his integrity or his capabilities as a public servant.

Mr. Ellsworth was defeated last November after 14 years in Congress. His retirement was said to be partly a result of his position on the foregoing issues and partly as a result of a Democratic sweep that almost wholly swamped the Republicans of that State. Still, we believe Mr. Ellsworth is an honorable and dedicated man whose appointment to the Civil Service Commission would be in the public interest.

The Al Sarena mining case was a compound of then existing bad mining laws (since corrected) and errors of omission and commission not alone by the Eisenhower administration but also by its predecessor. Harris Ellsworth was not alone responsible for real or imagined abuse of public policy if indeed responsibility, under circumstances then applying, can be fixed at all. And it is, in our opinion, nonsense to suggest that a man of great experience in the Congress, of demonstrated talents in government and of proven interest in the public welfare is "disqualified" for administration of civil service by virtue of his views on natural resources. Mr. Ellsworth should be confirmed.

Hyprocrisy—Where Is Thy Sting?

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1957

Mr. PORTER. Mr. Speaker, for further comment on the moral tone of this administration, here is a good example from a recent newsletter of my good friend and distinguished colleague Senator RICHARD L. NEUBERGER:

HYPOCRISY—WHERE IS THY STING?

From George Dixon's syndicated column of January 22, 1957, in the national capital's leading newspaper, the Washington Post and Times Herald:

"Champagne flowed like Niagara Falls at the inaugural balls last night, but not a bottle was in sight. President Eisenhower personally issued the order to keep those

bottles off the tables. He didn't want them showing up in photographs. Inaugural ball officials kept close vigil all through the night. They wouldn't even let a bottle be brought up to a table. They insisted that the stuff be poured somewhere in outer darkness and then carted to the tables in camouflagons. The reason for the Presidential ban on bottles was that Ike was furious 4 years ago over the vile vial pictures."

And, to herald this event, the following appeared in the Washington Post and Times Herald the day before the inaugural balls:

"Also 'on the house' is champagne donated by California vineyard growers for a toast to President Eisenhower. This treat, much protested by temperance organizations, won't be consumed in the Presidential presence because waiters have been instructed to keep glasses out of sight when the Chief Executive appears."

Alfred E. Smith was wet and unashamed. Herbert Hoover was dry and proud of it. But.

Some Chickens Coming Home To Roost

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. ROOSEVELT. Mr. Speaker, on Sunday, February 24, 1957, in the New York Times, there appears an article by James Reston, entitled "Some Chickens Coming Home To Roost," which deplores the lack of a vigorous United States foreign policy backed by the willingness to use force, if necessary, in support of just compromises. I want to commend to the attention of my colleagues the points made by this interesting article:

SOME CHICKENS COMING HOME TO ROOST

WASHINGTON, February 23.—There is an intriguing and disturbing paradox in much of the reaction to President Eisenhower's proposal to force Israel's troops back within their own borders.

This is that, while all well-informed observers agree that Israel should withdraw and that the President is now grappling more realistically with the Arab-Israeli conflict than ever before, there is more opposition to the President's Middle East policy than at any time since he took office and outspoken criticism against putting economic pressure on Israel to rely on his promises.

Why is this? How could it be that the man who enjoys the overwhelming confidence of the people of the United States cannot get the support of the Congress, the Canadians, the British, the French, the Danes and many other sympathetic governments for his proposals?

WHAT ARE THE ANSWERS?

There are a number of answers to these questions, including the following:

United States verbal promises are no longer as valuable as they once were on the international market. The same goes for U. N. resolutions. The U. N. has been calling for an end to Egyptian commando raids on Israel for years. The United States has supported these calls, but the raids have continued.

The United Nations Security Council passed a resolution in 1951 calling on Egypt to stop blocking Israeli ships in the Suez Canal. The United States voted for that resolution, but Egypt defied it for over 6 years, and the President, as late as the first week of this month, said he didn't know there was any such resolution.

This is one answer which the Nation refuses to recognize; there is, to put it bluntly, a crisis of confidence in United States leadership in the world.

The proposals of the United States for the Gaza strip and the Gulf of Aqaba in the last 2 weeks have, in the opinion of many observers here, been more realistic than anything Mr. Eisenhower has proposed in the past. Mr. Dulles' offer to establish freedom of navigation in the Gulf of Aqaba and try to get U. N. troops there and in the Gaza strip was perhaps the most imaginative stroke in the entire controversy, but it depends upon confidence in the will and ability of the United States to carry out its promises through the U. N., and that confidence does not exist.

PARADOX AND TRAGEDY

In an administration that has talked more of confidence and good faith than any other in the world, this is not only a paradox but a tragedy.

For the fact is that there has been a noticeable change of heart here. The President and Mr. Dulles are no longer prepared to acquiesce in Egypt's defiance of the right of free navigation in the Suez Canal and the Gulf of Aqaba. It is unfair to charge them, as some of Mr. Dulles' detractors have done, with putting up bogus promises merely to entice the Israelis to withdraw. Therefore, many observers here think the Israelis have misjudged the situation. But the issue of confidence remains, and it has not been removed by the President's solemn speech of Wednesday night.

For this speech contained several things which have added to the sense of uneasiness about the conduct of American foreign policy. The President implied that it was no argument to say that the U. N. should not put pressure on Israel since it did not put pressure on the Russians in Hungary.

But last November he proclaimed after the invasion of Egypt: "We cannot subscribe to one law for the weak; another for the strong. * * * There can be only one law or there will be no peace."

Also, the speech not only contained a factual error suggesting that Ben-Gurion had broken his word to Mr. Eisenhower, but put the President in the position of inciting the U. N. to economic pressure on Israel before the possibility of negotiating a compromise had been exhausted and before the question had even been discussed in detail with the other nations concerned.

CONFIDENCE IN THE U. N.?

More important, the President once more emphasized his determination to rely on the U. N. in dealing with Egypt, and ruled out the use of force in settling these international differences. And this has increased the general sense of uneasiness, for other Governments are more and more convinced that the United Nations, as presently constituted, is no substitute for vigorous United States diplomacy backed by the willingness to use force, if necessary, in support of just compromises.

These are the things responsible men are saying here in private but seldom saying in public about the present situation. They are not saying that these things justify the mulish determination of Ben-Gurion to overplay his hand, or that the United States has not finally begun to grapple sincerely with a highly complex and tragic situation.

But they are saying that noble pronouncements out of Washington are not enough to clear away the misunderstandings, illusions, hesitations, and mistrust, of the past.

Small Business Selling to Big Business—Is There a Future in It?

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. PATMAN. Mr. Speaker, the Small Business Committee receives hundreds—I believe thousands—of letters from small-business people who have some specific and acute problem with which they need help.

The committee also receives, however, many thoughtful letters from small-business people who are not asking for help, but are advancing constructive ideas to help others. Such a letter came to me on January 29 from a small-business man in Pennsylvania. I believe that the Members will find two points of interest in this letter. First, the writer advances an idea for forming local committees of small-business people within the local civic clubs, such as the Kiwanis Club. Second, all of the advertising and all of the special studies which we receive from the big corporations about how much they purchase or subcontract from small firms conveys to us a much rosier picture about big business purchasing from small business than the small-business man encounters when he calls on the big corporate purchasing agent with catalogue and order book in hand.

I would like to insert the letter at this point and then make a few concluding remarks:

PURCHASING AGENTS VERSUS ADVERTISING DEPARTMENTS

JANUARY 28, 1957.

I am watching with interest your committee's spendid work in exploring the complex problem of small business and realize that you have a tremendous task in working out how the small-business man may continue to survive in the ever-increasing economic bigness.

We are small—with about 15 people on our payroll. We have our problems and are doing all we can in order to continue in business. It requires hard, persistent work to maintain our position in the business world.

Our main competition is in the big firms in our field. However, in some ways, the very bigness of our competition works to our advantage. Like all small business we can offer a personalized service. In fact in some of our advertising we are starting to use the slogan "Small Business Gives You Personal Service."

In fact, this type of slogan, actually followed up, can be of value to small business.

However, the one fact that I have been confronted with in my job of selling has been that of the lack of interest on the part of purchasing departments to give the small manufacturer consideration. The top officers of a large corporation will advertise, talk about, and publish the fact we do this for small business. You go to these firms that are receiving from the Government money for the products that they can best produce, and when you talk about your product and service you notice a notable lack of interest because you are small.

I feel that your committee, among many things, can do a job bringing to Government,

management and the public that small business is the basic foundation of our economy and that big business is the result of small business growing greater with the passage of time. So that encouragement to small business is good business.

I feel very keenly about small business and only this week we are organizing a small-business committee in the Kiwanis Club of my hometown. We feel, that service clubs, being made up of small-business men in the main, have a common exchange of ideas that could result in worthwhile ideas that come from the grassroots.

A small-business man is a "breed unto himself," for instance, as owner of this company of mine I must be financier, traffic manager, purchasing agent, production manager, sales-manager, new product developer—yes, even janitor.

I must work with my hands and head. I must spend many, many hours reading and thinking of my business. My mind is framed with a dollar mark because my time must be spent in thinking of money from every angle.

However, I feel that small business will continue. We still have rugged people that don't want to be part of a big machine but want to get out and do something on their own—work for themselves—not beholden to anyone or corporation. They will do this despite the complex obstacles thrown in their way by current conditions.

* * * * *

Trusting that you'll find this of interest and will show that we in the small-business world are rooting for you and your efforts on our behalf, we are.

Sincerely yours.

BIG COMPANY BACK SCRATCHING

The writer of this letter points out that in contrast to all of big business' advertising about its fondness for purchasing supplies and parts from small firms, the big corporations are in reality usually not interested in the small firm's product. He hopes that some means can be found for appealing to the big corporations to be more generous in this respect. I hope that this can be done, and I believe that to a certain degree such an appeal can succeed.

There are terrific barriers, however, which the small-business man frequently does not appreciate. The fact is that a very large portion of the total volume of business transacted in the country today is buying and selling between one giant corporation and another. Frequetly there is reciprocal buying between a pair of giant corporations. Take for example the auto tire or the auto battery or other auto accessories which we might buy in the local filling station. Behind those products we find buying and selling arrangements like this: A major oil company, or a pair of major oil companies, sell the raw stock for making synthetic rubber to one of the big rubber companies. Then the oil company buys auto tires—as well as batteries and other auto accessories—from its rubber company-customer, for distribution through its retail gasoline stations. In other words, this is a packaged deal. The small-business man who makes things the rubber company makes, is wasting his time to try to sell to the oil company. And so, too, the small-business man who sells things the oil company sells is wasting his time trying to sell the rubber company.

Our business system today is riddled with arrangements of this kind, but usually these arrangements are somewhat more complex, and their outlines are not so visible to the eye of the small-business man. There are complex financial ties where 1 big bank, or 1 big insurance company, is the financier of both the buyer and seller corporation; and there are other more elaborate reciprocal buying-selling arrangements which parallel the elaborate patterns of interlocking boards of directors among the giant corporations. As arrangements of this kind spread and increase in the community, interest between and among the giant corporations becomes more closely knit and there is less and less opportunity for the small-business man. The quality of the service he offers and the price at which he can offer a product will have nothing to do with his breaking into a market like this.

SMALL BUSINESS PEOPLE SHOULD DEVELOP THEIR OWN IDEAS

As for the idea of establishing "small-business committees" within the local civic clubs, it seems to me this is both wholesome and constructive. Small-business people are extremely busy people. As this small-business man points out, in his own firm he must be "financier, traffic manager, purchasing agent, production manager, sales manager, new product developer," and "even janitor." Being busy, the small-business man does not have sufficient time to keep informed on the general economic and legislative issues which affect his well-being. Consequently, small-business committees such as have been suggested should provide an opportunity for small-business people to exchange information and discuss their problems. This kind of exchange of information and frank discussion will not find a hospitable home in some of the national business organizations such as the National Association of Manufacturers and the Chamber of Commerce. Such get-togethers among small-business men would, then, serve a very real need for giving expression to ideas coming up from the "grass roots." In the organizations I have just mentioned, the ideas, the propaganda and the "party line" all seem to flow down from the top.

I have heard many small-business people say that the giant corporations use these organizations to propagandize the small-business man against his own interests.

I believe that the democratic processes provide our best assurance of progress, as well as our best safeguards against economic totalitarianism. Small-business people must learn to make the best uses of these processes.

Meatpackers Amendment

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1957

Mr. DIXON. Mr. Speaker, in President Eisenhower's economic report transmitted to Congress January 23, 1957, he emphasized the importance of a competitive economy in producing the abundance we have enjoyed in America.

The report states:

> The preservation and strengthening of competition must, therefore, be a leading objective of public policy. * * * Vigorous enforcement of the antitrust laws is basic to the obtainment of this objective, for threats of encroachment on competition are always present and assume constantly changing forms.

Most of us in Congress are in agreement with this objective. However, there is an important area of our economy which for decades has escaped antitrust scrutiny or enforcement. This is the meatpacking industry.

In the years prior to 1921 the Federal Trade Commission was vigorously investigating monopolistic practices among the packers. The Justice Department brought antitrust suits against the Big Five packers, and to escape prosecution they signed a consent decree in 1920 by which their activities were restricted.

In 1921 the Packers and Stockyards Act transferred monopoly and fair-trade control from the Federal Trade Commission to the Department of Agriculture. However, Congress has never given the Department of Agriculture an appropriation for an enforcement staff. Thus, meatpacking is the only industry in America which escapes Government supervision of unfair trade practices by which giant companies can force small competitors out of business or artificially lower prices for produce sold to them.

Today, Congressman EMANUEL CELLER, chairman of the House Judiciary Committee and its antitrust subcommittee, and I are introducing identical bills to amend the antitrust laws so as to vest in the Federal Trade Commission jurisdiction to prevent monopolistic practices in the meatpacking industry. Senators ARTHUR V. WATKINS and JOSEPH C. O'MAHONEY are introducing the same bill in the Senate.

Strict antitrust enforcement is urgently needed, because the packing industry is heavily concentrated. This puts the consumers, the small independent meatpackers and the cattlemen in a vulnerable position. Ten national packers slaughter 50 percent of the cattle, 60 percent of the calves, 70 percent of the hogs, and 77 percent of the sheep under Federal inspection.

Secretary of Agriculture Ezra Taft Benson is to be commended for his recent announcement that the Department is making a survey of activities and problems concerning unfair trade practices. Secretary Benson has also indicated he expects to ask for funds to build an enforcement staff if that function remains in his Department.

However, more economic and effective antitrust enforcement against the packers over the long run would result from transferring enforcement to the Federal Trade Commission for the following reasons:

First, the FTC could do the job with little or no expansion of staff, with consequent economy to the taxpayers. It has been estimated that for the Department of Agriculture to adequately assume

this enforcement would require an additional staff of as high as 60 people.

Second, scrutiny of unfair buying or selling practices would likely be accomplished with considerably greater efficiency by an agency with decades of experience in antitrust enforcement than by a newly established organization.

Third, over the long run the Department might be restrained from pushing antitrust enforcement, because the success of some Department activities, such as marketing news services and Federal meat grading, requires cooperation of the meat packers.

During the summer and fall of both 1955 and 1956 I spent considerable time visiting with stockmen from most of the 25 counties in my congressional district in Utah. There men are almost universally requesting vigorous enforcement of the antitrust laws against the meat packers. In addition a growing list of powerful regional and national organizations is taking a strong stand in favor of the bill, which I am introducing to transfer authority from the Department of Agriculture to the Federal Trade Commission. These include the National Milk Producers Federation, the Western States Meat Packers Association, the National Wool Growers Association and the United States Wholesale Grocers Association.

Passage of this bill should mean added protection to livestock producers, meat consumers, and independent packers.

When College Boys Decide To Stay Down on the Farm

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "When College Boys Decide To Stay Down on the Farm," which appeared in the February 19, 1957, issue of the Courier-Journal, of Louisville, Ky.:

WHEN COLLEGE BOYS DECIDE TO STAY DOWN ON THE FARM

A recent poll of young men in colleges showed that 53 percent of those who are farmers' sons planned to make a career of farming. This is a notably high figure. The average was only 16 percent for boys planning to follow their father's profession.

These are college boys, remember, boys who have been away from home and have seen something of the world. They are not likely to be swayed completely by the old argument that "what was good enough for Dad is good enough for me." Young people today are seldom bound by such feelings of tradition.

It must be true that these young men are thinking in terms of a genuine career of farming. A great many of them are taking special training in agriculture, so that they will enter their life's occupation at least as well prepared on the technical side as the average boy who goes into business or industry.

There was a time when it was the less able, the less ambitious youths who were more likely to stay on the family farm, while their brighter brothers sought their fortunes out in the world. Many became farmers by default, because they had no other vocation. There are still some situations, of course, where opportunity is too restricted to satisfy a young man of ambition, especially where there is a big family living on a small, poor farm. But there is a significant trend of college-trained youths to go right back to the old home farm for a prosperous, happy life.

Our cities have drained population from the farms for many years. Where 60 percent of Americans lived in rural areas in 1900, only 36 percent were there by mid-century.

Yet agricultural production has gone on rising, due to new equipment and new methods of farming. Rural life has grown steadily less lonely, less isolated, less cut off from the main stream of America's development. We have seen evidences that many of the young people now settling down on family farms are the cream of the crop. The farm contests run each year by the Courier-Journal, Louisville Times, and WHAS turn up a heavy proportion of young people as prize winners who are joining their fathers on the farm as a career.

Loss of quantity in the farm population is not important if there is a steady gain in quality. We see that kind of gain on Kentuckiana farms, and we are happy about it.

Impossible Job of Secretary of State

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1957

Mr. FULTON. Mr. Speaker under leave granted to extend my remarks in the RECORD, I include the following article from the New York Times magazine of February 24, 1957:

IMPOSSIBLE JOB OF SECRETARY OF STATE
(By Paul H. Nitze)

WASHINGTON.—President Eisenhower in a recent press conference described the position of Secretary of State of the United States as "the greatest and most important job in the world."

When the President made his statement his main purpose undoubtedly was to emphasize his personal support for John Foster Dulles at a time when Mr. Dulles was under serious attack in the Congress and elsewhere. Furthermore, the President probably did not mean to suggest a comparison in greatness and responsibility between the office he himself holds and that of his Secretary of State. Nevertheless, the description is not to be lightly dismissed. A strong case can be made that the office of Secretary of State of the United States is a more difficult office to fill well than the Presidency—that, if not the greatest, it is the world's most difficult job. The most important exercise of the President's power and responsibility, provided he decides not to do the job himself, is his choice of a Secretary of State.

Clausewitz makes the point in discussing military organization that a supreme commander can lead, direct, and supervise 8 to 10 intermediate commanders, but that each of these intermediate commanders should not be assigned more than 4 subordinate units. His explanation was that an intermediate commander must look up as well as down, that he must concern himself as much with his relationship to his commander as with his realtionship to his subordinates, and that the number of unts he can therefore direct is more limited than in the case of the supreme commander who needs only to look down.

The relationships with which the Secretary of State must concern himself are many, but probably the first and most essential is that with his immediate superior, the President. The powers and responsibilities with which the Secretary of State is dealing derive almost entirely from those of the President. He acts in the President's name with authority delegated from the President or else the President acts in his own name but on the advice and recommendation of his Secretary of State.

Any lack of understanding or of confidence between the two is a flaw that will rapidly undermine all possibility of successful conduct of the Secretary of State's office. When President Roosevelt ignored Secretary of State Cordell Hull on vital matters of foreign policy Hull's usefulness as Secretary of State was seriously impaired. When Secretary of State James F. Byrnes slighted his obligations to keep President Truman fully informed and allowed doubt to arise as to whether he was fully reflecting Truman's wishes his usefulness as Secretary of State was at an end.

But this relationship up—to the source of his power and authority, to the office in which the responsibility for his actions and those of all his subordinates is centered—is only one of the many relationships that the Secretary of State must simultaneously cherish. To the 15,000 members of the State Department and the Foreign Service the Secretary is the man in whose name and on whose responsibility all their actions are taken. A Secretary who permits lack of confidence, or misunderstanding, to arise between himself and the organization of which he is the head soon finds himself in a very weak position.

In his first speech to the State Department employees after he took office Mr. Dulles said he could take personal responsibility only for those matters of which he had personal cognizance. But it is impossible for the Secretary of State to divorce himself from responsibility for what the organization as an organization does. He cannot possibly do everything himself. He must, to a large extent, rely on others. He cannot avoid concerning himself with the competence and morale of the organization on which he and the President must rely for much of the development and execution of their policies. In this role the Secretary of State must be an executive, the second most important executive, of the executive branch of the United States Government.

The Secretary of State must concern himself with two other sets of relationships of the utmost importance. One of these is internal, within the United States, and finds its most critical expression in the Secretary's relations with Congress, particularly the Senate. The other is external, the Secretary's relations with the governments and peoples of the countries with whom the United States is allied or who are otherwise important to the conduct of our foreign policy. Both of these relationships are in part direct and personal, and in part dependent on public opinion and thus on all those things that help to mold public opinion, including the press.

During the years that Mr. Dulles served as special adviser to the Secretary of State in the Truman Administration he had an opportunity to watch at first hand the development of these relations under Dean Acheson.

It was my impression that Dulles found little fault, and in fact found much to praise, in the way Secretary Acheson handled his external relations, particularly his relations with the leading men of the countries allied

to us or uncommitted to either side. Dulles did, however, question Acheson's success in handling his internal relations, particularly his relations with Congress and the press. It was Dulles' view that the mounting bitterness toward Acheson on the part of an important segment of Congress and the press was destroying his ability to carry out the courses of action on which he was embarked and therefore undermining his usefulness as Secretary of State. Dulles was determined not to repeat what he considered to be Acheson's errors in handling Congress and the press.

The question remained, and still remains, whether it is possible for a Secretary of State simultaneously to maintain the good will of Congress and of the press, and also maintain the respect and confidence of our allies and friends abroad.

There are those who believe that the job of the Secretary of State as it has evolved in the last 20 years is an impossible job. They say that one can conceive of a man—a first-class executive and leader of men, an expert in the field of foreign affairs—who is able to serve both as a loyal and dedicated staff officer to his President and as an executive and leader to his subordinates. They further say that it is possible to visualize this man conducting our foreign policy in a manner that merits and secures the respect of our friends and allies abroad and the fear and respect of our enemies.

But, they say, to imagine that this same man can also manipulate, weave through, accommodate and placate the myriad pressures, prejudices and opinions that are to be found in Congress, the press and domestic public opinion is just asking too much.

Some have suggested that what we need is a Secretary of State who has been through the domestic political mill, who has been elected to high office—either to the Senate or to a governorship—and who, because of this experience, will be better equipped to deal with the domestic scene and with Congress than any of our recent Secretaries of State have been. They argue that the Secretary of State, to be effective, must have domestic political power in his own right. They do not argue that experience and success in domestic politics are, by themselves, enough to qualify a man to be Secretary. They urge that he have this background in addition to all the other qualities necessary for him to carry out well the demands of his job.

Others would question whether such paragons exist. They suggest that a choice has to be made, and that priority should be given to those qualities of character and experience which best fit a Secretary of State to deal effectively with people and governments abroad. After all, the prime business of a Secretary of State is the effective conduct of our foreign relations.

What are the qualities of character and experience that best qualify a Secretary of State for this part of his job, the guidance and conduct of United States policy in what the Supreme Court once called "this vast external realm?"

I think most observers would probably list courage at the top of the list of essential qualities. The conflicting pressures on a Secretary of State are so intense, the issues he is dealing with so important, and the merits, costs and dangers of any course so difficult to sort out, that unless he has by innate character a disposition to energy, fortitude and consistency—in other words, courage—his guidance of foreign policy will fluctuate and be uncertain.

In addition to consistency of policy, it is important that the policies pursued have a reasonable prospect of success, that they be based upon actual conditions and possibilities and not on prejudice, bias or lack of understanding. The Secretary of State is assisted by the full organization of the Foreign Service, by the State Department staff in Washington and by the various intelligence agencies. They collect, digest and evaluate information from a myriad of sources but, in the last analysis, it is the Secretary who must decide on the final evaluation or recommend such a decision to the President.

This kind of judgment requires something more than experience; it requires a particular sensitivity, a power of intuition, an ability to put one's self into another person's place, to see how a given course of action will appear not just to representative Americans, but to people abroad—some friendly, some hostile, all human beings, but all having somewhat different backgrounds from ourselves.

Combined with this sensitivity, a Secretary of State has to have somewhat the same capacity for toughness as a military commander. A general cannot hesitate to send a unit into an action that will almost certainly result in its destruction, if that action is necessary to the success of his overall strategy. From time to time, a Secretary of State is called upon to make decisions requiring a similar toughness of spirit. He is in no position to give orders to any foreign citizen or official; therefore this toughness often finds expression in a well developed ability to say no, but it is toughness nevertheless.

If one were to ask foreign observers, observers basically friendly to our interests, what quality in a United States Secretary of State is most important, I believe they would say honesty. A reputation for honesty has long been stressed by students of diplomatic history as being the key to success in diplomacy and statesmanship. It is not that the diplomat or statesman should be a blabbermouth or have no secrets. It is that the statesman and the diplomat are presumed to have considered their remarks before they make them, to be precise in giving expression to their thoughts, and to mean what they say.

Even in negotiations between basically hostile states, a high degree of precision in expression is necessary if misunderstandings leading to consequences desired by neither side are to be avoided. In the conduct of alliance diplomacy, and particularly in the case of a nation that plays a role of leadership in a coalition or system of alliances, precision of expression and a reputation for honesty are absolutely essential.

It is important at this point to draw a distinction between that precision of expression which one finds in the fine print of a legal contract and precision of expression which conveys in a politically significant manner the meaning one intends. Henry L. Stimson, when he was Secretary of War, was asked to approve a statement that his staff had prepared. When he objected that it was unclear, members of his staff pointed out that all the points he had in mind were covered somewhere in the language they had prepared.

His reply was that in the world of politics one should never forget that any public statement is to be judged as though it were a poster, not a photograph. The overall impression, not just the detailed words, must correspond with the thought that is intended.

It would be wrong, of course, merely to stress honesty and precision of expression without regard to the content of what the Secretary of State wants to express. People abroad are fundamentally interested in two questions. The first question is whether we in the United States consider them to be part of the group in whose behalf we are conducting our policy of leadership, or whether we view them as mere counters to be played this way or that in a game in which they really have no part.

The essence of leadership is to promote successfully the basic interests of those one is attempting to lead. If the developing course of history has thrown on the United States the burden of leading a coalition of those who do not wish to accept Soviet hegemony in the world, then the Secretary of State must have a sufficiently broad point of view to associate himself with the basic interests of the members of that coalition. He must be tough in saying no to those who would have him espouse interests that are partial and are not basic. Interests that really are vital to the members of the coalition must be vital to our Secretary of State, and to us, if we propose effectively to lead the coalition.

The second question in which people abroad are interested is whether as a country we have the will and the determination to carry out the policies that we purport to be pursuing. A Secretary of State who promises more than he can deliver debases the currency of our prestige as a country. Every concrete success of our foreign policy tends to improve our chances of further success. The close balancing of stated objectives with capacity for performance is an art that the Secretary of State must constantly have in mind.

Our ideal Secretary of State, then, is a man of many and seemingly contradictory virtues. He is a loyal subordinate to his chief while he is a leader and executive of the State Department and Foreign Service. He is courageous, and he is sensitive. He is honest, and he is precise and careful in his expression. He is broadminded, and he is tough. Perhaps one should add one other set of virtues. He must be proud and he must be humble. Without pride, he would be unable to face the responsibilities that press upon him. Without humility, he would crack under the strain.

In practice no actual Secretary of State will fully meet our ideal. He will have great strengths and he will have weaknesses. The task of good government organization is to make it possible for human beings to carry superhuman responsibilities. The President, the White House staff, and the leaders of the political party in power can carry a major part of the burden of protecting the Secretary of State from unfair congressional pressures and criticism.

The State Department and the Foreign Service can assist the Secretary of State to the limit of their ability in the actual formulation and conduct of policy. Our friends abroad are willing to do what they can to help if given a chance. It is only as a team that the job can possibly be done at all. The Secretary of State must permit—and help—the other members of the team to help him. Personal diplomacy is not enough. But even if he seeks and receives the fullest assistance others can give him, the unavoidable pressure of responsibility and burden of decision upon the Secretary of State make his job, if not the greatest, probably the most important, and certainly the most difficult, in the world.

Twenty-four-Hour Quarantine Service

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. PELLY. Mr. Speaker, H. R. 4249, the 1957 deficiency appropriations bill, is in conference. On the last printed House Calendar I received it showed no House conferees had yet been appointed. I trust this matter will be taken care of

speedily, and agreement reached. In particular I want to stress the desirability of retaining a provision for reestablishment of 24-hour quarantine service. The February 21, 1957, issue of the New York Herald Tribune contained the following article which explains this service:

MORE QUARANTINE SERVICE

Steamship lines and shippers in American ports have been trying for a number of years to obtain 24-hour quarantine service, instead of being limited to the hours between 6 a. m. and 6 p. m. Passenger vessels arriving at other hours can obtain radio clearance if there is a doctor aboard, but the many freighters carrying the cargo which constitutes the bulk of the traffic cannot. They must anchor, in the case of New York, off Quarantine on Staten Island until the station opens in the morning, and then, arriving at their piers at 10 or 11 a. m., lose practically half a day in unloading.

Not that the lines haven't been willing to pay overtime if additional doctors were available between 6 p. m. and 6 a. m. But article 101 of the World Health Organization states that no charge shall be made for medical examinations such as those required by the Quarantine Inspection Service. Otherwise the line would be glad to reimburse the Government for the extra service because of the savings in quicker unloading, loading and turnaround, which have been estimated at $10 million a year. They already do so in the case of customs and immigration officials.

The supplementary appropriations bill passed earlier this week has an item of $67,500 inserted by the Senate for just such purposes. This will provide round-the-clock inspection until June 30, and a $150,000 item for the next fiscal year has been included in President Eisenhower's new budget. As Representative PELLY, of Washington, pointed out, it is false economy not to provide such inspection in view of the large subsidy which our merchant marine receives from the Government. Increased costs simply mean higher subsidies, and if an appropriation of $150,000 will save the merchant marine an estimated $10 million, if not more, it should certainly be included in the bill which finally goes to the President for his signature.

More Oil Pipelines Needed

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. ROGERS of Texas. Mr. Speaker, I have a unanimous-consent request that I feel sure will be welcomed by all. It is for permission to insert in the CONGRESSIONAL RECORD the remarks of Gen. Ernest O. Thompson, of the Railroad Commission of the State of Texas, at a meeting of the Panhandle Chapter of the Texas Society of Professional Engineers at Amarillo, Tex., February 22, 1957. General Thompson, a recognized and unchallenged expert on oil and gas matters the world over, is a beloved and honored son of the Panhandle of Texas, and one of which we are deeply proud. He recently appeared before the House Committee on Interstate and Foreign Commerce as a witness to testify concerning the oil problems that grew out of the closing of the Suez Canal. His concise, but complete explanation of the situation measurably eased much of the fear and trembling that had been generated by many unfounded and unwarranted statements on that subject matter.

His splendid remarks well illustrate the clear and brilliant thinking of a public servant dedicated to his task and to his country. I am pleased and honored to have the opportunity to make these available to all Americans:

MORE OIL PIPELINES NEEDED

(An address by Ernest O. Thompson, Texas railroad commissioner, before Panhandle Chapter, Texas Society of Professional Engineers, Amarillo, Tex., February 22, 1957)

It is a great pleasure always to discuss our oil problems. Today oil of the Middle East has world attention. The stoppage of Suez Canal emphasizes this point. Europe's oil supply was interrupted. Since November 1, 29 million barrels of crude and products have gone to Europe from the United States. Persian Gulf oil has had to be diverted around Africa to Europe. But the job has been done. The lesson learned was the need of more pipelines. This applies here at home and in the Middle East.

Petroleum has become increasingly important in the life of everyone in America and throughout the world. Our ever-expanding peacetime economy and our national security in time of war depend upon petroleum. In the United States the oil consumption is increasing 5 percent per year. In Europe and Asia the rate of increase is 12 percent annually. By 1975 the United States will need 14 million barrels of oil per day. That is nearly double our present oil production in the United States. We can find the oil, but we must have adequate pipelines to move it safely and cheaply. Without gasoline and lubricating oil, even the atomic bomb could not be delivered by ship, plane, truck, or tank. Therefore, even with the atomic weapons, we must have gasoline and oil to carry them to the point where they will be delivered most effectively to preserve the peace of the free world.

At this point I make reference to a top editorial in the Houston Chronicle under date February 20, 1957, on page 6B, entitled "Texas Doing Its Part in Oil Emergency, Thompson Shows":

"The tirade of abuse directed at Texas oil producers and the Texas Railroad Commission should stop now that Gen. Ernest O. Thompson of the commission has given the facts to the House Interstate and Foreign Commerce Committee and high administration officials.

"As Representative WALTER ROGERS of Texas said Saturday, if one listened to charges made by some Congressmen and some Eastern and European newspapers, he would think that the entire continent of Europe was freezing to death and that Texas had cornered the entire fuel market and was refusing to make it available to the cold and hungry.

"General Thompson set the record straight. He told how Texas had increased its production at least 270,000 barrels daily since the European emergency arose and would have raised it higher if transportation had been available.

"Europe's oil shortage is due in no part to American indifference or rapacity. It was caused, of course, by the sinking of ships in the Suez Canal and the blowing up of the Iraq pipeline in Syria. Europe is still on short oil rations, despite American efforts to make up the deficit, because the pipelines and tankers are not available to get all the oil she wants to her. The shortage currently is about 250,000 barrels a day, but this will be erased shortly, barring further political troubles, by clearing of the canal and repairs to the pipelines.

"Representative ROGERS brought up another point. He said that this country still is importing almost 900,000 barrels of oil daily, and that if 30 percent of this quantity could be diverted to Europe, the situation there would be relieved.

"Meanwhile, there would be less criticism of the oil industry for the recent increases in prices of crude oil and gasoline if people would read the facts and figures.

"Compared with the prices of almost everything else, and considering the increased costs incurred by the industry, oil prices have been overdue for an increase for some time. Rising stocks of oil had operated to prevent a raise in prices. The price rose when the overhanging supplies were cleared out by the European demand."

We are in perilous times, and conservation of oil and gas becomes increasingly important each day. When World War II came, it was found that by careful conservation of oil and gas by the Railroad Commission of Texas for 10 long years prior to Pearl Harbor we had been able to build up in Texas a daily reserve oil-producing ability of 1 million barrels per day; and never at any time did Texas fail to supply every barrel of oil that was needed. Sixty percent of the overseas tonnage during World War II was composed of petroleum and its products, and 80 percent of this petroleum and the products thereof came from Texas oil fields.

Today we are faced with a situation where Europe, by the closing of the Suez Canal, has been cut off from its oil supply that formerly came through this route. Diversions of Middle East oil have had to be made around the Cape of Good Hope, and additional petroleum and products have had to be sent to Europe from the United States. We have sent about 29 million barrels to date. This burden has fallen largely upon Texas because of the fact that our production was great and that our pipelines led to the gulf coast. We again had the reserve producing ability built up by conservation.

Last week I was invited to appear before the Interstate and Foreign Commerce Committee of the United States House of Representatives to discuss some of the problems that have come up with this closing of the Suez Canal.

I made that appearance after having been graciously introduced by our distinguished Speaker of the House, the Honorable SAM RAYBURN, and I was vouched for by our majority leader in the Senate, the Honorable LYNDON JOHNSON.

These endorsements helped me greatly.

I opened my statement by saying that I was glad to learn that our Government was requesting that refinery runs of crude oil be reduced and that the cut of the throughput be changed to make less gasoline per barrel of crude. This will help work off gasoline stocks and replenish residual oils to be sent to Europe. They say they don't want gasoline. They want crude.

I stated also that I was glad to learn that the Office of Defense Mobilization, which is an executive arm of the President, had directed that a study be made to divert Venezuelan crude imports from this country directly to Europe instead of bringing this crude to the United States and then loading up these ships with American crude to be sent to Europe.

I am encouraged to believe that both of these objectives will be achieved.

I told the committee that we had in Texas 8,344 unconnected oil wells in the State, and I brought out with all the emphasis that I could that the most important thing that could be done for our national security at this time would be to immediately construct a crude oil pipeline from Texas to the east coast—and by the east coast I mean Philadelphia or that neighborhood so that, come war, if war should come, we would not be faced with the same difficulty that we faced in World War II of having to build oil pipelines after the war started. You will remember we had to build the Big and Little

Inch both from Texas to the East after the war started by reason of evermounting sinkings of tankers by German submarines, even right off the coast of Florida within plain sight of people on land. The pipelines did the job.

Reliable information is that Russia has constructed more than 400 new submarines aimed at the destruction and sinking of oil tankers with the view of leaving our Army, Navy, and Air Corps short of fuel and immobilizing them.

I told the committee that I thought the inquiry they were making was timely, and that if the construction of a big inch crude pipeline from Texas to the east coast could come out of their proceedings that it would be worth all the effort. A new pipeline to the west coast has been announced already.

The committees of Congress are composed of serious-minded men. These committees study their assignments with all the care that is possible to be put into critical, careful, constructive study. The Congress follows their committee recommendations.

Our Texas delegation is keenly attentive to the interests of Texas and to the security of our Nation; and as such, naturally, they are keenly interested in seeing that Texas oil production is properly protected.

I told the committee that I took a good deal of pride and happiness and satisfaction in the fact that the judgment of the Texas Railroad Commission had been vindicated in that we did not jump in suddenly and raise Texas allowables to a point where we could not move the oil in November, December, and January, and that excessive stocks in gasoline should be worked off.

Crude oil stocks today are 250,927,000 barrels in tanks above ground. That is 1 percent less than they were this time a year ago. However, the reduction in crude stocks in the last 5 weeks has been very considerable. Texas crude stocks were drawn down more than 200,000 barrels per day during February.

Crude stocks are today 10 million barrels below what should be called minimum working stocks. This great reduction in stocks of crude and the great reduction in residual fuel oil and the shortage of crude oil on the coast were the reasons that your Railroad Commission increased the daily production of Texas crude for the month of March by 210,000 barrels per day at our hearing on Tuesday of this week. There was a firm market demand for this crude. There was no dissent among the purchasers. There are some who indicated at the first instant that they wanted somewhat less, but said that they had a firm demand for the additional crude if we would allow it to be produced; and the testimony was that 210,000 additional barrels could be produced without waste and that much could be transported to the coast or to the North, then down the Mississippi River.

The reason that we have large stocks of gasoline on hand at this time, to my mind, is as follows: After World War II the Government of the United States encouraged refiners to add an additional 1 million barrels' refining capacity to their plants in the United States, giving them, in most instances, appreciated depreciation, on the theory that they were national-security wartime facilities and would not be needed for peacetime. But these refiners, once they get a plant built, cannot resist the temptation to run the refinery at full capacity once the stills are fired up.

This is the reason that I have been pushing the idea of trying to get our Government to urge European buyers to buy more gasoline and less crude. But Europe, as usual, wants to run their refineries full tilt—even at the expense of our refiners having to run at less than capacity.

I told the congressional committee that I was not alarmed at the situation at all, that our Railroad Commission had proceeded with caution about increasing allowables. Texas has contributed as we saw the need, in view of the testimony presented before our Commission. We carried out our statutes clearly and fully, because we believe that our Government is one of laws and not a government of men.

We have proceeded in our hearings in an orderly fashion. Notice is given of the hearing at which the allowable will be considered. Witnesses are required to testify under oath and are cross-examined thoroughly. A record is made; and we make a finding of fact and conclusions of law, and on that we base our order.

I told the committee that I further believe that most of the so-called crisis was a newspaper crisis, because it made good scare headlines; and I felt that the Government had not given out full and complete information on the oil-lift movements to Europe.

And with that I closed my statement. That took me about 15 minutes. And for 2 hours and a half I was quizzed and questioned by every member of the committee. I must say that they were very courteous. They were anxiously and earnestly seeking to get all the information they could on this oil situation.

I think these hearings are good, but they are exhaustive and exhausting on the witness.

I want my friends here to know that we are not running out of oil. We have great oil reserves in this country—a total of 32 billion barrels, 15 billion barrels of which are located in Texas. In 1956 the United States produced 2.5 billion barrels, of which Texas produced 1.1 billion barrels.

For many years after oil was discovered in Pennsylvania in 1869, people were interested only in securing coal oil or kerosene to light their lamps. The gasoline went down the creeks of Pennsylvania. Then when the inventive genius of man brought forth the internal combustion engine, gasoline was required to motivate and power these internal combustion engines in automobiles and other installations.

Accordingly, the maker of all good and perfect gifts permitted man to discover the great Spindletop field in 1901, which furnished the oil to make the gasoline for the beginning of the gasoline age. Then later on came in the great Panhandle oil field; still later the east Texas oil field. About the time we thought oil was getting scarce, Canada came in with great discoveries. Then Venezuela had brought in great discoveries prior thereto. And then, to cap it all off, there have been discovered around the shores of the Persian Gulf more than 200 billion barrels of oil reserves where they are producing today—or were producing just before Suez—approximately 3 million barrels per day, which is a little less than the State of Texas produces.

With good conservation methods that we practice and require to be practiced in Texas, and which are being followed in many other States of the Union and parts of the world, we are able to get out of the reservoir 3 or 4 times as much of the oil in place as was formerly recovered under old open-flow conditions. This is because of better methods of maintaining reservoir energy, which is the pressure at the bottom of the hole in the producing formation.

This is the story of conservation and the present oil situation.

The pressing need for our ever-expanding peacetime economy and the imperative need and requisite essential for our national security and that of the free world is more and bigger oil pipelines. We are at our pipeline capacity when Texas' March allowable production starts to flow. Come war, tankers will be sunk by enemy submarines. We must at once construct a big pipeline from Texas to the eastern coast.

Strife Over Our Middle East Plan

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1957

Mr. GUBSER. Mr. Speaker, I submit herewith a column by Frank R. Kent, which appeared in the Washington Star on Sunday, February 24:

STRIFE OVER MIDDLE EAST PLAN

In ignorant fury against John Foster Dulles, and by reason of reluctance to support the President, even on a question that should be high above politics, there is a certain type of Democrat apparently willing wholly to ignore logic and truth. A striking example of this is given in the Democratic opposition, in and out of the Senate, to the Eisenhower-Dulles resolution concerning the Middle East problems that appear to threaten the peace of the world.

This resolution, as has been repeatedly stated—and without contradiction—does not confer upon the President any powers that he does not already possess. It merely serves notice to the world that should he deem it essential to use these powers, the Congress would be with him. In other words, in a crisis on foreign policy, the United States will always be found united. Aside from the fact that the President's resolution seemed indisputably sound, this was the reason it so promptly gained press and popular support all over the country. So clear was it that the people generally approved the resolution and wanted it adopted by Congress that the House committee favorably reported it, and the House quickly passed it by an overwhelming vote. Also, it was endorsed by Democratic Speaker SAM RAYBURN, by ex-President Harry Truman, and a good many others.

DIFFERENT STORY IN SENATE

There was, however, a very different story when the resolution hit the Senate. There it fell into the hands of the truculent and intolerable Democratic Senators, HUMPHREY, of Minnesota, and MORSE, of Oregon, who apparently are equally convinced that everything about Mr. Eisenhower is evil and that anything he proposes must necessarily be opposed and torn to pieces if it can be done. Certainly that seems the view of Adlai Stevenson, recently defeated for the Presidency by Mr. Eisenhower so overwhelmingly as almost to establish a record. It also appears the view of Chairman Paul Butler of the Democratic National Committee, of Arthur Schlesinger, Jr., of the Americans for Democratic Action, and others of the left-wing New Dealers, of Mrs. Eleanor Roosevelt and most of the New Deal labor politicians who see in the Democratic Party their real political future, when organized labor will come into its own and run the country without opposition—save only such as occurs in its own ranks.

DELAY WILL PLEASE RUSSIA

The first thing that occurred was a violent name-calling debate in the Senate committee during which Senator LONG, Democrat of Louisiana, asked Secretary Dulles if the late Franklin D. Roosevelt had a right to station troops in Iceland during World War II. Mr. Dulles simply replied that he did not know. On this basis Senator LONG told the Senate "this was a falsehood and everyone in the committee room knew it was not true." Senator LONG offered nothing whatever to support his statements. Then Senator MORSE, of Oregon, probably the most violent and virulent of all the Senators, proceeded to call Mr. Dulles' testimony an "outrageous lies." Later the Washington Star character-

ized this sort of talk as a barroom debate and expressed the view that Mr. Dulles' reputation for integrity and veracity was sufficiently established not to be damaged by attacks from such antagonists. It also voiced the conviction that the level of the debate would not be raised by the new amendment to the Eisenhower-Dulles resolution. This amendment, offered by Senator HUMPHREY, seeks to clarify the amendment offered by Senator FULBRIGHT. "No one, we think," said the Star, "will ever know what this amendment really means."

There still seems every reason to believe that the President's resolution will eventually pass in a shape satisfactory to him. But apparently now it will not be without a period of delay and denunciation well calculated to please the Soviet and to bolster and nourish the propaganda of our enemies everywhere. It seems typical of those who profess and aspire to lead the Democratic Party these days. But it seems unlikely to succeed—even with the aid of the self-admitted economist, Senator DOUGLAS, of Illinois.

Federal Employees Entitled to Pay Adjustment

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1957

Mr. PELLY. Mr. Speaker, a salary increase for Federal employees whose positions are subject to the Classification Act is amply justified. I am proposing a formula for such an increase in H. R. 5243, which I introduced on February 22.

Congress has provided pay raises for these employees in recent years, but at no time were they sufficient to restore their salaries to their prewar level of purchasing power. They have to wait too long for each increase for the raise to give them any lasting benefit. For that reason there should be no delay in taking action on this matter as soon as possible.

The bill I have introduced would increase the first $2,500 of salary by 10 percent. That part of total salary which exceeds $2,500 would be increased by 24½ percent. In the case of a salary now in excess of $7,500 that portion above $7,500 would be increased by 27 percent. Thus the employee now receiving $3,415, the entrance rate for grade GS–4, would receive $250 as 10 percent of the first $2,500 of his total salary and an additional $224 as 24½ percent of the $915 by which his salary exceeds $2,500. His total raise would be $474.

In the first four grades the proposed increases would be well substantiated by the increased cost of living and the overall advance of productivity. Raises in the middle grades would be brought up to approximate equality with the cost-of-living level of salaries for the same grades in 1939. However, even at the rates of increase I am proposing, the salaries provided would not be sufficient to withstand even a further small increase in living costs.

The entrance salary for grade GS–7 would be increased by only $71 a year above the amount needed to restore the rate for that grade to its purchasing power in 1939. In grade GS–9 the proposed rate would be only $10 above the 1939 cost-of-living level.

The salary problem is a very real and pressing problem. For the Government it is a matter of attracting and holding employees who are qualified and reliable. The Government has been fortunate in being able to recruit many unusually capable employees. They are in fact dedicated to the public service. But the Government should not exploit this attraction which the public service may have over and above the remuneration which it offers.

For the employees it is a matter of simple justice. Workers outside the Government service have received increases well above those in the Federal service. We cannot match industry in paying the salaries offered persons in the higher administrative and professional positions, but there is not the slightest reason we cannot do as well or better than industry in paying employees in the first few grades of the Classification Act salary schedule.

In searching for a solution to the immediate pay problem, we should keep clearly in mind that the maintenance of buying power is common to all who earn a livelihood. Prices of commodities and services which people generally need for ordinary comfort have risen considerably since the end of World War II. The trend upward has not ended. This fact has only one meaning—a pay increase is needed now and it should be large enough to prevent Federal employees from continuing to lose a sizable portion of the purchasing power of their salaries in earlier years.

Naval Flight Training Program Should Be Reviewed

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1957

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks I wish to include an article which appeared in the magazine, Nation's Business. In this article the assertion is made that the Navy could save $7 million by employing civilian contract schools in their training program. If this is true, I feel that a thorough investigation should be made into the Naval Training Program.

Mr. Speaker, I am proud to have served as a naval aviator, and admittedly the Navy does have an outstanding training program. However, $7 million is a tremendous expenditure, and in my opinion, the Navy should be required to explain why they are unable to train aviators competitively, or why they have not enacted the recommendations of this civilian report.

Mr. Speaker, I am including this article in the RECORD today, as I feel it should be called to the attention of my colleagues. The article is as follows:

NAVY REJECTS $7 MILLION SAVING—CIVILIAN SURVEY MAKES RECOMMENDATIONS UPSETTING TRADITIONAL TRAINING METHODS

A plan that could save at least 7 million tax dollars a year is being bypassed by the United States Navy.

Such a saving would be equal to all the Federal taxes that approximately 26,600 average American families will pay this year.

The survey which recommends the cost-reduction changeover is classified and the Navy refuses to make it public.

The Navy's official position, in classifying the survey, is that it involves national security.

This has aroused some officials who say that the classification stamp in this case is merely a convenient means of avoiding adoption of the survey's recommendations.

The study involves the primary training of new fliers. The Navy spends a great deal more to train a new flier than the Air Force spends, and the report reveals that the Air Force primary training system is more efficient.

The Air Force provides primary flight training through privately operated contract schools.

The classified study concludes that it is not only feasible and practical for the Navy to do likewise but that a substantial saving could be achieved.

Not intended as purely a dollar comparison, the study also concludes that contract flight training is actually better than the present Navy program.

The Air Force, which now trains all its new pilots with civilian instructors, has graduated about 285,000 military aviators trained in this manner. The Army, after evaluating the Air Force contract plan, will switch to civilian teachers for helicopter and fixed wing pilot training in January.

In addition, college students in Air Force and Army Reserve Officers' Training Corps units at universities across the Nation will be offered flight training this year for the first time. This training will be handled by civilian instructors.

The Navy says it has no plans to provide ROTC flight training at universities.

Although $7 million would appear to be a small saving when compared to total Federal expenditures of almost $70 billion anticipated for the year ending next June 30, it could help to make an impressive dent in the rising cost for the operation and maintenance of the United States Military Establishment.

Major national defense during the current fiscal year is expected to cost $40.8 billion. That's about 60 percent of all 1957 Federal expenditures, and $454 million higher than the administration anticipated earlier.

All phases of naval flight training will cost the taxpayers about $91 million this year, compared to $87 million during fiscal year 1956. Of that sum, the proportion which will go for training new fliers is a large question mark. It could be anywhere between $40 million and $55 million—depending on which source you ask.

One official Pentagon source says: "The Navy's latest figure on the cost of 18-month training program which leads to designation as a naval aviator is $89,500 per student."

Another says the figure is $68,000.

A third says the figure cannot be ascertained.

Comparable Air Force training averages $40,000 per student, of which $8,872 goes for the cost of primary training.

The Navy told Nation's Business that it could not say what proportion of the total pilot cost is attributable to the primary phase.

Although it appears that the Navy could reduce its cost for training new pilots, some top naval officers are so thoroughly against the contract plan that the survey seemed doomed before it arrived in the Pentagon.

One high naval officer told Nation's Business:

"I find it difficult even to talk about the matter. It's so dead set against the contract plan that I can't discuss it without emotion."

Even before the survey was completed, another high officer of the Navy expressed his opposition to the contract concept. He is Capt. R. E. Riera, Chief of Staff, Naval Air Training Command.

He told a news conference at Pensacola, Fla., where the Navy teaches primary flying: "The Air Force was forced against its wishes to go into civilian flying school contracts for its primary training.

"We believe that our primary training is better than that of the Air Force. We believe also that there would not be a cost variation of as much as five percent between the two systems."

Later, when the report—made by Robert Heller & Associates, of Cleveland—was delivered to the Pentagon, the Navy classified it. Although it was expected that the Navy soon would declassify the report, it has not done so.

The Navy told Nation's Business: "It is apparent that cost studies conducted in the past are invalid and their release would serve no useful purpose."

The Navy also says: "The study of costs of civilian contract training contains some inaccuracies since certain hidden costs were not considered."

The Navy does not identify hidden costs and does not explain why any costs should have been hidden from the Heller firm which it was paying $40,000 for a survey.

The study served a useful purpose, the Navy continues, because "it pointed to certain areas of the Navy program where revisions have been made to effect economies."

"Because of advances in performance of aircraft and changes in composition of the naval operating forces, major revisions to the flight training program are in progress or planned for the near future. These include a reduction in the time devoted to primary training and the introduction of a jet trainer into basic training.

"The Navy's decision not to adopt civilian contract training at this time stems primarily from the inherent advantage of using instructors who have recently returned from the operating forces to indoctrinate the young student aviator.

"This system," the Navy adds, "has produced the finest aviators in the world and the Navy considers it most unwise to shift to a different system."

Notwithstanding this official opposition, there appears to be some pressure to adopt the contract plan for the primary stage.

Advocates of the plan point not only to the dollar savings but to the proficiency of civilian flight instructors as specialists in the business of teaching flying. Proponents of contract schools say that the use of civilians would help release regular Navy personnel—as it does in the Air Force—to teach others the complex operations of new weapons systems, called by one high official the Navy's most serious problem.

Of more immediate importance, it would release Navy fliers from the job of elementary instruction to the job for which they were trained—flying with the fleet to maintain a state of combat readiness. It would release aviation mechanics from tending primary trainer planes to the job of taking care of operational aircraft.

Proponents of this viewpoint to the need for more efficient use of Armed Forces manpower.

Opponents of contract instruction say only a Navy man can train a Navy man. Esprit de corps, high in the Navy, can be achieved—a high naval official says—only if a Navy-trained and fleet-experienced flier indoctrinates a fledgling.

They point to the safety record of the naval training program as an achievement of this system. One fatality is recorded for each 32,000 hours of flight training. (The Air Force safety record is approximately the same.)

Idea for the Heller study originated in the office of James H. Smith, Jr., then Assistant Secretary of the Navy (for Air), a post now held by Garrison Norton. Discussing contract training, Mr. Norton told Nation's Business:

"I would be strongly in favor—in peacetime—of a completely in-house pilot training operation for the Navy. I believe this is the best policy when you have the time to use it."

"In-house" is Pentagon language for a program conducted within the Navy.

"Dollarwise," he said, "contract training might show up well, but the quality of training, no."

He added that, in any contract operation, he believes the contractor would do the minimum required by the contract.

The Army's attitude toward contract flight schools was expressed when the requirements for large cargo helicopters were increased. Maj. Gen. Paul D. Adams, former head of Army operations and training, told a subcommittee of the House Committee on Appropriations during Army hearings:

"Since contract training of cargo helicopter pilots can be conducted by civilian institutions at considerable savings, and would parallel the system now used by the Air Force for their primary fixed wing pilot training requirements, it is considered that this means of accomplishing the training should be utilized.

"Available Air Force experience and studies," General Adams said, "indicate that it is more economical to conduct this training by such contract.

"The primary flight training—which is just learning how to fly an airplane and before the military aspects of flying are introduced—can be done quite well by the civilian flight training schools."

Representative DANIEL J. FLOOD, of Pennsylvania, asked if the training was just as good.

"Yes, sir," said General Adams.

The first Army helicopter course conducted by private enterprise will begin next January 7. New classes of approximately 50 students each will enter every 4 weeks. Training for about 700 a year is planned.

The contract (for $890,215) was awarded to the Southern Airways Co., of Atlanta, Ga. Training, with about 65 civilian instructors, will be conducted at Camp Wolters, Mineral Wells, Tex.

Southern Airways was one of 66 firms solicited for proposals on the helicopter pilot training school. The company's proposal was 1 of 21 made by 16 different firms.

William J. Graham & Son, of Pittsburgh and Marianna, Fla., was given the contract (for a little less than $2.4 million) to train Army airplane pilots at San Marcos, Tex. The first class of 100 students will arrive in January. New classes will start each 3 weeks. The Army expects to graduate about 1,275 new pilots annually in this contract operation.

A flight training program for Reserve Officers' Training Corps students, both Army and Air Force, will also get underway during the 1956–57 school year. Next year the program will be enlarged. College students in 180 Air Force and 40 Army ROTC training units will be offered flight training.

Civilian instructors will teach the college students. In most cases the training will be handled by contract schools cooperating with the universities. About 20 universities, however, have their own facilities and already offer flight training as part of the regular college curriculum. They will enlarge their programs to take care of ROTC students.

An estimated 1,625 Air Force ROTC students will get beginning flight training during the current school year. The program will be stepped up to about 4,300 next year. The Army plans to train about 400 this year and about 800 a year beginning in 1957–58.

Each student will receive 35 hours of instruction in small airplanes, as well as classroom instruction in subjects associated with aviation.

Cost per student will vary from $430 to $455 for the entire flight course. Total cost of these programs for the first year is expected to come to about $865,000. Eventually the Government will be paying civilian schools about $2.1 million a year for ROTC flight training.

The Department of Defense states the purpose:

"The new flight training courses will . . . permit an earlier screening of the cadets' adaptability for flying while still in student status."

The training of military pilots by civilian specialists was first conceived in 1939. At that time the Army Air Corps had only 21,556 officers and men. A small group of civilian aviation school operators was called to Washington. These barnstormers, shouted the skeptics, could never train military aviators. Results astounded everyone. By 1944 the Air Corps, later to become known as the United States Air Force, had almost 2.4 million officers and men. Civilian instructors were turning out military pilots at the rate of 110,000 a year, and setting safety records while doing it. In that year of peak training only 1 fatal accident occurred for every 43,478 hours of flight in the primary program. A year later the ratio improved to 1 for every 63,000 hours flown.

The Air Force has estimated that the privately operated contract schools saved $250 million a year.

After World War II, with more pilots than could be kept on active duty, the program was discontinued, but not permanently. The matter of civilian instruction was studied continuously. Military planners wanted to know: Does contract pilot training afford in the present situation or in future emergency similar advantages as to efficiency, cost, and mobilization potential as were manifest before and during World War II?

A study by the Stanford Research Institute provided some of the answers. On the basis of the Stanford study and surveys of its own, the Air Force revived contract schools in 1951.

Today nine civilian schools train all new Air Force pilots. They are: Anderson Air Activities, Malden, Mo.; California Eastern Aviation, Inc., Mission, Tex.; Beiser Aviation Corp., Marana, Ariz.; Garner Aviation Service Corp., Bartow, Fla.; Pittsburgh Institute of Aeronautics, Marianna, Fla.; Hawthorne School of Aeronautics, Moultrie, Ga.; Serv-Air Aviation Corp., Kinston, N. C.; Southern Airways School, Bainbridge, Ga.; and Texas Aviation Industries, Inc., Hondo, Tex.

Each contract school has about 700 civilian personnel, 130 of whom are flight instructors. About 20 USAF officers and 15 airmen are based at each school. A comparable military operation at Goodfellow Air Force Base—now closed—required about 2,100 military personnel.

The flight student gets 140 hours of air training and 240 hours of academic training.

Under contract, each base operator is reimbursed for allowable operating expenses and is provided a flat fee per flying hour, ranging from about 65 to 95 cents. Each contract is renegotiated and amended to meet changing requirements.

Average net profit after taxes is about $32,000 a year per school, according to a new study by the Aeronautical Training Society, a national organization of flight school oper-

stors. Average net profit is 1.75 percent of gross receipts before taxes, or 0.864 percent after taxes.

Cost to the Government averages $8,872 per student—called by the Air Force "perhaps the greatest training bargain in history."

Propeller-driven training planes—similar to those used by the Navy—are used for the primary stage. After primary, students go on to other bases where military instructors continue their training in jets or multi-engine planes, with emphasis on the military aspects of their assignments.

Beginning in 1958 a small jet trainer will be used in the primary flight stage. The plane, a Cessna T-37, provides side-by-side seating for student pilot and instructor. Although slow for a jet aircraft (310 m. p. h.) it will provide—at considerably lower cost—the training necessary for easy transition to speedy jet and rocket aircraft of the future.

The Aeornautical Training Society explains some of the advantages of the contract program.

"A major key to the success of the contract schools," the association says, "—aside from the fact that civilian enterprise can use industrial methods to a larger extent than can any purely military setup—is the civilian flight instructor.

"He averages about 33 years of age, is married, has a home and children. He is a professional flight instructor because he likes to instruct. To him the task of converting recurrent batches of fledglings into airmen is not a repetitive bore but an interesting, challenging task.

"Because of him and the other civilians, the Air Force sends only a small military detachment to each school for supervision.

"As a result of this use of civilian know-how and employees—many of whom are beyond combat age—the Air Force is saving the taxpayers millions of dollars a year and is making available thousands of airmen in places where they can serve more usefully."

The Buffalo as a Highway Pioneer

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial written by Adele Brandeis of the Courier-Journal, of Louisville, Ky. This editorial is entitled "The Buffalo as a Highway Pioneer" and same appeared in the February 19, 1957, issue of the Courier-Journal:

THE BUFFALO AS A HIGHWAY PIONEER

It costs anywhere from a half million dollars up to a million a mile to build a modern toll road here in this southeastern quadrant of the country. Our ancestors did it more cheaply, the natural easy way, but the toll paid in those days was often death, not two bits or a couple of dollars.

The earliest north and south road or track where those travelers crept along in fear and darkness, for it was safer at night, was the Natchez Trace, the badly named Path of Peace, which the Chickasaw Indians followed, linking long fragments of trails and bypaths they found waiting for them. This ran for 500 miles linking Natchez and Nashville. It was the only land link between the gulf and the eastern settlements, for it ran from Nashville eastward through Tennessee, finally connecting up with Daniel Boone's Wilderness Trail.

Men used that trace, twisted like a slack thread, through forests and valleys and swamps, praying to God that they might survive nature's perils and attacks by Indians or cutthroats.

PATHFINDERS OF LONG AGO

And who laid out that track before the days of our recorded history? Buffaloes, vast herds. They beat a path along the ridges, and the edges of bogs, returning year after year to their favorite feeding grounds, where the lush cane flourished, and to lick the salt earth near the mineral springs.

In those days as John J. Audubon wrote in his Western Journal near the opening of the last century: "Daily we see so many of the beasts (buffaloes) that we hardly notice them, but this cannot last, there is such terrible destruction by the Indians * * * that before many years, like the great auk they will have disappeared." The Indians linked those tracks and soon there was a very rough trail.

But this was, except for the buffalo's hunger habits, a purposeless trail. In 1800 came the purposeful following of the trace. (The name was derived from the French word meaning tracks or a line of footsteps.) The principal users were the "Kentucks" the flatboat men who floated their big barges laden with cotton, flour, and grain down the Mississippi. The flatboats never came back. They couldn't be poled against the current. They were too heavy, and so they were usually scrapped and sold for lumber at New Orleans.

This created a demand for some well-marked road by which the rivermen could return to the Tennessee River or the Ohio from which they had started. They walked that 500 miles or so back north in about 3 weeks, 25 miles a day and beat a hard path along the Indian trails. The "Notchy" was its nickname, from the notched trees that marked the route. Those "Kentucks," with their beards, their long, tangled hair, tattered leather jackets and leggings, were strong, rough men; they had to be or they wouldn't have survived. They boasted they could wade the Mississippi or leap the Ohio and whip their weight in wildcats. But the great danger was not the animals, it was the Indians, the Choctaws and the Chickasaws. Many of the travelers never got home. And besides the Indians, there were floods and disease.

By 1800 the Federal Government took cognizance of the trace and began to improve it—to a slight extent. Taverns, most crude, and even more primitive shelters called "stands" appeared, but with them came bandits, and fearful brawls. Meriwether Lewis died of bullet wounds in an ambush at a Tennessee stand. He was one of the famous early pioneers and statesmen who rode or walked the trace a century and a half ago. Audubon, on his way back from Mississippi without a cent in his pocket; Henry Clay, Aaron Burr and Andrew Jackson were among many others.

The trace was finally connected with one farther north. It came down from Illinois through our own Kentucky. It was called the Buffalo Trace and is now almost obliterated. It too was stamped out first by buffalo moving south from the prairies of Illinois down to the bluegrass region. It was first surveyed in 1805.

It came down through what are now French Lick and Paoli, and crossed the Ohio at the falls, where it became the Louisville Trace. It turned east toward Maysville where it continued as the Buffalo Trace, always near water, salt licks, and verdant patches of grass. For decades the mudholes or wallows could be found. Tales are that sometimes 50 to 100 animals waited while their leader made the wallow, 2 or 3 feet deep, 12 feet across, and that they crossed the river in hundreds when it was low.

At Blue Lick and Big Bone Lick near Maysville they beat a path wide as a wagon road. Incidentally Big Bone Lick is one of the Nation's prehistoric bone yards. Even mastodon and Arctic elephant bones have been found there.

A MORE ROMANTIC WAY

A series of unexampled frigid winters in the early part of the 19th century froze all the big growth and the starving herds moved out to the Great Plains. But the "couriers du bois," the French salt hunters, the pioneer settlers, and later the express messengers who preceded the post, kept the trace clear.

There may be a lesson in this, "Tut, tut, everything's got a moral if you can only find it," said the Duchess to Alice, or it may be just a fascinating bit of history. It is not possible to import buffaloes, and the thousands of employees of the highway department would hardly like to tramp out a trail south. But it would make road building more romantic and following a trace would make you feel a bit nearer to the past.

I Am the Guard

EXTENSION OF REMARKS
OF
HON. VINCENT J. DELLAY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. DELLAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tribute to the National Guard:

I AM THE GUARD

Civilian in peace, soldier in war, of security and honor
For three centuries I have been the custodian,
I am the Guard.
I was with Washington in the dim forest, fought the wily warrior, and watched the dark night bow to morning.
At Concord's bridge, I fired the fateful shot heard 'round the world.
I bled on Bunker Hill.
My footprints marked the snows at Valley Forge.
I pulled a muffled oar on the barge that bridged the icy Delaware.
I stood with Washington on the sun-drenched heights of Yorktown.
I saw the sword surrendered.
I am the Guard.
I pulled the trigger that loosed the long rifle's havoc at New Orleans.
These things I knew—I was there.
I saw both sides of the war between the States—I was there.
The hill at San Juan felt the fury of my charge.
The far plains and mountains of the Philippines echoed to my shout.
On the Mexican border I stood.
I am the Guard.
The dark forest of the Argonne blazed with my barrage.
Chateau Thierry crumbled to my cannonade.
Under the arches of victory I marched in legion.
I was there.
I am the Guard.

I bowed briefly on the grim Corregidor.
Then saw the light of liberation shine on the faces of my comrades.
Through the jungle and on the beaches, I fought the enemy, beat, battered, and broke him.
I raised our banner on the serene air of Okinawa.
I scrambled over Normandy's beaches.
I was there.
I am the Guard.

Across the 38th parallel I made my stand.
I flew the MIG Alley.
I was there.
I am the Guard.

Soldier in war, civilian in peace.
I am the Guard.

I was at Johnstown, where the raging waters boomed down the valley.
I cradled the crying child in my arms and saw the terror leave her eyes.
I moved through smoke and flame at Texas City.
The stricken knew the comfort of my skill.
I dropped the food that fed the starving beast on the frozen fields of the West, and through the towering drifts I ploughed to rescue the marooned.

I have faced forward to the tornado, the typhoon, and the horror of the hurricane and flood.
These things I know,
I was there—
I am the Guard.

I have brought a more abundant, a fuller, a finer life to our youth.
Wherever a strong arm and valiant spirit must defend the Nation—in peace or war, wherever a child cries, or a woman weeps in time of disaster.
There I stand.
I am the Guard.

For three centuries a soldier in war, a civilian in peace—of security and honor.
I am the custodian, now and forever.
I am the Guard.

Morris Weisberger

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1957

Mr. MULTER. Mr. Speaker, another of my constitutents has reached a high post from which he can continue to serve the public interest.

The vacancy caused by the untimely death of Harry Lundeberg, leader of the Sailors Union of the Pacific, has now been filled by the election to that important position of Morris Weisberger.

It was typical of Mr. Weisberger's anti-Communist activities to immediately announce, upon his assuming this important post, that there will be no change in the union's policies from those followed by his predecessor, indicating in no uncertain terms that the union will continue to support the American way of life and oppose all leftwing activities.

Mr. Weisberger came up from the ranks, having been a deepwater sailor on all types of ships.

He is a good, solid American with hard common sense, who can be relied upon to do the right thing for the members of his union without being unfair to employers, and always giving due regard to the public interest.

His many friends wish him well.

An Anniversary Not To Be Celebrated

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, February 25, 1957

Mr. PELLY. Mr. Speaker, I am informed that today is the 24th anniversary of the Federal income tax. Frankly it is not my purpose to suggest that this is reason for American taxpayers to celebrate. Over a hundred years ago Karl Marx and the Socialists dreamed up the principle of this tax, and maybe we should be thankful and celebrate that the per capita tax has only increased 400 percent since 1913. Of course, the Communists think the Government should take all the people's income and property, and that Government employees and legislators can spend it better than the people themselves.

If each Member of the House of Representatives would take a few minutes today to compare on the one hand income taxes and on the other hand the budget, perhaps there would be more Members in support of House Resolution 170, to limit Federal spending in fiscal 1958 to $65 billion. I am told the Rules Committee will hold a hearing on this resolution later this week. I hope so—and meanwhile I suggest that witnesses intending to testify first study a few statistics in the following article which appeared in the Port Orchard Independent, a weekly newspaper in my district:

FEBRUARY 25: THE BIRTHDAY OF INCOME TAX

Next Monday is a birthday for which nobody will bake any cakes.

On February 25, 44 years ago, the Federal Government was authorized the power to levy an income tax on individuals. It was felt at the time that rates could never reach 10 percent.

The first year of the tax total corporate and individual income levies brought the Government $80 million. Dividing this by the population of 1913 shows that the per capita tax bite was 82 cents.

By contrast, in 1956—two world wars and a police action later—the income tax brought the Federal Government $55 billion. This is a per capita tax bite of $328.

Per capita annual income was $358 in 1913; today it is about $1,647. In this 44-year period, per capita income increased 4½ times while the per capita tax payments increased an even 400 times.

Other comparisons of then and now are of equal interest. For instance, in 1913 the single personal exemption was $3,000 compared to $600 today.

In 1913, a single man with a $5,000 a year income paid $20 tax; today, he pays $944. Rates the first year were 1 to 6 percent; they range today from 20 to 91 percent.

Mr. Taxpayer's total tax bill in 1913 was distributed 70.5 percent for State and local government and 29.5 for the Federal Government. Today the Federal Government takes 72.3 percent, leaving 27.7 percent for State and local units.

In 1913, people did locally what they wanted done. Today, they give their money to the Federal Government and fight among themselves to see who can get the most back.

Estonian Independence Day

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 25, 1957

Mr. O'HARA of Illinois. Mr. Speaker, the observance of Estonian Independence Day today, because Estonian Independence Day fell on Sunday, February 24, is an act of devotion to the permanence of political morality and of dedication to the future of a free Estonia, restored to her rightful sovereignty among the family of nations.

Let us keep in mind that Estonia was a free nation for 2,000 years before the first aggressive neighbor temporarily subjugated her. "Temporarily," I say, for it cannot be Estonia's destiny to remain subjugated. History proves this. Despite the tyranny of Czarist Russia for over 200 years, on February 24, 1918, Estonia declared herself "an independent, democratic republic." As many another newly born State, as our own infant United States, she was immediately compelled to fight to prove her determination to remain free. Not until German occupation forces were expelled, and a new Russian invasion repelled, was Estonia truly established, a democracy based upon a constitution which, like ours, guarantees representative government, civil rights, and civil liberties.

It is ironic to recall that the Soviet Government recognized Estonia's independence in a peace treaty signed in 1920. This was the same Soviet Government which, 19 years later, in secret negotiations with Nazi Germany, started steamrolling over Estonia by placing her, with other Baltic States, under Russia's "sphere of influence." This dangerout phrase was too soon to become a notorious synonym for overrunning a smaller country which the circumstances of war had left in helpless isolation. It became a formula for injustice by force, for enslavement by starvation.

In Estonia the repulsive pattern was set. Under the pretext of wartime necessity, at the beginning of World War II, the Soviet Government saturated the country with military establishments. A puppet government followed, never, of course, acknowledged by the United States. A second German occupation, from 1941 to 1944, repressed Estonia's desperate attempt to reestablish her independent government, but the hardships endured during this period were only the beginning. More followed the return of Soviet might in 1944.

The story has not been told in full. Estimates have been made that about 150,000 Estonians have been deported to

the Soviet Union, most of them to slave-labor camps. Thousands were murdered. Other thousands simply disappeared.

So the picture looks dark, indeed, today. Estonia is a land voiceless and isolated, a Soviet military bastion, a people stripped of liberty and of economic opportunity. Nevertheless, there must be hope. This celebration of the 39th anniversary of her independence is not a vain gesture. It is our acknowledgement that we feel deeply that the Estonian people will be free again as they have been free in the past, that Estonia's spirit is alive and surging, and that in Estonia, as in every country where independence has been enshrined as the greatest treasure, there can be no other ending. It is our acknowledgement that we feel deeply that the Estonian people will be free again as they have been free in the past, that Estonia's spirit is alive and surging, and that in Estonia, as in every country where independence has been enshrined as the greatest treasure, there can be no other ending.

Billion Minutes Since Christ's Birth

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Billion Minutes Since Christ's Birth," which appeared in the February 21, 1957, issue of the Madisonville Messenger, of Madisonville, Ky.:

BILLION MINUTES SINCE CHRIST'S BIRTH

A billion is such a huge figure that the average person has no idea what a Government figure or an economist or a professor is talking about when he mentions a billion dollars or a billion anything else.

The fact that the average person can't comprehend a figure as big as 1 billion makes it easier, perhaps, for him to be imposed upon by those who make up budgets, incur national debt, and otherwise shoulder responsibilities to pay vast sums upon the citizen.

What is needed, of course, is for everybody to get a clearer understanding of what $1 billion means. Then he could get a clearer understanding of what $72 billion means.

In the Wall Street Journal the other day a letter writer named G. W. Hearle wrote from Minneapolis that he had worked out a good example to help the average American understand what is $1 billion.

It is to recall, and ponder seriously, that scarcely 1 billion minutes have passed since the birth of Christ.

The Minneapolis writer invites the individual to try the following bit of ciphering, either on his calculator, if he has one, or with a pencil and piece of paper: 60×24×365×1,956 equals 1,028,073,600.

Then, when we think about a budget of $72 billion, such as has been suggested for the Federal Establishment for each of the next 2 years, the sum arrived at in the above calculation should be multiplied by 60 (the number of seconds to the minute).

Then the fellow who is beginning to appreciate what a billion means, or what 72 billions mean, will find from his calculator or from his sharp pencil that less than 62 billion seconds—seconds, that is, have passed since the birth of Christ.

It wouldn't be a bad idea if the little exercise in arithmetic, and its application to our annual rate of spending and to our national debt, were posted upon every available bulletin board in America—schools included.

Federal Transportation Tax Is Both Outmoded and Unfair

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1957

Mr. MACK of Washington. Mr. Speaker, to provide the revenue on which our Government operates, we must have taxes of various sorts. They are accepted by the people with good grace when they do not place an undue burden on one segment of our people.

Some of our taxes, such as the unjust transportation taxes are highly discriminatory. The present 3-percent tax on freight bills and 10 percent on travel tickets places a disproportionate burden on industries and citizens of Western States.

These transportation taxes were enacted during World War II as an emergency revenue source. They have no place in a peacetime economy when we are trying to encourage economic expansion of industry. Our western plywood, lumber, paper, and aluminum producers must ship their bulk products greater distances to reach consuming markets in the heavily populated East. They must pay higher freight rates and a correspondingly greater tax. This places them at a competitive disadvantage with eastern and southern industries.

Transcontinental travelers are also forced to pay unduly high travel taxes and for this reason many of them are crossing into Canada and buying rail and travel tickets on Canadian lines to escape this 10-percent tax. Canada has no such travel tax.

The Seattle Times, one of the Northwest's leading newspapers, presented a thought-provoking editorial on this subject recently, and I request permission that it be inserted at this point.

[From the Seattle Times of February 17, 1957]

FEDERAL TRANSPORTATION TAX IS BOTH OUTMODED AND UNFAIR

One of the most flagrant illustrations of the maxim that a tax once imposed stays on the books forever is the unjust Federal transportation tax that was enacted by Congress as a war measure in 1941 and 1942.

This is the 3-percent tax on the transportation of freight and the 10-percent tax on passenger travel, originally levied for purposes of emergency war revenue and, in the case of the tax on passengers, to discourage civilian travel when transportation facilities were over-burdened with troop and supply movements.

The freight transportation tax was enacted in 1942 as a 3-percent tax—4 percent on coal—and has remained at that level until the present time. The passenger tax, first enacted in 1941, then was a 5-percent tax. It was raised to 10 percent in 1942 and 15 percent in 1944. In 1954, it was reduced to the present rate of 10 percent. Both taxes are charged against users of American rail, air, bus, and truck transport carriers.

As a war measure, for purposes it was intended to fulfill, this tax was cheerfully accepted by the American public, as were many other wartime inconveniences. But it was not to be expected that this attitude would be continued indefinitely, long after the war emergency no longer exists. In the Pacific Northwest and other western sections of the country, the levy has become particularly objectionable.

This is partly because this region and all the west coast are far from principal centers of distribution of many commodities and far from eastern travel destinations. The long-haul shippers and long-distance travelers are required by this tax to make an entirely disproportionate and unjust contribution to Federal revenues. In this sense it is a highly discriminatory tax. It includes some absurdly discriminatory rates on air travel between Seattle and the cities of Alaska and between Seattle and Honolulu.

Across the northern section of the United States, moreover, it discriminates against American transportation lines to the profit of Canadian carriers. Passengers originating in Seattle, for example, can easily travel to Vancouver, British Columbia, and save considerable sums on fares on Canadian rail and air lines, escaping the transportation tax they would be required to pay here.

The Seattle Chamber of Commerce and the Los Angeles Chamber of Commerce are taking the lead in their respective areas in efforts to have this Federal transportation tax repealed during the present session of Congress. It would be helpful if the Washington Legislature would join in this movement by memorializing Congress, urging that the tax be rescinded this year.

George Washington

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. CANFIELD. Mr. Speaker, I like an editorial tribute to George Washington that appeared in the Passaic, N. J., Herald-News, on February 22. In a few well-chosen words it gives the key to Washington's success.

The editorial follows:

GEORGE WASHINGTON

George Washington lived at a time when this land was blessed with men who would have merited the adjective "great" in any age.

Benjamin Franklin, Thomas Jefferson, Alexander Hamilton, James Madison, John Adams were men of remarkable stature. In company such as this, it would be understandable if Washington had been relegated to the background.

The fact is, however, that Washington was the tower of strength, the undisputed leader. He appears to have been indispensable in the winning of the Revolution, the welding together of the Nation thereafter, and getting it started successfully.

What qualities made it possible for Washington to harness brilliant opposites like

Jefferson and Hamilton? What made this dignified, reserved man, who seemed almost cold, universally beloved and trusted by his countrymen?

The explanation lies in Washington's integrity. He was a leader of iron determination, but so have other leaders in history been. What set Washington apart was that he was utterly honest, unselfish, honorable, and devoted to the cause of freedom.

Washington stands as an everlasting rebuke to cynicism, selfishness, and easy morality in men who serve the public.

You Too Can Be a Pundit (or, Do-It-Yourself Political Thinking)

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. MULTER. Mr. Speaker, the following article by Martha Gellhorn appeared in the February 18, 1957, issue of The New Republic. Miss Gellhorn is a novelist and magazine writer, and a correspondent for the New Republic in England. I believe that many of our colleagues will find the article of interest. It follows:

YOU TOO CAN BE A PUNDIT (OR, DO-IT-YOURSELF POLITICAL THINKING)

(By Martha Gellhorn)

I do not see why every American, or any American, should not now become a Political Thinker. In view of the general low level of professional political thinking, it would seem to be a career wide open to amateurs.

We have certainly no reason whatever to believe that our official political thinking is revealed religion, judging by results; nor is there cause to imagine that our leaders are guided by Voices, and that the White House and the State Department are either the Delphic Oracle or the Burning Bush. And amateur political thinkers might, in their youthful excitement, express themselves in plain, coarse language which would be a welcome change.

Anyone can do it. Or anyone can try, which is all the professionals do. The professionals have "sources" which are not open to the amateurs; the professionals read top secret meaning fairly confidential documents which they send around among themselves, and they talk to each other at high level conferences. The amateur has newspapers and other forms of public communication, the amateur has all his like-minded or opposing friends, and every bar can easily become a little Geneva.

I hereby submit, to fellow amateurs, some political thinking.

When are the British going to notice that the United States Government all but kicked out their Prime Minister? Of course there were contributory causes, not least of which was Sir Anthony Eden's ill health. (In Europe, which is a backward area, if a man has a grave operation and weakened physical resistance, his doctors do not say that he is much stronger because of this; they say that he is not. Since Europeans are poor, and therefore practical, they expect their public servants to work all the time or make room for someone who has the health to stand the gaff. That is a long parenthesis.) The fact is that Eden has departed and Dulles remains. Eden was not going to get that essential invitation for a chat at the White House because everyone around the White House is cross with Eden. Now reports come in that the White House et al. are pleased with Eden's successor, and Mr. Dulles likes Mr. Macmillan best of anybody. The British may begin to brood on this and ask themselves whether they enjoy having their Prime Minister's fate depends so much on United States Government approval. Looking back over the last 10 years, there seems to be a long record of the United States Government helping to kick the British out of where they were, without consoling rewards for the British, and without the United States Government bothering to replace what was kicked out. The British might begin to make a mental picture of the Anglo-American Alliance as a giant boot, which is the United States, and a relatively smaller bottom, which is Britain.

THE MIDDLE EAST

The waiting world has now been told of the Eisenhower doctrine. The waiting world might wonder what is the use of a doctrine which does not mention the active cause of all the trauble, but only says very grandlike that it is going to prevent something that has not happened. Most amateur people have understood that the central issue in the Middle East is Israel and the Arab States. Many have different explanations for what is wrong, and why, and what to do about it, but all are convinced that so long as the Arab leaders think Israelis belong in the sea, there will be no order in the Middle East. People speak of Israel quite openly, everywhere, but the United States Government seems to be shy of that name or embarrassed. Why the Arab leaders wish to push the Israelis into the sea is another matter, and many believe that the Israelis are nothing by whipping boys for the Arab leaders who have to give their people something to be good and mad at or else their people might be good and mad at their own Arab leaders and at their own lives. But surely the United States Government must put first things first and from there work to second things second and so on. The Israelis, of course, expect nothing so logical and possibly effective, for they are well aware that they possess no oil. On the other hand, oil has to be paid for, so the Arab leaders do not have it entirely their way. Instead of talking about Marines, who anyhow are not meant to appear except in unlikely contingencies and when asked for by the very people who will not, by then, want them, wouldn't it be better doctrine if the United States Government thought and talked hard about Israel and the Arab States, emphasizing the fact that the Israelis are on land to stay? Other whipping boys could be found for the Arab leaders, such as poverty, ignorance, and an inadequate supply of water.

THE UNITED NATIONS

Lately the United Nations appears to have become a sacred cow in America, which is a new and interesting condition for the United Nations. On the whole, a love of sacred cows interferes with thinking about facts. The United States Government could remind the American people who exactly makes up the United Nations, and how many of the member nations are honorable God-fearing secret-ballot democracies, and how many are anything but. It is not possible to rely on a parliament of nations to do the noble things that secret-ballot democracies consider correct, if a great number, nearly a majority, of that parliament do not even consider secret ballots correct. The United Nations can do nothing to protect the people of Hungary from cruel slaughter by a foreign power. The United Nations can, very late and with much wangling, pass a resolution; but nary a United Nations inquirer may enter Hungary, even to do something so modest as ask questions. Meantime there are Hungarians whose condition must cause all men of good will to sleep poorly and feel their souls sick with shame. The United Nations cannot help the Hungarians nor us because a powerful United Nations member objects. For years the U. N. Mixed Truce Commission has been unable to stop the nagging, destructive Arab attacks on Israel and therefore has been unable to stop the Israeli reprisals. Even now, after all the schemozzle, the daily Arab raids, from Jordan into Israel this time, have started again. Israel protests; nothing happens. Israel masses troops on the Jordan frontier, since Israel must protect itself if the U. N. can't. Jordan protests; Mr. Hammarskjold calls a meeting. This is the form of the status quo ante. If the United Nations cannot do a small job—policing the Israel-Arab frontiers—nor a large job—calling Russia to account in Hungary—but can only force obedience on that limited group of secret-ballot nations who are, relatively in a sinful world, good boys anyhow, is the United Nations quite the sacred cow which Americans now think it? Perhaps more realism and less prayerful hope would be the most sensible attitude which the United States Government could take toward the United Nations.

In conclusion (this is not full-scale political thinking but only a trial balloon, a phrase I have learned from political thinkers), what about money? Money is what we Americans have got. Money is about all anybody wants from us, since they cannot rely on our political thinking, which is not conspicuous for avoiding or solving dangerous muddles. We do give money, and truckloads of it. But do we give it right? If so, it is odd that money seems to have accomplished so little. Or perhaps money is not much good unless it is used as a guided missile, with solid principles and careful plans to direct it. If the money is not guided but simply handed out as nervous bribes, first a bit here, then a bit there (and then switch the bribes and scold some of the bribe receivers) it would seem to create havoc. Far from being loved for generosity, the money-bags come to be regarded as a menace. And money, with moralizing, appears to be the most futile cure-all that exists.

Foreigners, who never see our point of view, are apt to feel that the American national motto is: "God's in His heaven, all's right with America." We cannot hope to be understood by the definitely hostile foreigners. But whatever the friendlier foreigners may think of God, they are pretty sure all's not right with them, and they are not completely sold on the idea that all's right with America except for being undeniably rich. The friendlier foreigners might prefer to be treated less like poor relations or shocking nuisances, and more like people with whopping problems and a strong desire to survive. America has no corner on the instinct of self-preservation.

Farm Income

SPEECH
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. METCALF. Mr. Speaker, the gentleman from South Dakota [Mr. McGOVERN] has made an outstanding statement. Already he has shown a broad knowledge of the farm problem and a deep sympathy for our family farmers.

In the course of this debate, several phases of our farm program have been discussed fully. I have one addition.

As our colleague from Montana [Mr. ANDERSON] has pointed out, the Secretary of Agriculture has been claiming that farm income in 1956 was higher than in 1955.

This is not the case according to statistics provided by the Department of Agriculture and published in the February 1957 Economic Indicators. Page 7 of the current issue is devoted to farm income. At the top of the page are these words:

Gross farm income (seasonally adjusted annual rate) rose at the close of 1956 for the fifth successive quarter. Despite an increase in farm production expenses, net farm income was up $500 million in the fourth quarter of 1956.

As you read the columns of statistics on that page, you will note, however, that there was such an increase in net income only if you exclude net change in inventories. If you include net change in inventories, the statistics show that net farm income in 1956 was $11.6 billion, down $100 million from 1955.

Inventories are the livestock, the grain, and the other farm commodities which the farmer has on hand. They are like the goods on the storekeeper's shelves. A storekeeper who juggles his books to show that he is making a profit only by ignoring a decrease in his inventory, will not be in business long.

The net change in inventories cannot be ignored in figuring net farm income either. It means that our farmers had to sell off their livestock and their stored grain at prices which were below previous levels in order to get enough money to pay their bills.

By this statistical method, our farmers have 1 year of Benson prosperity left. They can sell their farms to pay their bills next year and still show a profit.

This claim that farm income actually rose last year is phony.

Corporate Responsibility

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 25, 1957

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given by me before the Management Club of the Whirlpool-Seeger Corp., in St. Joseph, Mich., February 22, 1957:

CORPORATE RESPONSIBILITY

I welcome this opportunity to discuss with you some of the problems that today confront the management of our leading corporations. These problems involve social and political responsibilities, both domestic and international. They flow from the extensive economic powers now possessed by the managers of the corporations that form the foundation for our modern American society and its current prosperity.

As managers of the Whirlpool-Seeger Corp., your operations clearly involve these responsibilities. Since the merger in September 1955 of the Whirlpool Corp. and the Seeger Refrigeration Co., your organization has risen to rank 127th among all the industrial corporations of the United States. Your importance to the country is indicated by the cold statistics of the economists. With assets of $146,217,000, in 1955 you had net profits of $14,130,000 on sales that amounted to $280,363,000.

Already Whirlpool-Seeger produces by far the greatest volume of laundry appliances of anyone in the field. As your engineering and research department accomplish their projected advances in automation, there is no doubt that your organization will challenge the leaders in every segment of the home appliance industry.

The magnitude of your activities is impressive. Whirlpool-Seeger directly provides jobs for 16,000 people in 7 communities in the States of Minnesota, Ohio, Michigan, and Indiana, and in its regional sales offices across the Nation. In addition, your organization provides the basis for the substantial operations and investment of 81 independent distributors and their employees throughout the United States.

In light of these considerations as managers of this business, I am sure you realize your responsibility not to your stockholders alone, but responsibility, as well, as trustees for the entire community affected by its activities.

Since World War II there has been extensive debate over the dangers posed to the American system of free enterprise by the industrial phenomenon commonly designated "the increasing concentration of economic power." This condition has aroused my personal interest because of my conviction that the principles of private enterprise embodied in our antitrust legislation in the main have released the essential energies underlying our industrial and technological development. The principles of private enterprise have kept us free.

As a consequence, as chairman of the House Judiciary Committee's Antitrust Subcommittee, I have conducted a number of inquiries to ascertain the degree of concentration in American business and its relationship to our political and social institutions. I think it would be well to summarize some of the outstanding observations that have been made about the corporate structure and the nature of competition that typify our present economy.

The extent of economic concentration of power may be very briefly stated. Prof. M. A. Adelman, of the Massachusetts Institute of Technology, in his 1951 study indicated that 135 corporations own 45 percent of the industrial assets of the United States. This is nearly one-fourth of the manufacturing volume of the entire world.

Although there is dispute about the rate of increase in concentration, everyone agrees that the top corporations control a growing percentage of American business life. This is indicated by the fact that at the end of 1952, corporations with more than $100 million in assets had 52 percent of all assets of manufacturing corporations. By the middle of 1955, 57 percent of these assets were held by corporations of this size.

The extent of industrial concentration is perhaps most graphically expressed by the following: At the present time 3 companies make more than 90 percent of all our silk; 3 companies make over 95 percent of our tin cans and tinware; 3 companies make 90 percent of our linoleum. Three corporate organizations dominate the production of cigarettes, aluminum, whisky, and automobiles.

My good friend Adolf A. Berle, professor at Columbia University, in his book The 20th Century Capitalist Revolution (published in 1954), directed attention to the outstanding characteristic of the modern American corporate economy. He stated, "A pattern has emerged, that we may christen the concentrate," a pattern that covers roughly 70 percent of all American business. It is the situation where a few large corporations dominate the trade in their industry.

Professor Berle described this characteristic to our Antitrust Subcommittee as follows: "In industry you find a standard pattern of not less than 2, nor more than 5, large corporations which have 50 percent or more of the volume of that industry between them." The remainder is divided among small firms that must necessarily live under conditions established by the "big two," the "big three," or the "big five." This pattern, Mr. Berle said, "* * * is typical of more than half of American industry, and the most important half."

Moreover, the economic power of the large companies in the concentrate is not fully revealed by a study limited to consideration of the assets they actually own. The ability of the large corporation to direct economic activity and to make decisions transcends the area of the plants and facilities it owns.

In the automobile industry, for example, the power of the big three manufacturers extends to their franchise dealers, who themselves have investments greater than $5 billion and employ more than 600,000 people. Although nominally "independent," their policies, operations, and for all practical purposes their prices, are determined by their supplying manufacturer. The same extension of the concentrate's power to peripheral relationships exists in other industries that distribute through dealers, as, for instance gasoline retailing and farm implement distribution.

It is immediately apparent that one result of corporate growth during the last 60 years, is that American private free enterprise no longer resembles the classic system where numerous sellers competed on equal terms in a free market composed of equally numerous buyers. The picture presented by our economic system now is one where the American community depends upon the operations of a relatively few very large corporations. It is a picture that shows the basic industries that support our business life have become concentrated in the hands of an extremely small number of powerful units.

Significant changes in the nature of competition have accompanied the development of the concentrate structure of American industry. First, competition no longer takes the form of vigorous price rivalry. It has been superseded by acceptance of a situation in which pricing is no longer the primary factor.

In industries where the "concentrate" prevails, there appears to be a "follow the leader" policy in pricing. Each member of the industry, both the large and small concerns, individually elects to follow the policy of not changing prices until the "leader" changes his prices. Price movements of the leader are followed almost automatically.

This condition is difficult to correct under the antitrust laws. If the Government can establish the existence of an actual agreement or tacit agreement among the companies in the industry to adhere to or to follow the prices of the market leader, then the companies can be charged with a conspiracy or combination to restrain trade. In most instances, however, evidence is not to be found of an actual agreement and the courts have been reluctant to infer the existence of conspiracy in the absence of some direct evidence of an agreement.

This is one of the problems of concentration that has plagued antitrust enforcement officials since the war. In all probability the absence of price competition often results from recognition of the mutual hazards of a price war among the members rather than from an "agreement" to adhere to the pricing system that exists.

A result of the development of the "concentrate" has been to reduce competition to a struggle for power, to balance supply against demand rather than to secure addi-

tional customers by price competition. This type of competition requires industry to create elaborate planning organizations that can predict the future market conditions, needed to permit a planned production that can be disposed of at anticipated prices. And I stress the word "anticipated."

In many industries the drive for stability in supply has resulted in direct Government participation in basic production decisions. In the oil industry, for example, supply is limited by State regulatory bodies on the basis of demand estimates prepared in the Federal Bureau of Mines from information obtained from importing and purchasing oil companies. In the sugar industry, the same result is accomplished by the Secretary of Agriculture limiting sugar imports to his estimate of the future market. Planning for stability in supply by means of Government instrumentalities now is accomplished in vast areas of the American economy. To name but a few of these areas, in addition to oil and sugar, there are: banks and banking, railroads and trucks, electric light and power, radio and television, shipping, meat products, aviation transport, and aircraft production.

Professor Berle noted this phenomenon of planned supply with the following comment:

"In greater or less degree, the practice of national industrial planning is now familiar throughout great areas of the 20th century capitalist system. Participation in it is frequently a function, and in any case an occupational hazard, of the management of large corporations."

Planning any substantial part of the economy has significant implications. In the first place, planning does not reduce power, it increases it. More important, in the hands of the people who do the planning rests the future course of our economy. It is they, as far as is humanly possible, who will determine the level of prosperity, the nature of social organization, and the artistic and moral values that society shall reward.

Concurrently with the increase in concentration there has been a removal of many of the outside checks upon the routine business decisions made by corporate officers. No longer does management have to submit its past record and its projected operations to the judgment of the market place in order to secure needed capital. Major corporations in most instances now do not seek capital. They form it themselves.

According to a 1953 study made by the economists of the National City Bank, an aggregate of $150 billions was spent by all businesses in the United States for capital expenditures to enlarge corporate plant and equipment in the period 1946–53. Sixty-four percent came from internal sources, i. e., retained earnings and reserves set aside for depreciation, depletion, and amortization.

The remaining 36 percent was divided among the following groups: 18 percent was raised by current borrowing chiefly, bank credit; 12 percent was raised by issue of bonds and notes, half of which was privately placed rather than disposed of through the capital market and, only 6 percent of the total $150 billion was raised by issue of stock.

The private investor, who determined the use to be made of capital, gave capitalism its name. His function in large measure has vanished as the determinative force in corporate decisions. Direction formerly supplied by the sum of the investor's decisions in the capital markets have been replaced by corporate boards of directors. These, in practice have tended to become small self-perpetuating oligarchies. The only substantial control that limits and guides their economic and social action is their philosophy and their assessment of future public reaction. Perhaps, that is why the public relations divisions loom so large today in the corporation setup.

In broad outline, the features we have been discussing are the outstanding characteristics of our present American economy. It is clear that the powers now possessed by the "concentrate" corporations impose impressive responsibilities to the public.

Participation in industrial planning, by necessity nationwide and frequently international in scope, involve decisions much broader in range than the specialized functions of running their businesses. Their obligations involve assurances that conditions will prevail for employment of vast numbers of people. The goods and services they decide to provide, the manner in which they are marketed, the employment conditions they create, and the plants they build, all exert widespread influences on the framework of community life. Their decisions with regard to expenditures in pure research, and their support to educational institutions lead and shape the content of the future. In apportioning capital expenditures, they direct the continued growth of one section of the country as against another. Decisions to move plant and equipment may make ghost towns of the communities from which they withdraw.

Decisions of their personnel offices in security matters determine the ability of the individual worker to earn his livelihood. Unwisely applied they may deprive him unjustly of his rightful place in the community.

In their international operations, large corporations have developed relationships to the other countries that rise to the stature of treaties between governments. In its operations, the international corporation directly affects the amount of foreign exchange brought into or taken away from the foreign country, and in small countries this materially affects the position of its own currency. Expansion of its activities in a small country may affect materially the level of employment and the level of wages. The taxes it pays frequently are a major item in the country's revenue.

In a word, the corporation cannot disassociate its activities from the policies of the countries in which it trades. Moreover, decisions in foreign operations of necessity must be accommodated to the overriding policies of the United States Government in that area.

The concentration of economic power into a relatively few corporations brings continual pressure for increased Government action in the industry. When corporate management has failed to act responsibly in its relationships to the community, eventually an aroused public opinion forces the Government to step in.

A notable example of this Government-business relationship is found in the legislation enacted by Congress last year to readjust the bargaining position of franchise automobile dealers to their automobile manufacturers. This legislation was a direct result of the concentration of economic power in the automobile manufacturing industry and the widespread abuse by manufacturers of their superior position with respect to their dealers.

Implicit in this legislation is the conclusion that in the automobile industry concentration of economic power had resulted in conditions where traditional concepts of contract law no longer were adequate. The bill also was a recognition that the antitrust laws were not adequate to cope with concentration in this instance.

The "auto dealers day in court bill," in essense, affords a dealer an opportunity to secure a judicial determination, irrespective of the terms of his contract, as to whether the manufacturer failed to act in good faith in performing the provisions of his franchise or in canceling, terminating, or not renewing his franchise. In addition to the provisions of any contract, in its definition of "good faith," the bill imposed a duty on each party to act in a fair and equitable manner toward each other, so as to guarantee freedom from coercion, intimidation, or threats of coercion or intimidation.

This type of legislation constitutes a new departure in adjusting corporate powers. It necessarily is an experiment and may not apply to other corporate areas. Its significance is the demonstration that an aroused public will require the Government to step in and adjust situations where corporate powers are not exercised in a responsible manner.

Possibly, the greatest danger that accompanies the concentration of corporate power in the United States is to our political institutions. If the power is used unwisely and fails to keep the public substantially satisfied, it unavoidably will lead to some form of State socialism with excessive Governmental control over the lives of individuals. Such extensive Government supervision and regulation is not in the heritage of the American people, and I am convinced is not the desire of the American people.

In this connection, it is significant that, because of the difficulties surrounding attempts to correct abuses by means of antitrust laws, some advocates advance alternative proposals for dealing with the problem of concentration. These alternative methods invariably call for an increase in the Federal Government's supervision and regulation over economic behavior.

Prof. Louis B. Schwartz, professor of law, University of Pennsylvania, for example, recommended to the Antitrust Subcommittee the creation of a "free enterprise commission" to take over the anti-monopoly functions of the Federal Trade Commission. Such a commission would have the power by regulation to define and prohibit anti-competitive practices and to prohibit integration and merger unless specifically approved. The commission would also have the power to compel reorganization of large enterprises in order to reestablish competition, as well as other broad regulatory powers over the economy.

Other witnesses before the Antitrust Subcommittee have recommended enactment of legislation comparable to the Public Utilities Holding Company Act. Legislation of this type would empower agencies of the Government to compel, in appropriate instances, the dissolution of the giants in the economy and the creation of smaller economic units.

Whether concentration has progressed to the degree that requires such far-reaching proposals is at this time highly debatable. I would much prefer that the solution to the problem of concentration be reached within the basic framework of our existing antitrust legislation. I am reluctant to have imposed additional Government supervisory over the economy unless the growth of large scale firms and the misuse of their powers preclude any other solution for adequate protection to the public. Unless corporate management, however, discharges its responsibilities so that the public continues to be substantially satisfied, there is real danger that existing corporate concentration could result in a far greater degree of Government control over business than it has today.

The petroleum industry illustrates many of the characteristics of the modern economy that we have been discussing. It also provides numerous examples of abuse by corporate leaders of their responsibilities to the public.

Structurally, the industry is composed of 20 fully integrated large concerns under the general hegemony of 5 companies that operate both domestically and internationally. The big five in the oil industry, Standard Oil Company (New Jersey), Socony Mobil Oil Co., Inc., Gulf Oil Corp., the Texas Co., and Standard Oil Company of California, in terms of assets rank No. 1, 6, 8, 9, and 11,

respectively, among American industrial organizations.

The Government has granted many benefits to the petroleum industry. I have already discussed the Government's activities in stabilizing supply with the industry's estimate of the future demand for their products. In addition, the industry receives unique favors under the income-tax laws of the United States. These special tax benefits, granted to encourage explorations and development amount to a virtual Government subsidy to the industry. I refer to the 27½ percent depletion allowance in the production of oil and its corollary, the privilege of writing off completely all drilling and development costs.

These benefits amount to a double deduction with respect to the same capital investment and, in addition, the depletion allowance goes on indefinitely. It does not end when 100 percent is reached as in the case of depreciation.

In companies that are engaged only in the production of oil, these benefits are substantial. The January 1946 issue of Fortune magazine described Amerada Petroleum Co.'s tax benefits as follows:

"Amerada's tax situation is a businessman's dream. The corporation quite literally does not have to pay any Federal income tax if it does not want to. This is due to the highly reasonable provisions of the internal-revenue law designed for producers of crude oil. Amerada pays so little in Federal income taxes that it does not even segregate the tax item in its annual reports. In wartime, though Amerada's profits soared, it made no provision for excess-profits taxes, and from 1943 to 1944 its normal Federal income tax actually declined. In 1944, on a gross of $26 million, a gross profit of $17 million and a net after all charges of $5 million, Amerada's allowance for its Federal income tax was only $200,000."

Even among the integrated companies the depletion allowance and the drilling write-off are significant in their operations. Humble Oil & Refining Co., a company owned by Standard Oil Company of New Jersey is integrated to a certain extent, and it distributes about one-sixth of the products of Texas. Its own operations make it a big crude-oil producer. According to the record before the antitrust subcommittee, in 1952, Humble Oil & Refining Co. made net income after taxes and expenses of $145,292,144, and paid Federal income taxes of $30,500,000. In that year it took a depletion allowance of $88,488,000. For tax purposes it wrote off another $63,044,110, in intangible drilling costs.

In addition to production controls and tax benefits, the Government virtually permits the petroleum industry in times of emergency to conduct its own affairs. This is accomplished by the industry staffing the Government agencies responsible for its performance. The Government agency then works through a myriad of committees composed of oil company officials. These committees provide most of the coordination and undertake the joint activities desired by the Government.

At the height of World War II in 1943, the Petroleum Administration for War in the Department of the Interior was staffed in its important positions by oil company executives serving on a without-compensation basis. The Petroleum Administration for War discharged its responsibilities through 155 industry committees with 1,635 members, of whom 1,136 were officials and employees of the major oil companies.

The same type of committee activity was invoked during the Korean emergency; it was used to resolve the crisis in the industry that occurred when Iran nationalized the concession of the Anglo-Iranian Oil Co.; and it is currently being used as a device to resolve the crisis posed by Egyptian seizure of the Suez Canal. It is significant in all these joint activities the industry asks for, and obtains, immunity from the antitrust laws.

Despite these special favors granted to the petroleum industry, the record of the industry discloses notable abuses of corporate power. A series of actions that started with corruption of Government officials in the famed Teapot Dome scandal and extend to the industry's 1956 effort to influence enactment of natural gas legislation had made "oil" synonymous with corporate irresponsibility in both political and public opinion.

During World War II, the relationship of our leading oil firm, Standard Oil Co. (New Jersey) with the I. G. Farben cartel stimulated severe criticism of the industry. Hearings conducted in the Senate disclosed that this company's relationship with I. G. Farben over a 13-year period had stifled synthetic rubber production in America and had put control over that vital defense product in the hands of the German Government. In addition, Thurman Arnold, then Assistant Attorney General in charge of the Antitrust Division, testified that as late as February and March 1941, Jersey Standard had sold gasoline and enabled Axis airlines operating out of South America to defeat the British blockade. Indignation over these disclosures caused the then Senator Harry S. Truman to remark "I think this approaches treason."[1]

An aroused public after these hearings required Jersey Standard to relieve the principal officer involved from his duties in the company.

Another example of oil industry officials' failure to act responsibly is found in the remarks of Mr. P. C. Spencer, president of the Sinclair Oil Corp., at a meeting of the National Petroleum Council on September 29, 1953. On that occasion Arthur S. Flemming, Director of the Office of Defense Mobilization, had requested the Secretary of Interior, Douglas McKay, to explore with the oil industry construction of standby pipeline facilities that would be required in the event of an emergency. In his request, Mr. Flemming noted "* * * it is apparent that timely provisions of this additional capacity could not be achieved, if construction were to be deferred until after the emergency arose."[2]

Mr. Flemming's request was presented to the National Petroleum Council, whereupon Mr. Spencer opposed the construction of standby pipeline facilities. He stated:

"Surpluses not properly handled or controlled are an anathema, because they have a way of destroying price structures, they have a way of breaking down progress, and they can destroy an industry. It certainly would be a tragedy, gentlemen, to attempt to protect our national security by building up standby facilities which in the end make the industry so feeble it could not do the job in any event.

"I am talking particularly here about standby pipeline facilities. It applies with equal force to standby tanker facilities, standby refining facilities, standby storage, and, if you please, standby production. It applies all through the line."[3]

As to his solution for the maintenance of a proper mobilization base, Mr. Spencer said:

"I am a rank amateur as a strategist in war or logistics, but it seems to me, perhaps somebody told me, that the greatest cushion in the world for petroleum reserves is in the elasticity of and the flexibility of civilian demand. Take it away from them, if we are going to have a war. * * * We have tried to make war too comfortable and too convenient for civilians. * * * War should be tough. We should cut back the civilian demand. I think that is the greatest reserve cushion we have."[4]

It is submitted that these statements hardly reflect the requisite degree of corporate responsibility for the problems of the American public.

Currently, the Senate is again investigating the petroleum industry in connection with the actions the industry has taken to resolve the crisis presented by closure of the Suez Canal. In this instance, it appears that the oil industry has again acted with a view toward corporate profits rather than the welfare of the American public. At a time when stocks of gasoline were at all-time highs, the industry used the Suez crisis as an excuse to impose additional price increases. As of February 8, 1957, the industry had nearly 200 million barrels of gasoline in stocks. This was an increase of nearly 4 million barrels over the preceding week and 12 million barrels over the stocks in storage a year ago. It now develops that the crisis presented by the Suez shutdown was not as extensive as originally feared. In fact, there is a widespread belief that the public relations campaign surrounding the seriousness of the crisis were based in large part upon recommendations made by the major oil companies in order to justify an increase in crude petroleum prices.

In conclusion, I think you will all agree that the problems presented by the existing concentration in American industry are most intricate.

Let no one doubt that benefits from our existing corporate structure are substantial. I believe it is fair to say that the United States as a community has profited mightily in the development of our current corporate economic structure. The system of large scale distribution and mass production made possible by these large institutions can fairly claim the credit for changing the face of our country for the better. As a result, poverty, in the sense it is understood elsewhere in the world, in America has been reduced to minimal proportions.

The most dramatic social revolution in history has occurred through natural growth and without the bitter divisions that have darkened the political life of other nations. It gave the lie to Karl Marx.

All to the good, but the good must not be diminished. Unless the powers that have been concentrated in corporate management are exercised prudently and with vision, it is apparent that this concentration will force the Government to take action and direct the complex itself, and freedom will be the price we pay.

I am convinced that it is essential to maintain in full vigor enforcement of the antitrust laws to cope with these problems even though in some respects results have not been satisfactory. Change must be made slowly. The problem presented by existing concentrates are of such gravity that precipitous action by the Government on any particular phase would be unwise. Tinkering with the economic process without full comprehension of the results likely to ensue, could create more problems than are solved.

We must hope the determination of the type of economic life of and the nature of political institutions which are to be enjoyed by the American people in the future, rests in the hands of those who understand freedom best.

Frances Knight—From Editor's Secretary to United States Passport Director

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. CANFIELD. Mr. Speaker, writing for the February 1957 issue of Charm magazine, Margaret B. Parkinson tells the most interesting story of Frances Knight, United States Passport Director.

Speaking as one who has had to do business with our country's Passport Office for 33 years, I can bear testimony bearing on the remarkable performance of the lady director. But this magazine's article gives us some background fortifying the editor's forecast that success in Frances Knight's undertakings is certain.

Charm's article follows:

FRANCES KNIGHT—FROM EDITOR'S SECRETARY TO UNITED STATES PASSPORT DIRECTOR

(By Margaret B. Parkinson)

If you look like your passport picture, somebody said once, you really need the vacation. It wasn't a bad gag, but it probably won't be good for much longer. What's likely to change the picture is one woman's notion that traveling Americans don't have to present themselves abroad as grim, unsmiling thugs.

To voice her belief that passports don't have to make us look like such a sorry lot, she wrote a magazine article not long ago called Let's Put Our Best Face Forward—and was thereupon deluged with letters from photographers who wailed, "But we thought passport pictures had to be unsmiling."

The look is only a minor part of a major retouching job that's been going on in agencies of the United States Passport Office since Frances Knight moved in as Director in 1955.

It's one of the few Government agencies that meet the public on a day-to-day, face-to-face basis, and Miss Knight is resolved to make the meetings agreeable. Public service is a phrase she is busy retranslating to mean that getting a passport needn't be a tedious chore costing endless hours of standing in line in dank rooms about as full of decorative interest as the average railroad station.

THE NEW LOOK

Miss Knight is revamping passport-issuing offices to include just about every comfort short of softly piped-in Kostelanetz. Application time is being cut in half with readily available blanks, information counters, and boldly displayed posters that tell you what you need without your having to queue up to find out. And passports themselves have been simplified, reduced in bulk, and put into plain, delegalized English.

Innovator Knight's conception of public service extends to the idea of cooperation with the travel industry, too. Travel agencies and carriers are on the grateful receiving end, these days, of the kind of information that helps them serve the public. Statistics never before gathered are being made available to them—who's doing the most traveling, where they're going, why they're going, how and when they can be expected to go.

Frances Knight is a bug about statistics. "You can prove almost anything with them," she says. But adds, seriously, "You can't chart a working future without knowing the past." The future of United States citizens, as charted by their recent past, looks anything but stay-at-home. The number of passports issued and renewals granted in 1956 (570,711) was up 82 percent over 1950. By 1960, with the jet age really here, the Passport Office expects an increase over 1956 of 56 percent.

PASSPORT TO SUCCESS

To let you draw an earthbound breath, we pause to say that Miss Knight's own statistics add up to a remarkable documentary of personal success. An expanded passport version might read something like this:

Age: 50.

Appearance: Nice. Tall. Blue eyes, blondish.

Citizenship: Born in United States of a British father, Czech mother. Father's business took him around world, wife and daughter in tow.

Education: Early schooling in France, Austria, Czechoslovakia, Monaco, New York. Later, Hunter College, New York; New York University School of Journalism. Still later, night courses at Columbia University and N. Y. U.; business school training.

Travel experience: All 48 States, Hawaii, 34 foreign countries.

Occupation: Top woman in the United States State Department.

Job journey: Starting point in Government—the very bottom. She took a job as a clerk, one grade above custodial service, because she wanted to be a writer.

To untangle that tie-up, we go back to Frances Knight's very beginnings as a wage earner. In college, she had decided she wanted to be a journalist, and to get a foot in the door of publishing, she took a job in New York as secretary to the editor of a church magazine. That was in 1925. She enrolled for a course in magazine makeup at New York University's night school, convinced her boss that she had learned enough to be tried out as a helping hand in the production department. By the time she left the magazine in 1934 she was handling that entire end of it.

Miss Knight left because the magazine itself moved to Boston, and because she wanted to take a stab at writing. The most exciting thing in the country to report on, she thought, was the New Deal, and Washington was where she would get the inside dope for a series of articles. She went there and didn't get a thing but the brushoff—Government executives were too busy to sit down and give her the time of day, much less any inside dope.

KNOCKING ON DOORS

All right, she'd get inside herself, do her reporting from within. She went around to 11 different Government agencies, filled her finger-aching way through endless application forms.

Then she did not sit back and await developments. She began a telephone barrage of the agencies, politely inquiring, Is there any job today, please? Just as politely, she filled in some time by paying courtesy calls on Senators and Congressmen from New York. (She's still a believer in calls: Within 3 months of taking over as Passport Director, she had dropped in on all 98 Senators and the chairman of every House committee, just to find out if there was anything her office could do for them.)

In answer to her prayers and phone calls, she got in finally as a clerk with the National Recovery Administration. Mostly she filed, but there were occasional typing jobs. Typing up a budget presentation one day, she spotted an error in figuring of $7 million. Her impressed supervisor rewarded her with slightly more interesting typing—press releases and speeches—and it wasn't long before she was making editorial corrections as she typed. Her reward this time was to be made assistant to the special assistant in charge of industrial information—working with industrial trade papers and magazines. It kept her so busy she never got around to any of her proposed free-lance articles. What she did get around to was realizing that she liked Government work so much she wanted to stay in it.

In 1936 the NRA folded, and Miss Knight transferred to the Works Progress Administration, where she became deputy director of its Public Information Division. "I heard there was an opening, so I applied for it," she explains. "Too many people think Government jobs are just a matter of pull. I never got anywhere by pull, because I never had any to use."

She stayed with the WPA for 3 years, was then assigned (1940) to the just-born National Defense Advisory Commission. The Commission served to advise the President on those areas of national life (transportation, labor, etc.) which would assume primary importance in time of war.

Miss Knight was special assistant to the Commissioner in charge of consumer affairs. A large part of the job was one of public education, and she dealt a lot with housewives, women's organizations, women's magazines. (Remember the beginning the guns-and-butter days, when we first started saving grease and tin cans?)

When war actually came, the NDAC was absorbed by the Office of Emergency Management. Because she had had experience with the woman's angle, Miss Knight was switched to the Office of Civilian Defense. "They thought only women needed to be taught what to do when the sirens sounded," she says dryly, "but I wound up talking to as many Rotarians as I did Soroptimists."

It was a much bigger thing, of course, than just lecturing. It was essentially an idea job: thinking up ways to put a message across, knowing where to go, whom to contact. (Examples: getting the American Express Co. to put defense posters on its trucks; persuading a cereal outfit to print air-raid instructions on the labels of its products.)

With the war over, she took a break from Government service. A friend of hers was president of an organization in Washington called the American Retail Federation—a countrywide association of department stores. He thought it was time the organization strengthened its liaison with the Government—after all, stores were being tremendously affected by such agencies as OPA. He held out a big salary offer, snared Miss Knight (who felt she could use both change and folding money) as his Government relations expert.

She stayed with the association 2 years, "but I hadn't really shrugged off my case of Potomac fever." In 1947 JOHN TABER—one of the New York Congressmen she had paid a courtesy call on 12 years before—came and asked her to be his special assistant. He was then chairman of the House Appropriations Committee and needed someone to do a research and documentation job for him. "Poring over the CONGRESSIONAL RECORD every day," she says, "is what got me into my first pair of reading glasses."

With the congressional change of 1948, TABER lost his committee chairmanship, and his research assistant's next job was with the United States Information Agency as a script reviewer for the Voice of America. It was not an especially happy association. Miss Knight had traveled abroad enough, both on business and pleasure, to feel that the VOA programs weren't appropriate for the people of the Iron Curtain countries she had been in. She stuck with the job until 1952, though, when she heard from Scott McLeod.

He had just been appointed Administrator of the new Bureau of Security and Consular Affairs, and since he was familiar primarily with the congressional world (Miss Knight had known him when he was Senator BRIDGES' assistant), there were lots of staffing and administrative problems on which he wanted help. Miss Knight was transferred to lend it—as acting Deputy Administrator.

Under the reorganization setup, the Passport Office had become a part of McLeod's bureau. When Passport Director Ruth Shipley retired in May 1955, she recommended Frances Knight to fill her place. So did no less than 30 Senators and Congressmen.

Organizationally, it might look as though it were a step down for ex-Deputy Administrator Knight. But in terms of prestige, the challenge of needed revamping, and the satisfactions of running one's own shop, it was a step she was glad to take. And the step looks as though it's turned into a stride of welcome progress for travel-minded United States citizens.

To round off her documentary, there are a couple more passportish statistics we ought to thrown in:

Marital status: Wed in 1935 to Wayne Parrish, Washington publisher of aviation trade journals. (Kept her maiden name on the job.) A traveling man himself, Mr. Parrish has logged 900,000 miles in 70 countries.

Clubs and associations: None. (She's an unexplained, unapologetic nonjoiner.)

Destination of traveler: Success in current job. (Editor's forecast: Success certain.)

Exempt Social Security Benefits From Tax

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1957

Mr. DINGELL. Mr. Speaker, I have introduced a bill today which would exempt the benefits received by social security pensioners from all taxation.

The law at present is that such benefits are exempt from execution. This results in a rather confused tax status in that Federal, State, and local governments cannot reach the proceeds of social security payments to pensioners, but nevertheless can place social security pensioners in jail for nonpayment of taxes on these benefits. Because of this muddled status few governments attempt to tax social security benefits. Of course, with the very low level of income that social security pensioners receive the amount of tax which could be recouped by any tax on social security benefits is extremely small. In fact, so small as to be administratively hardly worth the trouble.

At the present these benefits are exempt from Federal taxation through an interpretative ruling. Since there is no specific provision in the Internal Revenue Code exempting social security benefits from taxation, it is entirely possible that a different ruling could be made at some future date.

This matter has been brought to my attention by a recent attempt by the government of the District of Columbia to tax the payments received by social security pensioners in the District of Columbia. The various inequities in the law as well as the fact that social security payments are presently so small as to verge on pauperism make me feel that introduction of such legislation as this and its passage at a very early date is necessary, not only to benefit social security pensioners but to help clarify an unclear state of law on this subject.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

United States Foreign Policy Today and Tomorrow

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 26, 1957

Mr. MANSFIELD. Mr. President, on February 11 the distinguished minority leader, the senior Senator from California [Mr. KNOWLAND] inaugurated the first of a series of lectures at Georgetown University. The lectures are a part of the Father Edmund A. Walsh lecture series. On that occasion the distinguished minority leader made a speech, which I believe to be entitled not only to the consideration of this body, but also to the consideration of the House of Representatives and the country as a whole. As usual, he was constructive and fair-minded, and he laid before the American people a proposition for their consideration.

Mr. President, on last evening I had the opportunity and the honor of following the distinguished senior Senator from California, at which time I spoke on the subject "United States Foreign Policy Today and Tomorrow." I ask unanimous consent that the speech I made last evening at Georgetown University be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

UNITED STATES FOREIGN POLICY TODAY AND TOMORROW

(Address by Senator MIKE MANSFIELD, Democrat, Montana, Father Edmund A. Walsh lecture series, Georgetown University, February 25, 1957)

More than 35 years ago the late Father Edmund A. Walsh saw the fulfillment of a dream for which he had labored with steadfastness of purpose and great energy. It was the foundation at Georgetown University of the school of Foreign Service which now, fittingly, bears his name.

The circumstances of its birth are familiar to you all. A terrible war had ended. Father Walsh recognized the demands which coming events would make upon the intellectual resources of the Nation. He properly estimated the importance of having an informed citizenry and a trained and dedicated personnel to discharge the responsibilities of this country in the cause of world peace.

Yet Father Walsh could not have anticipated the extent to which the life of our people was to be dominated by the subject of foreign policy, or the scope of its development. The world is quite a different place today from what is appeared 35 years ago. When I was a student, our problems, our interests were predominantly local or national. We were concerned almost exclusively with domestic matters. The United States was an immense country, so immense that even what happened on the west coast touched the east but lightly. Our relations with foreign governments were for the very few who were qualified to understand the meaning of incidents around the globe.

Today one has only to look at the curriculum of the average university to appreciate the extent of our preoccupation with foreign affairs. Main Street knows, and insists on knowing, why Washington proceeds in one way or another; for Main Street is directly affected by decisions on countless matters to which, a few decades ago, it paid little or no attention. Areas of the world which were merely places in a book are common topics of conversation, because they are vital to our national interest.

Foreign policy has become the business of everyone. And it is just about the biggest business of our Government right now. National defense, commerce, and agriculture are all involved in the determination of our policy toward other nations. Tangible proof of this regularly comes across my desk.

A few days ago I received a routine distribution of Department of State press releases. One of these dealt with an agreement for the sale of United States surplus agricultural commodities to Korea under Public Law 480. The purpose of this agreement was to assist in stabilizing the Korean grain market and the entire Korean price structure. Defense equipment will be procured by the Korean currency generated in the transaction.

Another press release informed me that the United States and Mexico had reached agreement on the use of standard band radio broadcasting channels. Another set forth the latest facts concerning the failure by the Chinese Communists to release imprisoned Americans, as they had undertaken to do. Still another contained word that the Italian Government had notified the United States of its intention to limit the export of velveteens to this country during 1957 to 1.37 million square yards.

Now, this was only 1 day's announcements. But observe the broad range of subjects involving issues of foreign policy, which bear directly on activities of our people within the United States. Decisions of our Government in the field of foreign relations reach down into every corner and crossroad of the country, affecting the farmer, the blouse manufacturer, the dairy producer, the watchmaker, the wheat rancher, the radio broadcaster. This trend will grow, as the world is more closely knit together, as technology advances and as the major problems of each nation are identified with the problems of every other nation. In the past 10 years we have concluded almost 2,000 agreements with other governments on matters of mutual concern.

If the United States is to be equipped adequately to meet these problems, our reservoir of human talent will have to be enlarged. There will be more and more demands for trained personnel in overseas posts. At the present time there are approximately 100,000 Americans working abroad. If current trends continue, it is not unlikely that in another 25 years that figure will reach 200,000.

Yet before the Second World War the average college graduate gave hardly a thought to utilizing his special training in foreign countries. The opportunities inviting him abroad today are so many and so attractive, even apart from the career Foreign Service, that they should not be overlooked in the planning of a graduate's future. As the intercourse of nations widen, the burden of universities to feed this reservoir will grow heavier. We are already feeling the pinch, in a shortage of those skills we should like to make available to other governments—particularly engineering—under the point 4 program.

The development of a competent corps of overseas personnel, and particularly of the career service, is a most vital matter for the future of this Nation.

No policy, no matter how brilliantly conceived, can be effective unless it is executed with skill. Even more important the actual policy which is adopted will, in large measure, be determined by the resourcefulness, ability, and quality of the men and women who represent the United States Government in the field. This is what is meant when it is sometimes said that foreign policy is made by the cables to the Department of State. To a considerable degree this is true. Yet, as impelling and compulsive as those cables may be, it is what the Secretary of State does with them which, in final analysis will measure the success or failure of a policy. The freedom of action they permit may often be very restricted. Yet within those narrow limits, a decision must be made, and made correctly. Peace and war may hinge upon it. Certainly the recent events of the Middle East have evidence how true this is.

To an outsider, to one not in a position to appraise all the facts, the policy indicated in a particular situation may seem to offer no difficulty. The question may appear clearcut, black and white, an open and shut case.

But things are not always what they seem—not even in foreign relations. We cannot always do what we might like to do. Let me cite just one example: During the last session Congress received mounting protests from eastern cotton blouse and shirt manufacturers against ruinous competition from Japanese exporters. The Japanese were able to market their finished product here for about one-fourth of what identical cotton goods could be sold in this country. Some American plants had already closed down in consequence. And so, pressures grew for an increase in tariff rates against the Japanese blouses. A simple and obvious solution—or so it seemed.

But when the Committee on Foreign Relations held hearings on a bill introduced for that purpose, we found it was not so simple or obvious. Japan was manufacturing shirts from cotton imported from the United States. In fact, Japan has been the largest single export market for American cottongrowers. To deny the Japanese the American market would have inflicted serious injury upon American agriculture. A particular segment of industry would have been protected at the expense of a much larger branch of our agriculture. The Carolina shirtmakers—and I might add, a great many newspapers—could see only a local consequence, not the overriding national interest on which the policy decision had to be based. Their remedy might well have been worse than the disease. Happily, Japan by a self-imposed quota on exports to this country has partially relieved the tension.

I have oversimplified this illustration for convenience. But there was a more subtle point involved. We were not only dealing with a tariff and trade problem. Indirectly, had the bill passed we would have been tinkering with the national security. It is, of

course, to our interest that Japan should find an adequate outlet for her exports, if it is to maintain a viable economy. Unless Japan can do business with the West and the so-called neutralist powers, it may be forced to draw closer to the Communist trade orbit. Such may well prove to be the ultimate outcome, in any event; and I do not wish to imply that American business should be sacrificed to the trade requirements of another Government. I merely mention this as one of the many veiled elements in what, on the surface, appeared to be a relatively uncomplicated problem.

I do not believe that ever before in our history, at least in peacetime, have we been so preoccupied with the security of the United States, as we have been during the past 10 years. The quest for national security preempts almost every other issue in the life of our country; directly or indirectly it cuts across both domestic and foreign policies. It dominates the budget; it is a brake upon atomic progress for peaceful purposes; it is the principal cause for the growth in the national debt, the drop in the value of our dollar, and the burden of taxation which you and I must carry. And, most regrettably, there is little on the visible horizon to encourage the hope that the search for security will not continue to be the principal concern of American foreign policy for the next decade. The general elements in that policy are, as you well know, support for the United Nations, the system of regional defense pacts capped by NATO and the Rio Treaty, and our foreign-aid program. All these have the same predominant purpose—security.

We are all aware that the broad lines of our foreign policy have been conditioned for the past 10 years by the designs of the Soviet Government. And as long as that Government seeks control over the rest of the world, it will not be possible for the people of the United States to cultivate with the people of Russia those bonds of human friendships which could enrich their existence and ours. Years in advance of most of his contemporaries, Father Walsh, who visited Russia not long after the revolution, sounded a warning to this country of the peril which the Soviet Union offered.

We have seen a reflection of that peril in Hungary. That tragic episode has caused a worldwide reappraisal of a principal source of Soviet power. It is recognized to a larger degree than never before throughout the world that this source is naked force. It is clearer now that in the satellite countries, at least, Soviet control is maintained largely by force of arms or threat of force. Given any kind of a chance, the oppressed peoples of central Europe will light the flame of freedom again and again.

The emergence of Russia as the most powerful nation in Europe and Asia has compelled a course of action upon the United States and a preoccupation with the problems of other nations which would have been unthinkable a few decades ago. And yet it is not, in my view, necessarily the most significant long-range political development of recent years insofar as our policy is concerned. Nor is the emergency of China as an industrial society, nor indeed the effect of atomic energy on world relations.

I think one of the most shattering events in our time so far as United States foreign policy is concerned, has been the impact of developments affecting the United Kingdom. For it was Britain during the 19th and early 20th century that played the role of world policeman; and it is no mere accident that this period coincided with what now seems like the golden age of international law and order. By and large, an agreement between nations then was meant to be kept. It was not a treacherous artifice employed to bring down a government's guard, an instrument of hostility bound with a red ribbon. The sanctity it received was undoubtedly due to the fact that the nations of Europe respected their heritage of Christian morality in a manner foreign to the Soviet tradition. Indeed, the Soviets have taken advantage of this very heritage.

Because the relative decline of British power has occurred in our lifetime, its ultimate effects may appear more obscure than they very likely will to a historian 50 years hence. To this country, however, it has already meant a vast increase in worldwide responsibilities. You have only to glance at a map of the world to see some of its immediate consequences. One of these consequences we can see right now, in the Middle East.

Before I go any further into that matter, let me make one thing clear. During the last 15 years, the executive branch under both Republicans and Democrats has frequently invoked the so-called principle of bipartisanship to obtain congressional backing for the conduct of foreign relations. I do not view bipartisanship—or, more accurately, nonpartisanship—other than as cooperation with the President on policy proposals which merit cooperation. It does not, and it cannot, signify blind acceptance of any policy merely because the Executive tells us it is a good policy and that it is needed. Nor does it signify announcing a policy first, then informing congressional leaders afterward. This administration, as administrations before it, can make unwise decisions. And Members of Congress have a duty to the American people to criticize constructively, and oppose any policy which does not seem to them to serve the national interest.

I would like to emphasize the word "constructively." For the purpose of criticism of our foreign policy must be to make it a better policy if the national interests are to be served.

Yesterday morning we had an example of responsibility when Secretary Dulles met—for 2 hours—with the congressional leadership to discuss amendments to the Mideast resolution and the question of sanctions. The meeting was both fruitful and worth while. Mr. Dulles is to be commended for the frankness and understanding he displayed.

Last week we had another example of the effectiveness of genuine bipartisanship or, what I prefer to call responsible cooperation between the President and Congress. You will recall that President Eisenhower conferred with members of both parties at the White House on the crisis in the Middle East. I attended this serious, nonpolitical conference on matters which affect the vital interests of all the people of the United States. There was a free and frank exchange of ideas. Members of Congress came away with a better understanding of the situation which confronts us in the Middle East. On his part, the President obtained the views of members of both parties. This meeting last week, and the Dulles meeting on yesterday, may well mark a new start in the field of responsible cooperation between the executive and legislative branches of our Government.

On the night of the meeting last week, the President, in response to a suggestion by the distinguished Senator RUSSELL of Georgia, addressed the entire Nation. In his speech, Mr. Eisenhower made clear for the first time the scope and gravity of the situation in the Middle East. I do not agree with all of the propositions which he advanced. It is not necessary to agree with all of them, however, in order to recognize in his address the beginnings of a more intelligible policy directed at the problems of the Middle East. Because he had spoken with Members of Congress, the President was in a far better position to talk not only to the people of the United States but to the people of the Middle East and the world as well. That was because, in calling the conference which preceded his speech, the President was availing himself of a cross-section of both party and regional leadership.

May I say at this point that there is, I believe, a somewhat mistaken concept that the Democratic Party is run by only one section of the country, by the South alone, or more specifically by Texas alone. That is a tribute to the distinguished services to the party and the responsible cooperation of LYNDON JOHNSON, the majority leader in the Senate, and Mr. SAM RAYBURN, the Speaker in the House. Those gentlemen, I am sure, would be the first to point out that there can be no effective leadership of a great national party without participation of all sections of the country. And all sections of the country are in fact represented in the leadership of the Democratic Party in Congress. That leadership in the Senate, in addition to LYNDON JOHNSON of Texas, is composed of CARL HAYDEN of Arizona, our distinguished President pro tempore, the Secretary of the Democratic Conference, the very able TOM HENNINGS of Missouri, and myself as party whip. In the House of Representatives, the party is guided not only by Mr. RAYBURN but by the outstanding majority leader, JOHN MCCORMACK of Massachusetts, and CARL ALBERT, the very capable whip from Oklahoma.

Is there any merit at all in nonpartisan support of foreign policy? In the proper sense, I think there is. The most obvious advantage, of course, is that it presents to the outside world a united front on vital issues, to obtain the maximum effect where desired.

With the kind of problems we now face, however, it has become increasingly evident that unity on a national, nonpartisan basis is not enough. The point has been reached where something akin to an international nonpartisanship must be developed. By this I mean that more effective relationship must be achieved between ourselves and friendly democracies, so that we may avoid a repetition of the appalling sequence we have witnessed in the Suez area. There are more rewarding pastimes than to continue our incredible unpopularity contest with the Soviets in France and England.

Policies of the western democracies during the past few years and particularly with respect to the Middle East question have given the appearance of a kind of diplomatic Tower of Babel. It is time for all to try to act with something approaching a singleness of purpose, even if we cannot speak with one tongue, if we are to avoid further disaster. In this respect, the Communist orbit has one important advantage. It knows where it is going. That has repeatedly been made clear to us, just as Hitler's purposes were made clear in Mein Kampf. In contrast, the United States and its western allies have had little common perception of where we are going, and still less of an agreed idea on how to get there. If we had, some of the recent defeats might have been avoided. What is even worse, too many of us do not seem to be aware that we have suffered these defeats at all. It is in this, I believe, that the real danger lies.

If we compare the relative position of the United States—and the West—with the Soviet Union, we will have to concede that the Western position has deteriorated. Anyone who doubts this need only review on the map the gains made by the Soviets, at the expense of the West. The most recent of these, after two centuries of effort, was in the Middle East. The Communists are in there with both feet, without the use of military force, and despite the so-called northern tier defense system. If reports concerning the Syrian arms buildup are correct, the Kremlin may well have succeeded in turning the flank of the Baghdad nations without firing a shot. This paramount fac-

tor is going to influence and direct our policy action in that area for the foreseeable future.

What is most tragic about this crisis is that it did not descend upon us suddenly. There was every reason to anticipate it; and there was a great deal we might have done to prevent it. It had been germinating for several years, ever since the Israeli-Egyptian armistice agreement of 1949.

For the United States, it is a sorry illustration of the failure of a policy—or rather a lack of policy—since our aberrations in this area hardly qualify as a policy. There has been temporizing. Politics, domestic and international, have been played. We have done everything, so it seems to me, except face up to the problem and take the minimal steps necessary to keep peace in the Middle East.

It is all very well to say, as has been said by the administration, that we seek our answer to the difficult problems of the Middle East through the United Nations. And it is all very well to find, as a distinguished, able and outstanding Republican Senator, a man of great integrity, did find in discussions before this group, that the United Nations has fundamental weaknesses. I think we can agree—I know that I do—with both the administration and Senator KNOWLAND. The administration, as it says, has certainly placed a large part of our trust in the United Nations to solve the Middle East dilemma. And the United Nations, in dealing with this and other problems, as Senator KNOWLAND says, has displayed basic inadequacies.

Both the administration and Senator KNOWLAND, in my opinion, are correct but where does that leave us? If we are going to find the answer to this question, I believe we have to start by accepting the premise of the President and the very able and hard-working Secretary of State that peace, stability, and the preservation of the independence of the nations of the Middle East is in our vital national interests. We ought then ask ourselves whether we were correct in entrusting such a large measure of the defense of our vital interests in the Middle East to the United Nations which as Senator KNOWLAND correctly says, has basic structural weaknesses?

Where, then, do we go from there? It seems to me that we must either reassume part of the defense of those interests ourselves or seek to correct some of the basic structural weaknesses in the United Nations. I regret to say that I have seen no evidence of an eagerness on the part of the executive branch of the Government to do one or the other.

On the contrary, that branch seems willing to content itself on the one hand with sending to Congress an urgent resolution which on its own admission is directed at no immediate danger or difficulty in the Middle East. On the other hand, it continues to rely solely on the United Nations in dealing with the immediate and difficult problems of that area.

That seems to me to be a formula for inertia, for drift, dodge, and delay and ultimately for disaster. It is a policy which would make the United Nations the scapegoat for our irresponsibility. A scapegoat may relieve the executive branch of a sense of frustration in this situation, but it will hardly serve the interest of the United States. Either the Middle East is or is not vital to these interests. If it is, as the President says it is, then we had better defend those interests through the United Nations or otherwise.

The tendency to impose tasks on the United Nations beyond its capacities, then to bemoan the inadequacies of that organization but to take no initiative in their correction can ultimately bring us to only one end. This tendency, if persisted in, will eventually destroy even the limited capacity which the United Nations now possesses for constructive action. Before we are much further along this road, I think we had better stop for a moment to consider the consequences. I think we had better decide whether it is in the interests of the United States—our long-range interests—to continue in that direction.

My own view is that it is a highly dangerous direction. It is not, as some may think, the road of return to a secure national isolation. Scientific developments of the past two decades have closed off all roads back in that direction. Rather, it is the road to isolated internationalism; it is the road to the disastrous delution of omnipotent national power.

The position I have assumed with regard to the President's proposal on the Middle East is related very directly to this matter. I have been critical of this proposal. While I accepted the premise on which it is based, namely, that developments in the Middle East involve the vital interests of the United States, I do not accept fully the manner in which the President has proposed to protect them.

It has seemed to me that two basic steps are essential if these interests are to be protected. First, we must be prepared to reassume that portion of the responsibility which we have shifted to the United Nations which is beyond its present capacity; and, I may add parenthetically, that within our Government we must apportion the reassumed responsibility as between the executive branch and Congress more strictly in accord with the Constitution so as to avoid a misuse of power. Second, we must be prepared to enlarge the capacity of the United Nations to discharge responsibilities in the Middle East and elsewhere if the enlargement can be brought about. To that end I have proposed an amendment to the President's resolution which would make clear our support of the United Nations emergency force in the Middle East as a force for peace in that area. I have also proposed an amendment which would make clear our initiative in seeking international control of the present unrestricted arms traffic in the Middle East, one of the principal causes of the tension in that region.

The western nations face a serious predicament in the Middle East and we are not entirely without responsibility for it. Today Suez is in hostile hands—that is, hands hostile to the West. French strength is dispersed in Algeria, bogged down in a revolt. The British are gone from the canal area—with our encouragement—without retaining adequate guaranties for freedom of maritime transit. The supply of Europe's vital fuel is thus delivered over to the caprice of one Middle Eastern nation, which has yet to display a sense of its international responsibility. With the current drain on world shipping resulting from this situation, where would we be if another Korea broke out somewhere in the world? Is there not something incongruous in a policy which produces this kind of a result, a policy which alienates our friends and invites the Soviets to give aid to the Arab nations?

No American can take satisfaction over this unhappy record. Recriminations over how we got to the present point would be futile. On the other hand, an examination of the steps which, under Democratic and Republican administrations, led to the disaster, could contribute to the formulation of future policy. What is essential is that we should recognize what has happened for what it really is—a serious setback for the West. And we must begin without delay to repair the damage.

With respect to the Arab world, further penetration by the Soviet Union is not only possible but inevitable unless we bring our energies to a solution of the issues which have plagued the Middle East since 1948; unless we base our actions upon principle and not upon expediency; and unless we can persuade all the nations in the Middle East that we have no desire to replace Britain and France in the vacuum we helped to create.

It must, instead, be made clear to them, by every means at our command, that our objective is the preservation of their independence—and not necessary only their independence of Russian communism. That is the menace today. Tomorrow the menace may arise elsewhere.

With respect to Western Europe, it is imperative to restore the former confidence which has been shattered and to rebuild the foundations of mutual understanding. This applies to all relations with our allies, including their problems with dependent territories. It is well and good to support bona fide nationalist movements and the natural desire of peoples to be independent. Let us take care, however, to avoid paths which conflict with our vital interests.

Of the many lines of action we might follow there is one that should be pursued immediately. I believe we should do what we can to enable Europe to reassert its former influence in the councils of the world. We can do this by encouraging the nations of Europe to draw together in closer association, as is the case in the coal-steel community. Separately, each of these nations has lost much of its former authority in international affairs. Drawn together in a common enterprise, the collectivity of Europe can once again exert the power which is commensurate with its magnificent heritage and the great capacities of its inhabitants.

We should also give very serious thought to encouraging a pooling of the economic and technological resources of Western Europe and the development of close ties ourselves with that pool. It is almost ludicrous that the western nations should be withholding their markets and technical processes from each other, while bidding against themselves for the Kremlin's trade.

Such is exactly what the Communists want. Europe's leaders may be coming to see this. They are, at the moment, concluding negotiations to establish a common market through the elimination of trade barriers and the creation of Euratom. I consider these important first steps which the United States should support; but they are only the first steps to that cooperation which must exist among the nations of Europe and with the United States. We can only achieve it, if we proceed with an urgency of purpose, recognizing that, in truth, we are met upon a major battleground.

Federal Aid for School Construction

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Tuesday, February 26, 1957

Mr. McNAMARA. Mr. President, I ask unanimous consent that a statement I have prepared relating to Federal aid for school construction be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LET US BUILD SCHOOLS

Even though the United States Chamber of Commerce was founded in 1912, I have always suspected a stubbornness on the part of that organization to acknowledge the presence of the 20th century.

Today we have further proof of the chamber's antediluvian outlook on life.

We are informed by the chamber, according to an article in the Washington Star of February 20, that the organization is opposed to Federal aid for school construction.

This is not very shocking.

It is consistent with the chamber's apparent desire for a return to the good old days—which means government for the benefit of the robber barons and others out to gouge the public.

Efforts by the Federal Government to be genuinely helpful to all the people are summarily rejected.

But while denouncing Federal aid, the chamber also took another long step along its dusty trail back to the dark ages when it proclaimed there was actually a surplus of classrooms today.

According to this same article, the chamber puts this surplus at 14,000 classrooms.

This outrageous statement is directly contrary to the opinion of the President of the United States, the Department of Health, Education, and Welfare, the National Education Association, a large part of Congress and the authorities of most of our States—not to mention the children stacked like cordwood in our present schools.

However, the chamber has never been known to be swayed by the facts.

I will not attempt to explain the mathematical whimsy by which the chamber of commerce arrives at this 14,000 figure. Nor do I intend to enter into a numbers game.

I don't know exactly how many classrooms we are short. But even the most conservative estimate of the Department of Health, Education, and Welfare puts the current shortage at 159,000 rooms.

The shortage exists—the shortage is critical.

No distortions by the chamber of commerce can hide this basic need of our country.

Again I urge the Senate to move promptly to consider the school construction measures that have been introduced.

Middle East Proposals

EXTENSION OF REMARKS
OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, February 26, 1957

Mr. ANDERSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD remarks which I delivered before the Bernalillo County Democratic convention at Albuquerque, N. Mex., on February 18, 1957.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

MIDDLE EAST PROPOSALS

(Remarks of Senator CLINTON P. ANDERSON before the Bernalillo County Democratic convention, Albuquerque, N. Mex., February 18, 1957)

This week the Senate of the United States will start its debate on the Eisenhower Mideast resolution. Next week it expects to vote. Possibly we should ask how the Democratic Senators on the Foreign Relations and Armed Services Committees have been acting in your behalf.

As you know, the combined committees reported out the Eisenhower Mideast resolution by a vote of 20 to 8, with Senators JOHNSON of Texas and LANGER absent. There were a number of attempts made to improve the resolution and to take into consideration the basic difficulties in the areas, such as the Arab-Israeli dispute, the Suez Canal question, the Soviet Union arms traffic, and the like; but no success was achieved, as a solid Republican bloc voted down all but the Humphrey amendment which, in effect, reaffirmed the President's constitutional authority as Commander in Chief of the Army and Navy and under it the power to act instantly in case our security was in danger.

It is my belief that if some of the amendments had been accepted, there would have been fewer votes against the proposal. It is my further belief that if this bill is not amended on the Senate floor in such a manner as to recognize the basic difficulties, there will be a sizable minority—possibly numbering about 25—against it.

This resolution as it was presented might have been regarded as unnecessary because the President had the constitutional right to exercise the military power and had the funds in this year's Mutual Security Act to carry out what, if any, economic ideas he may have had. However, this resolution means that we act on a unilateral basis; it means in the words of Senator RUSSELL, that despite weeks of effort to find out what the administration proposed to do in the matter of economic assistance, the Senate members of the two committees were given nothing they could hang on to, and in effect were "buying a pig in a poke."

Personally, I do not believe that the administration has a program for the Middle East. I think the resolution is a prelude to a policy, but not a policy in itself, and I am fearful that we may become committed in an area where we will find ourselves at a great disadvantage. Some Democrats felt that the military and economic sections should be separated, others felt that more consideration should be given to the basic difficulties inherent in the area, and others felt that a grave constitutional question was involved which was both against the interest of the Congress by, in effect, giving the President some of the constitutional authority belonging to the Congress, and against the interest of the President by putting a limitation on his own constitutional powers. There is absolutely no similarity between the President's proposal on the one hand and the Greek-Turkish doctrine and the Formosa resolution on the other. No country has requested us to come into the Middle East. The situation is extremely precarious because of the instability of all the Arab States except Iraq, and unless something definite is embodied in the final draft of the resolution, its chances for ultimate success are, in my opinion, not too good.

While we all recognize that the President has a primary and great responsibility in the field of foreign affairs, it is well to keep in mind that every Senator individually, and the Senate collectively, likewise has a great stake in the field of foreign policy. If we are going into an adventure in this area of the world, I think we are entitled to know much more in the way of facts than we know at the present time. In that respect our knowledge of what we intend to do, on the basis of testimony before the committees, is practically nothing.

But the Democratic Senators on those two committees have measured up to the standards of a party of responsibility. They studied with care the proposals of the President and his Secretary of State. Senator MANSFIELD, of Montana, early delivered on the Senate floor a memorable address which was universally praised in the press as outstanding in its fairness and in its appeal for true bipartisan conduct of our foreign affairs. Senator FULBRIGHT, of Arkansas, followed up his statement of January 24 with a strong Senate speech on February 11, just 1 week ago. I want to quote some sentences from it to show why reasonable and internationally minded Democratic Senators have trouble signing on the dotted line, whatever the President asks.

"In form and substance, the resolution as prepared by the administration wants something from this Chamber, the mere asking of which would have led to a national outcry under any other administration back to Washington's. It asks for a blank grant of power over our funds and Armed Forces to be used in a blank way, for a blank length of time, under blank conditions, with respect to blank nations, in a blank area. We are asked to sign this blank check in perpetuity or at the pleasure of the President, any President.

"Who will fill in," asks Senator FULBRIGHT, "all these blanks?"

"The resolution says that the President, whoever he may be at the time, shall do it. And that's not all it says. It says that in filling in the blanks, the President need not consult, much less be accountable to any other constitutional organ of Government. He shall be the counsel—judge—jury of the national interest.

"His judgment about world realities shall be the sole warrant for his deeds in committing our forces to battle and our funds to who knows what purpose.

"His office shall be the only archive holding the record of his transactions, except as he reports the results once a year to the Congress.

"And, finally, he shall decide autonomously when his autonomous powers shall expire."

Now I say to you that in situations like this one we need representatives in the Congress—and this convention is held to select the delegates who will pick the proper one in the State Democratic convention—who will not be afraid to take time to consider the implications of every Presidential proposal and then vote upon each as they believe the welfare of the Nation demands.

It has been 10 years since I sat in the Cabinet Room of the White House and discussed with a group of the Nation's leaders headed by President Truman, the need for aid to Greece and Turkey if these lands were not to surrender to the pressures of communism. A great Republican statesman sat just at my right, the late Arthur Vandenberg of Michigan. The situation in Congress was comparable to the present—only reversed. The Congress then as now was controlled by the opposite political party to the President. I have not forgotten that the Republican Senators of 1947 exercised their full right to proceed with caution on the statesmanlike proposals of President Harry S. Truman for the aid of Greece and Turkey. I will neither be surprised nor shocked if Democratic Senators 10 years later examine with equal care the much more drastica proposals of President Eisenhower to stabilize conditions in that same area.

Every mile of the road is marked with signs reading, "Proceed With Caution." What the administration asked us to do was not to pass a simple Senate resolution expressing our composite view, nor a concurrent resolution in which the House of Representatives added its voice, but a joint resolution which when signed by the President has the force of law, and thus becomes a blanket transfer to the executive of the constitutional right vested in the Congress to declare war.

I am ready and willing to vote for a resolution which clearly states and pledges the support of the Senate to the President as he seeks to oppose the spread of Communist influence in the Middle East. With the amendment proposed by Senator HUMPHREY, a Democrat, of Minnesota, and adopted by the two Senate committees engaged in the Middle East hearings, I believe the resolution comes closer to that objective and I shall probably vote for it. But the span of hearings and debate upon it has persuaded me, if I needed any proof or persuasion, that the position of Representative in Congress is one of tremendous importance to the people of

New Mexico, and that the Democratic Party should do its utmost to select a strong candidate and win the April election in an impressive manner.

The Middle East Situation

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 26, 1957

Mr. JOHNSON of Texas. Mr. President, one unfortunate result of the recent discussions over the situation in the Middle East is that we tend to lose sight of the basic factors in the problem. We have become so preoccupied with details that we have forgotten some of the long-term realities.

An editorial in the New York Times this morning sums up this situation with great clarity. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CRUX OF THE MATTER

Although negotiations for Israel's withdrawal to the armistice lines are proceeding in a somewhat more hopeful atmosphere, there is danger that the crucial issue in the whole conflict may become buried under a mass of detail. This crucial issue is whether the problem of Palestine is to be solved by peaceful means in accordance with the Charter of the United Nations or by war and warlike acts in violation of the Charter. Unless this issue is resolved, all the guaranties to either Israel or the Arab States, however important in settling the immediate controversy, will not end the conflict itself or banish the possibility of new explosions.

Contrary to widespread assumptions in the United Nations and in Washington, the issue is not originally the result of Israel's armed invasion of Egypt. The issue was raised by Egypt's longstanding insistence on maintaining a "state of war" with Israel and implementing it by both guerrilla raids and a double blockade in the Suez Canal and the Strait of Tiran. It was this Egyptian maintenance of a "state of war" and the exercise of belligerent rights which Egypt derives therefrom that resulted in Israel's military counteraction. Egypt has made no public move or promise to end the "state of war" or to renounce the belligerent rights.

The Egyptian claim to belligerent rights under its self-proclaimed "state of war" against another United Nations member is both absurd and illegal. It is ruled out not only by the charter, which bars the use or threat of force in settling international disputes, but also by the armistice agreement of 1949, which Secretary General Hammarskjold interprets as a virtual nonaggression pact. It was specifically rejected by the Security Council in 1951, when it denied Egypt any belligerent blockade rights. And it was Mr. Hammarskjold himself who, in his report of January 25, called for assurances that the parties to the armistice agreement, "will not assert any belligerent rights (including, of course, such rights in the Gulf of Aqaba and the Strait of Tiran)."

In other circumstances it would seem that the first duty of the United Nations should be to call on Egypt to end the "state of war" and renounce its claim to belligerent rights as a first condition of peace in the Middle East. Only if Israel then refuses to follow a like course would sanctions against it become a legitimate course of action.

Program of American Farm Bureau Federation

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 26, 1957

Mr. WILEY. Mr. President, I was pleased to read in the February 1957 issue of Badger Farm Bureau News a most handy summary of the 1957 resolutions of the American Farm Bureau Federation.

In one brief listing, the major program objectives of this great national organization and of its Wisconsin affiliate were presented so that the members of the federation could be up to the minute on the organization's position.

I sent to the desk the text of the article, and ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AFBF RESOLUTIONS SET NATIONAL POLICY

When delegates to American Farm Bureau Federation (AFBF) annual meetings adopt resolutions, they become the official national policy of county and State farm bureaus as well as AFBF. If they are to be made effective they need substantial membership support.

Printed below in shortened form are some of the 1957 AFBF resolutions. The full text runs near 20,000 words. Some call for action. Others are statements of farm bureau's approval or disapproval of Government programs and policies of business, labor, and others.

WE SEEK HIGHER NET INCOME, OTHE GOALS

Farm bureau national policy goals include:
Higher net farm income.
Generally lower tariffs.
Repeal buy American act.
Repeal cargo preference.
Extend Public Law 480.
Sponsor international trade conferences.
Continue young farmer trainee program.
Expand school milk program.
Adequate support for extension services.
Eradication of brucellosis nationally by 1960.
Eradication of hog cholera, vesicular exanthema.
Right to work legislation.
Low cost farm credit for young farmers and others.
Permanent plan for disaster relief to farmers.
Preference to co-ops for purchase of federally produced electric power.
Action on water pollution.
Improved standards for grading farm products.
Labeling law for farm-product imitations, substitutes.
Poultry-meat inspection by United States Department of Agriculture.
Repeal of Fair Trade Act.
Establish principle of selecting Supreme Court Justices from high courts.
Federal milk-market orders that are not restrictive to movement of milk.
Reasonable access for farmers to new superhighways.
More adequate compensation for rights-of-way.
Railroads to mark cars with luminous paint for safety.
Clarification of water law and farmers' rights.
Rural-mail delivery to all accessible farms.
Labor unions made subject to antitrust laws.
Majority rather than two-thirds vote on corn allotments.
We oppose:
Universal military training.
Socialism, monopoly, Government secrecy.
Harvesting or grazing soil-bank land.
Expansion in Federal aid to education.
Compulsory social security for farmers.
A Federal sales tax.
Substantial railway rate increase
Compulsory checkoff for commodity promotions.
Extension of TVA to areas not now served.
Federal crop insurance that is not based on sound actuarial experience.
Giveaway of United States surplus farm products.
Industrywide bargaining by labor unions.
AFBF board of directors was directed by voting delegates to study certain issues and report to the membership. These include:
A way gradually to eliminate Government regulation of farming.
Acceptance by State governments of watershed program administration.
Development in State of marketing facilities for fruits and vegetables.
More equitable tax treatment for farmers.
Reasons for decline in farmer's share of consumer dollar.
Federal condemnation laws and procedures with a view to improving them.
Development of program provided in watershed protection and Flood Prevention Act.

SUPPORT U. N., PACTS WITH ALLIES

Farm Bureau favors and supports:
Military pacts with allies.
United Nations and its agencies.
Selective service.
Federal price support and production adjustment programs.
Paying for soil bank with CCC surplus commodities.
Putting land in soil bank as a qualification for price support.
Soil bank contracts to run more than one year.
Research to find new uses for farm commodities.
Balanced budget in good times, deficit financing in times of deflation.
Reduction in national debt before tax cuts.
Hiring of foreign nationals for seasonal farm work.
Giving States rather than United States the power to acquire highway right-of-way.
Strict enforcement of truck weight limit laws.
Private investment overseas.
United States technical assistance to friendly countries.
Competitive pricing of United States exports.
Legislation to raise quality of United States farm products sold overseas.
Legislation for the conservation and beneficial use of water.
Government policies contributing to stable price level.
Marketing orders where producers want them.
Active participation by individuals in political parties.

The Eisenhower Doctrine Turns Into a Sideshow

EXTENSION OF REMARKS
OF
HON. JOHN O. PASTORE
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, February 26, 1957

Mr. PASTORE. Mr. President, a timely and thoughtful editorial appeared in the Providence Evening Bulletin of Monday, February 25, entitled "The Eisenhower Doctrine Turns Into a Sideshow." I wholeheartedly agree with the editorial, recommend it to my colleagues for reading, and ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE EISENHOWER DOCTRINE TURNS INTO A SIDESHOW

The fact that Senate debate on the Eisenhower doctrine has been completely overshadowed by discussion of the United States position toward Israel is most revealing. It seems to confirm the impression that the proposed effort to resist Communist aggression in the Middle East is a good deal less than the historic and decisive development the administration has tried to make it appear to be.

The so-called doctrine has been misrepresented on three counts. First, it does not really change the American position in the Middle East very substantially. We would probably have fought overt Communist aggression in that area almost any time during the past 10 years, just as we fought it in Korea, with or without a specific commitment to do so.

The President now wants a formal statement of our intentions in this respect, and there may be merit in his contention that this will help prevent a Soviet miscalculation. Congress will undoubtedly support the President, but it may well do so largely on the negative ground that no harm will be done by spelling out a commitment already implicit in our own strategic interests, our relationships to the Baghdad Pact and NATO powers, and our interpretations of the U. N. Charter. The congressional attitude has already made it apparent that the Eisenhower doctrine is not to be considered a significant new departure in American foreign policy, in the sense that the Truman doctrine or the Marshall plan were.

In the second place, the new doctrine seems of less importance than advertised because it is addressed exclusively to the most remote danger in the Middle East—overt Communist military aggression againts countries which may request our assistance. How we propose to meet the real threats of Soviet penetration through subversion and arms shipments is not specified, although there may be hidden possibilities in the request for a $200 million military-economic assistance fund to be spent for deliberately unspecified purposes.

Finally, but most importantly, the reason the Congress has been more preoccupied with the Israeli situation than with debating the Eisenhower doctrine is that the President's plan does not touch the real source of danger in the Middle East. That is the undying hostility between Israel and the Arab States. The arguments over Israeli troop withdrawals and possible U. N. sanctions against Israel obviously relate directly to this issue. The President's concern with preventing a Soviet invasion of the Middle East is only incidental to it.

No wonder the scheduled great debate in the Senate ran out of both speakers and listeners on its second day. Events have conspired to make the administration's big pitch look more and more like a sideshow.

The Minnesota Code for Parents and Teen-Agers

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 26, 1957

Mr. HUMPHREY. Mr. President, the Minnesota State Youth Conservation Commission last spring drew up some ground rules which have now been incorporated in the so-called Minnesota code, a suggested guide to help Minnesota parents and teen-agers find their way through the difficult adolescent years. An interesting feature article which was published in the American Weekly magazine for February 17, 1957, describes this Minnesota program. Written by Jean Libman Block, the article is entitled, "Minnesota Gets Everybody Into the Act With Its Conduct Code for Teen-Agers."

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MINNESOTA GETS EVERYBODY INTO THE ACT WITH ITS CONDUCT CODE FOR TEEN-AGERS

(By Jean Libman Block)

The judge's 15-year-old daughter, Kay, invited 60 classmates to a party after the season's big basketball game. The 60 arrived, but that was only the beginning. Friends of those invited rolled up with carloads of their friends. By 11:30 more than 200 teen-agers, many of them strangers to the hostess, were dancing, playing records, milling through the house. Judge Theodore Knudson and his wife ran relays from the kitchen to the recreation room to keep the kids supplied with soft drinks and snacks.

"They made an awful lot of noise and there were too many of them," the judge told his daughter after the last of the mob had finally departed, "but it was sure a swell party."

By morning, however, the judge had changed his mind. For daylight revealed a carton of empty beer cans in the driveway. A search of nearby lawns turned up a large basket-load of beer cans and an empty fifth of vodka.

"I was circulating among those kids all evening," Judge Knudson exclaimed to a neighbor. "How could they have been drinking?"

The neighbor had complaints of his own. Teen-age party crashers had broken into his liquor cabinet. Another neighbor told of a car borrowed and wrecked by teen-agers. Still another was shocked when a group of 14-year-olds refused to go home at 11:30 insisted their parties always lasted until 1:30.

Such typical skirmishes between parents and children took place last year in the pleasant suburban community of St. Louis Park, Minn.

But this year things are different. Hordes of kids are not crashing parties. Adolescent drinking has diminished. Youngsters are saying amiably to parents, "Expect me home about 11 o'clock; I'll call if I'm delayed."

This astonishing truce went into effect this past fall when St. Louis Park became the first city in the State to adopt the Minnesota Teen-Age Code. In his dual capacity of junior high PTA president and chairman of the governor's advisory council on children and youth, Judge Knudson sparked the movement.

The Minnesota code, unique in that it is statewide, is a suggested guide to help parents and teen-agers find their way through the stormy growing-up years. In 2 sections, 1 for junior high and the other for senior high age levels, it covers such hotly controversial ground as: Parties—at home if possible; use of car—based on mutual agreement; sensible hours; appropriate dress; party crashing—outlawed; respect for the rights and property of others; smoking—forbidden by law under 18; and drinking—illegal under 21.

While offering plenty of suggestions on how young people should behave, the code also asks parents to toe the line in supervising parties, enforcing liquor laws, providing transportation, encouraging their children to entertain at home.

The code opens with this basic rule: "Parents should know where their sons and daughters are while away from home, what they are doing, and with whom they are spending their time. Parents should also know what time their young people return home."

"It's time we had some ground rules around here," I heard a high-school football player remark when he first saw the code.

The ground rules, in rough form, were drawn up last spring by the Youth Conservation Commission, a State agency concerned largely with the prevention of delinquency. The draft was submitted in May to 370 youngsters from all parts of the State attending the governor's youth conference. They tore the code apart and took it home to discuss with their families and friends. Their comments, mailed to the commission, indicated overwhelming teen-age support for a code.

Some, naturally, wanted to liberalize the hours for terminating parties. But most surprising was the number of youngsters who proposed tightening code provisions.

"Is there a State law to prosecute parents who make alcoholic beverages available to minors?" a girl from Faribault demanded. There is such a law and the code now warns irresponsible adults they may be charged criminally for serving alcohol to other people's children.

A St. Paul boy found inadequate the section on young drivers assuming their portion of responsibility for the maintenance and appearance of the family car. He added: "The young person should also fill the gas tank after using the car."

A Duluth girl urged outlawing kissing games.

"Doesn't mention profane language," an Albert Lea girl noted.

"What about parents' control over the necklines of formals?" a young man from upstate inquired.

One Minneapolis 12th grader underlined this sentence: "Young people should understand it is foolhardy to ride with a driver who is under the influence of alcohol, and should seek safer means of transportation."

"Call a cab or call your parents," he advised. "They'd rather be inconvenienced than have you dead."

Revised by the youngsters, the code was next checked over by the 300 adult members of the governor's advisory council. Then thousands of copies were mailed to every

PTA president, school superintendent, and student council president in the State. Adults and teen-agers in each town were urged to study the code, talk it over, change it, reject or adopt it as they saw fit.

In nearly 100 towns throughout Minnesota, parents and their young are now engaged in a lively debate about such touchy topics as dating, drinking, and driving.

Wherever the code is up for discussion, unprecedented crowds turn out. In St. Louis Park 100 were expected at one PTA meeting and more than 1,000 persons, old and young, packed the hall. "This is really a PTSA meeting," said Darlene Anderson, an enthusiastic student, "a parent-teacher-student association."

"In many places," says Dr. Hyman Lippman, distinguished St. Paul psychiatrist, "parents and young people are getting together for the first time to find out what each expects of the other."

"I never before had a convincing answer for the familiar 'everybody's-doing-it' argument," a Duluth father declared. "But from the code I've learned that everybody is not doing what my youngsters say they're doing, and I can put my foot down when demands are outrageous."

In St. Paul, the Women's Institute, one of the country's outstanding women's groups, has taken the initiative in making the entire city code conscious. A special St. Paul code was drawn up by community leaders and students. This document particularly stresses the joint responsibility of parents and young persons to work out problems. "Parents should make young people feel that they can bring their problems, mistakes, and aspirations to them," the code states.

The institute has blanketed St. Paul with 40,000 copies of the code, posted them in schoolrooms and asked disc jockeys to read excerpts on their radio programs.

"My husband is in Korea and I was having a hard time raising my 14-year-old daughter," a grateful mother told me. "But now, with the code on the kitchen bulletin board, whenever a touchy question comes up, we both say, 'Let's look at the code.'"

"Our goal," explains Mrs. Agnes Kennedy Ridder, founder and president of the Women's Institute, "is to help make what is right popular among teen-agers."

Minnesota does not claim to have found an easy answer to the teen-age puzzle. The code won't reach the grossly negligent parent who doesn't give a hoot where or how his children spend their time. Neither will it make a civilized gentleman of a confirmed rowdy. But, as Gov. Orville L. Freeman puts it, "The code is a constructive action toward solving many of the problems facing young people and their parents today."

From the stir already created, it seems likely that many other States will turn to Minnesota's pioneering code as a basis for their own teen-age programs.

These are the key provisions of the Minnesota code:

A parent, or some other responsible adult, should be home and on call when teen-agers entertain, but should allow the youngsters a sensible measure of privacy.

No crashers allowed at parties.

"Lights out" games have no place in a well-ordered party.

Dress to suit the occasion. Informal clothes are to be accepted as all right for informal get-togethers.

Young people and their parents should agree in advance on a definite time for getting home from dates.

Young people should come directly home from an evening out unless other plans have been approved by parents.

Going steady in junior high school should be discouraged.

Parental consent for the privilege of driving the family car should be based on: (1) Possession of a driver's license; (2) young people's proof of ability to control themselves and the car; (3) a healthy attitude regarding the rights and welfare of others.

Riders have a share in the responsibility for safe driving. Dares and jeers from riders have been responsible for many deaths.

Young people should understand that it is not a disgrace to decline an alcoholic drink.

Suggested times for terminating social affairs on nonschool nights:

	7th grade	8th	9th	10th	11th	12th
Formals	------	11:30	12:00	12:00	1:00	1:00
Informals	10:00	10:30	11:00	11:30	12:00	12:00
Home parties	10:00	11:00	11:00	11:30	12:00	12:00
General dating	------	10:30	11:00	11:30	12:00	12:00

Affairs on school nights are not encouraged for junior high-school students. Senior high-school gatherings should be over by 10 o'clock on school nights, except for special occasions.

The Record of the 84th Congress in Heart Research

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Tuesday, February 26, 1957

Mr. JOHNSON of Texas. Mr. President, I believe that all of us are rightfully proud of the record of the 84th Congress. One of the brightest chapters of that Congress was the constructive achievement in stepping up research into the diseases which beset mankind.

For heart ailments alone, appropriations amounted to more than $33 million. If we continue this research attack on the killers of mankind, we can eliminate a great scourge of humanity.

The question naturally arises: Does this kind of attack pay off? The question is answered extremely well by an editorial in this morning's Washington Post.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HEART RESEARCH PAYS

Last year a big frontal attack, costing around $15 million, was made on this Nation's No. 1 killer, heart disease. The amount allocated for heart research through public and private sources was more than six times that spent in 1949. Naturally Americans ask: Has it paid off?

Dividends from these 8 years of research, as recently reviewed in this newspaper by Nate Haseltine, are remarkable. Half a dozen major developments in heart surgery have saved the lives and increased the capacity for living of countless children, young people and adults. Medical advances have made possible prevention of recurrent sieges of rheumatic fever, the second most common cause of death by disease in the 20–24 age group, and the leading cause of death, except for accidents, among school-age children. Through new drugs, high blood pressure can now be better controlled; blood clotting in persons who have had heart attacks prevented; and the heart's work-load in those having coronary disease relieved.

The three organizations that sponsored this research—the American Heart Association, the National Heart Institute and the Medical Life Insurance Research Fund—are furnishing eloquent proof that money wisely expended can purchase longer and fuller lives for many persons who otherwise would fall victim to heart disease.

Results of Questionnaire—First Congressional District, Wisconsin

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 25, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am inserting the results of a January questionnaire which was sent to about 10,000 people in the First Congressional District of Wisconsin. I believe the results will be interesting to Members of the House:

RESULTS OF THE JANUARY 1957 QUESTIONNAIRE FROM CONGRESSMAN LAWRENCE H. SMITH, FIRST DISTRICT, WISCONSIN, FEBRUARY 18, 1957

1. Do you approve the exchange of atomic secrets with other countries? Yes, 262; no, 1,731.

2. Do you favor the development and use of atomic energy by private enterprise? Yes, 1,662; no, 233.

3. Do you approve the use of military force by the United States as proposed by President Eisenhower? Yes, 866; no, 940.

4. Do you approve large sums of money for use in developing Middle East countries? Yes, 198; no, 1,764.

5. Do you think the Middle East problem is one for the United Nations only? Yes, 1,085; no, 874.

6. Do you think the United States should proceed in its own way to establish peace in that area? Yes, 648; no, 1,254.

7. Do you think the Federal Government should continue its support programs of agricultural products? Yes, 803; no, 1,072.

8. Do you favor immediate balancing of the Federal budget? Yes, 1,620; no, 354.

9. Do you favor reduction of taxes before balancing the budget? Yes, 587; no, 1,397.

10. Should Federal spending be reduced? Yes, 1,975; no, 61.

11. Do you approve direct Federal grants to States to help build schools? Yes, 667; no, 1,336.

12. Do you approve an increase in the minimum wage? Yes, 467; no, 1,441.

13. Should labor union welfare funds be regulated by law? Yes, 1,848; no, 159.

14. Would you approve legislation providing for 4-year terms for Members of the House of Representatives? Yes, 1,535; no, 456.

15. Do you favor an increase in postal rates to meet postal deficits? Yes, 1,321; no, 663.

16. Do you believe there should be some relief from payment of Federal taxes? Yes, 1,700; no, 217.

17. Do you approve an amendment to our immigration laws to admit more people to this country? Yes, 291; no, 1,656.

18. Should American taxpayers support underprivileged nations? Yes, 301; no, 1,579.

19. Should Russia be expelled from the United Nations? Yes, 429; no, 574.

20. Should we break off diplomatic and other relations with Russia? Yes, 1,280; no, 665.

More than 2,000 replies have been received at this time. This is approximately 20 percent return.

Pfc. John D. Kelly, USMC (Deceased)

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. HOLLAND. Mr. Speaker, I consider it a great privilege and honor to pay tribute to an American marine from my district who made the supreme sacrifice by giving his life on the battlefield of Korea. He died so that his beloved America might live.

Thursday, in Homestead, Pa., the entire community gathered to pay homage to the memory of this great hero.

The following lists the events which led to the death of this brave American boy. His mother, Mrs. Emma Kelly, of Homestead, may be justly proud of her valiant son for gallantry in action, far, indeed, beyond the call of duty:

PFC. JOHN D. KELLY, USMC (DECEASED)

Marine Pfc. John D. Kelly, 24, of Homestead, Pa., has been awarded the Nation's highest military decoration, the Medal of Honor, for his heroic action of May 28, 1952, against the Communist aggressor forces in Korea during which he fell mortally wounded.

As a radio operator with Company C, 1st Battalion, 7th Marines, Private First Class Kelly distinguished himself by conspicuous gallantry and intrepidity in the face of superior enemy forces. His platoon was pinned down by intense mortar, artillery, small-arms, and grenade fire; to make a move was to risk one's life. Kelly requested permission to leave his radio in the care of another man in order to join the assault on enemy key positions. His citation follows:

"For conspicuous gallantry and intrepidity at the risk of his life above and beyond the call of duty while serving as a radio operator of Company C, 1st Battalion, 7th Marines, 1st Marine Division (reinforced), in action against enemy aggressor forces in Korea on May 28, 1952. With his platoon pinned down by a numerically superior enemy force employing intense mortar, artillery, small-arms and grenade fire, Private First Class Kelly requested permission to leave his radio in the care of another man and to participate in an assault on enemy key positions. Fearlessly charging forward in the face of a murderous hail of machine-gun fire and hand grenades, he initiated a daring attack against a hostile strongpoint and personally neutralized the position, killing two of the enemy. Unyielding in the face of heavy odds, he continued forward and singlehandedly assaulted a machinegun bunker. Although painfully wounded, he bravely charged the bunker and destroyed it, killing three of the enemy. Courageously continuing his one-man assault, he again stormed forward in a valiant attempt to wipe out a third bunker and boldly delivered pointblank fire into the aperture of the hostile emplacement. Mortally wounded by enemy fire while carrying out this heroic action, Private First Class Kelly, by his great personal valor and aggressive fighting spirit, inspired his comrades to sweep on, overrun, and secure the objective. His extraordinary heroism in the face of almost certain death reflect the highest credit upon himself and enhances the finest traditions of the United States naval service. He gallantly gave his life for his country."

He enlisted in the Marine Corps in August of 1951, in Pittsburgh, Pa. Following his initial training at Parris Island, S. C., he was transferred to Camp Pendleton for further training prior to joining the First Marine Division in Korea.

Private First Class Kelly was born July 8, 1928, at Youngstown, Ohio. Later his family moved to Homestead, Pa., where he attended grade school and high school. He graduated from high school in 1947, and was attending Arizona State College, prior to entering the Marine Corps.

Private First Class Kelly is the son of Mrs. Emma Kelly, 126 Locust Way, Homestead, Pa.

American Business and Free Enterprise

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following speech made by Mr. R. Perry Shorts, chairman, Second National Bank, Saginaw, Mich. The speech is entitled "American Business and Free Enterprise" and was made at the 58th midyear convention of the Michigan Association of Insurance Agents in Detroit on February 21:

AMERICAN BUSINESS AND FREE ENTERPRISE

The American banker of today has an interesting job. His daily work rubs him against businessmen of all sorts and descriptions. He learns their business problems and all the tricks of their trades. And he soon discovers that when he loans them money, he is temporarily in business with them—and sometimes permanently. Many a trusting banker has loaned money to a scrap dealer one day—and found himself in the junk business the next. I speak feelingly on this subject. But they talk the same language and they feast or starve together. In fact, I heard of one businessman who specified in his will that all of his pallbearers should be bankers, and when asked for an explanation he replied, "Well, these bankers have been carrying me all my life and I'd like to have them finish the job."

And the American insurance man, too, has an interesting job—I found that out over 50 years ago when I was in the business. In those days, competition especially in the accident and health lines was of the cut-throat variety. You would go to bed at night wrinkled and withered and worn by your overexertions of the day, and just as you were drifting off into the alluring arms of Morpheus, one of your men would telephone you excitedly that your business was being "twisted" by the Golden Rule Casualty Co. (which you thought was a friendly competitor). "Twisting" and "rebating" were everyday affairs. And quite similar conditions applied in life insurance too.

As a result, casualties among the insurers themselves occurred. Some died overnight and many large companies were built over the graves of deceased competitors. Reinsurance was the soft method used to avoid bankruptcy—it sounded better, smelled sweeter, avoided lawsuits, and saved attorneys' fees, court costs, and flowers. These were the catch-as-catch-can days of the business and only the strongest survived. But now things have changed; insurance has become a profession, and we find national and State associations of agents bound together by high standards of efficiency and business morality. The 1,000 members of your own association are now writing, fairly and squarely, probably four-fifths of all the fire and casualty premiums in the State.

And look at the modern tools you agents have to work with—fire policies with extended coverage; liability and burglary protection added to your dwelling contracts; casualty policies which cover everything from A to Z in a single document; accident and health policies with medical, surgical, and hospital aid; homeowners' and commercial package policies covering fire, public and employee liability, theft and risks of every sort; and bankers' blanket bonds covering risks formerly insured under half a dozen separate policies—and at reduced rates too. All these coverage extensions have so increased the demand that today no sensible man will run a business, build a building, drive a car, or even walk on the street without insurance protection. Everybody wants it—and so all you agents have to do to increase your production is to get out and call on 15 prospects a day. That was the success formula 50 years ago—and it's a safe bet that easy office chairs cause insurance agents (present company excepted, of course), to lose more new business today than wine, women, and song all put together.

When you stop to think that the total property insurance premiums right here in Michigan are now running over $670 million per year; that our State's automobile coverage premiums alone were over $205 million in 1955; that our population is increasing at an astounding rate, and also our building of homes and factories and schools and highways, you can form some conception of the unlimited opportunities for you insurance men to participate in this ever-increasing prosperity and at the same time render an ever-increasing service to the public.

And now let us take a broader look to include American business as a whole and its prospects and promises for tomorrow.

You and I are living in the grandest country in the world. You don't have to be even brilliant to make a good living here. All you have to do is to use your God-given brains and follow the simple formula of thrift, hard work, and old-fashioned honesty. Money used to do all the talking, but now it whispers reverently in the presence of brains. Henry Ford had a good idea, but no money. He finally induced a few men who had money, to risk $28,000 of it to make more money by developing his idea. Thus, one man with brains, other men with risk capital, and a few good workmen, went into partnership and they all prospered—and in the process hundreds of thousands of other stockholders have since benefited and new jobs have been created for over 185,000 employees. His idea created new wealth, new business, and new jobs.

Here, and right in front of our eyes, is the American free-enterprise system at its best—a combination of capital and labor and brains—and through its countrywide operation, prosperity has been spread over millions of our people and we have become the richest and strongest nation on the earth. This broad spreading of business ownership, is one of the greatest achievements of our American system. Our thousands of corporations are now owned by over 8,60,000 stockholders, over half of whom are women. Anyone who has saved $100 can buy one or more shares in almost any corporation in America. The American Telephone & Telegraph alone is owned by nearly 1,500,000 stockholders with average holdings of only 42.1

shares. Critics attack our capitalistic system, but no one attacks the standards of living it provides—broadest ownership, highest wages, shortest hours, lowest prices, and greatest abundance of the good things of life. Away back in ancient times, Horace, the wise old philosopher, said, "If a better system is thine, impart it; if not, make use of mine." This is America's challenge to the world today.

One of our important blessings is the opportunity we all have to employ other men of outstanding ability to work for us. Of course, no man is rich enough to hire Harlow Curtis for example, as his employee—but he can indirectly accomplish this very result by investing some of his savings in General Motors stock. From that moment on Harlow Curtis is working for him, and he will receive his full share of the fruits of his labors. Most of the managers of our big corporations today were once poor men who saved their wages, bought their company's stock, and then worked like beavers to climb to the top. They won their high stations through thrift, hard work, and old-fashioned honesty. So when you spot some good business manager in whom you have great confidence, buy some stock in his company and get him working for you.

And don't let any politician tell you that our laboring men can't share in the prosperity of American business. All they have to do is to save their money and invest it wisely. Why, do you know that if the 1,058,000 railroad employees in America today (who are so frequently striking for higher wages) would just set aside $125 each, they could buy the controlling interest of the whole New York Central Railroad system—and if each would save just $125 a year for 5 years, they could buy the controlling interest of all the railroad systems from Chicago to the Atlantic seaboard. Or, as Ben Fairless tells us, if the 223,000 employees of the United States Steel Corp., who have struck 5 times since World War II, would just set aside $20 a week they could buy the controlling interest of the whole corporation in less than 7 years' time.

Right here and now in America, we have an economic system that beats socialism and communism a mile, where the workers themselves can own and control their own corporations—and do it without a bloody revolution, or any change whatever in government. All our workers have to do is to save their money and buy the corporations they want to own. They could then fire their present bosses, elect their own boards of directors, and raise their wages whenever they liked. Perhaps they would then be surprised to learn that their real employers were not their bosses at all, but the customers of their corporations—and if their costs ran up too high, it wouldn't be long before they would lose first their customers, then their jobs, and finally their investments, too. Corporations need manual labor all right, but they can't prosper unless they have management brains to run them.

And think of the promising growth that lies ahead of us. Since World War II, over $145 billion have been invested in new plants and equipment—and this pace is still continuing. Look at the new insurance business there. This means that our most powerful businessmen are betting their billions that America's future is going to be prosperous. This big capital investment out of somebodys' savings is the chief cause of the constant advance in the earning power of labor. Without it, labor would be at a standstill. More plants mean more production—more production, more jobs—more jobs, more income—and more income, more demands for still more goods. Expansion feeds on itself. And as we are producing new goods, we are also producing new customers to buy them at the rate of 11,000 new babies per day (or 4 million per year)—and more people mean more business. Surely that's good news for our candymakers, for it doesn't take much sales talk to sell candy to babies.

And look at the new products that are constantly coming on the market and the new jobs being created to make and sell them—orlon and dacron, vitamins and wonder drugs, synthetic rubber and electric batteries charged by the sun—to say nothing of plastics, electronics, aeronautics, and many other great fields of industry hardly yet scratched on the surface. And then recall that 40 percent of all the products on the market today were never even heard of 50 years ago—when even I was young. General Electric now hires over 45,000 new people making products which didn't exist 11 years ago—and 81 percent of RCA's present billion-dollar-a-year business is in products that didn't exist even 10 years ago—when even you were young.

But, of course, American business has many problems. Red lights are always flashing and it takes a fast thinking businessman to know when to step on the gas and when to step on the brakes. All these tremendous investments in new plants and equipment are speculations with investors' money—to produce more goods and produce them cheaper. This program, however, keeps us constantly exposed to overproduction, and overproduction causes more business failures than any other single cause. Right now, there are about $31 billion of installment purchases outstanding (over twice as much as 10 years ago) and this just about covers the excess goods produced over and above what the people could buy and pay for. Does this show overproduction by producers or over extravagance by consumers—or both? Many people nowadays don't even get the installments paid on the old car, before they buy a new one. Some don't even ask the price of goods—all they want to know is, "How much a month?" I heard of one young husband who cheerfully said to his wife: "Mary, dear—one more payment and the baby is ours."

Now, we all know that prosperity is with us when there is a constant flow of money from industry to consumer and from consumer to industry. Depression is with us when consumers stop buying and industry shuts down—and that always happens when prices get so high that the people refuse to buy. If you could tell in advance just when that is going to happen, you could get rich overnight. The "stock market's" action of late would indicate that thousands of investors are already doing some guessing. I've seen times so bad that even the "dead beats" who never intended to pay, stopped buying. When workers force wage raise after wage raise upon the "boss" without proportionately increasing their production, they themselves increase the price of products—for labor alone usually constitutes from 60 to 80 percent of the entire production cost. Higher prices mean fewer sales—fewer sales mean fewer jobs—and finally there are no jobs at all—and sadly but surely we learn again the same old lesson—"You cannot help the wage earner by pulling down the wage payer." During the past 50 years, we have had 11 depressions, large and small—and they all succeeded periods of high wages and prosperity.

Mass production is fine, but only until the public's stomach is filled—and evidence of "indigestion" is prevalent in some lines today. Perhaps we should all "sit steady" for a while and not "rock the boat." If you produce an abnormal quantity of goods, you are skating on thin ice unless you can also produce an abnormal market to buy them. There comes a time, however—automation or no automation—when the increased cost of manufacturing and selling, swallows up the savings of mass producing—and when the smoke clears away, you show a big volume, but no profit—a profitless prosperity—and then your stockholders complain, your banker calls your loans, your workers are laid off, and you have a depression all by yourself. Too bad—but there must have been some poor thinking somewhere in your organization.

Another big problem that is always with us in competition. Statisticians tell us that only 5 businessmen in 100 are what we term successful; that the average life of manufacturing concerns is 7 years, and of retail stores 7.1 years; and that nearly 50 percent of all corporations on the average don't make a dollar of profit.

Phonograph manufacturers were once smothered in luxury as a result of unheard-of prosperity, when some brilliant genius invented a radio and the Victor Co. passed its dividends and the rest went to the industrial hospital. Tanners used to brag, "There will always be a demand for sole leather as long as babies are born barefoot"; but rubber soles are now coming strong and babies' feet are still born bare. Oil is fighting coal to heat the country and electricity is fighting ice to cool it; and now gas makes a bid to monopolize the whole show by producing both heat and cold. Waterpower is fighting steampower, plastic is fighting glass, steel is fighting wood, cement is fighting steel, lumber is fighting cement, and Celotex is giving lumber the greatest fight of its long and honorable career.

You just get one good product started when somebody thinks up a better one, or a substitute that is cheaper. These "thinkers" are the fellows who are raising the devil with business, and the only thing to do is to follow the advice of the Scotchman, "If you can't beat 'em, join 'em," and do some scientific thinking for ourselves.

And, worst of all, there is inflation, which pushes prices up and the value of money down. We have too much of it now, and George Humphrey warns us that if we don't slow up we will all have curly hair. I agree with Mr. Humphrey that our greatest economic problem of the day is the defense of the dollar. Since the 1930's Congress has created many controls to prevent a bad depression; but what has it done to prevent a bad inflation, which is far more serious? Depression can hurt many of us, but inflation can ruin practically all of us. Certainly it is time for our political leaders, our labor leaders, and our industrial leaders to read the handwriting on the wall and take the necessary action to stop this wage-price spiral and keep America strong.

Our Government started this inflation when it took us off the gold standard in 1933 and put us on a "tax, spend, and elect" inflation program, and then started its pump-priming and spending sprees. As a result, our dollar is now worth 52 cents and is still going down. There are many ways, however, by which the Government could now check inflation and help put us back on the straight and narrow path:

Let it get out of thousands of business activities and turn this business back to private enterprise;

Let it carry out the Hoover recommendations and reduce operating expenses $4 billion or $5 billion a year;

Let it stop granting income-tax exemption or favoritism to co-ops and business associations of every sort which compete against taxpaying corporations (if democracy means anything, it means tax equality for all—somehow or other we resent paying more taxes to make up for what they don't pay); and

Let the Government get out of the give-away business and stick exclusively to the business of governing our people.

But in spite of all our problems, looking ahead 20 years, we can see greatly enlarged production over what we have today. Where will it all come from? From capital and labor and brains, with ever-improving cooperation between all three of them.

Close cooperation is the key to our economic progress, because these three production forces are dependent one upon the other. Capital can't get anywhere without labor and brains—and brains can't get anywhere without capital and labor. It is all very well for capital or labor to deny the power of brains and attribute all progress to itself, but did either ever stop to think that we can now telephone from Detroit to San Francisco not because of capital, and not because of labor, but because of the brains of Alexander Bell. These politicians who rant and rave against our big men and our big corporations always fail to tell you that they do increase jobs and hold down prices. How much higher would the cost of living be today but for mass-producing machinery?

And, yet, any sound-thinking laboring man can see that the advent of machinery has not been to the detriment of the man who toils but rather to his everlasting benefit. Machines do not reduce jobs when the decreased costs bring lower prices, they make more jobs for more people and permit higher wages. Fifty-seven years ago there were 29 million jobs in the United States and today there are nearly 63 million. The typewriter temporarily threw a lot of penmen out of work, but it now makes jobs for hundreds of thousans of stenographers. Thirty-seven years ago (before dial telephones had ever been heard of) the Bell System employed 131,000 operators, and today it employs over 232,000. Livery stables used to employ 100,000 men, but automobiles (which put them out of business) now make jobs for over 4 million. In 1940 General Motors employed 258,000 people and 17 years later is now employing over 617,000.

But don't forget that capital also plays a star part in this dramatic story because it takes from $8,000 to $10,000 of somebody's actual money investment in plant and equipment for every worker's job. We have more capital investment now than ever before, and with it all more plants, more products, more jobs, and higher wages.

Today we have more automobiles, more telephones, radios, and a host of other products in America alone, than in all the rest of the world combined. We are told that we can now put 163 million people on the road at one time—with all the back seats empty. And this reminds me of the minister who said we should sing hymns while driving our automobiles. At 50 miles an hour we should sing Highways Are Happy Ways; at 70 miles an hour, When the Roll Is Called Up Yonder, I'll Be There; and at 90 miles an hour, Lord, I'm Coming Home.

But the more we study the more we come to see that scientific research (which only brains can perform) is the chief discoverer of all these new products and our greatest insurance of continuing prosperity.

The half has never yet been told about the great blessings which research has brought to mankind. George Goethals figured out the Panama Canal and made two oceans one. Otis thought out the elevator and made practicable our 80-story buildings of today and the concentration of millions of people upon a few acres of ground. Stevenson developed the locomotive and gave us railroads—one of our greatest job producers and distributors of wealth. Faraday searched and found the theory of electromagnetic induction, and today we have our great electrical industry spreading light and power and comfort to the peoples of all the earth. And Thomas A. Edison, the noblest Roman of them all, (who started his work here in Michigan) spent a long life in laborious experiment, succeeding here and failing there, searching, ever searching to find new blessings for mankind—plodding ever onward into dark and strange unchartered fields with an inspiration in his heart and a lantern in his hand. These great men of science have rendered as beneficial service to the world as all of the statesmen of their times.

And right here, let me make a suggestion for the benefit of our young men who are just launching out on the rough seas of American business. Big successes always come from a succession of little ones. Every young man should learn, first of all, that neither capital nor labor nor scientific research ever has or ever will develop a substitute for personal courage. Obstacles appear at every turn in the road—and obstacles are things to test the stuff we are made of. You can't win all the time in any line of endeavor. The best baseball team in the world loses from 50 to 60 games a season. Frank Woolworth worked hard to save his first $50 and then saw 3 of his first 5 chain stores absolutely fail. Cyrus H. K. Curtis lost over $800,000 on the Saturday Evening Post before he could make it pay a single dollar of profit. Du Pont worked 11 years and spent $27 million before the first pound of nylon was sold. Frank Munsey's remarkably successful career after repeated failures, might be tersely described as 40 failures, 40 successes, 40 millions. Abraham Lincoln suffered one failure after another—was badly defeated in 5 different elections—and finally became our country's greatest man. Courage is the first essential of the successful businessman.

And now, Mr. Chairman, just one more thought and I am through. Our own experience has proved that it is free enterprise, and not government, that makes America grow and prosper. And yet, we find in our country today a bloc of so-called liberals who are constantly fighting to promote Government ownership—and they will never be happy until every industry, every public utility, steel plant, and factory of every sort is owned and run by the Government. And all this—in spite of the fact that history records not one single case where government planning ever raised the standards of living of any people.

We know that there is more danger in big government than in big business—that big government always means big bureaucracy and big waste. And we also know that the welfare of our country rests on economic grounds; that when business prospers, everybody prospers; that any law that hurts business, hurts everybody; and that the best friend of the people is not the politician, nor the Government—but the businessmen of America, large and small, in every city and village and town, whose success or failure casts a profound influence upon every job, every school, every family, and every home in the whole United States. Strangle business and you strangle everybody, including the Government.

It is free enterprise that builds our cities, bridges our rivers, erects our skyscrapers and our schools and our churches, promotes our industries, furnishes our jobs, and passes prosperity around—and it is free enterprise, not Government, that gives every man a chance to rise and win his share of God's blessings to mankind.

And so, as good Americans who love our country and want to pass on its blessings to the generations yet to come, let us exert our best efforts to support those particular leaders in Washington today who are dedicated to the constructive, patriotic cause to preserve for America, free enterprise for our people, and efficiency, solvency, and morality for our Government. Thus will our good old Ship of State sail proudly on—in good times and in bad times—safely and surely—to ever-enlarging strength and freedom and progress.

Labor Investigation

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 26, 1957

Mr. JOHNSON of Texas. Mr. President, a select Senate committee headed by our highly respected colleague, the Senator from Arkansas [Mr. McCLELLAN], opened its hearings this morning into improper practices in the field of labor-management relations. It is safe to say that this is one of the most important investigations the Senate has undertaken in recent years, and is one that will be welcomed by the American people.

The select committee will perform a vitally important purpose. It is thus doubly important that it be one which commands our respect.

An editorial in the Baltimore Sun this morning sums up very well the background of the investigation. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LABOR INVESTIGATION

Eight Senators especially designated by their colleagues and operating under a revised (some might even say a reformed) set of rules, will open today a committee investigation bound to be of importance. This is the examination into labor racketeering by the select committee under Senator JOHN L. MCCLELLAN. Other Democratic committee members include the former judge, ERVIN, of South Carolina, MCNAMARA, a labor man from Michigan, KENNEDY, the impressive (and some say presidential-looking) gentleman from Massachusetts. The Republicans are MCCARTHY, who is not unknown, MUNDT, IVES, an Eisenhower-type Republican and labor expert from New York, and GOLDWATER, rightwinger from Arizona.

The committee will be operating under a set of rules derived from those adopted by the standing subcommittee on investigations at the time Senator MCCLELLAN took over its leadership from Senator MCCARTHY. Counsel for the committee is Robert F. Kennedy, brother of the Massachusetts Senator and, though a young man, a veteran of the congressional investigation. The rules aim to keep the control of the hearings in the hands of the Senators (where it belongs); but to maintain the rights of witnesses in fair balance against the right of the community to information as a basis of possible legislation.

Thus witnesses will be permitted to submit questions to be put (if the committee agrees) by the chairman to other witnesses. There will be safeguards against one-man committee hearings and closed sessions. The Republicans will have power to call a committee meeting if reluctance should develop in the Democratic delegation. A person considering himself damaged by committee testimony may be allowed to appear or to file a sworn statement in his own behalf.

The committee's personnel, the Senate's special statement of its jurisdiction, its rules and the business which will engage it all assure maximum public attention to its work. One of the best things about the outlook is

that the legitimate labor movement, speaking through AFL–CIO President Meany, has already expressed approval. A thorough investigation, firmly but fairly pressed, could purge the labor movement of excrescences. It could also remind a public somewhat confused by certain recent investigating tactics how useful the congressional investigation really is as an instrument of free and responsible government.

Arms Aids Harms United States Aims in Asia

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 26, 1957

Mr. HUMPHREY. Mr. President, the distinguished former Ambassador to India, Mr. Chester Bowles, is currently in the midst of a visit which is taking him to India, Pakistan, Afghanistan, the Soviet Union, and Western Europe. I am sure that many Members of Congress have been following his reports, which have appeared from time to time in Washington and New York newspapers.

In a recent issue of the Washington Post and Times Herald there is a report from Afghanistan which I believe is worthy of special attention. Mr. Bowles discusses the disrupting effect on regional controversies of American-arms aid in the Middle East and Southeast Asia. He proposes that American diplomacy attempt to negotiate a general moratorium on arms traffic in both the Middle East and Southeast Asia. Similar suggestions have recently been made in testimony before the Senate Subcommittee on Disarmament. At various times during the past year, and as recently as my floor speech on the Middle East on February 11, I have ventured similar suggestions.

I ask unanimous consent that the text of Mr. Bowles' article be printed in the Appendix of the RECORD.

Let me point out that the article is very germane to our present discussion of the Middle East resolution. The article is in the form of a dispatch from Kabul, Afghanistan, an area in the Middle East where Mr. Bowles has visited.

I suggest that before the Senate votes on the Middle East resolution, all Senators give careful attention to the observations made by Mr. Bowles as a means of better acquainting ourselves with all of the meaning and possible application of the pending joint resolution.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARMS AID HARMS UNITED STATES AIMS IN ASIA

(EDITOR'S NOTE.—Chester Bowles currently is on a 10-week trip to India, Pakistan, Afghanistan, Russia, Poland, Yugoslavia, and Germany. This is another in a series of reports by him. Bowles has served as head of the Office of Price Administration, Governor of Connecticut, and Ambassador to India. He is the author of several books, including The New Dimensions of Peace, American Politics in a Revolutionary World, Africa's Challenge to America, and Ambassador's Report.)

(By Chester Bowles)

KABUL, AFGHANISTAN.—Tomorrow we fly in a Soviet plane over the Hindu Kush Mountains to Tashkent, the showplace of Soviet Central Asia.

Behind us we leave the turbulent Indian subcontinent, the political center of the vast area of Asia, Africa, and the Middle East, whose future course will probably determine the power balance between the nations of the Atlantic community and the Communist world.

Historically Afghanistan is not so much a nation as a passage—a passage from Central Asia to the lush valleys of the Indus and the Ganges, where invaders hoped to secure not only riches but the power to control one-fifth of the human race.

We went overland from Peshawar, last citadel of the British Empire in the northwest frontier province, to Kabul, capital of Afghanistan. It took 14 hours over some of the most mountainous roads I have ever traveled. Our car broke down at the Khyber Pass. But we were lucky. The jeep station wagon of the United States courier who carries the diplomatic pouch with State Department documents came by on its regular schedule to Kabul and gave us a lift.

ONLY 12 MILES AN HOUR

We averaged 12 miles an hour for 180 miles over bumpy, almost impassable roads, across riverbeds, up mountains above the snow lines and down into deep valleys. We followed in reverse the trail of the Aryans, Darius and his Persians, Alexander the Great, Genghis Khan, Tamerlane, the Pathans and the Moghuls, who in ages past fought their way through the Khyber Pass to the promised land to the south.

In the last two centuries the threat from the north has come from Russia, first from the Russia of the Czars and then from the Russia of the Communists. Every mile between the Khyber Pass and Kabul is marked by forts, some built more than 1,000 years ago, others only very recently.

In the pass itself we saw many plaques carved in rock commemorating British and Indian regiments for their role in three Afghan wars that were fought to block Russian expansion south—the Khyber Rifles, the Fifth Punjab Infantry, the Third Gurkhas, the Maratta Light Infantry, and others. Now British power has departed, but the struggle to control this gateway to South Asia continues in new forms.

When we reached snow-covered Kabul the incredibly rough road suddenly merged into broad, smooth paved streets. They were recently paved by the Russians. A young Afghan we met at an inn when we stopped for tea along the way told us about other expanding Russian projects. "There are too many Russians here," the young man said thoughtfully.

AMERICANS THERE ALSO

There are Americans here, too, and some of our projects—the Helmand River development undertaken by Morris-Knudsen, the American engineering firm, on contract with the Afghan Government—are promising. Through the International Cooperation Administration, the University of Wyoming and Teachers College at Columbia are helping to reorganize the education system.

Unfortunately these earnest American efforts to help Afghanistan maintain its independence are increasingly crippled by our policies in south Asia and the Middle East. Our stepped-up shipments of arms to Pakistan which were designed to keep Soviet military power behind its borders are in reality opening the doors for Soviet economic and political penetration on a massive scale.

Although both Pakistan and Afghanistan are Muslim states, they are at least as suspicious and fearful of each other as are India and Pakistan. When we move into a complex situation of this kind to send a flood of the most modern arms to one country, we antagonize the others, increase the divisions among them all, and upset the balance of power in the entire region.

Most Pakistanis welcome these arms not because they fear a Russian attack but because their newly created power strengthens Pakistan's hand in her continuing conflict with her immediate neighbors, India and Afghanistan.

This leads the latter two nations to turn more of their own scarce resources into defense.

PLAYS INTO RUSSIAN HANDS

This plays directly into the hands of the Russians. To help match the arms we gave Pakistan, Moscow offered modern arms to the Afghans and their offer was accepted. No one knows the extent of the shipments, but they are substantial.

Taking further advantage of the Afghans' fears and needs, Moscow then offered an economic assistance loan of over $100 million. This is a huge sum for such a thinly populated country. On a per capita basis it is equivalent to a loan to India of $4.5 billion.

In India the Soviet approach is similar although as yet not fully developed. Soviet economic aid to India is now in the neighborhood of $220 million. Soviet military aid has so far been refused.

Yet Indians say that Marshal Zhukov, on tour there, is now stressing the inability of the Indian Army with its World War II equipment to stand up against the well-equipped Pakistani divisions. Whether the Indians will follow the Afghans into an arms agreement with the Soviet Union is anybody's guess.

India's opposition to communism is clear to anyone who knows the present Indian leadership. My talks this week with Prime Minister Prince Da'ud, Foreign Minister Naim, and other Afghan officials convinced me than Afghanistan, too, is determined to maintain its independence. Yet fear, whether reasonable or unreasonable, is a powerful force, and these two nations are afraid.

INDIA MUST DIVERT FUNDS

Already the developing power of the American-equipped Pakistan army and air force has frightened the Indians into spending $100 million of their dwindling foreign exchange to purchase comparable weapons at regular prices from Britain and France. This meant a diversion from badly needed economic development projects of twice the sum the United States gave India in economic assistance in 1956.

The immediate Russian threat should not be exaggerated. The Soviet is not about to take over Afghanistan, and the Afghans are a vigorous people with plenty of indigenous resistance to communism. Nor is India in immediate danger. But America's overemphasis on military arms in the whole region is facilitating the long-run Russian aims.

Already Afghanistan's oil comes over the mountains from the U. S. S. R. to Kabul. Approximately 50 percent of its trade is with the Russians. Five hundred Russian technicians, diplomats, and military emissaries are here, and many of them are able to speak to the Afghans in their own languages.

Our narrow military focus is particularly ironic. For in arming one side in the Pakistan-Afghanistan-Indian regional conflict we are doing what we rightly criticized Russia for doing in Egypt. In that case, Israel, frightened by the flood of Soviet arms, suddenly struck out.

Despite my deep misgivings about current American policies I have voiced no public criticisms on this trip. Frequently I have

been asked to express my views on American foreign policy. But in America I have heard foreigners gain a passing popularity by attacking their own country from afar. American policies are sufficiently unpopular here to make it easy for one to gain popularity this way. But I have resolved to save my views for home consumption where they might do some good.

EMBARGO IS SUGGESTED

In this letter home I would however, like to add to my criticisms a constructive suggestion. The way out of the dilemma is, I believe, this: A prompt proposal in the United Nations for an embargo or moratorium by America, the Soviet Union and all others or the shipment of arms to both the Middle East and the Indian subcontinent for a period of years.

Such an embargo would check the future flow of Soviet arms to Egypt, Syria, and Afghanistan. It would relieve Israel of the terrible pressures which led her last fall to risk a preventive war.

In return for these very substantial gains we would forego arms shipments into Pakistan, Iran and Iraq. (Turkey, as a member of NATO, would not, I should think, come within such an agreement.)

Only by a bold move of this kind can we put a stop to the arms race between the neighbors of this strategic subcontinent, as well as of the Middle East, and encourage them all to apply their energy and resources to their greatest need, the elimination of poverty, disease, and ignorance among their people.

From my talks with Pakistanis, I believe that such a moratorium, if vigorously pressed by us, would be acceptable, particularly if some of the masive aid which now goes to them as guns, tanks, and jets would then go to speed their economic and social progress.

We must soon make some such bold step, for time in South Asia and the Middle East is steadily running out.

Congratulations, Miss Willis

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial taken from the Camden (S. C.) Chronicle, February 22.

Miss Willis is a native of the Fifth Congressional District of South Carolina, and has brought many honors to our State, as the editorial will show. She exemplifies in every way the graciousness, modesty, and all the other attributes of a young lady, and I deem it a privilege to join with thousands of others in honoring her with Carolyn Willis Day:

CONGRATULATIONS, MISS WILLIS

Carolyn Willis, of Chesterfield, S. C., "Miss Everything," has, for the past 2 or 3 years, been something of a one-woman ambassador of good will for the State, and the many honors bestowed upon her during Chesterfield's Carolyn Willis Day yesterday were most deserving.

The vivacious little Carolyn won the first of her many and varying titles in 1953 when she was judged the best appearing majorette of South Carolina. Since then she blazed her name across the Nation's press with the following titles:

Miss Majorette of America, Miss International Television, Miss South, Carolinas' Carrousel Queen, National Miss Majorette, first runner-up Miss Grand Bahama Island, Miss Majorette of South Carolina, 1954, Miss Majorette of South Carolina, 1955, and Best Appearing Majorette of South Carolina in 1953 and 1954.

She has been star guest of honor at three national conventions: (1) American Legion convention, (2) Vets of Foreign Wars convention, and (3) Lions International convention.

Last year the pretty little brunette had a beautiful new variety of camellia named for her. And now she's going to Hollywood and, we suspect, to a lucrative job in the movie industry.

Thank you, Miss Willis. South Carolina owes you much. The very best of luck in your future sojourns.

Michigan and Wheat Moisture Content

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks, I wish to include herewith a letter dated February 21 which I received from Mr. H. M. Brown, assistant professor in the department of farm crops, College of Agriculture, Michigan State University, East Lansing.

Professor Brown sets forth objections to proposed changes in grain grading standards which concern lowering wheat moisture content from 14.0 percent to 13.5 percent. Because of circumstances of climate characteristic of Michigan, this ruling would work great hardship on Michigan wheat farmers. As Professor Brown indicates, Michigan wheat farmers will be able to meet these standards only with great difficulty and by hazarding their entire crops.

While I assume that grain standards are established only after careful study and investigation, I nevertheless strongly feel that national regulations ought to make due allowance for significant regional production variables. Professor Brown's letter will indicate the importance of such considerations:

MICHIGAN STATE UNIVERSITY,
DEPARTMENT OF FARM CROPS,
East Lansing, February 21, 1957.

Hon. CHARLES E. CHAMBERLAIN,
Representative from Michigan, House Office Building, Washington, D. C.

DEAR REPRESENTATIVE CHAMBERLAIN: Due to your interest in Michigan wheat growers and the wheat situation in Michigan I am presenting to you our attitude with regard to one of the proposed changes in wheat grading standards. The proposed change has to do with lowering wheat moisture content from 14 percent to 13.5 percent. This reduction is certain to cause considerable loss to our Michigan farmers, even though they exercise great care in the harvesting and subsequent handling of the crop.

May I call to your attention that Michigan weather is very uncertain through the harvesting period. This means that while it might be and has been possible to get wheat harvested with the moisture down to 14 percent, or slightly under, there would be many acres which could not be harvested as low as 13.5 percent moisture without lowering other quality factors. Wheat, if handled properly, has been kept satisfactorily when its moisture content has been 14 percent to 13.8 percent moisture. Under the proposed change all of this would grade "tough" with the consequent loss of income to the farmer.

Experience has shown that, if our farmers try to meet the lower moisture requirement by delay in harvesting and/or by shortening the harvesting time during the day, there is great likelihood of having 3 other adverse conditions occur, 2 of them fully as serious in their effect on wheat quality as the moisture content between 13.5 percent and 14 percent.

I refer to drop in test weight of mature grain while it stands in the field exposed to rains or heavy dews. This condition is not met with on the Great Plains but is very real in Michigan.

A second condition, applicable primarily to our white wheat, is that periods of wet weather with high humidity after the grain is ripe, has induced sprouting to a detrimental extent. This is not limited only to our white wheats but is more pronounced in our white wheats. This is a condition which can easily be aggravated by delaying harvest to meet a needlessly low moisture requirement.

The third adverse condition, which is certain to be met by many farmers delaying wheat harvest to meet the lower moisture requirement, is that wheat harvest will interfere with the harvesting of spring sown barley and oats, both of which are found on many Michigan farms along with wheat.

For these reasons we are opposed to a lowering of the moisture requirement from 14 percent to 13.5 percent.

Enclosed is a copy of an extension folder F-134: Prevent Damage to Stored Wheat. On pages 3 and 4 are our comments on moisture content.

It may be possible that the grading factors for some classes of wheat should be changed from what they have been, but we think that the moisture grading factor for soft white winter and soft red winter, the classes which predominate in the North Central and Northeastern United States, should not be lowered.

Thank you for giving these suggestions your earnest consideration before final action is taken by the Grain Division of the Agricultural Marketing Service and by Congress.

Very truly yours,

H. M. BROWN,
Assistant Professor.

Dear Mark

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. ROGERS of Florida. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I would like to include the following editorial from the Fort Lauderdale Daily News, by Mr. Jack Gore. Mr. Gore has been one of Florida's and the Nation's outstanding editorial writers and has received many awards for his fine editorials on democracy and citizenship. I particularly would like to call to the attention of the membership of the House the editorial

entitled "Dear Mark," which I think sets forth some of the basic tenets of good citizenship which are so important today:

DEAR MARK

Mr. MARK SNARSKY,
Edgewood School,
Fort Lauderdale, Fla.

DEAR MARK: This week, in a very intelligent and thoughtful letter from a 9-year-old boy, you asked if I could please take time to explain to you and your classmates the meaning of good citizenship.

You wrote that all during this school year your good citizenship class had been trying to be good citizens. You pointed out that the class had elected good citizenship club officers and that every boy and girl has reported deeds of kindness, thoughtfulness, unselfishness, and examples of living by the Golden Rule each day. You also wrote that at each class meeting committees on beautification, industry, loyalty, health, manners, honor, fair play, and safety make reports for the benefit of all your class members.

Apparently, Mark, you have been wondering if all these things you have been doing will help you to be a good citizen. And like all boys and girls you have an inspiring faith in the ability of older people to give you the right answers to the problems that children of your age have to meet these days.

I wish, Mark, that I did have the ability to tell you in clear, simple terms just what does go into the making of a good citizen. That, however, is quite a difficult job, for you see just about everybody in this world of ours today has his own ideas of what a good citizen should be. Nearly everybody likes to think of himself or herself as the ideal good citizen and since we all don't think the same way it's a little hard sometimes for people to agree on the things that do make a person a good citizen.

I think, however, most people will agree that for a person to be regarded as a real good citizen some things are absolutely necessary. Respect, for instance, is one quality every good citizen must possess. He must have respect for the rights of other citizens. He must have respect for the laws that govern us. Not only for the written laws without which there could be no civilization as we know it today, but also for the moral laws which God handed down to Moses a long, long time ago.

A good citizen must also have respect for himself and the God-given rights that have been conferred upon him. He must stand ready to demand that others respect his rights and, if necessary, he must be willing to fight and to shed his blood to protect not only his own rights but those of his fellow citizens.

As you study your history books, Mark, you will find that many times good citizens have had to fight and to shed their blood to protect their rights and their dignity as free citizens. Today, for instance, we celebrate the birthday of the first President America ever had. You have already learned something about George Washington in your studies and you no doubt already know the terrible struggle George Washington and his little army of brave citizens went through before they won their fight to create a Nation wherein the freedom and the dignity of the individual citizen would reign supreme.

We can never stop fighting, Mark, if we wish to keep our freedom and dignity as citizens of a great Nation. Even today there are men and forces which would like nothing better than to destroy our country and all it stands for. There are many, many nations in the world where freedom and dignity for the common citizen are nonexistent. The people of these nations would dearly love to have the rights that we have over here in America. But they have lost their rights and they face a terribly long and hard fight to even regain them again.

We are more fortunate. We won our fight for freedom almost 200 years ago, and now our battle is only to protect what we won. But don't think, Mark, that this is an easy task. In many ways we are already losing that fight as too many of our people, mostly adults who should know better, fail to understand that every good citizen has certain duties he must shoulder.

He must take an interest in his Government for the citizens of this country are the Government. Many people think today they can do nothing about changing things in their Government they don't like. But you will find, Mark, as you grow older, that the people who are always complaining about their Government are the ones who don't bother to go to the polls to vote; who seldom, if ever, write a letter to their representatives in Washington to make a complaint; and who are always too busy with their own personal affairs to take an active part in the many worthwhile projects that good citizens everywhere are constantly working on in an effort to make their own particular town or city a better place to live for themselves and for their children.

Your letter, Mark, indicates that even at the tender age of 9 you and your classmates are already learning what it takes to be a good citizen. Don't forget these lessons, Mark. Learn them well and as you grow older don't listen to those around you who might say you are a fool for trying to live up to the Golden Rule, for being respectful of your fellowman, his rights and his opinions, and for trying, in your own small way, to make this a better world.

We need boys and girls like you, Mark, to straighten out some of the terrible messes we older folks are going to leave you with. We need you, too, to remind us that out of the mouths of children sometimes come important truths we adults have forgotten.

You are young and you are strong, Mark, and your mind hasn't yet been twisted by the prejudices, the ill-will, the eternal hates, and the selfishness that afflict so many of us older but supposedly wiser citizens. You, and your classmates, are our hope for the future, Mark, and if you put to good use the lessons you are learning now, I have no fears about that future or of your place in it as a very good citizen.

JACK W. GORE, *Editor.*

Veterans' Hospital Situation in California

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. ENGLE. Mr. Speaker, Mr. Lewis S. Sloneker, director of the rehabilitation commission of the American Legion, department of California, appeared before the California congressional delegation on Monday afternoon, February 25, 1957, and gave one of the clearest statements regarding the veterans' hospital situation in California that I have seen.

The main point of his position is that the population in California has increased 63 percent in the last 10 years—from 8,500,000 in 1946 to 13,321,000 in 1956, with an equivalent increase in the veteran population in California and the number of veterans requiring hospital care of one kind and another.

Notwithstanding this phenomenal increase of veterans' hospital requirements, the allocation of hospital beds to California proceeds at a level equal to or somewhat less than the national average. Mr. Sloneker gives a point by point bill of particulars regarding veterans' needs in California.

Under unanimous consent, I make his excellent statement part of the RECORD:

Mr. Chairman and members of the California congressional delegation, we are pleased to again have this opportunity to meet with you, and we bring you greetings from the American Legion, department of California. As citizens of California and members of the American Legion, we are mutually interested with you in all the problems concerning the welfare of our State and its residents.

Today we wish to discuss with you some of the major problems of war veterans and their dependents in California. We feel qualified to do so because of our experience and background in the field of veterans' rehabilitation. Your earnest and sincere consideration of these problems will be appreciated.

Many veterans in California who are sick, broke, and badly in need of hospitalization and medical care are finding it most difficut, if at all able to find any place for such care. Some of them receive little or no medical care. Literally thousands of them eventually find their way to a State or county hospital. Those doing so almost without exception are there at the expense of the taxpayers of California. The expense for the care of veterans is part of the expense of war or the result of war. It should be shared by all of the taxpayers of all of the States in the Nation. A good example of what we are talking about is that 5,500 veterans are patients in California State hospitals. Over 400 veterans per month are admitted to the Los Angeles County General Hospital. This is exclusive of tuberculosis and neuropsychiatric cases. There are approximately 120 veterans per month committed to State mental hospitals from Los Angeles County alone. The number admitted to other county hospitals for treatment or commitment would be smaller but the percentage of the total patient load would be about the same.

It is true that the so-called waiting lists of the Veterans' Administration hospitals in California do not begin to show the need for additional hospital beds for veterans. Literally hundreds of telephone calls are made to the Veterans' Administration hospitals or medical clinics by private practicing physicians for the purpose of trying to get veteran patients in a Veterans' Administration hospital, who are turned down because no beds are available. This large number of veterans in need of hospitalization do not appear on the Veterans' Administration's waiting lists because no formal application (VA form 10–P–10) was made. Veterans hospitalized by reason of service-connected disabilities in State or other hospitals whose hospitalization is being paid by the Veterans' Administration do not show on the waiting lists, yet they do indicate a further need for Veterans' Administration beds. Every day there are hundreds of applicants for hospitalization who are given an appointment date for some time in the future to report to a Veterans' Administration hospital. In such cases they are not placed on the waiting list or if they are already on, they are removed. They are, in fact, waiting to be hospitalized, but are not recorded as waiting for a bed.

Any reasonable long-range planning of hospital beds for veterans in California is at least 10 years behind time. Ten years ago, almost to the day, we were here in meeting with our California congressional delegation,

thanking them for their part in having the Federal Government approve, in October 1946, the construction of a new 1,000-bed neuropsychiatric hospital for the San Francisco area. The rate of progress made toward the final construction of this hospital since then is deplorable. We are told that sometime in the near future bids will be called for. This means we will have to wait a minimum of at least 3 to 5 years longer before this hospital is constructed and made available to receive patients.

Some things that have happened during these past 10 years which have an important bearing on this subject are well known to each of you, but we feel they are worth reviewing at this time. The population in the State of California has increased by 63 percent, or, in other words, from 8,500,000 in 1946 to 13,321,000 in 1956. The Veterans' Administration's Chief Medical Director has stated to us that, insofar as California is concerned, about 1 out of every 6 people in our State are veterans, while about 1 out of every 7 in other States are veterans. In other words, there were, in 1946, 1,417,000, and, in 1956, there were 2,222,000 veterans in our State, an increase of 805,000. According to Veterans' Administration estimate, only 1,378,000 of our State's total veteran population were residents of California prior to entering service, leaving 844,000 who entered service from some other State.

The Federal Government has failed miserably to adequately provide sufficient hospital beds in California for this large veteran population increase. During this 10-year period 1 new 250-bed general medical and surgical Veterans' Administration hospital has been constructed at Fresno, 1 961-bed neuropsychiatric hospital has been constructed at Sepulveda, in San Fernando Valley. During this same period general medical and surgical hospital beds for veterans in California have been reduced by cancellation of contracts the Veterans' Administration had with other Government hospitals, as follows:

Mare Island Navy Hospital	250
Letterman General Army Hospital	175
U. S. Public Health Marine Hospital, San Francisco	50
Oak Knoll Navy Hospital	400
Pasadena regional hospitals	100
Long Beach Navy Hospital	400
Corona Navy Hospital	225
San Diego Navy Hospital	140
Total	1,740

Such action as this not only ignores the fact that all of these beds were needed and occupied by deserving veterans before they were done away with, but it further ignores the better than three-quarters of a million increase in veterans' population. We know of no other State where such conditions exist or such action has been taken.

The fact of the matter is that only three other States show an increased population today over and above the number that went into military service from their State. They are: Arizona, 5,000; Florida, 65,000; and Oregon, 2,000. Here we have a situation existing in California where there has not only been a much higher increase in number and percentagewise of veteran population than in any other State in the last 10 years and during this same period of time a reduction in hospital beds for veterans.

HOSPITAL BEDS PLANNED FOR THE FUTURE

In addition to the over-10-year plans for constructing a new 1,000-bed neuropsychiatric hospital for the San Francisco Bay area, there are plans to construct a new 500-bed general medical and surgical hospital at Martinez, Calif., to replace the present Veterans' Administration 712-bed general medical and surgical hospital in Oakland. Here again we are faced with another reduction of 212 general medical and surgical beds for veterans.

The Veterans' Administration will tell you as they have us, that the reason for this planned reduction is because their plans called for 250 of the 1,000-bed neuropsychiatric hospital planned for the San Francisco area, are to be general medical and surgical beds. This would leave 750 beds for neuropsychiatric patients. Most of the 250 general medical and surgical beds planned for this hospital would be needed for medical and surgical patients from among the neuropsychiatric patients in this hospital and their neighboring 1,400-bed neuropsychiatric hospital at Palo Alto. Apparently California is the only State which is continuously faced with an increase in veteran population and at the same time a reduction in the number of hospital beds for veterans.

Here is what the United States Department of Commerce, Bureau of Census, has to say about the increase in population between 1940 and 1950 of some of the heavier populated counties in the Oakland Veterans' Administration hospital territory:

County:	*Increase percentage*
Alameda	44.3
Contra Costa	197.6
Napa	63.5
Sacramento	62.7
San Joaquin	49.6
Solano	113.4
Stanislaus	69.9
Sutter	40.5
Yolo	29.2
Yuba	43.4

All experts are agreed that the veteran population in California increased at a higher percentage than the general civilian population during this 10-year period, and even at a higher rate subsequent to 1950. In spite of this, the Federal Government's plans call for a reduction of 212 beds for veterans in this area. If there is any doubt as to whether the 250 general medical and surgical beds planned for the new neuropsychiatric hospital to be constructed on the Stanford University grounds at Palo Alto, will be needed for veterans in that immediate area, assuming they would not all be needed for general medical and surgical cases among the neuropsychiatric patients, at this new hospital, and the present neuropsychiatric hospital at Palo Alto, the United States Census Bureau shows the following increases in population by counties during the period of 1940 to 1950:

County	*Increase percentage*
Monterey	63.5
San Mateo	110.8
Santa Clara	66.1
Santa Cruz	47.7

We cannot urge you too strongly to correct this situation and would like to suggest that you start immediate action to have the replacement hospital for Oakland be increased to 1,000 beds, 800 of which will be for general medical and surgical cases and 200 for use of intermediate, or perhaps more appropriate to say, for nursing and attendant care for long term chronic cases.

OTHER VETERANS' ADMINISTRATION HOSPITALS IN CALIFORNIA IN NEED OF REPAIRS OR REHABILITATION

Fort Miley Hospital, San Francisco: Fort Miley is long overdue for much needed repair.

Fresno Hospital: This hospital building is in excellent condition. There is a great need for the installation of an elevator in the empty elevator shaft already available.

Livermore and San Fernando Hospitals: These hospitals are in reasonably fair condition.

Long Beach Hospital: The first phase of the construction program to replace the badly deteriorated temporary construction, is progressing very satisfactorily.

Palo Alto Hospital: Practically nothing with the exception of emergency alterations and repairs, have been undertaken at this hospital since it was constructed in 1922. All buildings are in need of alterations and repairs. Some may have to be replaced.

Veterans' Administration Center, Los Angeles:

The new pathological wing under construction for the Wadsworth General Medical and Surgical Hospital at this center, is progressing satisfactorily. The building being used for hospital purposes is inadequate and should be used for long-term chronic cases in need of nursing and attendant care. A new 1,000-bed hospital should be constructed as a replacement for general medical cases. This center is badly in need of an administration building. Administration offices are housed in domiciliary barracks. An addition to the women's cottage for domiciliary care for women should be constructed. There are many, many other things that are badly needed at this center, as the report from the manager to the Chairman of the House Veterans' Affairs Committee will show.

We would like to again call to your attention that 85 beds for general medical and surgical cases are closed at the Wadsworth Hospital, for lack of funds.

Veterans' Administration regional office, Los Angeles:

For approximately 12 years, this regional office has been forced to operate in 2 separate and wide-apart locations. One location is in the old quonset hut temporary-type construction on Veterans' Administration property in West Los Angeles, known as the Douglas Building because it was constructed by the Federal Government for Douglas aircraft during World War II. The other location is some 12 or 14 miles distant in the Western Pacific Building, in downtown Los Angeles.

This divided operation is expensive, difficult to manage, and most unsatisfactory from every standpoint. It is reasonable to say that the added cost of this type of operation over this 12-year period has been sufficient to pay for constructing a permanent building on Veterans' Administration property in West Los Angeles, large enough to house the entire regional office. Some interesting figures on space and cost have been obtained for your information.

	Douglas Bldg.	Western Pacific Bldg.
Space:		
Gross square footage	123,300	151,834
Net square footage	105,415	141,539
Difference (nonusable corridor space)	[1] 17,885	[2] 10,295
Rental:		
Annual rental costs (1956)	[3]	$302,926.04
Average rent per square foot per year	None	2.023
Additional costs for upkeep (charged by VA center, includes all utilities, but not the cost of janitorial services or painting)	$140,088	None
Janitorial contract	18,576	None
Painters and laborers	6,077	----------
Total	164,741	302,926.04
Total, 1956	467,667.04	

[1] Los Angeles regional office pays additional costs involved in janitorial service and painting at the Douglas Bldg.
[2] No additional costs for janitorial service or painting in the Western Pacific Bldg. VA is not charged for nonusable space in the Western Pacific Bldg.
[3] None, VA owned.

As of February 19, 1957, the estimated cost to the Veterans' Administration for the past 10 years for the space at the Western Pacific Building is $3,585,777. This is based on an average of 169,540 square feet per year at an average cost of $2.115 per

square foot. The estimated cost for the upkeep, utilities, and other services for the Veterans' Administration owned Douglas Building, is estimated at $1,647,000 for the last 10 years, or a total cost for rental, upkeep, and other services for this divided regional office, for the last 10 years, is $5,232,777, to say nothing of the added cost of motor vehicles and travel necessary between the two buildings.

This divided operation has also added greatly to the cost for personnel. Working conditions are so unsatisfactory in the Douglas Building because of the inconveniences of noise, dirt, dust, poor ventilation, etc., that the turnover of employees is about 100 percent a year.

We are informed that the General Service Administration is interested in a proposal that a building be erected under lease purchase contract on Veterans' Administration property in west Los Angeles, which would include space for the regional office.

We highly recommend for efficiency and economy and a better convenience to all concerned, to use your best efforts to have a satisfactory building of permanent-type construction, constructed under a lease purchase contract on Veterans' Administration property in west Los Angeles with adequate space for this regional office.

VETERANS' HOME OF CALIFORNIA

Last year we told you of the need for Federal aid for capital outlay on a matched basis with State funds, for our veterans home. We also told you of the need and justification for the Veterans' Administration to pay the cost of transportation of bodies of veterans who die in the State Veterans' home on the same basis as it does for the bodies of those veterans who die in Veterans' Administration hospitals. We feel it important enough to repeat what we had to say to you on this subject last year.

A majority of States have established, and operate veterans' homes for domiliciary and/or hospital care of disabled war veterans. The Federal Government has recognized the assistance given by the States in caring for thousands of disabled war veterans through Federal-aid subsidies in part payment for the operating expense of maintaining veterans' homes.

The ever-increasing veteran population, eligible to our California Veterans' Home, has continuously required additional construction, modernization, additions and/or improvements of domiciliary, hospital, and auxiliary buildings. Financial assistance is required by California and several States in providing additional and planned facilities in relation to the veteran patient and member population.

Our State government has been very generous in maintaining and modernizing our California Veterans' Home. It is considered the finest in the land today. At present, there are 2,000 members, both male and female, in domiciliary, chronic, and convalescent, and hospital. Modernization and construction of new additions are presently underway. The overall plans call for accommodations to care for a maximum of 3,250 members.

Bills have been introduced and are now pending in the Congress which, if acted on favorably, would grant Federal aid subsidy to State veterans' homes for capital outlay, which would be in accordance with our Department and national mandates on this matter.

When a veteran dies in a Veterans' Administration hospital or domiciliary home, payment for transporting the body for burial to any place in the continental limits of the United States may be authorized. Veterans in our States veterans' home must meet Veterans' Administration requirements for hospital or domiciliary care. When they die, the next of kin or the State of California now have to pay for the transportation of their bodies to the place of burial.

We believe, and it is our recommendation, that provisions for payment by the Veterans' Administration for cost of transportation of the bodies of veterans who die in State veterans' homes be on identically the same basis as it is for the bodies of those veterans who die in Veterans' Administration hospitals. The Veterans' Administration advises that to do this will require legislation.

NEED FOR NATIONAL CEMETERY IN LOS ANGELES AREA

It is important and long overdue that we have a national cemetery in the Los Angeles area. We are again repeating what we had to say to you on this subject last year.

It is reliably estimated that there are over 818,000 veterans residing in Los Angeles County. There are well over a million veterans residing in the Los Angeles area. There are many next of kin from this area who cannot afford transportation to Golden Gate Cemetery, San Bruno, or Fort Rosecrans, San Diego, for the purpose of attending the funeral and/or burial of their loved ones, where it is the desire to bury them in a national cemetery. We know of no place in the United States with such heavy concentration of veterans where a national cemetery is not more closely situated. The Veterans' Administration cemetery in West Los Angeles is not available for burial of deceased servicemen or veterans who die outside of Veterans' Administration hospitals.

SURVIVORS OF DECEASED VETERANS CONFUSED AND DISAPPOINTED

We are very sorry to report the difficulty survivors of those killed while in active military service or of veterans who have died of service-incurred disabilities are having, because of some of the unreasonable restrictions in Servicemen's and Veterans' Survivors Benefits Act of 1956 (Public Law 881, 84th Cong.). It is not believed that the Congress intended, by the passage of this act, to take away benefits to which these survivors were entitled to and drawing prior to December 31, 1956. Many such survivors are, however, being hurt by having their benefits reduced because of applying and accepting what they thought and what the Veterans' Administration thought to be an increase over what they were previously receiving.

The many problems these survivors are faced with and the many problems the Veterans' Administration is faced with in trying to administer this law could come in for a very lengthy discussion. Just to cite 1 or 2 examples: A widow drawing death compensation and servicemen's indemnity insurance applies for benefits under Public Law 881. The Veterans' Administration checks the records and finds that under this new law the widow would be entitled to a higher payment of dependency and indemnity compensation than she is drawing, then make up a new award for payments under the new law. The widow receives her first check and then remarries. She is no longer entitled to anything. On the other hand, had she not elected to receive benefits under Public Law 881, all she would have lost by reason of her remarriage would have been her death compensation. She would have continued to draw her servicemen's indemnity insurance. This could amount to a loss up to $7,000 or $8,000.

A dependent mother drawing $75 per month death compensation, makes application for benefits under Public Law 881, may receive payment in the same amount, as this is the maximum. Assuming she has another son who was disabled while in military service and he dies, the mother is the beneficiary for national service life insurance. This may cause this almost destitute mother who has lost 2 sons as the result of military service in time of war, to lose her death compensation because under the new law this insurance would be counted as income.

There is a provision of this law that makes an election once made irrevocable. What possible justification is there for this? It is contrary to all prior laws and Veterans' Administration regulations granting benefits to veterans and the dependents of those who have died. Regulations now in effect permit the Veterans' Administration where two benefits are payable, such as, service connected compensation or pension, to pay the one offering the most. The same right is given those in receipt of retirement pay to elect and reelect. How can we possibly justify taking advantage of aged and dependent parents and their lack of understanding and penalize them by reducing indemnity compensation payments if later they become entitled to national service life insurance, part III, social security, and so forth? While speaking of dependent parents, what justification is there for considering payments of national service life insurance and Government life insurance for which premiums were paid as income? Why penalize a widow struggling to live on meager death compensation and servicemen's indemnity for electing to receive the few dollars more of servicemen's indemnity payments and then losing it all on remarriage, resulting in her losing probably thousands of dollars of servicemen's indemnity to which if she had not made the election, she would still be entitled?

How can we possibly justify a law that permits a situation which provides if a veteran dies on December 31, 1956, say of disability in combat, his widow is entitled to nothing; but the widow of another veteran who dies of the same disability on January 1, a day later, may be entitled to as high as $262 a month the rest of her life?

Post Office at Fort Mill

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article from the Fort Mill Times regarding delays in erecting new post office at Fort Mill:

I suppose nobody in Fort Mill was surprised last week when it was announced from Washington that plans for a new post office building in Fort Mill had been suspended. After all these years of Government promises and subsequent letdowns, Fort Mill folk have grown accustomed to disappointment at the hands of the Post Office Department.

Probably most citizens hereabouts are familiar with the Fort Mill post office story. But possibly there are a few who are not; so briefly, I'll rehash it:

Back in the thirties almost every city of Fort Mill's size in the United States was the recipient of a handsome new post office. This was true even in South Carolina and York County. Rock Hill, York, and Clover all received spacious new post office buildings.

About 1937 postal authorities agreed that the small building here which for many years had been rented for a post office was too small and its facilities inadequate. With typical Government slowness the Department set about in quest of a lot on which to erect a new office. Finally, a nice centrally located lot was secured from the late L. A. Harris. The deal was consummated in 1939

and for a time it looked as though the building actually would be erected. A service station that occupied the site was moved to another location. The start of construction seemed imminent.

But simultaneous with the drawing of the plans for our new post office, Hitler's plans for conquering the world were also taking shape. The war clouds rolled in. The announcement was made that the Government would erect no more post office buildings until a more propitious time. It was promised, however, that the local office would be one of the first to be built after the cessation of hostilities.

When peace came, talk of this city's new post office also came. Not only in Fort Mill, but from official sources in Washington. At regular intervals announcements would come out of Washington that the Budget Commission, the House Post Office and Civil Service Committee, the Senate Post Office Committee, the Post Office Department, etc., had authorized the expenditure of such-and-such an amount for a new post office in Fort Mill. The hopes of some local citizens would rise, only to be smothered out a short time later by the familiar postponement announcement.

I hesitate to state how many times these contradictory announcements have come out of Washington because they have been so numerous—possibly averaging once a year for the past decade.

Then the Post Office Department instituted its lease-purchase plan, whereby a private contractor would erect the building and the Department would lease it and pay for it over a 20-year period with a very low rate of interest on the contractor's investment.

A couple of years ago a delegation of Fort Mill citizens headed by Mayor Luther G. Patterson and Postmaster W. H. Nims went to Washington in an attempt to speed the building's erection. They were accorded a warm reception from South Carolina's Congressmen and Senators, and an equally cool one from postal officials.

Eventually it was agreed that a building costing $49,000 might be erected here under the terms of the lease-purchase plan. Many local citizens were of the opinion that this amount would not erect a postoffice that would be a credit to the community. But Postmaster Nims stated that it would build one so much larger and more adequate than the little rented room we now have, that he was happy over the prospects.

Architects were engaged to draw plans. They drew plans for a building that they estimated would cost around $50,000 and submitted them to postal officials in Washington. The local report is that officials of the Post Office Department in Washington, anxious for an excuse not to erect the building, placed an arbitrary figure on the plans as an estimated cost, said it was too much and abandoned the project.

All of this leaves us back where we started in 1937 with local postal employees trying to handle an ever-increasing volume of mail in the same cramped quarters that have been home to Fort Mill's postoffice for more than 40 years. If Fort Mill needed a new postoffice when it was first recommended two decades ago, how much more we need it today, considering our little city's steady growth.

If the string of broken promises and disappointments weren't so bitter it would remind one of the story of the council in a small town which unanimously passed the following resolution:

"*Resolved*, That Red River will erect a new town hall.

"*Resolved*, That the new town hall will be built of the materials which are salvaged from the old town hall.

"*Resolved*, That the old town hall must not be torn down until the new town hall is completed."

The Post Office Department may not have passed this resolution in connection with the construction of the Fort Mill Post Office. However, it has obtained the same results.

Cut Spending, Not Our Throats

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. ROGERS of Colorado. Mr. Speaker, under unanimous consent I include in the Appendix of the RECORD an excellent editorial that appeared in the Denver Post, Denver, Colo., of February 20, 1957.

The editorial is as follows:

CUT SPENDING, NOT OUR THROATS

If anyone wants to argue that taxes are too high and that Government spending should be reduced, we are willing and eager to listen. There are a lot of things we would like to buy if our tax bill were lower.

When the Government takes a dollar out of our pocket, it takes money we had hoped to spend on a refrigerator or a suit of clothes and says, "Uncle Sammy will spend this dollar for you—for public purposes. A few cents will go to buy weapons. A few to build roads. A few to bolster farm prices. A few for veterans benefits. A few to support the post office. A few to protect public health, stockpile minerals, build dams, aid the disabled, conduct atomic research, pay the expenses of Congress, guarantee home loans, improve fishing, help foreign countries strengthen their economies, help cities clear slums and build airports, pay interest on the United States debt, prosecute criminals, inspect coal mines, protect national forests from fire, maintain national parks, operate lighthouses, etc., etc., etc."

If taxes and Government spending are too high, the sensible way to economize is to hunt for expenditures which can be eliminated without doing any particular harm. We recommend this course to all tax complainers and hope they can come up with some good suggestions.

A less sensible way to try to reduce taxes and spending it to try to scare people into a belief that failure to ax the Federal budget will bring on a depression or inflation. This is the method Secretary of the Treasury Humphrey and ex-President Hoover have been using.

It has been echoed by scores of businessmen who have taken up the theme that because of Government spending the country is drifting toward bankruptcy.

The trouble with scare tactics is that they can upset business confidence, do more harm than good, and never reach the real problem of reducing Government spending at all. We had a brief demonstration of this the other day when Mr. Humphrey had to explain that, in spite of his previous statement about a hair-curling depression, he considers the country in good financial condition.

That second statement repaired some of the damage to business confidence and the stock market promptly staged a rally. Business Week magazine believes this scare talk warrants an admonition:

"Pull yourselves together, gentlemen. Button up those lips. You may be talking us into a lot of needless trouble, and some of your friends are beginning to worry about you."

Business Week takes the position we are in no danger of runaway inflation, there is no resemblance to 1929 at this time and the real cause of the strange statements that have been coming out of Washington is the frustration the Eisenhower administration feels in desiring to reduce spending without being able to discover how to do it.

Depression talk would be more easily excusable if all the economic statistics did not prove that the country has just had the 4 most prosperous years in its history—and that at a time of high Government spending.

It has just been announced that the gross national product in 1956—the total value of goods and services produced and performed by the American people—reached an alltime record of $412 billion. How Mr. Humphrey can talk about a hair-curling depression in the light of that performance is difficult to understand.

As much as we would like to see Government spending reduced, we believe it is entirely possible that big Federal budgets have contributed to the record business performance. Certainly, some Federal spending, such as aid to farmers, payments to veterans, and so forth, have helped maintain consumer purchasing power.

As Business Week puts it:

Whatever caused the 1929 collapse . . . it wasn't a rise in Federal spending of the sort that Humphrey and Hoover have been decrying.

This may be heresy among those who would like to reduce taxes by scaring people silly but it happens to be true and cannot be ignored.

Outdoor Advertising and the New Superhighways

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Printers Ink of January 24, 1957:

OUTDOOR ADVERTISING AND THE NEW SUPERHIGHWAYS

Outdoor advertising should be outlawed on the new Federal-State $50 billion road network, says Robert Moses, New York's parks and highways administrator.

In a widely discussed article in the December issue of Harper's magazine, Moses continues his long crusade against the outdoor medium. He writes in such vitriolic and exaggerated fashion that a patrician disdain toward all advertising is evident.

Advocating an amendment to the Federal law setting up the highway program in order to control billboards and advertising devices, he says: "We face the prospect of speedways built in gasoline gullies, obliterating scenery,

and confined between continuous rows of offensive advertising."

In his language Moses violates the good taste he is so concerned about with respect to the Nation's scenery. His article contains ridiculous exaggerations in such phrases as: "Continuous barricades of monstrous billboards." Nevertheless his acknowledged public service and the very violence of his opinions combine to get a hearing for his views. And, from his point of view, he evidently means there should be no outdoor advertising—not even along the highway connections that have a heavy and predominantly commercial function; that lead to and through urban areas; through thousands of miles of cities and business areas.

Moses ignores completely the contribution of advertising in general and of outdoor advertising specifically to our economic welfare. He also ignores the continuous and successful efforts made in recent years by the outdoor industry in voluntarily controlling their medium in terms of taste, crowding and location. He ignores the fact that the vast majority of American consumers do not share the opinion of the few who carry on a continuous esthetic crusade against outdoor advertising. Advertisers would hardly use a medium that, because of public objection, would redound against them. Incidentally, an American public that will accept in its living room, via television, a depiction of the gastronomical tract down which the aspirin tablets flow is again evidently not composed of esthetes of the Moses caliber.

There are several points that need to be made about Moses' proposal to ban by legislation outdoor advertising along the new highways. First, everyone in advertising—especially those allied with an advertising medium other than outdoor—should take the Moses proposal as a reflection on the whole advertising business. He recognizes no economic contribution of it, while his fundamental complaint is one that could be leveled at many other media.

Today the important job advertising has to do—and outdoor is an important segment of advertising as a whole—is to see that this Nation's productivity is consumed. Advertising today is a necessity as we seek to maintain prosperity in the face of communistic hopes that capitalism will collapse.

On the other hand, the outdoor-advertising industry, more than ever, has to exert vigilance, good taste and regard for minority opinion if it is to stave off legislation being pushed by a minority that evidently has a fanatical zeal in its makeup.

ELDRIDGE PETERSON,
Publisher.

The America We Lost

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1957

Mr. McDONOUGH. Mr. Speaker, some of our more modern historians and students of government may get a shock out of the following statement by Dr. Mario A. Pei, a naturalized citizen of the United States, a native of Italy, who fears that we are losing some of the precious things that made the United States the great Nation that it is.

Perhaps all of us could take a leaf from his book and benefit from his sound advice which comes from personal experience.

I recommend the following as good reading for any and all Americans:

THE AMERICA WE LOST

(Dr. Mario A. Pei, who came to this country from Italy in 1908, is an associate professor of romance philology at Columbia University in New York. He is the author of several distinguished books and numerous magazine articles. This article appeared in the Saturday Evening Post of May 31, 1952.)

When I first came to America, 44 years ago, I learned a new meaning of the word "liberty"—freedom from government.

I did not learn a new meaning for democracy. The European country from which I came, Italy, was at that time as democratic as America. It was a constitutional monarchy, with a parliament, free and frequent elections, lots of political parties and plenty of freedom of religion, speech, press, and assembly.

But my native country was government-ridden. A vast bureaucracy held it in its countless tentacles. Regardless of the party or coalition of parties that might be in power at the moment, the government was everywhere. Wherever one looked, one saw signs of the everpresent government—in the uniforms of numberless royal, rural, and municipal policemen, soldiers, officers, gold-braided functionaries of all sorts. You could not take a step without government intervention.

Many industries and businesses were government-owned and government-run—railroads, telegraphs, salt, and tobacco among them. No agreement, however trivial, was legal unless written on government-stamped paper. If you stepped out of the city into the country and came back with a ham, a loaf of bread, or a bottle of wine you had to stop at the internal-revenue barriers and pay duty to the government, and so did the farmers who brought in the city's food supply every morning. No business could be started or run without the official sanction of a hundred bureaucrats.

Young people did not dream of going into business for themselves; they dreamed of a modest but safe guovernment job, where they would have tenure, security, and a pitiful pension at the end of their plodding careers. There was grinding taxation to support the many government functions and the innumerable public servants. Everybody hated the government—not just the party in power, but the government itself. They had even coined a phrase, "It's raining—thief of a government!" as though even the evils of nature were the government's fault. Yet, I repeat, the country was democratically run, with all the trappings of a many-party system and all the freedoms of which we in America boast today.

America in those days made you open your lungs wide and inhale great gulps of freedom-laden air, for here was one additional freedom—freedom from government.

The Government was conspicuous by its very absence. There were no men in uniform, save occasional cops and firemen, no visible bureaucrats, no stifling restrictions, no Government monopolies. It was wonderful to get used to the American system: To learn that a contract was valid if written on the side of a house; that you could move not only from the city to the country but from State to State and never be asked what your business was or whether you had anything to declare; that you could open and conduct your own business, provided it was a legitimate one, without Government interference; that you could go from one end of the year to the other and never have contact with the National Government, save for the cheery postman who delivered your mail with a speed and efficiency unknown today; that there were no national taxes, save hidden excises and import duties that you did not even know you paid.

In that horse-and-buggy America, if you made an honest dollar, you could pocket it or spend it without having to figure what portion of it you "owed" the Government or what possible deductions you could allege against that Government's claims. You did not have to keep books and records of every bit of income and expenditure or run the risk of being called a liar and a cheat by someone in authority.

Above all, the national ideal was not the obscure security of a Government job, but the boundless opportunity that all Americans seemed to consider their birthright. Those same Americans loved their Government then. It was there to help, protect, and defend them, not to restrict, befuddle and harass them. At the same time, they did not look to the Government for a livelihood or for special privileges and handouts. They were independent men in the full sense of the word.

Foreign-born citizens have been watching with alarm the gradual Europeanization of America over the past 20 years. They have seen the growth of the familiar European-style government octopus, along with the vanishing of the American spirit of freedom and opportunity and its replacement by a breathless search for security that is doomed to defeat in advance in a world where nothing, not even life itself, is secure.

Far more than the native born, they are in a position to make comparisons. They see that America is fast becoming a 19th century model European country. They are asked to believe that this is progress. But they know from bitter experience that it just isn't so.

Prophets of Debt and Doom?

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD an excellent editorial that appeared in the Denver Post, Denver, Colo., February 20, 1957.

The editorial is as follows:

PROPHETS OF DEBT AND DOOM?

(By Roscoe Fleming)

Again we've had with us the gentlemen who tell us down to the dollar that we each owe $1,909 as our share of the public debt, or $7,636 per family of four. This deftly introduces their thesis of national ruin; that "worra-worra," all that's left for us is to drive to the poorhouse in our tail-fin Caddies. No wonder, they say, that newborn babies squall. They've just learned how much they already owe, etc., etc.,

These prophets of debt and doom are usually well-paid agents of other people who are not nearly so interested in cutting down the total burden of taxes, as in conning the 99 percent of us into taking over more of the burden.

Also, they stop short. It really ought to scare us into conniption fits, and the babies into retreat to the womb to learn how much we each owe of the total debt, public and private.

This would figure out to about $4,400 per person, or $17,600 per family of 4. "Golly, Pa, move over on that park bench; it's going to be cold tonight."

I don't maintain for a second that the public debt is not too big, and that we all oughtn't to help cut it down, even if neces-

sary by such means as paying our way more nearly as we go, by higher Federal income-tax rates.

The times cry out for this anyway as a deflater of inflation; that is, if our agents in Government are really serious about the perils of inflation.

But the "I want to make yer flesh creep" approach is all washed up because of its very insincerity. What is our country worth? What could we get, to move out to the moon or somewhere and let some tribe with lots of money but no home move in, like selling your house fully furnished? What would we sell for?

Of course, we wouldn't sell at any price, but would $3.2 trillion interest you as a possible valuation of the physical United States of America?

Then the public debt is just 10 percent of what the United States of America is worth. And the total debt is just 24 percent. Show me a young couple who don't go in deeper than that, when they buy their first home.

But, you say, we don't own all that; some of us own most of it, and most of us own much less of it, grading down to nothing? And that this is the American way?

Now you get the point, as the harpooner said to the whale: If it is fair to tell us that we all owe the debt equally, and that Mr. John R. Bigg, the well-known multimillionaire, owes only $7,636 of it along with his wife and two, exactly the same as his clerk Bob R. Cratchit and his wife and two—well, how about going the logical step further?

That would be to divvy up also all the wealth that the debt is balanced against, and thus let us all share equal joy in owning the United States of America, along with our equal gloom in owning the debt.

In other words, these gentlemen who so deftly slice up the debt in equal shares outmarx Marx—and I do mean Karl and not Groucho—when it comes to sharing the burden.

But when it comes to sharing the wealth that the debt is balanced against—why, they cry, that's communism; you ought to have your mouth washed out with soap after being investigated by the authorities and fired from your job.

The joke is that what they perhaps ingenuously seem to advocate—dividing up the burden equally but not the benefits—is already on full and daily view in Russia.

There the hapless comrade learns anew each morn that his is the full staggering share of the burden, heaped high and higher; but that the benefits are reserved for the minority of his comrade betters.

Is the U. S. S. R. their model for the United States?

Future Farmers of America

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. AVERY. Mr. Speaker, as you know last week was National Future Farmers of America Week.

The FFA chapters have made many outstanding contributions to our American society. The primary interest of the program is to promote better farm practices; however, good citizenship, and strong character are important features of the training.

The following is an article which appeared in the Manhattan (Kans.) Mercury newspaper for Tuesday, February 19, 1957. This newspaper account clearly shows the excellent results of FFA activities.

Kansas can be proud of the many fine records achieved by Kansas FFA chapters, such as is presented in this article regarding the Manhattan, Kans., high school FFA chapter. The article follows:

FORTY-ONE WORTH $25,753—MANHATTAN CHAPTER HAS 58 IN FFA WORK

(By Max Good)

The Future Farmers of America is a national organization of boys who are students of vocational agriculture in the public high school. Nationally the FFA has more than 9,000 chapters and 380,000 members. All over the Nation, FFA members are celebrating FFA Week.

The Manhattan chapter has 58 members, with Gerald Havenstein, president of the organization. Forty-four members are enrolled in Manhattan High School and 14 are graduates who keep an active interest in FFA projects started in high school.

The FFA program of work is built around eight headings. They are:

Supervised farm practice, cooperation, community service, leadership, earnings and savings, conduct of meetings, scholarships, and recreation.

Each member keeps a Kansas vocational agriculture record book which includes his diary agreement, inventory and net-worth statement, receipts and expenses, livestock and crop production records and analysis of his farm business. The drought last summer made it difficult for several boys to show a profit, but overall progress is gratifying The 41 members now in school show a total net worth of $25,753.74, with a gain of $5,360 for 1956.

Beef cattle is the most popular enterprise with 25 members participating. Eighteen have hogs, 16 have poultry and rabbits, 4 have dairy cattle, and 2 have bees. Feed crops for the livestock were raised by 26 members and 24 raised gardens.

Other activities include a trip to the Topeka Free Fair, National FFA Convention, and a trip to the American Royal Livestock Show at Kansas City.

Manhattan's FFA judging team consisting of Harold Bailey, Gerald Havenstein, and Walter Rudolph participated in the national dairy judging contest at Waterloo, Iowa, last October.

Last week seven members judged poultry at the Solomon District contest. The Manattan Chapter plans to judge crops at Hope; farm mechanics at Clay Center; dairy and dairy products at Riley, and they will sponsor the district livestock judging contest.

All of this activity is in preparation for the State high school agriculture and farm mechanics contests to be held at Kansas State College April 20 and 30.

Members of the Manhattan chapter are as follows:

Ninth grade: Kent Dial, Douglas Diederich, Mike Leasure, Vincent Miller, Douglas Mitchen, Larry Moss, Loren Parks, Alvin Stewart, George Stauffer, and Keith Umscheid.

Tenth grade: Robert Brook, Bruce Conrad, Bill Ensley, Dale Finney, Donald Genger, George Hall, Charles Langford, Larry Mummert, LeRoy Padgett, William Rogers, Henry Rosencutter, John Rosencutter, Richard Spain, Arnell Springer and Joe Stater.

Eleventh grade: Larry France, David Isaacson, Jerry Graves, Jackie Hignite, George Jensen, Richard Malone, Wayne Moritz, Cleo Petersen, Gerald Powell, Dave Richards, and Robert Stewart.

Twelfth grade: Dennie Anderson, Harold Bailey, Jim Beiter, Richard Britt, Gerald Havenstein, Kenneth Kientz, Larry Lake, Larry Rogers, Jim Walters, Albert Wood, and Eddie Woodyard.

Those who have graduated but still maintain FFA projects are:

Dale Lind, Jesse Estes, Alfred Heidel, Paul Heidel, Roy Wood, Willis Wood, Larry O'Neill, Walter Rudolph, Paul Ehm, Harold Ehm, and Anton Strauss.

FFA project work is widespread and in Kansas more than 7,500 young men participate in its various offerings in the field of farming. During the first 28 years of its history the Kansas association of the FFA has elected 2,059 members to the State farmer degree; 93 members have received the American farmer degree; one member was declared star farmer of America, and 2 members from the Sunflower State won the national FFA speech contest.

National FFA Week is observed in February every year during the week of the anniversary of George Washington's birthday. Although usually considered first as a great general, our first President and an engineer, Washington's first love was the farm he called Mount Vernon. There he was one of the first in the Nation to practice contour farming, crop rotations, and other soil-conserving methods. Thus it is out of deep respect and admiration for George Washington, that Future Farmers annually observe their national FFA Week at the time of his birthday.

Power Utilities Would Throw Away Yardstick

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. MOSS. Mr. Speaker, if Secretary of the Interior Seaton is permitted by Congress to sell the falling water of the Trinity Dam in California to the Pacific Gas & Electric Co., it will set a most disastrous precedent for other similar projects throughout the Nation. In my considered opinion, if the Seaton plan is accepted, it will give the green light to virtual monopolization by the utilities of hydroelectric power resources in the West.

One of the best insurances against too high power rates is competition. This fact seems to have totally escaped both former Secretary of the Interior Douglas McKay and the incumbent Interior Secretary, Fred A. Seaton. These men appear to have forgotten, if they ever knew, the value to the people of a public yardstick measuring the cost of electricity in this country.

The Sacramento Bee of Sacramento, Calif., in its February 21 issue, editorially calls attention to the fact that the lowest rates charged by private utilities are in areas of the United States which also have access to public power. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

The editorial follows:

POWER UTILITIES WOULD THROW AWAY YARDSTICK

One thing which never impressed itself upon former Secretary of the Interior Douglas McKay and apparently no more so on the present Secretary, Fred A. Seaton, is the value to the people of a public yardstick measuring what electricity should cost.

It is argued that State regulative bodies set the power rates of the privately owned utilities and this is a safeguard to the consumers in lieu of competition.

But it has not worked out that way.

The lowest private utilities rates are in the territories which also have access to public power.

It can be shown graphically and spectacularly that, the farther one is removed geographically from the Tennessee Valley area, the Government developments in the Pacific Northwest, and the Central Valley's project, the higher are the rates he is charged by the privately owned utilities.

This hardly can be marked down as a coincidence. The pattern is definite. It is consistent. To insure the consumers the most economical power costs there needs to be the yardstick which public power affords.

The comparison in rates between privately and publicly owned power utilities long has been odious to the private power lobby—and its No. 1 objective is to eliminate this comparison by the simple expedient of eliminating every vestige of public power.

Secretary Seaton has fallen in step with this move by recommending the Pacific Gas & Electric Co. be given the power generating facilities of the Trinity project.

He presents some questionable figures to the effect the Government would be something like $55 million better off at the end of 50 years than if it developed the hydro itself.

Even if these calculations were correct two glaring fallacies enter into his reasoning.

The $55 million would be paid by the customers of the utility and they also are taxpayers, so how would they gain? They would not.

United States Senator THOMAS H. KUCHEL made this crystal clear when he said of the proposed Trinity partnership:

"I have studied the recommendations of the Secretary of the Interior. I disagree with them. They do not serve the interests of the people of California. I cannot and will not support them."

If the yardstick of public power rates is removed the utility customers in California and everywhere in the United States will be charged many times $55 million through higher power rates. Of that there can be no doubt.

The power yardstick is a concept inherent in the reclamation program inaugurated in 1902 by President Theodore Roosevelt. But it has escaped the Eisenhower administration which views a matter of such vital, personal concern to every citizen only as "creeping socialism."

Is Sectional Discrimination Evil, Too?

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the February 21 issue of the Pageland (S. C.) Journal.

IS SECTIONAL DISCRIMINATION EVIL, TOO?

Believing that every point of view should be understood and appreciated for its true worth, this newspaper has long maintained an open-door policy toward letter writers, printing frequently opinions that vary sharply from those of the editors, in the interest of better understanding.

Recently a letter from a resident of the State of Maine, the most northeastern of all the 48 States and in many ways the most rock-ribbed, geographically as well as politically, of the States, was published in the Christian Science Monitor, one of the very best daily newspapers in America. The writer, obviously a man of breadth and wisdom, presents the forced integration question in a new light, one that assumes at the outset that people are capable of harboring more than one idea at a time.

We find the letter interesting, its presentation reasonable, and its rather new idea provocative. It follows:

"SECTIONAL DISCRIMINATION

"To the Christian Science Monitor:

"If we once admit the principle that a majority in Congress may enact laws bearing mainly (or almost wholly, in practice) upon one section of the country, over the vehement protests of representatives of that section, we are denying the very basis of representative government and laying ourselves open to a tyranny which might be no less oppressive than that of a dictator.

"This will perhaps be more apparent if we think of it in terms of economics. Time was when manufacturing had its principal home in the northeast. Suppose that during that era a majority representing the other parts of the country had rail-roaded through Congress some Federal legislation doing away with the protective tariff. You could have heard the screams of New England clear to the Pacific coast.

"I might make this thesis more general and state that no branch of the Federal Government, either legislative or executive, is entitled to force restrictions not already provided for by law upon any section, except where such action is essential to the preservation of the union, as in the case of war. The question is, therefore, not whether integration is morally right, nor does it depend upon the merits of the contemplated civil-rights bill per se. It has to do rather with the basic concept of government on which our Nation was founded. I think it is both interesting and important in the present argument over civil rights (so called) that expression be given to this point of view, and particularly so when it comes from someone removed about as far as possible from the South.

"JOHN T. ROWLAND.

"NEWCASTLE, MAINE."

How American Communities Are Handling Their School Shortage Problems

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 26, 1957

Mr. HUMPHREY. Mr. President, the Bloomington Sun, of Bloomington, Minn., has recently printed a series of articles, by Miss Betty Wilson, on how various American communities are handling their school shortage problems. As an indication of the interest of one Minnesota community, I should like to bring these articles to the attention of my colleagues.

I ask unanimous consent that two of the articles, entitled, respectively, "What Are Other Communities Doing About Space Shortages?" and "Construction Costs Are Compared," be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE SCHOOL PROBLEM: WHAT ARE OTHER COMMUNITIES DOING ABOUT SPACE SHORTAGE?

(By Betty Wilson)

"There was an old woman
Who lived in a shoe;
She had so many children
She didn't know what to do."

The lack of adequate school buildings is now alarming. The shoe is pinching all over the United States.

Other crowded communities are employing stop-gap measures, including hectic triple shifts in New York City, Texas, and California, temporary wooden portable schools in Minneapolis, Tacoma, Wash., and El Paso, and belt-tightening "economy" schools in Robbinsdale, Minnetonka, Glen Lake, and Hopkins.

Some hard-pressed districts have rented space in churches and firehouses. Others have used buses, abandoned railroad cars and converted chicken coops.

In districts where rigid State statutes have prohibited adequate financing and where property assessments have been unrealistic to meet the added need for new schools, new methods of financing have evolved.

In several communities across the country, big builders are experimenting with ideas designed to open the school doors as soon as new homes are occupied.

These include schools for rent, cottage schools which can be reconverted into small homes and schools financed by slightly higher home prices.

Examples are Linda Mar, Calif., Park Forest, Ill., and El Paso, Tex.

In Linda Mar the school board could not find enough room for the influx as new families arrived in the area.

Builder Andres F. Oddstad, Jr., built a temporary school of 11 houses.

By leaving out room partitions and connecting the buildings by a covered breezeway, 10 classrooms and an administration building were provided.

Financed as unfinished homes and FHA insured, the school is being rented to the district for $750 a month until a new permanent school is ready to operate.

At that time it is planned that the builder will put in partitions, remove the walks, and garages, and sell the houses as homes.

El Paso has a similar cottage school plan for first and second graders in suburban areas.

Besides their temporary advantages, school authorities here believe that these small, homelike schools provide an especially suitable atmosphere for very young children.

Six years ago Park Forest, Ill., was an open prairie. Its 1955 population was 23,000, including 9,000 children under 14.

To meet the classroom crisis last year builders turned over a dozen row-house apartment units as temporary school quarters.

Ten ranch-type cottages modified as 2-classroom schools, each accommodating 40 to 50 pupils, are rented to the district by the builder through a not-for-profit school corporation at actual debt-service cost, computed on a 20-year 4.5-percent mortgage basis.

The company has given the school district $500,000 in operating subsidies, loan assistance, and land at par value.

In addition it has advanced nearly $1.4 million of working capital to the not-for-profit corporation.

Builders in Park Forest recently proposed to contract with the district to make a gift of $200 to $250 to the corporation out of the proceeds of each house sold.

(The average middle- or lower-income house here goes on the assessment lists at a figure from $200 to $250 too low to meet the

added need for new schools for children who will live in the house.)

Some communities have saved time and money by converting large private homes, hotels, community centers, or other buildings into schools.

Here consideration must be given safety and health, maintenance costs, and fire insurance.

In Bucks County, Pa., it has been found practical to convert prefabricated one-family houses to one-room schools, moving them from one part of the district to another as needed.

Prefabricated self-contained classrooms and expandable schools also are coming into use on a permanent basis.

In Pennsylvania, builder William Levitt set aside land for schools in his new community of 16,000 homes outside Philadelphia.

He financed and built two 20-room schools at a half-million each and leased them to the board, giving title to the district after 20 years.

The schools rent for $38,000 a year.

If the board had floated a 35-year bond issue for similar schools, costs would have been about $67,500 a year.

CONSTRUCTION COSTS ARE COMPARED

(By Betty Wilson)

Some communities have developed cluster and campus designs clustering small numbers of classrooms in individual building units attached to, or near, separate nonclassroom space used by all.

The general effect is like a small college. This kind of arrangement has been used for years in some private preparatory schools.

A pioneer among campus-type public schools was the Heathcote Elementary School in Scarsdale, N. Y.

Cluster plans also have been adopted for the Oak Meadow Primary School in Fairfax, Calif., San Carlos, Calif., and Groton, Conn.

The Hollow Tree Elementary School at Darien, Conn., has 16 classrooms housed in eight 1-story buildings and attached at intervals to a long multipurpose central building.

Each classroom has its own outside entrance and small court.

In the central building are offices and a dining room-assembly space equipped with a pullout stage and library shelves.

Economy in construction is achieved by the elimination of corridors.

This was 1 of 5 winners in the 1954 competition for better school design sponsored by the School Executive.

There is a trend in some areas toward schools with small window areas.

Here in Minnesota a brick wall used instead of glass saves 50 cents per square foot.

Howarden, Iowa, is an example of a new school with a small window area. Artificial lights are used most of the year.

They maintain there is a marked saving in cleaning costs and small heat loss as well as cutting down glare of natural light.

They also suggest that a solid wall gives children a feeling of security they cannot have from bringing the outside into the classroom through large sheets or walls of glass.

Westmor High School at Daly City, Calif., uses a loft plan with windowless classrooms.

The architect figures that heating requirements will be 45 percent less because of the minimum exterior surface, few openings, and day-long electric light.

Public School 220 in New York City uses combinations of aluminum, glass and masonry with an aluminum window wall, and aluminum paneling in place of masonry, as does Fort Couch, Pa., and Fairmont high school in Minnesota, and a new school coming up at Moorhead.

Advocates say the advantages are the light weight permits use of smaller foundations, lighter structural steel framework; larger and fewer wall facing units; preassembly methods in shop; low transportation load to construction site with less freight charge; greater interior heat retention in winter; better exterior heat resistance in summer; ease and speed of wall erection reduces labor costs, brings earlier occupancy.

The Christian Brothers school on highway 100 north of Robinsdale is considered a unique school in economy design. Asphalt tile is used here instead of terrazo floors; block walls in the corridor instead of structural.

Each room has its own heating plant.

The small simple schoolhouse has many advocates. It can be built cheaply without sacrificing educational quality.

In saving construction time it saves on labor costs.

It also simplifies lighting and heating as it has few expensive corridors and few if any stairways.

Perhaps the biggest saving comes from the fact that competitive bidding can be thrown open to a wide area, and on-the-spot home builders here.

It can be built more easily on an irregular site.

The small home builder who not long ago would have hesitated to undertake a school can tackle without qualms many of today's small schools.

The small school's warmth and un-institutional character contrast favorably with schools of the past.

In it, small children adjust to school more easily.

It eliminates expensive special rooms and makes full use of a multipurpose room instead of separate large rooms for lunch, auditorium and gym.

It would, however, involve greater operating costs.

According to figures from the building department of the State department of education, other Minnesota communities are getting more economical buildings for quite a bit less per square foot than Bloomington through use of different type of materials going into the building and different types of rough construction.

There seems to be no question that dollar-wise Bloomington is getting its money's worth in construction, but the people must decide if we can afford this type of school building.

Recent new schools show a cost of $11.5 to $12 per square foot at Mound View, about $12 at the Richfield Portland Avenue School, $14 at St. Louis Park, slightly under $15 for Edina's newest elementary school, and $15 for Valley View, Bloomington's newest school.

Before a hasty conclusion is drawn here, consideration must be given as to whether some economies permitting initial saving are also long-range economies, or whether they are false economies.

For example, in one new economy school in suburban Minneapolis, classroom shelves were eliminated, leaving expensive encyclopedias stacked on the floor.

Asphalt tile floors are cheaper to install than terazzo, but will they hold up as long and are they as safe?

Plans for the new Humboldt Heights School call for 9-foot ceilings as against traditional 12-foot ceilings, meaning a saving in both construction and maintenance costs.

Bloomington has some unique problems.

It would seem that some revolutionary solutions are needed.

In solving these problems, there is a great opportunity for Bloomington to pioneer the field and come up with ideas that will set the pace for the country.

The challenge is here now for citizens of the community and school officials.

Gold Is a Job for Congress

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. ENGLE. Mr. Speaker, Mr. L. L. Hulelsdonk, manager of Best Mines Co., Inc., at Downieville, Calif., made one of the best statements I have seen on gold at the national western mining meeting at Denver, Colo., on February 8, 1957.

Mr. Huelsdonk has a very clear picture of the problems of the gold-mining industry as well as the relationship of gold to our currency. He clearly points out that this is a subject matter which should have a thoroughgoing study by the Congress. He calls attention to the dangers of our presently dwindling gold supply and to the powerful influence that gold may exercise in international affairs hereafter—for those who have it. Mr. Huelsdonk's statement follows:

GOLD IS A JOB FOR CONGRESS

(By L. L. Huelsdonk)

In order that there shall be no misunderstanding in regard to the attachment of currencies to gold, I will begin by reading paragraph (a) of section 1 of article IV of the final act of the Bretton Woods Agreement:

"(a) The par value of the currency of each member shall be expressed in terms of gold as a common denominator or in terms of the United States dollar of the weight and fineness in effect on July 1, 1944."

When gold is priced in terms of a currency, its supply must keep pace with the issuance of that currency, or imparity between these values develops. Such an imbalance invites disaster, and yet, today, the easy devices of monetary management have progressively upset this equation over a long period of time without great economic disturbance. Furthermore, advocates claim that this phenomenon is not accidental; that it is not dependent upon crisis after crisis; but that it is a "planned thing" for the continuity of sound money.

This scheme enjoys the official blessing of major money managers throughout the world and "gold revaluation" (with its power to increase bank reserves) is held back as a secret weapon to combat depression. In the meantime the United States is charged with an international responsibility to hold the overall price of gold down by standing ready at all times to buy and sell without limitation at the official price. Further arguments to justify such action delve into the complications of mutual aid agreements, rallonges, foreign policy, daily arbitrage, credit quotas, tariffs, trade balances and many other implications of unendable controversy.

Rebuttal arguments easily demonstrate that continuous devaluation of currency under this strategy has been real and unavoidable—because the average age of today's monetary systems is about 6½ years and more than a dozen of them are younger than 2 years.[1] Moreover, no present currency unit in the world has existed for more than 23 years without legal devaluation. The United States dollar, which is listed among the oldest five, was given a deceptive devaluation as late as 1945 when its gold reserve requirements were lowered from 40 percent to 25 percent—and it is doubtful if 10 percent of

---

Footnotes at end of table.

the Congressmen, who "rubberstamped" this legislation knew that they had directly voted to inflate the dollar by 37½ percent.

These "direct" devaluations invariably combine with other factors to generate "indirect" devaluations in the form of constantly rising prices—which in a big sense challenges the prudence of "printing-press" money. Current warnings by the administration and its sudden devotion to a tight money policy lends a degree of credence to this challenge. At the same time it points to a call for help that can only be answered by the revaluation of gold, because when economic factors force threats of administrative discipline over a population, it simply means a choice between the acceptance of communism or a return to the people's control of an economy through monetary discipline.

However, confused debate and official contravention has antagonized this situation into a desperate dispute which needs the service of Congress as a referee to protect the interests of the public. Legislative action on 24 gold bills subsequent to World War II drew recognizable interest by less than a handful of the lawmakers—departmental and agency recommendations were rubberstamped without question. Such complacency should not be allowed to continue. A thorough, energetic congressional investigation should be called now. This would not only open the way for honest appraisement, but would also cut down the wanton indifference accorded this subject in Washington.

A gold crisis is on the horizon—because long overdue adjustments have not been made to balance the spread between the economic value of gold and the official price paid for it in terms of the inflated dollar. This maladjustment, which crippled the entire domestic gold mining industry, has reached out in many other directions which should be scrutinized. For instance, prior to World War II industrial users required a yearly average of less than $500,000 worth of gold to supply their needs. During the first full year of major warfare (1940) over $4 million worth was purchased for this alleged purpose, and demand rapidly claimed enormous yearly increases until in 1946 $137,133,857 worth of the metal was sold by the mint and private smelters (under Treasury Department licenses) for industrial, professional, and artistic uses. (See chart.) It was ironical that the Government closed the gold mines under WPB Order L–208 with the statement that gold had no strategic value in a war economy—and then sold, on a yearly basis, over 270 times the peacetime requirements during a war economy. It was ironical that these sales, at $35 per ounce from monetary stock, exceeded the domestic production and occurred at a time when foreign free market prices were tremendously high. Who granted these special privileges and why? Was strategic use shown for this gold? Were smuggling operations involved? Were income taxes evaded? Even at this late date, Congress should look searchingly into these questions and find the answers. It may seem irrelevant to back up to the war period at this time, but figures indicate that Congress was asleep at that time, and there is nothing to indicate that they are not asleep now.

Today many phases of the gold question demand the attention of an alert and responsible Congress because over 90 percent [2] of the world's present production is being channeled to central banks and governments for use in the control of currency and trade. International banking alliances have built a wall against an official price increase by a policy which morally obligates the United States to hold the price down as a responsibility to the rest of the world. This allows a foreign buildup of gold and dollar reserves with long-range aims toward equilibrium of monetary reserve backing and ultimate convertibility. Good banking practice dictates that more dollars be held than gold, because dollars draw income; and with proper short-term investments, these can readily be redeemed in gold at the official price from the United States Treasury.

The merits of such a policy cannot be challenged from an international viewpoint. However, it poses a threat to the gold of the United States over which Congress should stand guard. The December 1956 Treasury Bulletin shows that short-term banking liabilities to foreigners rose steadily from $10½ billion at the end of 1952 to over $15 billion by October 1956. Simple arithmetic indicates that at this rate the total United States gold reserve of nearly $22 billion could, theoretically, be taken by foreign deman within 6 years. This is only a threat now, but it will probably substantially materialize just prior to a general call for gold revaluation—which will enhance the position of the foreign central banks—first, by the accumulation of American gold through conversion of their dollar holdings; and then by the sell-back of the revalued official gold for a proportionate increase in American dollars. Who can say that such a manipulation is wrong? America would get her gold back and the foreigners would get extra dollars which might otherwise be given them in the form of aid programs. However, since this manipulation can be repeated again and again, it seems like a serious matter for Congress to look over. There is also the danger that the foreigners may decide to hold rather than sell back the revalued gold. In such an event our dollars would be home without gold to back them—or if—in a protective mood—we decided to repudiate our gold redemption agreement for foreign-held dollars—dollar prestige would be lost.

A review of the disturbing gold question would not be complete without comparing Russia with the free world. The present low price for gold is lending progressive advantage to Russia. First; because the increased production costs in the free world have prevented a proper ratio of gold production to the increase in population and anticipated cost rises for future production will further maladjust this position. Second; because, with slave labor, costs do not affect Russian production materially. Besides, having the second largest reserve in the world (now estimated at $7.3 billion [3]) she has become the second largest producer with an anual estimated output of 13.2 million ounces including production from her satellites. Most European officials agree (even in the face of the Hungarian situation) that this cheap gold is good for Russia and good for Europe, as it allows Russia to purchase imports which she and her satellites need and provides trade, which the European needs. Russia could not materially increase her gold production under the influence of a price raise, for her capacity is tied to her present physical ability to increase mining facilities. In other words, no matter what the price, her present all-out effort is her limiting factor; whereas the free world could multiply production by many fold through the resumption of closed operations and by the mining of present marginal ores. It is not strange that the two major gold producing countries in the world mine with virtually slave labor; it is the only way they can mine with the present fixed low price for gold. However, the difference lies in Russia's ability to continue this practice whereas South Africa is at the mercy of the free world's increasing prices.

This should be a matter of deep concern to Congress, since the present status points to a definite trend toward more and more confidence in the Russian ruble.

And, finally; the domestic gold mining industry finds itself at the brink of death—under an exclusive 15-year-old depression—in a land of plenty. Congress should move immediately to revitalize this important industry which may, someday soon, be called upon to strengthen the financial fences of the free world. This could be no stronger illustrated than by the words of President Eisenhower in his state of the Union message to Congress—

"I believe the time has come to conduct a broad national inquiry into the nature, performance, and adequacy of our financial system, both in terms of its direct service to the whole economy and in terms of its function as a mechanism through which monetary and credit policy takes effect."

This warning should alert Congress to its responsibility in carrying out a complete and unbiased investigation into the controversial gold question. Only by this search and the finding of facts can the confusion be cleared up. Congress, this task is up to you. It is your duty and a grave responsibility of your office.

Remember this well—a battle for influence in the Middle East—where gold has no peer—will require more and more gold—or else—major warfare.

Today's Republicanism Is in Essence the Republicanism of Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. VAN ZANDT. Mr. Speaker, during the Lincoln Day period it was my privilege to address a series of Lincoln Day dinners throughout the State of Pennsylvania, sponsored by the various Republican county committees. The final address in the series was delivered at the annual Lincoln-Washington dinner held at Greensburg, Pa., February 22, 1957, under the auspices of the Westmoreland County Republican Committee. The address follows:

It is a distinct honor to join you on this occasion as you pay deserving tribute to the immortal Abraham Lincoln.

It is a happy coincidence that this Lincoln Day Dinner is being held on the birthday of the first President—the Father of our Country—George Washington.

For years there have been friendly debates over the question as to who was the greatest American—Washington or Lincoln. While the issue is still a topic of discussion, nevertheless, the names of George Washington and Abraham Lincoln will always be enshrined in the hearts of the American people.

This year, the Republican Party through these Lincoln Day Dinners observes the 148th anniversary of the birth of the 16th President of the United States—the martyred Lincoln.

Abraham Lincoln was a self-made man. A pioneer farm boy, he had barely a full year of formal schooling. He was truly a man of the people who worked as a hired man on a farm, on a flatboat crew, as a rail splitter and a store clerk. Then he was a storekeeper, a village postmaster, a surveyor and a solider.

He owed his outstanding quality of humanity and his deep insight into the hearts and minds of the people to this training in the school of real life. Continuing his self-education, he studied law and entered politics. He became a fabulous figure as a successful trial lawyer in Illinois. He served in the State legislature and for a term in Congress.

When the Republican Party was founded, Lincoln became one of its early leaders. He gained nationwide attention in a series of debates with Senator Douglas. From this point he moved forward as a gifted son of the United States. His feet were planted on the path of destiny to the Presidency—and his martyrdom.

Lincoln and the Republican Party led the Nation during the greatest crises any free government ever endured. Together they saved the Union and won equality for all men.

Today's republicanism is in essence the republicanism of Abraham Lincoln. It is an up-to-date application of his enduring principles. It is a projection of Lincoln's principles into the age of atomic energy, electronics and guided missiles. Truly, it is 20th century application of a faith which was firmly founded in the age of steam and muskets.

It is a faith based on Lincoln's timeless statement that:

"The legitimate object of government is to do for a community of people whatever they need to have done but cannot do at all or cannot so well do for themselves in their separate and individual capacities.

"In all that the people can individually do as well for themselves government ought not to interfere."

This is basic republicanism. This is—and always has been—the philosophy of the Republican Party.

President Eisenhower referred to Lincoln's philosophy last April 3, when speaking on The Function of Government he said:

"There we try to stick to the old Lincolnian dictum that it is the function of government to do for people those things—(they) could not do for themselves and to stay out of things in places where the people can do things for themselves.

"We would hope, therefore, to have wisdom in government to help distinguish the line beyond which government should not go and yet be courageous in doing those things that it should do."

This is today's republicanism as defined in the words of President Eisenhower—a republicanism forged out of time and tested by the strains and stresses of this atomic age.

The Eisenhower administration has followed this Lincoln philosophy in its actions and its programs. It has taken to heart Lincoln's words: "To us it appears * * * the best sort of principle * * * the principle of allowing the people to do as they please with their own business."

The Eisenhower administration has restored the confidence of America in the free-enterprise system. It has chopped away at the systems of controls inherited from previous administrations. It has created a climate in which free enterprise can function at its best to bring us prosperity and full employment.

In the field of social legislation the Eisenhower administration has broadened and increased railroad and civil-service retirement benefits. New programs have been put into effect to help our farmers. New loan funds have been made available to help complete rural electrification, to improve rural telephone service, to aid small businesses. Funds have been made available to continue guaranties on GI mortgages.

A slum-clearance program is going full blast to make our large cities better places in which to live.

The Hungarian refugee program is underway on an expanded basis.

The Eisenhower program for modern highways was enacted—a program of today's republicanism to meet today's travel needs.

A modern school construction program remains a prime goal of the Republican Party—the party of peace, progress, and prosperity.

This forward-looking program of modern republicanism is in keeping with Lincoln's administration which encouraged the building of railroads to link East with West.

It also provided funds from Federal land sales for State agricultural and mechanical colleges—a program constantly trying to determine and solve the needs of all our people.

While doing all of these things, financial stability has been achieved. We are operating under a balanced budget—the first in almost a decade. Much effort has been made to put the Hoover Commission recommendations into effect and to add to the efficiency and economical operation of our Government.

As under Lincoln, the Republican Party is once again standing firm for the principle of equal rights for all men. Under the Republicans, today great strides are being taken in the fight against discrimination and injustice. The Republican policy of firmness and strength has gotten us out of one war and kept us out of others. We have made no secret diplomatic deals even with our allies. We stand for the right even when our friends do wrong. We worked to stop war in Egypt and are working to keep the peace.

Another quality inherited from Lincoln is a deep and ingrained respect for our constitutional republican form of government. As Lincoln said in his first inaugural address:

"A majority held in restraint by constitutional checks and limitations and always changing easily with deliberate changes of popular opinion and sentiments is the only true sovereign of a free people."

President Eisenhower, in his speech at San Francisco accepting renomination, said that the Republican Party "is the party of long-range principle not short-term expediency." He went on to say that "Our Founding Fathers showed us how the Federal Government could exercise its responsibility for leadership while stopping short of the kind of interference that deadens local vigor, variety, initiative, and imagination."

This respect for the rules and limits of our Constitution is typical of the Republican Party. The Republican Party of today has retained from Lincoln's time a great quality—that of moderation. As Lincoln said, "Now let us harmonize, my friends, and appeal to the moderation and patriotism of the people."

Harmony and moderation are the keynote of the present Republican administration.

Never have the people of the United States been so at peace with themselves—so prosperous, so satisfied. This Eisenhower administration—yes; this Republican administration—has been one of good will to all. The pettiness, personal animosities, and appeals to class hatred of previous administrations have no part in this one.

What a contrast exists, ladies and gentlemen, when you compare what took place during the 20 years under the New Deal and the Fair Deal. They sought to substitute a Government-planned and controlled economy for the free, competitive, private economy which made this Nation the greatest wealth-producing nation in the world.

Remember how the New Deal tried to regiment all American industry into codes in a Government-dominated NRA? Remember how New Dealers set up Government corporations in competition with our own citizens and pressed for Government monopolies over electric power? Remember how they tried to spread Government-controlled TVA's to other parts of the country in disregard of State lines and interests?

By piling bureau upon bureau and by extending the long arm of the Federal Government into every activity in the land, the New Dealers sought to make the farmer, factory manager, worker, and other large segments of our population subservient to Federal decrees and dependent upon Federal handouts.

Remember how the Fair Dealers kept production, wage, price, and rent controls long after the war was over? Remember how they tried to seize the steel industry, how they tried to draft railroad workers into the Army in order to force them back to work, and how they continuously raised taxes on all our people until the Government's tax bill demanded a quarter of the Nation's income?

Frankly, during the 20 years of Democratic rule the New Dealers and Fair Dealers had the Nation on a toboggan slide down the road to socialism.

Yes, ladies and gentlemen, down the road to socialism. And even though they were repudiated at the polls in 1952, and again by an increasing majority in 1956, yet this same group of New Dealers and Fair Dealers are today not only fighting to take over the Democratic Party, lock, stock, and barrel, but they are playing the role of a wrecking crew in their efforts to create disunity within the ranks of the Republican Party.

Regardless of what the Eisenhower administration proposes, whether it be a program for national defense or foreign or domestic policy, spokesmen for the New Deal-Fair Deal forces never miss an opportunity to launch vicious, personal, and partisan attacks on the Eisenhower administration in general, and in particular on President Eisenhower, Vice President Nixon, and Secretary of State Dulles.

These self-styled "liberals" who are experts in the field of political sniping charge the Eisenhower administration with failure of foreign policy, especially in the Middle East; yet former Democratic President Harry S. Truman on last January 1 said:

"If I were now a Member of the Senate, I would support the request of the President for congressional authority to use the Armed Forces of the United States against any Communist or Communist-dominated aggressor in the Middle East.

"And I would quickly approve granting him the funds he seeks to extend economic aid to help the Middle East nations maintain their independence."

In the field of national defense this New Deal-Fair Deal wrecking crew charges that the Eisenhower administration has weakened our national defenses, yet the military brains of the Nation have assured the American people time and time again that the United States has the greatest concentration of military force in its peacetime history.

Let me read a recent statement of Representative CARL VINSON, Democrat of Georgia and chairman of the House Committee on Armed Services, of which I am a member. Chairman VINSON said on February 1, 1957:

"The armed services have built not only strong defenses but have the ability to bring devastation on any nation that starts a war.

"The Military Establishment," he said, "was built for the defense of freedom and for the purpose of preserving peace, but it is capable of waging war, if necessary."

Echoing the attack they made in last fall's campaign in regard to the rise in the cost of living the New Deal-Fair Deal wrecking crew conveniently forgets that since President Eisenhower took office in 1953 inflation has been halted, the increase in the cost of living has been held to 3.6 percent, the dollar stabilized—and above all, we have full employment as well as increases in wages and purchasing power.

Then too, we are at peace with the world, with the American people accepting the 3.6 percent increase in the cost of living in preference to the wholesale slaughter of American youth on the battlefields of the world.

The New Deal-Fair Deal wrecking crew forgets that under Democratic President Harry S. Truman the cost of living from April 1945 to December 1952 rose 50 percent and that during his last term in the White House the cost of living increased 11 percent.

This same group claims that the Democratic Party is alone the friend of the common man. This myth is exploded when you study the tax record of the Democratic Party which shows that when they took over the Government of the United States in 1933 a married man with 2 children paid $68 in Federal income tax if he had an income of $5,000—but in 1952, when the Democratic rule ended, he was paying $461, or nearly 7 times as much. Since 1952, the Republican Party has granted two tax reductions which returned to the pockets of the wage earner and his family $2 out of every $3 granted in tax relief.

So, ladies and gentlemen, you can use your own judgment as to which political party is really the friend of the so-called common man.

The vicious personal and partisan attacks that led to twisting and distorting facts proved futile in last fall's campaign when the Democrats could not find a real issue they could use against the team of Eisenhower and NIXON despite the fact that during the Democratic-controlled 84th Congress they launched 218 congressional investigations and inquiries at a cost of nearly $9¼ million.

The present Democratic-controlled 85th Congress is at it again and to date has appropriated nearly $3 million for all sorts of investigations on every phase of Government as administered by President Eisenhower and his Republican administration. These investigations are designed to develop issues to be used against the Republican Party in the 1958 congressional campaigns.

In mentioning 1958, let me emphasize its importance because it has a twofold significance to every resident of Pennsylvania. First, we have to rid our State capital of the Leader administration by electing a Republican Governor and giving him a supporting Republican State legislature. Secondly, we have to elect a Republican United States Senator and Republican Members of the House of Representatives to support President Eisenhower.

If our efforts are successful in 1958, our success will mean the end to divided government in Harrisburg where we have a Democratic Governor and a Republican legislature—and in Washington where we have a Republican President and a Democratic Congress.

Experience over the years has proved that a divided Government does not function in the best interests of the American people.

Having mentioned 1958 as a crucial election year, let me make a few timely observations. To begin with, we are going to be faced with a militant Democratic Party headed by Governor Leader and gloating over its victory last fall in electing a Democratic Congress including Democratic Senator from Pennsylvania despite President Eisenhower's impressive victory.

Do you know that a study of the 1956 election results reveals that Republican congressional candidates last November ran over 7 million votes behind the 35½ million ballots cast for President Eisenhower?

In plain words, ladies and gentlemen, over 7 million voters who favored President Eisenhower did not even bother to vote for Republican congressional candidates.

This fact is alarming mainly because in 1958 we will not have President Eisenhower on the ticket. In other words, we Republicans will have to row the political boat alone. This situation hurls a challenge at the Republican Party. Mark you, to meet this challenge face-to-face we must rededicate ourselves to Republican principles and especially the Eisenhower brand of modern republicanism. In so doing, let us resolve to spend more time and effort at the precinct level in the education of voters on the objectives and accomplishments of the Republican Party.

Let us elect to public office Republicans in whom the voters have absolute confidence and respect. In short, let us become political missionaries by preaching the gospel of true republicanism, thus building a more vigorous and dynamic Republican Party.

Ladies and gentlemen, we can take pardonable pride in the fact that the Republican Party—the party of Abraham Lincoln—is the party of the future. It is growing in strength because it is attracting to its ranks thinking men and women of all political faiths.

In its early days a large percentage of the founders of the Republican Party from all walks of life were former Democrats who felt that their old party was not true to its original ideals and who, therefore, turned to the Republican Party as the true party of the people. In recent years, as more and more Americans felt that the party of their choice was not living up to its principles, the Republican vote for President rose from less than 17 million in 1936 to more than 35½ million in 1956.

Many of these Americans are going the full distance and becoming active in the ranks of the Republican Party which more nearly meets their ideals. The Republican Party welcomes all Americans to its ranks to participate in the building of a better future—a future in the true tradition of Abraham Lincoln.

The up-to-date application of Lincoln principles under sound Republican leadership has brought peace, prosperity, and progress to America. The United States is the strongest hope of a troubled world. Because of this the points of agreement between Americans are growing stronger every day under the principles of republicanism. Differences are settled by ballots, not by bullets. Never before in the history of the world have so many of the good things of life been shared in such abundance by so many Americans. America's progress is of a material and spiritual nature and is reflected by new homes—new factories—new autos—a greater interest in religion—and a stronger determination for peace.

Therefore, on this occasion, as we commemorate the 148th anniversary of the birth of the immortal Abraham Lincoln, let us face the future with renewed confidence because of the realization that, as Republicans, we have gone far toward living up to Lincoln's words:

"With malice toward none—with charity for all—with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in * * * to do all which may achieve and cherish a just and lasting peace among ourselves and all nations."

Preparedness Day Now Before Senate

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1957

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD an editorial entitled "Preparedness Day Now Before the Senate," by Mr. Tom Hagen, editor of the Miami Daily News. The idea for designating December 7 as Preparedness Day originated with Mr. Hagan. I thought his idea an excellent one, and introduced House Joint Resolution 208 on January 29, 1957, which resolution has now been introduced on the Senate side. Mr. Hagan has written many fine articles on the subject of our country's preparedness, of which the attached article is one:

[From the Miami Daily News of February 14, 1957]

PREPAREDNESS DAY NOW BEFORE SENATE

Representative PAUL ROGERS of West Palm Beach introduced in the House of Representatives on January 29 a joint resolution designating December 7 in each year as Preparedness Day. The resolution, House Joint Resolution 208, was referred to the House Judiciary Committee.

Florida's Senators GEORGE SMATHERS and SPESSARD L. HOLLAND introduced in the Senate on February 7 an identical resolution, Senate Joint Resolution 52, and it was referred to the Senate Judiciary Committee.

This companion legislation, suggested on the editorial page of this newspaper last December 2, was endorsed by Senator SMATHERS in these remarks on the floor of the Senate:

"Mr. President, we all remember only too well December 7, 1941, as 'the day that will live long in infamy.' That day was, indeed, a dark one in the epochal history of the United States. It was a day that impressed upon all freedom-loving Americans the importance of the strongest possible national defense to the preservation of our democracy.

"I think it fitting and proper that this day be set aside and declared to be National Preparedness Day to serve as a constant reminder that we must be forever vigilant in keeping our defenses strong if we are to preserve for ourselves and posterity our American way of life and maintain leadership for world peace."

In behalf of Senator HOLLAND and himself, Senator SMATHERS then introduced the resolution which would designate December 7 each year as Preparedness Day.

It would also authorize the President to issue an annual proclamation calling on the officials of the Government to display the American flag on all Government buildings and invite the people of the United States to observe such day with appropriate ceremonies in schools, churches, and other suitable places. Senator SMATHERS concluded:

"I trust that the committee to which this joint resolution is referred will act promptly and favorably on it, and that it will be adopted by the Congress."

This newspaper is conscious of the fact that there are hundreds of so-called day bills introduced during each Congress to set aside a day for some specific purpose. Because there are so many days already set apart, the House and Senate Judiciary Committees are very reluctant to approve an additional day, particularly where national and legal holidays are declared.

Of course, there are relative merits in all fields of legislation and while there are hundreds of bills introduced in every Congress in this field, one is, in our opinion, deserving.

America has oblique reminders of the need for preparedness in Armed Forces Day every third Saturday in May, a public holiday by Presidential proclamation. The preparedness theme is also present on Armistice Day, the day World War I, and August 15, the day World War II ended. It is the background of Fourth of July and Flag Day, June 14, as well as a few other patriotic holidays.

However, there is at present no annual holiday with central observance and theme of preparedness.

We nominate Pearl Harbor Day as America's annual Preparedness Day, and of all Americans, those whose sons and fathers and other loved ones died that day should be the least regretful about the change in emphasis. If we had been prepared on December 7, 1941, the dead might have lived.

An Analysis of an Americanism Definition

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. BOLLING. Mr. Speaker, my friend, Arch Hale, the author of the analysis which follows, is one of the best loved citizens of the district I represent. Arch has devoted his life to the welfare of veterans and the promotion of all things that make for good citizenship:

AN ANALYSIS OF AN AMERICANISM DEFINITION

(By Arch M. Hale, national service officer, Disabled American Veterans)

On February 18, 1927, commanders of the five largest veterans organizations during a conference in Washington, defined Americanism as follows:

"Americanism is an unfailing love of country, loyalty to its institutions and ideals, eagerness to defend it against all enemies, undivided allegiance to the flag. A desire to secure the blessings of liberty for ourselves and posterity."

Consider unfailing love of country. Webster defines unfailing, as being incapable of being exhausted. Unfailing love, therefore, means that true Americans love their country during adversity as well as prosperity. It means to love country next to God. It means a burning, living consciousness, to thank God for our country above all things on earth. It means that we as individuals stand ready to take up arms, sacrifice all, including our lives, to save our country. Unfailing love of country means leaving our family and friends to fight, and being thankful that we are privileged to do so, and in the words of a great patriot of the past: "My country, may she always be right, but right or wrong, my country."

Second, loyalty to institutions and ideals. Actually our institutions are products of our ideas and ideals. Our churches, fraternal and veterans organizations, were at first only ideas that became ideals and the ideals resulted in our institutions which after fair trial became permanent and then became institutions.

Our greatest institution and ideal is, of course, our own democratic form of Government. This ideal will be consummated only when we make it work, and acceptable to the rest of the world. I think we in the United States know that democracy does work, but for a lot of years and at present communism is being preached in our country, under our very noses.

Communism is the worst form of monarchy, because it goes further. Monarchy confines itself to its own country, but communism seeks to enslave the whole world. If need be by armed force. Communism seeks to drag the best of us down to the level of the worst of us. Democracy seeks to pull the worst of us up to a level with the best of us. Communism holds that we the people do not have the brains to govern ourselves, therefore, a few are to use us as puppets on a string. This is why we as Americans must be loyal to our ideals and institutions.

Third, our eagerness to defend against all enemies. This has reference not only to serving in wartime but in peacetime as well. Knowing what communism stands for, I say, never give a Communist a break. All wars have demonstrated our eagerness to defend our country. The enlistments were so large that the armed services could not properly clothe or bed the thousands of volunteers immediately. This is one reason why they must have a draft, in order to take men and women into the armed service as they are able to take care of them. A good American enlisted soldier, therefore, must never hold himself better than a draftee.

Fourth, now, if you and I practice true Americanism as per the definition adopted by our great patriotic organizations, we will have secured the blessings of liberty to ourselves and posterity.

Fifth, undivided allegiance to our flag. This part of the definition of Americanism I have purposely left for the last, because in my opinion it is of uppermost importance. Our flag is a living symbol of Americanism. It was laboriously created by blood, tears, reverses, sacrifices, mistakes, and victories. It is the subject of our national anthem, The Star-Spangled Banner. It has been carried aloft through all wars, both hot and cold. Since 1776 it has never been trampled in the dust by an enemy. It is being flown atop our Capitol and other public buildings and schools every day. But, what are you and I as patriotic individuals doing about our flag? Nothing. I doubt if one-third of the families in the United States even have an American flag in their homes. I doubt that only a very few know when a national holiday arrives, with the exception of 3 or 4. I doubt if you can find an American flag, excepting a very small one for sale in our stores. We have grown careless. One man said it was corny. One dealer said he would not buy unless he had calls. Some merchandising. Because our flag is our national emblem let's show our appreciation to God and country. Yes, let's herald our patriotism to our neighbors and the world by displaying the flag from our homes on all national holidays. It is very simple and easy. How better can we demonstrate the love of country which is in every heart?

Mollycoddling No Answer

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial

which appeared in the Gaffney (S. C.) Ledger of February 23:

MOLLYCODDLING NO ANSWER

As everyone who reads or listens to news accounts knows, juvenile crime has become a problem of grim dimensions in this country.

A leading authority, J. Edgar Hoover, of the FBI, has devoted a signed editorial to it in a recent issue of that organization's law-enforcement bulletin. He says: "Recent happenings in juvenile crime shatter the illusion that softhearted mollycoddling is the answer to this problem." And he asks, "Are we to stand idly by while fierce young hoodlums—too often and too long harbored under the glossy misnomer of juvenile delinquents—roam our streets and desecrate our communities? If we do, America might well witness a resurgence of the brutal criminality and mobsterism of a past era."

Mr. Hoover also demolishes the idea, held by some people, that there isn't any more juvenile crime than there used to be—that it's just better publicized. In the past 4 years the population of 10- to 17-year-olds has risen 10 percent. In the same time arrests of individuals in that age bracket have increased at twice the rate.

Finally Mr. Hoover makes a strong case against the common custom of not publishing the names of young criminals. As he puts it, "Publicizing the names as well as crimes for public scrutiny, release of past records to appropriate law-enforcement officials, and fingerprinting for future identification are all necessary procedures in the war on the flagrant violator, regardless of age."

Growth of Taxes

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD an editorial from the Monroe Monitor of February 21, 1957. The Monitor is a weekly newspaper published in the Second Congressional District of the State of Washington.

This editorial points out some facts that reveal the tremendous growth of the Federal tax structure since its inception 44 years ago. Many of my constituents have written me to request a curb on Federal spending. Many of them have noted the disparity between what they earn and what the Government takes from their earnings.

It is significant that the figures disclose the reversal of taxation between the local and Federal Government. I have long deplored the long round trip our tax money takes from local sources, through Federal agencies and then back to perform functions which could often be performed best, and with less cost to the taxpayers, if performed at home.

I believe this editorial poses questions which should give every American citizen food for serious thought.

Text of the editorial follows:

FROM 82 CENTS TO $328

Next Monday is a birthday for which nobody will bake any cakes.

On February 25, 44 years ago, the Federal Government was authorized the power to levy an income tax on individuals. It was felt at the time that rates could never reach 10 percent.

The first year of the tax total corporate and individual income levies brought the Government $80 million. Dividing this by the population of 1913 shows that the per capita tax bite was 82 cents.

By contrast, in 1956—two world wars and a police action later—the income tax brought the Federal Government $55 billion. This is a per capita tax bite of $328.

Per capita annual income was $358 in 1913; today it is about $1,647. In this 44-year period, per capita income increased 4½ times while the per capita tax payments increased an even 400 times.

Other comparisons of then and now are of equal interest. For instance, in 1913 the single personal exemption was $3,000 compared to $600 today.

In 1913, a single man with a $5,000 a year income paid $20 tax; today, he pays $944. Rates the first year were 1 to 6 percent; they range today from 20 to 91 percent.

Mr. Taxpayer's total tax bill in 1913 was distributed 70.5 percent for State and local government and 29.5 for the Federal Government. Today, the Federal Government takes 72.3 percent, leaving 27.7 percent for State and local units.

In 1913, people did locally what they wanted done. Today, they give their money to the Federal Government and fight among themselves to see who can get the most back.

Great Economic Challenge

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1957

Mr. MULTER. Mr. Speaker, the following article by Sylvia Porter, which appeared in the Washington Star on February 3, 1957, makes interesting reading for all Americans in these days of spiraling prices:

GREAT ECONOMIC CHALLENGE

"One subject you haven't covered, which would be of great interest to me and to many thousands like me," the letter began, "is how to live on my meager income when I will soon have to retire."

In these expressive words, A. W., my correspondent, has reached the heart of one of the greatest economic challenges of our time. It is this:

Can we somehow—through the right combination of Government policies and of actions by millions of us—achieve the economic miracle of stable prices in a continuing period of full employment and general boom?

Or must we resign ourselves to this vicious prospect that we'll attain price stability only during periods of business slowdown, and over the years the outlook is for an ever-climbing cost of living and an ever-dwindling value of the dollar?

QUESTION IS BASIC

It's a basic question indeed! And its meaning to every American trying to build a nestegg for his children's education and his family's future security is profound.

Well, what does the record tell us?

After the enormous upsurge in living costs after World War II, prices did stabilize—and we approached the economic miracle during the last part of the Truman Administration and the early part of the Eisenhower administration.

But in the past 18 months, a new price-wage spiral has clearly been in the making. At the year-end, the official price index hit an all-time peak of 118—meaning it costs $1.18 to buy what $1 bought in 1947–49. The so-called living cost index is 3 percent above a year ago.

And now most prices are on the rise again. It's not a wide upward price sweep, but it's enough to compel Government officials to admit new highs in the cost-of-living index are coming. It's enough to lead even economists who expect 1957 to be a relatively "slow" year to predict a price rise of 2 to 3 percent.

And what does a "mild" price rise of 2 percent a year mean to millions who have nesteggs in cash and its equivalent?

It means that $100 in savings today will buy only $82 in the marketplace 10 years from today, only $67 in the marketplace 20 years from today, only $50 of goods 35 years from today. It means, in short, that in one generation, the dollar's buying power will be cut in half.

NOT MUCH COMFORT

What comfort, then, can I give A. W.? He can't "hide" in any other country. We're actually doing better on controlling prices than most.

He can't—unless he has a big backlog of cash, which he hasn't—invest it so that his profit and income offset the dollar's decline.

He can, of course, try to keep working to supplement his income. He can ask help from relatives. He can say "me too" and fight for bigger benefits from industry and Government. He can properly and vigorously support all those who are seeking the way to the miracle of prosperity-plus stable prices.

And that's about the best I can offer. I'm beginning to think the question for A. W. and me and the millions like us is not only whether we can manage to live to a healthy old age. The question is also whether we can "afford" to live to a healthy old age.

Nineteen Hundred and Fifty-six Growth and Expansion of Southern California

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1957

Mr. McDONOUGH. Mr. Speaker, under leave to extend and revise my remarks I submit the following review of the growth and expansion of southern California in 1956:

REVIEW OF THE YEAR 1956

Business volume in the southern half of California during 1956 was at the highest level in the history of the area.

The past year was characterized by substantial increases in population, employment, income, nonresidential construction, and industrial expansion. In manufacturing, substantial employment gains occurred in the aircraft and electronics industries.

Increases did not occur last year in all sectors of the local economy, however. Noteworthy declines occurred in homebuilding and in new car sales. There were moderate declines in petroleum production and in the number of real-estate transfers.

Population in the southern half of California increased by an estimated 413,000 during 1956. That was a larger gain than oc-

curred in the preceding year, and larger than the average annual gain during the period since the 1950 census. In each of the past 2 years the net growth in the area's total population has exceeded 1,000 per day. Following are estimated population totals for the 14-county area and for the Los Angeles-Long Beach metropolitan area:

	14 southernmost counties of California	Los Angeles-Long Beach metropolitan area
Jan. 1, 1955	7,998,000	5,490,000
July 1, 1955	8,181,000	5,622,000
Jan. 1, 1956	8,375,000	5,760,000
July 1, 1956	8,582,000	5,910,000
Jan. 1, 1957	8,788,000	6,059,000

Personal income in the southern half of California during 1956 is estimated at approximately $20.2 billion, a gain of nearly 10 percent over 1955. In the Los Angeles-Long Beach metropolitan area, the total is estimated at $14.7 billion.

Retail sales totaled an estimated $8,600,000,000 in the Los Angeles-Long Beach metropolitan area during 1956. That represented a gain of a little more than 5 percent over 1955, the previous record year.

Total civilian employment in the Los Angeles area increased in December for the 11th consecutive month. Both the December figure and the annual average established new alltime records. The average of 2,453,800 persons gainfully employed in this area during the past year was 131,300 or 5.7 percent higher than the average for 1955.

Unemployment in the Los Angeles-Long Beach metropolitan area during 1956 was at the lowest level since World War II. The average of 64,300 listed as unemployed during the year was 8.5 percent below 1955.

Manufacturing employment in the Los Angeles-Long Beach metropolitan area increased in December to a new alltime high of 767,400. The 1956 average of 740,800 was 6.4 percent above the previous year, and a new record.

Aircraft employment in the Los Angeles area expended in December to 218,500—the highest point since World War II. New postwar peaks have been established in 11 of the past 12 months. The number of workers employed in the aircraft industry averaged 208,200 during the year 1956—a gain of 8.9 percent over the previous year.

New industrial plants and expansions announced for Los Angeles County during 1956 will involve a capital investment estimated at $345 million—the largest annual total in the history of the county. This figure represents a gain of 38.5 percent over 1955 and 4.4 percent over 1952, the previous peak year.

Construction: During the year just ended, the total of all building permits issued in the southern half of California, plus all contracts awarded for engineering construction, came to $2,832,000,000—a level 7.8 percent above last year's record of $2,628,000,000. A decline in residential building was more than offset by a gain in non-residential building and construction exceeding 20 percent.

Home building: Permits were issued in the Los Angeles-Long Beach metropolitan area during 1956 for 90,298 family dwelling units—a reduction of 14.4 percent from the 105,546 units authorized during 1955.

The reduction in home building which occurred in the Los Angeles area—and especially in Orange County—between 1955 and 1956 was not universal. Gains in the number of dwelling units authorized were recorded in San Diego, Riverside, Santa Barbara, and San Luis Obispo counties.

The consumer price index (i. e., the cost of living index) in the Los Angeles area averaged 1.6 percent higher in 1956 than in 1955. In November, the latest month for which figures are available, the index was 2.4 percent higher than it was a year earlier.

Earnings of factory workers in the Los Angeles area averaged $89.89 per week during 1956—an increase of 5 percent over the 1955 average. In December, average weekly earnings exceeded $94.

The Supreme Court Speaks

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. FORAND. Mr. Speaker, in view of the national publicity given to the contest for the governorship of Rhode Island last fall—a contest that finally was decided on a constitutional point by the Supreme Court of the State of Rhode Island—I offer for printing in the CONGRESSIONAL RECORD the decisions of our Supreme Court in the cases of *Dennis J. Roberts* v. *Board of Elections et al.* (M. P. No. 1198) and *John H. McGann* v. *Board of Elections et al.* (M. P. No. 1195).

They follow:

JOHN H. McGANN *v.* BOARD OF ELECTIONS ET AL.
(M. P. No. 1195)

OPINION

Paolino, Judge: This is a petition for certiorari to review and quash the record of the State board of elections declaring Alexander G. Teitz elected representative in the general assembly from the third representative district of the city of Newport at the general election held on November 6, 1956.

After the petition was filed Alexander G. Teitz, hereinafter referred to as the intervenor, requested an opportunity to be heard before we issued the writ. However, an examination of the allegations of the petition, which was sworn to, made it manifest that the legal and constitutional issues raised were so substantial that we were constrained to issue the writ forthwith. However, in order to give the intervenor an opportunity to be heard, as he had requested, we departed from our regular practice in such cases and included only a temporary restraining order and after notice to him assigned the case specially for a hearing thereon. At such hearing, however, neither he nor his counsel appeared and we thereupon continued the restraining order in effect until the merits of the petition were determined.

The respondent board, in compliance with the writ of certiorari, made due return of its records pertaining to the election in question. Thereafter the intervenor duly filed a motion to intervene and to take over the defense to the petition. In open court the respondent board by its counsel consented thereto and thereupon we granted the motion.

The intervenor however did not file any answer or plea to the petition for certiorari. Therefore the truth of the facts alleged therein are undisputed. But he did file a motion to dismiss such petition on the ground that this court has no jurisdiction over the subject matter thereof. The cause was thereupon set down for hearing to a day certain on both the motion to dismiss and on the merits of the petition.

Before considering the motion to dismiss, we shall state briefly the undisputed facts as they appear in the record of the instant case. A biennial general election was held in Rhode Island on Tuesday, November 6, 1956, in pursuance of the provisions of article 16 of amendments to the constitution of this State. Section 1 of said article provides: "The governor, lieutenant governor, secretary of state, attorney general, general treasurer, and senators and representatives in the general assembly, shall be elected at town, ward, and district meetings 'on the Tuesday next after the first Monday in November,' biennially, commencing A. D. 1912."

At the general election on November 6, 1956, the petitioner was the Democratic candidate for representative in the general assembly from the third representative district of the city of Newport, and the intervenor was the Republican candidate for said office.

On election day petitioner received on the voting machines in the polling places throughout said third representative district 1,407 votes and the intervenor received 1,381 votes. In addition thereto each received a certain number of votes cast by members of the Armed Forces and the merchant marine of the United States in active service and absent from the State under article 22 of amendments to the constitution. None of such votes is in dispute and 29 of them were counted for the petitioner and 45 for the intervenor. Therefore the total uncontested votes for each candidate then stood as follows: 1,436 for petitioner and 1,426 for the intervenor. On the basis of these admittedly valid votes petitioner had a clear majority of 10 votes and if there were no other votes legally cast by qualified electors the board should have declared petitioner elected.

The procedure adopted by the board was substantially as follows: It first tabulated the State election returns of the votes cast on election day on the voting machines. It next proceeded to count certain ballots cast by electors absent from the State and hereinafter referred to as civilian absentee voters. Then it proceeded to count certain other ballots cast by electors described in article 23 of amendments to our Constitution as electors otherwise qualified who, by reason of old age, physical disability, illness or for other physical infirmities were unable to vote in person within the State. These will be referred to herein as shut-ins. The final step in the process was the counting of the war ballots, so-called, which were cast outside the State by members of the Armed Forces and merchant marine by virtue of article 22 of amendments to our Constitution. These war ballots are not in dispute here.

Before the count of all classes of ballots was finally completed by the board and prior to the declaration of the result of such count, petitioner challenged all of the civilian absentee and shut-in ballots on the ground that they were unconstitutional. He accordingly objected to the counting of any of such ballots by the board in the tabulation of the votes for the aforesaid candidates and requested that none of said votes be considered or counted by the board in arriving at the result of said election. At the same time the petitioner requested the board to segregate and mark for identification the inner envelopes, which contained the ballots cast by the civilian absentee and shut-in voters at said election. These envelopes by their color and by the jurat or official acknowledgment carried on the face thereof their own identification and separation as to the time and place of voting. The same request was made as to the outer envelopes and further as to all civilian absentee and shut-in ballots cast in said election. In this last respect, as will appear later in this opinion, petitioner did more than was required of him in order to raise the constitutional and jurisdictional issues here involved.

The petitioner protested before the board that it should not count any of such civilian absentee or shut-in ballots on the ground that article 23 of amendments was not self-

executing; that there was no valid legislation implementing it so as to validate the votes of these two classes of electors; and further that certain attempted amendatory legislation under which the ballots had been issued to said civilian absentees and shut-ins was unconstitutional. The board, however, in denying petitioner's motion that said civilian absentee and shut-in ballots be not counted stated that they had no authority or jurisdiction to consider and determine constitutional questions. They took the view that it was their duty to carry out the literal language of the law as purportedly amended and to count all such ballots, unless and until this court declared those statutes and votes to be unconstitutional.

The board thereupon proceeded to count and tabulate all the civilian absentee and shut-in ballots. Some of these, as clearly shown on the face of the inner envelopes in which the ballots were contained, were cast on election day and admittedly others showed they were cast before election day. By counting all such ballots, regardless of whether they were voted on or before election day, the board determined that the total votes cast for each candidate then stood as follows: 1,490 votes for petitioner and 1,561 votes for the intervenor, thus showing an apparent majority of 71 votes for the intervenor. On that basis the board declared the intervenor elected.

The petition thereupon promptly filed the instant petition and as stated sought and received a stay of the isuance by the board of a certificate of election to the intervenor until this court could determine the question of constitutional law, on which depended not only the validity of the civilian absentee and shut-in ballots but also the jurisdiction of the board to count them. Because of the importance of the issue involved we peremptorily assigned the case for a special hearing on the earliest possible date consistent with the right of counsel to make reasonable preparation.

The intervenor as stated has filed a motion to dismiss the petition on the ground that this court has no jurisdiction over the subject matter of the petition, or, in the alternative, if it has jurisdiction it ought not, in the special circumstances of this case, exercise its power. He bases this contention entirely on the provisions of article 4, section 6, of our State constitution which provides in part: "Each house shall be the judge of the elections and qualifications of its members * * *." It is true that in our system of government pursuant to the above constitutional amendment each house of the general assembly is the final judge of the elections and qualifications of its members. However, in the instant case we are not concerned with the ultimate issue of the seating or not seating of the petitioner or the intervenor. Nor are we called upon to decide the power of either branch of the general assembly in that regard.

On the contrary we are confronted with a fundamental question of constitutional law which was raised on the record before the board completed the count and in this petition. In both places petitioner expressly challenged the constitutional right of the civilian absentee and shut-in electors to vote at all and also the jurisdiction of the respondent board to count any of the ballots cast by such classes of electors.

Consequently the issues thus raised on the record present questions of constitutional and fundamental law and are therefore within the court's exclusive jurisdiction. (Rhode Island Constitution, art. 10, sec. 1 and art. 12 of amendments, sec. 1. *Taylor & Co.* v. *Place* (4 R. I. 324).) Therefore neither branch of the general assembly has any authority to determine the constitutionality of its own enactments or the legal consequences of the application thereof.

Since 1893 the law has been well settled that jurisdiction of this court to pass upon questions of law in cases brought before it involving elections for senators and representatives in the general assembly is not affected by the constitutional provision that each house of the general assembly "shall be the judge of the elections and qualifications of its members." *State* v. *Town Council* (18 R. I. 258). In that case at page 263 this court stated: "Again, it does not follow from the fact that one tribunal is the ultimate judge of a question when it arises in reference to a matter proper for its decision, that another tribunal may not entertain the same question independently when called upon to decide its own action or to compel the action of parties lawfully in its jurisdiction, and the recurrence of the same question in both fora does not exclude from the jurisdiction of either tribunal a case normally within it."

In the same case at page 262 the court held: "Under the constitution the action of each house with respect to the person claiming to be elected is valid and final; but none of the steps by which that action was reached and none of the reasons assigned by either house, though they were spread by resolution upon its records, would have any force as declaring the law beyond the case then decided. Neither house of the legislature by itself can either make or authoritatively interpret the law as a rule for others. The making of the law under the constitution requires the concurrent vote of both houses and the declaration or authoritative interpretation of the law so as to form a precedent for subsequent cases, is for the courts. * * * The late Chief Justice Ames, in *Taylor* v. *Place* (4 R. I. 324), says, page 361: 'Neither the convention which framed the constitution, nor its members, nor the members of the general assembly, nor even the general assembly itself can authoritatively expound the constitution, but only the courts.'"

The intervenor has not cited and we have not found any authority or case affecting State elections which we deem of sufficient pertinency and persuasiveness to cause us to depart from the well-established law on this issue as above enunciated. But petitioner relies strongly on a statement in *Corbett* v. *Naylor* (25 R. I. 520), to the effect that each house of the general assembly being "the judge" of the elections and qualifications of its own members is therefore the sole judge thereof.

However, he overlooks several points in this regard. First, the case was in mandamus to compel performance of a duty of the respondent moderator to count ballots which he already had done according to law. Therefore any observation about the power of each house of the general assembly, if taken literally and comprehensively out of context, was entirely unnecessary for the decision and is obviously dicta. Secondly, if this statement is read in the light of the nature of the case and the admitted status thereof on its fact, all counting of ballots had been legally performed and the ballots themselves according to existing law had been returned to and were being held for the sole use of the general assembly. At such juncture the statement in question is understandably correct, because the issue at that time was entirely as to the seating or not seating by a house of the general assembly of its own member. As to that narrow issue each legislative branch can be said to be the sole judge of the elections and qualifications of its members. But that is far from saying that each house of the general assembly is the sole judge to determine the constitutional right of certain classes of voters, the constitutionality and legal effect of its own statutes, and the jurisdiction of the board to count such civilian absentee and shut-in-ballots. Finally if the court meant what petitioner argues, it is strange that the case of *State* v. *Town Council, supra*, was not even mentioned much less overruled, since 3 of the 5 judges in the case of *Corbett* v. *Naylor, supra*, also participated in the earlier decision only 11 years previously.

On the other hand there is an abundance of authorities elsewhere supporting the view which has been so well stated in *State* v. *Town Council, supra*, which was not overruled by *Corbett* v. *Naylor, supra*, and has been consistently followed here. For example see *State ex rel. Benton* v. *Elder* (31 Neb. 169); *O'Ferrall* v. *Colby* (2 Minn. 180); *People ex rel. Fuller* v. *Hilliard* (29 Ill. 413); *People ex rel. Sherwood* v. *State Canvassers* (129 N. Y. 360); *State ex rel. Ingles* v. *Circuit Court of Spink County* (63 S. D. 313).

It is therefore the unanimous opinion of this court that it has exclusive jurisdiction to hear the purely legal and constitutional issues in this case. Therefore the motion of the intervenor to dismiss the petition for lack of jurisdiction in this court is denied. Consequently we shall proceed to consider the merits of the allegations of the petition.

The petitioner here, as he did before the board, contended that the latter lacked jurisdiction to count any civilian absentee and shut-in ballots in determining the final results of the election in question. He based his contention on the ground that General Laws, 1938, chapter 319, and all purported amendments thereto are unconstitutional in that they are in violation of section 1 of article 16 of amendments and because they are not in conformity with article 23 of amendments to the constitution of this State. This objection was expressly made by petitioner before the counting of votes in this representative district was finally concluded and before the result of the election was declared. At the same time petitioner requested that all civilian absentee and shut-in ballots, as well as the inner and outer envelopes in which they were received, be segregated and marked for identification by the board.

The intervenor, however, contends that we should not consider these constitutional questions on the ground that petitioner, by his failure before the board of elections to have the ballots marked for identification and segregated, is thereby barred from having the legal issues presented by the petition reviewed in this court. Inasmuch as there is a diversity of opinion among the members of this court on this point, we shall proceed to determine this issue before we consider the other contentions of the intervenor. The intervenor relies chiefly on *Brereton* v. *Board of Canvassers* (55 R. I. 23), and cases cited therein in support of his contention that the petitioner's objection before the board was not timely.

The facts and issues in the Brereton case are completely different from those in the instant case. In the first place the issues in the Brereton case concerned questions whether or not ballots though legally cast were nevertheless defective because of the manner in which the voters had marked them. Secondly, these questions naturally required an inspection of the ballots and markings to determine their validity. For these reasons this court found nothing to review legally and it quashed the writ of certiorari, which had theretofore issued on the basis of allegations in the petition which at the hearing in this court admittedly did not stand the test of legal proof. Thirdly, in that case the petitioner admittedly made no objection or request of any kind before the board of canvassers at any time, but sought to make his record of protest for the first time in this court. Fourthly, this court specifically pointed out in that case that no question of a lack or abuse or excess of jurisdiction had been raised by the petitioner therein either before the board of canvassers or before this court.

In the instant case we are confronted with a pure issue of constitutional law which was expressly raised on the record below, as to the right of civilian absentees and shutins to vote at all and as to the jurisdiction of the board to count any of the ballots allegedly cast by such electors. These issues are not to be confused with the question whether certain specific ballots, though cast legally, were or were not marked by the voter according to law. The petitioner before the completion of the count challenged the constitutional right to vote of all civilian absentee and shut-in electors and he further contended that none of the ballots cast by such electors should be counted because there is no valid statute implementing article 23 of amendments and authorizing such ballots to be issued, cast, and counted. Consequently a pure question of constitutional law was raised on the record and it must be determined, if at all, not by an examination of the ballots themselves, but rather by determination and application of pertinent constitutional and statutory provisions. Indeed an inspection of the ballots as such could not possibly aid the court in determining the constitutional and legal questions here involved and therefore their marking for identification would serve no useful purpose here.

The petitioner's claim of unconstitutionality also raises basically the question of the jurisdiction of the board of elections to count any of the civilian absentee and shut-in ballots. If the amendatory statutes in question are invalid, then the civilian absentee and shut-in electors had no legal right to vote in the first instance. It necessarily follows that the board likewise had no legal right or authority to count such ballots.

It is fundamental in our system of government under law that the question of jurisdiction over the subject matter can be raised at any time. In *Gorman* v. *Stillman* (25 R. I. 55), it is stated at page 59 "that if the court should be convinced that it has no jurisdiction over the suit it ought to dismiss the same at any stage of the proceedings. For, as said by Stiness, C. J., in *Hazard* v. *Coyle* (22 R. I. 435): 'When a court has no jurisdiction of a cause, it should stop at any point where the fact appears.'" Continuing, the court said: "Indeed, the court of its own motion should do this, because jurisdiction is the primary and indispensable thing in all judicial proceedings."

Likewise in *David* v. *David* (47 R. I. 304), the court held at page 306: "The question of the lack of jurisdiction could be raised at any time on motion, and should be determined at the earliest stage of the proceedings if possible * * *; whenever it appears that the court has no jurisdiction the court of its own motion should stop the proceedings." See also *State Loan Co.* v. *Barry* (71 R. I. 188), where it is stated at page 189: "This court has consistently held that the question of jurisdiction over the subject matter may be raised at any time before judgment. *Streeter* v. *Millman* (68 R. I. 456); *O'Neil* v. *Demers* (44 R. I. 504)."

In *O'Neil* v. *Demers*, supra, the court held that it was proper to entertain a motion in the Supreme Court to dismiss a complaint pending in the district court on the ground that the district court lacked jurisdiction. The case was then before the Supreme Court on a constitutional question certified from the district court of the sixth judicial district. After citing *Lace* v. *Smith* (34 R. I. 1), as authority for dismissing the complaint even when the case was before it only on certification, it was stated at page 507 with reference to that case: "The court based its action upon the broad ground that a question of jurisdiction may be raised at any stage of the proceedings in a cause before judgment, and said, 'If the motion should be granted, the whole case, including the constitutional questions raised therein, would terminate and cease to exist, therefore it becomes necessary to first inquire into the validity of the motion.'"

The same rule is followed generally in other jurisdictions. For example, in *Welton* v. *Hamilton* (344 Ill. 82), the court said at page 95: "It is contended by the appellees that the appellants waived the question of the constitutionality of the act because it was not raised by them at the hearing before the board of appeals. The question here presented is one of jurisdiction of the subject matter, and it is a principle which does not require the citation of authority that jurisdiction of the subject matter cannot be waived, or, as it is otherwise stated, cannot be conferred by consent of parties. * * * If a tribunal transcends the limits which the Constitution or the law has prescribed for it and assumes to act where it has no jurisdiction its acts will be utterly void. Any act of a tribunal beyond its jurisdiction is null and void whether without its territorial jurisdiction or beyond its powers. * * * Want of jurisdiction may be taken advantage of by plea in abatement, and must be taken advantage of before making any plea to the merits, if at all, when it arises from formal defects in the process or when the want of jurisdiction is over the person, but where the cause of action is not within the jurisdiction granted by law to the tribunal it will dismiss the suit at any time when the fact comes to its notice."

See also *City of Gainesville* v. *Brown-Crummer Investment Co.* (277 U. S. 54), where the Supreme Court of the United States in speaking of such jurisdiction said at page 59: "Of course a question of jurisdiction cannot be waived. Jurisdiction should affirmatively appear, and the question may be raised at any time."

The questions of estoppel, waiver and laches were not pleaded and strictly for that reason are not open to the intervenor. But even if pleaded it is well established generally that since the parties may not confer jurisdiction over the subject matter by agreement or consent, so they may not waive such jurisdiction by agreement or consent or conduct, especially where it concerns the constitutionality of a statute that affects the public interest. See 41 American Jurisdiction, Pleading, section 159, pages 403, 404, and cases cited.

Consequently after a careful examination of the issues raised by the motion to dismiss on the ground that petitioner did not make timely objection, it is the opinion of a majority of the court that his objection was raised on the record in time and that petitioner is properly here. Therefore the motion to dismiss is denied.

The main issues raised by the petition involve the constitutionality of General Laws 1938, chapter 319, as amended, which purported to give civilian absentee and shut-in electors a right to vote before election day. The petitioner contends that all such civilian absentee and shut-in ballots, even though conforming literally with the provisions of chapter 319, as amended, nevertheless were cast without valid constitutional or legislative authority. He also argues that article 23 of amendments to the constitution of the State of Rhode Island expressly annulled article 21 of said amendments and thereby annulled all laws enacted pursuant thereto, and that therefore on November 6, 1956, there was no valid legislation enacted by the general assembly pursuant to power granted by said article 23.

He further contends that the power of the general assembly under article 23 of amendments was limited by the same language which appeared in article 21 of amendments which was expressly annulled thereby; that such language of article 21 had been construed by the justices of this court in 1942 as not permitting absentee voting except on election day; that in the light of such opinion the people must be presumed to have used the language intentionally to limit the legislature as in article 21; that after the adoption of article 23 containing the language thus interpreted by the court, sections 6 and 7½A of chapter 319, as amended, were nevertheless further amended to provide for voting by civilian absentee and shut-in voters on or before election day; and that therefore in such respect both statutes were unconstitutional and void. In other words he contends that the constitutional pattern and language used by the people in adopting article 23, following the interpretation of the same language appearing in article 21, showed unquestionably an intention to limit the legislature so as to permit civilian absentees and shut-ins to vote only on the day of election.

On the other hand the intervenor contends that chapter 319, as amended, is constitutional, but that even if civilian absentee and shut-in ballots cast before election day should be deemed invalid, the statutory amendments are servable and, at least to the extent that they authorize ballots to be cast on election day, are valid and that such ballots are legal and should be counted.

The constitutional questions thus raised by the instant petition and by the contentions of the parties are basically the same as those in the case of *Roberts* v. *Board of Elections*, (R. I. —,) in which our opinion has this day been filed. In that case the issues and principles of law applicable thereto have been fully considered. We therein held that a liberal construction should be applied to the amendatory acts passed subsequent to the adoption of article XXIII; that accordingly they could be treated as manifesting a legislative intention to implement such article by reenacting the prior law by reference; and that in the circumstances such liberality was warranted in order to save as many of the civilian absentee and shut-in votes as was constitutionally possible.

For the reasons stated therein we are of the opinion that there is effective legislation implementing article XXIII to the extent that the board had authority to receive and count all ballots of civilian absentees and shut-ins provided they were cast on election day. We have considered the other contentions raised by the intervenor and we find them lacking in merit.

Mr. Justice Andrews, while dissenting on the ground that the petitioner because of his alleged failure to make a timely objection did not preserve the right to question here the constitutionality of the civilian absentee and shut-in ballots, nevertheless agrees that if this issue is before us then the constitution authorizes the general assembly to permit voting by civilian absentee and shut-in voters only on election day.

The petition for certiorari is granted, the record of the action of the board in counting certain civilian absentee and shut-in ballots contained in inner envelopes whereon it was clearly established by the jurat or official acknowledgement that such ballots had been cast before election day, and the declaration of the result based thereon, are quashed, and pursuant to our decision in this matter heretofore filed on January 1, 1957, the records certified to this court are ordered returned to said board.

Andrews, Judge, dissenting: As is shown by the decision filed on January 1, 1957, I dissented on the ground that the petitioner had not preserved the right to question the validity of the absentee and shut-in ballots. I have had an opportunity to examine the extended opinion of the majority on this day filed but am unable to agree with it on this point.

General Laws 1938, chapter 319, section 7, as amended, provides that after the board of elections has received all the absentee ballots it shall proceed to process, count, and

preserve them as therein provided. Specifically, the board is directed to see if the name of the voter appearing on the envelope enclosing the ballot is on the check list, and having done so, to open the envelope, remove the ballot, and, without looking at the inside of it, immediately deposit it in a covered box. The obvious purpose of the last requirement is to preserve the secrecy of the ballot. This procedure was followed by the board in counting all the absentee and shut-in ballots cast at the last general election and the 2 groups of lawyers representing the candidates for the 2 parties were given every opportunity to examine the envelopes before they were opened to see if the ballots in them were cast according to law.

Another candidate of the same party, the petitioner in *Roberts* v. *Board of Elections et al.* (M. P. No. 1198), challenged 270 ballots because the envelopes containing them did not bear a notarial seal or its statutory equivalent as required by said chapter 319. In each case, the board, before opening the envelope, covered the voter's name with masking tape to preserve the secrecy of his ballot and then took out the ballot and gave it and its envelope the same number to preserve the identity of the ballot should this court be later asked to pass upon its validity. In view of the command of the statute, this was at least a proper way to preserve the identity of the ballot, for once the unidentified ballot was put into the locked box with the other ballots it could never be matched up with its equally unidentified envelope. When either party challenged a ballot on this or any other ground the same procedure was followed. Neither party objected to this procedure and neither can now object to it. The shut-in ballots and the objections thereto were handled in the same manner as the absentee ballots.

After all the absentee ballots had been counted, the result was made known and the same was done in regard to the shut-in ballots. It was not until about 2 weeks after all the absentee ballots had been counted and about a week after all the shut-in ballots had been counted that the petitioner for the first time objected to any of them on the ground that they had been cast under an unconstitutional statute. He then protested and moved that the board consider none of them in the final count. As stated by the majority, he did at that time request the board to have the inner envelopes which contained the ballots cast by absentee and shut-in voters at said election segregated and marked for identification.

When this case was decided on January 1, 1957, I thought this petitioner, like the petitioner in *Roberts* v. *Board of Elections et al.* (M. P. No. 1198), had failed to ask the board to identify the ballots at the time he made his motion to have them excluded from the final count. My mistake in this regard has recently come to my attention and I freely admit it, but as I then stated to my brethren and continue to maintain that the petitioner should have had the ballots and their envelopes marked for identification at the time the envelopes were opened long before he made his motion, my mistake is of no legal significance. Otherwise, I would abandon my dissent if such a thing is now possible.

A few days after he made his motion the petitioner filed this petition for certiorari and in his brief and oral argument before us contended that he had properly preserved the right to challenge all the absentee and shut-in ballots, relying solely upon the following quotation from the opinion in *Brereton* v. *Board of Canvassers* (55 R. I. 23). I quote from page 5 of his brief immediately after he cites that case. "In that case the court said at page 30, citing with approval the case of *Adams* v. *Glen* (53 R. I. 41), and commenting upon the decision rendered in said case:

" 'Clearly the court then was of the opinion that in such proceedings only ballots, the rulings on which by the board of canvassers had been objected to before the board and which therefore should have been marked by the board for identification, should be considered by the court. Moreover, the view of the court then clearly indicates that if rulings of a board late in the counting of ballots of any election make one of the candidates wish to object to the ruling on any ballot previously counted or rejected, he still can and should make such objection and have the ballot marked for identification at any time before the counting is finally concluded and the decision made.' "

I do not read the rule of the quotation from the *Brereton* case to mean that a candidate can delay asking the board to identify ballots until a time when it cannot do so because of his earlier failure to have them identified when they could have been identified. And this is so, although at the time of the late request the ballots are still in the custody of the board and it is still counting ballots. That is just the situation in this case.

Further on in the *Brereton* opinion the court gave what has always seemed to me its reasons for the rule of the quotation when it said, pp. 31, 32, that to have the marking, segregation and rulings made in this court would be to make this court a super counting tribunal rather than a reviewing one and so it would not allow these things to be done there for the first time.

Had the petitioner challenged each ballot when its envelope plainly showed on its face when it had been cast and had such ballot and its envelope been identified with the same mark, as was done in the case of the 270 ballots, the board could at any time while the ballots were in its custody have determined for which of the contestants the good and bad ballots were cast, for it is for that ultimate purpose that identification is required.

The motion was to have all ballots disregarded in the final count and since some of them were entitled to be counted, said motion was too broad and was properly denied. *Hampson* v. *Taylor* (15 R. I. 83, 87 (1885)).

When the petitioner made his late motion doubtless he thought that all ballots were bad just as he doubtless thought that all the ballots were good when he failed to have them identified when identification could have been made; but the fact that he was wrong in both instances does not change the vital fact that the ballots cast before election day were bad and those cast on election day were good. Courts do not make the law; they only declare what it wat at the crucial time in the past. These ballots were always good or bad depending upon the time they were cast.

But the majority holds that the Brereton case does not rule this case on this point. It says in part: "The petitioner's claim of unconstitutionality also raises basically the question of the jurisdiction of the board of elections to count any of the civilian absentee and shut-in ballots. If the amendatory statutes in question are invalid, then the civilian absentee and shut-in electors had no legal right to vote in the first instance. It necessarily follows that the board likewise had no legal right or authority to count such ballots. It is fundamental in our system of government under law that the question of jurisdiction over the subject matter can be raised at any time."

I respectfully disagree with the majority that the petitioner raised the question of the jurisdiction of the board to count the ballots. He simply attacked the validity of the ballots which had long before been counted without objection by him—two profoundly different legal situations. It is abundantly clear that he did not consider that he had raised a jurisdictional question for he relied solely upon the Brereton case which did not involve jurisdiction. Nevertheless there can be no question of the right of the majority to reject the position taken on this point by the lawyers for both parties and to decide it on any ground it chooses. Neither can there be any question of the right of an appellate court to dismiss a case for lack of jurisdiction in the lower court over the subject matter and this, too, without being asked so to do.

I take this occasion to state that when this case was decided on January 1, 1957, the majority raised the question of lack of jurisdiction and rested its decision on this point of a lack of jurisdiction and that I then expressed my disagreement with its position.

There has never been any doubt in my mind of the board's jurisdiction, using that term as it has long been understood to mean—the power conferred by law upon a tribunal to enter upon the inquiry—the subject matter—here the counting of ballots. That power includes the power to make, in the course of the inquiry, erroneous rulings. It has also long been settled that such erroneous rulings are final unless they are reversed at the instance of the person against whom they are made, who has preserved his right to have them reversed by taking the proper steps at the proper time in accordance with the rules governing the inquiry, for example, the rules of the Brereton case.

Said section 7 conferred jurisdiction upon the board to count all the ballots not just those validly cast. The board of canvassers of Warwick had a like jurisdiction. The counting of each ballot is not a separate case. A tribunal that has jurisdiction to take an account, for example, that of an executor, administrator, or a trustee, has jurisdiction to allow items that should not be allowed. That is mere error in the exercise of jurisdiction, just as here it was mere error for the board to count, as it came to them, ballots cast before election day—error to be preserved for review as provided in the Brereton case.

The majority says that we are not concerned with certain ballots not properly marked in accordance with law. This was the situation in the Brereton case. That case did not involve a question of jurisdiction. I am unable to see, at least for jurisdictional purposes, any substantial difference between ballots invalid because they bear distinguishing marks and ballots invalid because their envelopes lack notarial seals or ballots invalid because they were cast before election day. In each case the ballots are invalid and no more or less so than in the other two cases.

I have examined the cases cited by the majority and they are in point on the question of the right of an appellate court to raise the lack of jurisdiction of the lower court over the subject matter without being asked so to do, but I find nothing in them that shows that in this case we have a lack of jurisdiction in the board.

State Loan Co. v. *Barry* (71 R. I. 188), cited by the majority, was an action at law commenced by a writ wherein the ad damnum was fixed at $1,000 returnable to the superior court. This court referred to the statute which provided that the superior court shall have exclusive original jurisdiction only when the damages laid in the writ shall exceed $1,000 and that the statute also provides that the district court shall have exclusive original jurisdiction of all civil actions wherein the damages laid in the writ do not exceed $1,000. Here we have a perfect illustration of lack of jurisdiction over the subject matter but it has no application to the facts of this case.

Jurisdiction must be conferred by the constitution or by statute and what better illustration of this rule can be found than in the very opinion of the majority. The intervener moved to dismiss this case because he

claimed that the petition showed on its face that this court lacked jurisdiction to hear it because the constitution makes each house of the general assembly the sole judge of the election and qualification of its members. I agreed with the majority that the reasoning of Mr. Justice Douglas in *State* v. *Town Council* (18 R. I. 258) is more convincing than that of the dissenter Mr. Justice Stiness who, unlike his associates, did not abandon the first opinion in that case. That does not mean, however, as might be inferred from the statement of the majority at the end of its consideration of that motion that I agreed that we should proceed to hear the so-called merits of this case. I did not so agree because as I have stated in my dissent filed on January 1, 1957, the petitioner had failed to preserve "the right to question here the constitutionality of the absentee and shut-in ballots."

Since my dissent was grounded solely upon the failure of the petitioner to properly preserve his right to be heard at all on the substance of his petition, had I received any support from my brethren the petitioner would have been stopped right at the threshold of the court. Such being my position I have confined this opinion strictly to the reasons that led to my position and to the reasons why I could not agree with the majority that we were dealing with lack of jurisdiction. Consistently with that position I have not discussed here anything concerning the court's decision of January 1, 1957, on the merits, except to emphasize the words of my dissent thereto, namely: "If this question is properly before us."

If it be said that my dissent is based on a procedural point, my answer is that it was upon this procedural point that this court refused to hear the merits of the Brereton case.

For the foregoing reasons it is my judgment that the instant decision should read: "The petition is denied and dismissed, the writ is quashed, the restraining order heretofore entered is dissolved, and the records certified to us are ordered returned to the board of elections with our decision endorsed thereon."

JOHN H. MCGANN *v.* BOARD OF ELECTIONS ET AL. (M. P. No. 1195); ALFRED B. GOBEILLE *v.* SAME (M. P. No. 1196); HAROLD E. SHIPPEE *v.* SAME (M. P. No. 1197)

DECISION

The above three cases were heard together, involved the same basic issues, and will be decided together.

The motion of the intervenors to dismiss the petition for certiorari in each case on the ground that the general assembly constitutionally is the judge of the qualifications of its own members is unanimously denied. We are not concerned with the ultimate issue of the seating or not seating of any member of the general assembly. The controlling issue before us is purely a question of constitutional law and therefore is solely within the court's jurisdiction under the constitution.

The majority of the court have agreed that, even assuming by extreme liberality there was in existence a valid statute giving the board of elections the right to count civilian absentee and shut-in votes so called, such statute cannot constitutionally and legally be extended to authorize such civilian absentee and shut-in voters to cast their ballots on any day other than election day, November 6, 1956.

Since the board has not informed this court of the number of civilian absentee and shut-in voters who, by the jurat or acknowledgment on the inner envelope, clearly established that they had cast their ballots on election day, we are able only to point out to the board that they should follow the principle as set forth in the case of *Dennis J. Roberts* v. *Board of Elections et al.*, (M. P. No. 1198), filed this day, and that they should count only the civilian absentee and shut-in ballots wherein the inner envelopes establish that they had been sworn to or legally acknowledged on election day.

The records and actions of the respondent board in counting civilian absentee and shut-in ballots contained in inner envelopes not in accordance with our above-stated conclusion, and the declaration of result in each case based thereon are hereby quashed. Our opinion will be filed later.

Andrews, Judge, dissents on the ground that the petitioners did not preserve the right to question here the constitutionality of the absentee and shut-in ballots. He agrees, however, that if this question is properly before us then the constitution allows voting of civilian absentee and shut-in voters so called only on election day.

DENNIS J. ROBERTS *v.* BOARD OF ELECTIONS ET AL. (M. P. No. 1198)

OPINION

Condon, Judge: This is a petition for certiorari to review the action of the respondent state board of elections in declaring Christopher Del Sesto, the other respondent, elected governor of the state at the general election held on November 6, 1956. We issued the writ and in compliance therewith the board made due return of its records pertaining to the election of governor. The respondent Christopher Del Sesto took over the defense to the petition, the board by its counsel expressly consenting thereto in open court. We shall hereinafter refer to him as the respondent. As such respondent he neither moved to dismiss the petition nor filed any answer or special plea to it, but proceeded to a hearing on its merits. Therefore the validity of the petition and the facts alleged therein are undisputed.

The facts are as follows: On election day petitioner received on the voting machines in the polling places throughout the State 190,259 votes and the respondent received 190,052 votes. In addition each received a certain number of votes cast by members of the Armed Forces and the merchant marine of the United States in active service and absent from the State, of which 2,056 were counted for petitioner and 1,552 for respondent. The total for each candidate then stood as follows: 192,315 for petitioner and 191,604 for respondent. On the basis of these admittedly valid votes petitioner had a clear majority of 711 votes, and unless there were other votes legally cast by qualified electors the board should have declared petitioner elected.

However, over the protest of petitioner the board counted certain ballots cast by civilian electors absent from the State and by other civilian electors "who, by reason of old-age, physical disability, illness or for other physical infirmities" were unable to vote in person although within the State. The electors of the first class are sometimes referred to as civilian absentee voters and those of the second class as shut-ins. They cast their ballots and forwarded them by mail under the provisions of general law 1938, chapter 319, as amended.

That chapter, as amended, purported to authorize such electors to vote in absentia on or before election day. It had been originally enacted pursuant to article 21 of amendments to the State constitution and authorized voting only on election day. Subsequently article 21 of amendments was expressly annulled by article 23 of amendments which also did not authorize voting before election day. Thereafter the general assembly undertook to amend chapter 319 apparently intending thereby to give effect to that constitutional amendment. Some of the ballots that were voted under such amended chapter had been cast on election day, but a much larger number had been cast before that day. After counting all of such ballots the board found that the total vote for petitioner was 194,547 and for respondent 194,974, and it thereupon declared the latter elected.

The petitioner protested before the board that it should not count any ballots cast by either the civilian absentees or the shut-ins, contending that article 23 of amendments was not self-executing and that there was no valid legislation implementing it; and he argued further that such attempted legislation under which the ballots had been issued to said civilian absentees and shut-ins was unconstitutional. The board refused to entertain petitioner's objection on the ground that it was without jurisdiction to pass upon the constitutionality of the election law and that it was its duty to count all ballots cast under such law unless and until this court declared it unconstitutional.

As a consequence of such ruling, petitioner promptly filed the instant petition and sought a stay of the issuance by the board of a certificate of election to the respondent until the questions thus raised affecting the legality of the civilian absentee and shut-in ballots could be determined according to law. We issued such stay and peremptorily assigned the case for hearing at the earliest possible date consistent with the right of counsel to make reasonable preparation.

The case has naturally aroused intense public interest. This is understandable in view of the ultimate issue involved. Notwithstanding the emotional overtones of the discussion of it elsewhere, it is worthy of note that the case was argued here strictly in keeping with the customary decorum of this court. With commendable ability and zeal, yet without rancor, counsel for each party urged every legitimate legal point in support of their client's interests. Their appeals were always addressed to the law and the precedents as they understood them, and never to the emotions. Such restraint on their part appeared to have communicated itself to others who crowded the courtroom far beyond its capacity. They, too, demeaned themselves in a manner befitting the time, the place, and the constitutional issue that was presented.

We mention these facts to show that we are not unmindful of the human emotions which tend to prevent a calm approach to the cold, legal aspects of this case. Others, without having the supreme judicial responsibility under the constitution, may indulge those emotions and play upon them, but we in this court may not do so. On the contrary we are in duty bound to put emotional arguments completely aside and to decide the case, as we do every other case, solely by the rule of law. Only in that way can the people of this State hope to retain and enjoy that priceless possession of free men, a government that guarantees liberty and justice under law. What then is the rule of law which governs the right of these civilian absentees and shutins to vote?

In this State the time and the place of voting for governor and other State officers was fixed by the constitution from the beginning. Article 16 of amendments, which now governs, expressly provides that they "shall be elected at town, ward, and district meetings on the Tuesday next after the first Monday in November, biennially, commencing A. D. 1912." For 87 years after the adoption of the constitution down to 1930 there was only one exception to the rule that an elector must appear in person at his polling place in order to exercise his right to vote. That exception was article 4 of amendments which was adopted in August 1864 and provided that an elector absent from the State in time of war in the actual military service may vote on the day of election by delivering a written or printed ballot with the names of the persons voted for thereon to the officer commanding his regiment or company.

In 1918 the judges of this court as then constituted, namely, C. Frank Parkhurst, William H. Sweetland, Walter B. Vincent, Darius Baker, and Charles F. Stearns, unanimously advised Governor Beeckman that no elector except those entitled to claim the privilege of article 4 of amendments could exercise his right to vote otherwise than in person in his town, ward, or district meeting on election day. In re Right of Electors in the Military Service of the United States, 41 Rhode Island 118.

On November 4, 1930, the people adopted article 21 of amendments which provided that any elector absent from the State and otherwise qualified to vote at the general election should have the right to vote for all officers and propositions on the State ballot. Unlike article 4 of amendments, however, it was not self-executing but required legislation to make it effective. This amendment expressly authorized the general assembly to enact such legislation, annulled said article 4, and further authorized the enactment of special regulations to govern the manner of voting by electors absent from the State in the actual military service of the United States.

Pursuant to that amendment the general assembly enacted public laws 1932, chapter 1863, which later became chapter 319 in the revision of general laws of 1938. This is sometimes referred to as the absentee voter law. That statute sets out in minute detail what the elector must do in order to exercise the exceptional privilege granted to him by the amendment. And in section 6, consistently with the views so clearly stated unanimously in *In re Right of Electors in the Military Service of the United States, supra*, it was expressly provided: "The absentee voter, upon receipt of the absentee voter's ballot as provided in this chapter, shall vote the same 'on said election day' at some place without the State of Rhode Island * * *." Thereafter the above language which we have not quoted appeared in two subsequent amendments of the chapter down to May 11, 1953, when chapter 3204 of the public laws of 1953 was approved. In that chapter for the first time it was provided that such ballot could be voted "on or before said election day."

In the meantime, 11 years prior to that amendment of the statute, the Honorable the House of Representatives had asked this court: "May the legislature authorize those absent from the State in the actual military service of the United States, in time of war, to cast absentee ballots, before the Tuesday next after the first Monday in November, the time for holding biennial general elections?" The judges of this court as then constituted, Edmund W. Flynn, William W. Moss, Antonio A. Capotosto, Hugh B. Baker, and Francis B. Condon, unanimously answered that question in the negative and stated: "Whatever other power may be vested in the general assembly by the last sentence in article 21, section 1, that sentence gives no power to the general assembly to change the day of the general election held biennially, when the vote of a qualified elector, whether an absent elector or not, shall be cast." (Opinion to the house of representatives, 67 Rhode Island 465, 469.)

The general assembly apparently abided by that opinion and did not enact legislation to the contrary. Subsequently a constitutional convention was held on March 28, 1944, at which an amendment was proposed to the constitution which expressly authorized the general assembly to prescribe the time of voting by members of the Armed Forces. That amendment, which is article 22 of amendments, was adopted April 11, 1944, and besides specifically authorizing absentee voting by "members of the Armed Forces and the merchant marine of the United States in active service," it provided: "and the general assembly is also authorized and empowered to enact legislation prescribing the time, place, and manner and extent of voting by such members." The people thus extended the power of the general assembly so that thereafter it could constitutionally authorize such members of the Armed Forces and the merchant marine to vote on or before election day, but significantly nothing was provided expressly or by necessary implication in that amendment to authorize the general assembly to fix the time for voting by civilian absentee and shut-in voters.

However, some years later the general assembly proposed to the people article 23 of amendments, which the latter adopted on November 2, 1948. This amendment authorized not only electors absent from the State to vote as provided by article 21, but it also extended the privilege to electors within the State who were unable to vote in person at their polling places because of old age, physical disability, illness or for other physical infirmities. It also authorized such civilian absentees and shut-ins to vote for officers and on all questions on the city, town or water district ballots as well as those on the State ballot, which article 21 did not. It further provided that the general assembly should have the power to carry the amendment into effect, but again significantly it did not authorize that body to prescribe the time of voting by civilian absentees and shut-ins, as article 22 had done for those in the Armed Forces.

Apparently the general assembly recognized a distinction in the problems affecting the exercise of the special privilege by the members of the Armed Forces on the one hand and by the civilian absentees and shut-ins on the other, and accordingly it did not ask the people for the power which had been given to it by article 22. We are, therefore, unanimously of the opinion that the constitutional pattern is clear, and that article 23 does not authorize the general assembly to provide for voting by civilian absentees and shut-ins thereunder at any time other than on the day of election as expressly prescribed by the constitution in article 16 of amendments.

Under article I, section 4, of the Federal Constitution the legislatures of the several States are expressly authorized to fix the time of holding elections for Senators and Representatives in Congress, so that this opinion has no application to the election of such officers.

Article 23 of amendments to the State constitution expressly annulled article 21 of amendments and did not contain any saving clause preserving the legislation which had been enacted thereunder and under which civilian absentee voters had been exercising their privilege of voting in absentia since 1932. It is undisputed that article 23 was not self-executing and therefore required legislation to implement it. See Opinion to the Governor (The Registration of Electors; 22 R. I. 651).

The petitioner argues that the general assembly failed to enact such legislation. The respondent contends that since the general assembly, after the adoption of that article, did pass certain amendments to General Laws 1938, chapter 319, purporting to carry out the intent thereof, namely, Public Laws 1949, chapter 2316, Public Laws 1950, chapter 2637, Public Laws 1953, chapters 3204 and 3205, Public Laws 1954, chapter 3314, and Public Laws 1955, chapter 3456, it had effectively implemented the article of amendment. The petitioner claims such legislative amendments were abortive since they purported to amend a law which did not exist. He contends that such law fell with the express annulment of article 21 of amendments on which the law was based. In support of that claim he relies upon the well-recognized principle that, in the absence of a saving clause, legislation which is dependent upon or subsidiary to a constitutional provision which has been repealed falls with such provision, and he cites *State* v. *Tanks* (15 R. I. 385), *Williams* v. *Standard Oil Co. of Louisiana* (278 U. S. 235), *Dorchy* v. *State of Kansas* (264 U. S. 286), *Railroad Retirement Board* v. *Alton R. R.* (295 U. S. 330), *Carter* v. *Carter Coal Co.* (298 U. S. 238), and *United States* v. *Chambers* (291 U. S. 217).

We have examined those cases and we are in accord with the principle applied to the facts therein. However, in the case at bar we think the factual situation which confronts us differs in kind and degree to such an extent that a majority of the court feels that a liberal construction should be applied to the amendatory acts passed by the general assembly subsequent to the adoption of article 23 of amendments and that they should be treated as manifesting an intent on the part of the general assembly to implement such article of amendment by reenacting the prior statutory law by reference.

It is conceded that such a construction is extremely liberal and something may well be said by the petitioner in criticism of it. However, inasmuch as a rule of statutory construction only is involved in this phase of the case, we feel warranted in indulging such liberality in order that as many of these civilian absentee and shut-in votes as it is constitutionally possible to save may not be lost. Therefore we hold that such part of General Laws 1938, chapter 319, as amended, which authorizes voting on election day is valid and that part which purports to authorize voting before election day is invalid. See *State* v. *Clark* (15 R. I. 385). On that view we are of the opinion that there is effective legislation by reference substantially implementing article 23 of amendments so far as it concerns voting by civilian absentees and shut-ins on election day. The board is therefore lawfully authorized to receive and count the ballots cast by such electors on election day.

In view of the urgency of a prompt decision we directed the board to ascertain the number of those ballots. They have done so and have reported to us that 648 such ballots were cast on election day. By crediting the respondent with all of such ballots, notwithstanding some of them were probably cast for petitioner, the result favorable to petitioner as disclosed by the voting machine totals and the total of the ballots cast by members of the Armed Forces would not be altered. Consequently we find it unnecessary to examine 270 civilian absentee and shut-in ballots to which petitioner had objected for certain reasons pertaining to each ballot which had been segregated pursuant to such objection. In view of the official tabulation of the board as above disclosed, it is our further opinion that the board should issue a certificate of election to petitioner, since our order in this case is that the record of the board in counting certain civilian absentee and shut-in ballots which were cast before election day and the declaration of election of the respondent based thereon is illegal and void and must be quashed.

Before concluding we must advert to one other point because there is a diversity of opinion thereon among the members of the court. Although the respondent did not file any motion to dismiss the petition on the ground that petitioner was not entitled to prefer it, he contended in his brief and in oral argument that petitioner's failure, before the board of elections, to have all civilian absentee and shut-in ballots marked and segregated precludes him from having the board's action reviewed and the constitutionality of chapter 319, as amended, determined by this court in these certiorari proceedings. However, before the board he conceded that petitioner had the right to raise that question saying: "It is properly within the rights of Governor Roberts, if he wants to challenge the constitutionality of this section of the statute, nobody objects to his

right to do that." Transcript of the Board of Elections, page 715.

Nevertheless, he now seeks to make an opposite contention and relies chiefly on his interpretation of *Brereton* v. *Board of Canvassers* (55 R. I. 23). There are several answers to this contention insofar as it is urged against our considering the above issue. In the first place the determination of the validity of the statute does not require examination of any ballots. Secondly, petitioner objected to the counting of all civilian absentee and shut-in ballots before the count of all ballots was finally concluded by the board and the result announced. He thus properly brought in question upon the record the constitutionality of the statute upon which the jurisdiction of the board to receive and count all ballots cast pursuant thereto depends. See *State* v. *Garnetto* (75 R. I. 86).

The respondent has apparently misconceived the *Brereton* case. In that case the petitioner did not raise any objections to the rulings of the board of canvassers at the counting of the ballots although in his petition for certiorari he alleged that he had. As a result of such allegations the writ issued but at the hearing before us he was unable to sustain such allegations and we quashed the writ. Neither at the hearing before the board nor here did he question the validity of the election law and he did not raise any question of the right of any elector to vote. In fact no question of the constitutional right of absentees or shut-ins to vote was involved in that case. His contentions were based solely on the alleged illegal manner in which certain ballots were marked by the voter. We pointed out in our opinion that such questions could not be raised for the first time in this court but that they should have been raised before the board, and that each protested ballot should have been marked for identification and segregated there for purposes of review here. The petitioner at no time either before the board or in this court raised any question of the board of canvassers' jurisdiction to receive and count any ballots nor did he bring upon the record a question of the constitutionality of the election law.

In the case at bar the constitutional issue, which the respondent before the board conceded that petitioner had the right to raise, concerned the legal authority of two classes of voters to vote at all, and not whether certain specific ballots were properly marked by the voter in accordance with law. The sum and substance of petitioner's claim is that no civilian absentee or shut-in ballots should be counted, because there is no valid statute authorizing such ballots to be voted under article 23 of amendments, and therefore the board was without jurisdiction to receive and count them.

That is a pure question of law which may be determined wholly aside from an examination of the ballots. In fact an inspection of the ballots as such could not possibly aid in determining this fundamental question of law. Further, since it is a question of jurisdiction over the subject matter it could be raised at any time. Moreover, involved in petitioner's claim is the further contention that in any event the statute is unconstitutional. Such question having been brought upon the record before the board, there can be no doubt that certiorari lies in this court to have that issue finally determined. *Thayer Amusement Corp.* v. *Moulton* (63 R. I. 182). The majority of the court, therefore, have no hesitancy in holding that petitioner is properly here.

The respondent has raised a further objection, namely, that petitioner is estopped to question the validity of the statute under which the challenged ballots were cast because as governor he approved such statute. There is no merit in that contention. It would be a mischievous precedent if we were to hold that a governor or a member of the general assembly must submit to an unconstitutional law merely because in the performance of his official duty he had participated in the enactment of such law. We are aware of no case where any court has gone to that extent in applying the doctrine of estoppel to such officers and we doubt if any can be found. Without further prolonging this opinion we may say that we have considered the respondent's other objections based on estoppel, laches, and waiver and we find them all to be lacking in merit.

Our conclusions may be summed up in a few sentences. The people of this State have the sole power to say when and where the votes for officers on the State ballot may be cast. They have authorized the general assembly to allow members of the Armed Forces to cast them when and where it prescribes. They have not authorized the general assembly to allow civilian absentees and shut-ins to vote at any time other than on election day. If we were to give effect to that part of the statute which permitted them to vote before election day and allow such ballots to be counted, notwithstanding that we hold such portion of the statute unconstitutional, we would be usurping the power which the people have reserved to themselves.

This court may not evade its plain duty no matter how disagreeable the consequences. The power to keep the legislative department within its constitutional limits has been lodged here by the people and they have a right to expect us to exercise it in a proper case. Speaking of that power and the duty of the court to declare a statute which conflicts with the constitution void, the supreme judicial court of Massachusetts declared in *Bowe* v. *Secretary of the Commonwealth* (320 Mass. 230), at page 244: "It is a necessary function, if constitutional provisions are to be the supreme law, and not mere declarations of policy to be disregarded by the legislature at will."

And further on the same page that court stated: "The people by the constitution created the legislative branch of government as well as the executive and judicial branches, and conferred and at the same time limited the powers of each of them. Each must act pursuant to the constitution and within the authority conferred by it. Once the idea of enactments at different levels of authority is grasped, it becomes clear that a provision contained in a statute cannot have any force as law if it conflicts with any provision contained in the higher law of the constitution." Later in applying this principle they said at page 245: "When one party relies on some provision of a statute, and the other relies on some provision of the higher law of the constitution, with which, it is alleged, the statute conflicts, the court, in order to determine what the law really is, must first decide whether there is conflict. If there is, its duty is to apply the higher law of the constitution, and disregard the statute."

We recognize that this court, in keeping with those principles, is in a real sense the guardian of the constitution. To discharge that task it has been vested with the power to prevent the other departments of the government from transgressing the limits set for them by the constitution. We would be recreant to our trust if we did not scrupulously observe it ourselves. Being convinced beyond a reasonable doubt, as we are, that there is no constitutionally valid statute permitting civilian absentee or shut-in voters to vote before election day and no jurisdiction in the board to count their votes, it is our plain and imperative duty to declare all such votes illegal and void. *Carr* v. *Brown* (20 R. I. 215.) As was so well said by the judges of the Supreme Court of Connecticut with reference to the unconstitutionality of a similar election statute in that State, "• • • the people saw fit, in their determined intention that all elections should be regulated by constitutional provisions, unalterable by the general assembly, to prescribe in the clearest manner when, where, and how the elective franchise should be exercised, and these provisions must control the general assembly in all exigencies, until changed by the supreme will of the people, expressed in a new or amended constitution." Opinion of the Judges of the Supreme Court (30 Conn. 591, 600 (1862)).

The petition for certiorari is granted. The record of the board of elections pertaining to the counting of civilian absentee and shut-in ballots cast before election day and to the declaration of respondent's election as governor is quashed. Pursuant to our decision in this matter heretofore filed on January 1, 1957, the records certified to this court are ordered returned to said board.

Andrews, Judge, dissenting: The essential facts and principles of law material to my dissent in this case are substantially the same as in the case of *John H. McGann* v. *Board of Elections et al.* (M. P. No. 1195), in which I have filed a dissenting opinion and it seems to me unnecessary to file another extended opinion.

In my judgment the reasons which I have stated in the above-mentioned case apply here and the instant decision should read: "The petition is denied and dismissed, the writ is quashed, the restraining order heretofore entered is dissolved, and the records certified to us are ordered returned to the board of elections with our decision endorsed thereon."

DENNIS J. ROBERTS *v.* BOARD OF ELECTIONS ET AL. (M. P. No. 1198)

DECISION

The majority of the court have agreed that, even assuming by extreme liberality there was in existence a valid statute giving the board of elections the right to count civilian absentee and shut-in votes so-called, such statute cannot constitutionally and legally be extended to authorize such civilian absentee and shut-in voters to cast their ballots on any day other than election day, November 6, 1956.

On that view the board has informed the court that only a total of 648 civilian absentee and shut-in voters by the jurat or acknowledgement on the inner envelope established that they were casting their ballots on election day. Consequently all the civilian absentee and shut-in ballots, wherein the inner envelopes did not establish that they had been sworn to or legally acknowledged on election day should not be counted.

If we consider that all the 648 votes, which probably were divided, should nevertheless in the present circumstances be cast and counted for candidate Christopher Del Sesto, in accordance with the petitioner's concession in open court and in his brief, the petitioner will still have a plurality of all the votes legally and constitutionally cast, and a declaration of result and a certificate of election to the petitioner in accordance therewith should be issued by the respondent board.

The records and actions of the respondent board in counting civilian absentee and shut-in ballots contained in inner envelopes not in accordance with our above conclusions and the declaration of result based thereon are hereby quashed. Our opinion will be filed later.

Andrews, Judge, dissents on the ground that the petitioner did not preserve the right to question here the constitutionality of the absentee and shut-in ballots. He agrees, however, that if this question is properly before us then the Constitution allows voting of civilian absentees and shut-in voters so-called only on election day.

More Cooperation Needed in Voluntary Community Chest Efforts

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 26, 1957

Mr. WILEY. Mr. President, throughout this land, there are an increasing number of requests being made on our citizens for voluntary contributions and payroll deductions. The contributions are asked on behalf of an ever-wider variety of community health and welfare organizations.

The American people are a generous people. They gladly contribute to a larger proportion of private welfare activities than probably any other people on earth.

In recent years, however, there has been an increasing realization that there is still a good deal of duplication of effort among many of the private groups. And so, there is a feeling, at the grassroots of America, that there ought to be better cooperation and coordination. If that goal is reached, when a generous American contributes money, he will be sure that every dollar contributed will be used efficiently, with a minimum of overhead costs, and in a manner that will do the most good.

These objectives, too, have been of vital interest to the fine organization known as United Community Funds and Councils of America. I was interested to follow news reports last week from Chicago concerning the Midwest regional conference of that organization, which was attended by representatives of Wisconsin community chests and related groups.

I particularly invite attention to the sound remarks of the Assistant Surgeon General of the United States, Dr. Theodore Bauer, before that conference.

I send to the desk the text of an article from the Friday, February 22, issue of the Milwaukee Journal on this subject. I append two earlier articles describing the national biannual conference of the same organization, a conference in St. Louis which explored many significant community themes. I ask unanimous consent that these 3 articles—symbolic of grassroots thinking and cooperation in the American way—be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of February 22, 1957]

CHEST LEADERS URGED TO COORDINATE EFFORTS—COMPARTMENTALIZING OF HEALTH SERVICES IS INEFFECTIVE, SAYS UNITED STATES MEDICAL AIDE

(By Ellen Gibson)

CHICAGO, ILL.—The Assistant United States Surgeon General Thursday appealed to community leaders to face the "enormous challenge" of coordinating local health services. "The services required by many long-term patients, despite the wide difference in the causes of their illness, are strikingly similar," said Dr. Theodore Bauer, Washington, D. C. "Home care, nutritional counseling, social service, rehabilitation service—these are just a few of the many communitywide programs that would benefit patients with heart disease, cancer, tuberculosis, mental illness, and many other disabling conditions. Health services for the aging, especially, cannot be effective if compartmentalized according to specific diseases."

RAPS MULTIPLE SERVICE

Dr. Bauer addressed the 422 professional workers and lay leaders attending the Midwest regional conference of United Community Funds and Councils of America (UCFCA) at the La Salle Hotel here.

He claimed that the multiplication of services for numerous small groups with specific health problems was not an effective way to assure that all essential services were readily available.

Voluntary agencies, able to act more independently than tax-supported ones, ought to lead the way in this coordinating job, Dr. Bauer said.

CITES INCREASED RESEARCH

He spoke of the increase in research in the last 10 years, due to greatly expanded funds from Government, foundations, and voluntary agencies, and noted that most of it was directed to causes of diseases, diagnosis, and treatment.

He said that the time was now ripe for research into the underlying factors in the lives of individuals or communities that contributed to the occurrence of heart disease, accidents, arthritis, mental illness, or the like.

This research—epidemiology—starts with the fact of a high death rate or incidence and probes the physical and social environment for clues to prevention.

STRENGTHENING PLEAS MADE

Proposals to strengthen the national organization in view of the dynamic growth of new forms of federated fund raising were put before the conference Thursday. The UCFCA represents the welfare planning groups and Community Chests or United Funds of 2,000 communities. The federated drives raise $380 million from 26 million givers annually.

Traditional Community Chests are being replaced or augmented in many communities by the newer United Funds, which include some of the big independent fund-raising bodies as well as the usual local Red Feather services.

Federation in one form or another is destined to spread to more agencies and more communities, it was emphasized here.

This trend requires a strong national movement the conference was told by Ralph H. Blanchard, New York, UCFCA director.

The organization has been a rather loose collection of autonomous local groups. He cited the need for field staff, national advertising expansion, and expanded campaign staff, and for a 22 percent increase in the dues paid by communities to finance the greater program.

"You can't drive a spike with a tack hammer," Blanchard warned. "We have got to strengthen this partnership to meet the dynamic new situation."

POPULATION BOOM DISCUSSED

Facing the population boom in this, one of the world's fastest growing countries, another session of the conference discussed how chests and councils should be meeting metropolitan growth.

Calvin S. Hamilton, Indianapolis, Ind., director of the Marion County metropolitan planning department, urged completely new forms of community organization.

Howard F. Gustafson, director of the Indianapolis Health and Welfare Council, said that councils as now set up could expand fairly rapidly to outlying counties.

"It will be a lot easier in health and welfare planning," he said, "than it is for official groups to expand their geographical basis, and our work may pave the way for the official groups working on other problems."

HIGH INCOMES CITED

As to financing additional services in suburbs, Gustafson said that many suburbs had such a high income level that the residents could support such things as new recreation service through fees.

Raymond S. McClelland, Milwaukee Community Chest campaign director, told how the Milwaukee Welfare Council was examining the possibilities of extending both services and fund raising across the county line. He said that any such expansion should follow a study of existing services and that the expansion should not go beyond those areas where a large proportion of the residents have a close contact with the central city.

LABOR ISSUES WARNING

A discussion on recruiting and keeping top community leadership in welfare councils and community chests brought a warning from organized labor.

Joseph T. Clark, labor representative on the United Fund of Greater St. Louis, Mo., said that labor participation could be had for the asking but not to be used as window dressing.

"Too often we find we are invited to take part only for the use of our name," said Clark. "Most of us resent that. If that is your motive, forget it. Once we are invited in and discover why, you may regret you extended the invitation," he said.

Clark said that community welfare leaders might be surprised at the contributions labor could make at all policymaking levels.

[From the Milwaukee Journal of February 1, 1957]

WELFARE NEEDS LINKED TO GROWING POPULATION—VISION OF A NATION WITH 60 MILLION INCREASE IN 20 YEARS DOMINATES LEADER CONFERENCE

(By Ellen Gibson)

ST. LOUIS, MO.—The vision of an America with 60 million more inhabitants in 20 years dominated the conference of 410 community welfare council leaders from the United States and Canada which opened here Thursday.

Laymen who sit on boards and committees of local health and welfare councils outnumbered professional social workers by 5 to 1 at the third biennial meeting sponsored by United Community Funds & Councils of America, Inc. Among them were representatives of the Milwaukee, Madison, Wausau, and Green Bay Community Councils.

Some 97 percent of the 60 million new citizens will live in the already sprawling metropolitan areas, they were told. Urban areas are growing fast, said Philip M. Hauser, University of Chicago sociologist and director of the university's population research center. Fringe areas, he emphasized, are growing seven times as rapidly as the central cities they surround.

NEGRO MIGRATION CITED

H. J. Heinz II, Pittsburgh, Pa., president of the H. J. Heinz Co., in a speech prepared for delivery, likened the original metropolitan areas to fried eggs, each with a central city as its yolk. Now clusters of metropolises are developing, producing areas that look like a giant pan of fried eggs. Eighteen such "urban regions" are now counted in the United States. It has been predicted, said Heinz, that in 50 years settlement will be solid from Boston, Mass., to Newport News, Va., and westward at least to Chicago.

Heinz was grounded en route to St. Louis by bad flying conditions. His speech was

read by John A. Greene, Cleveland, president of the Ohio Bell Telephone Co.

The population is changing in character as well as size, other speakers pointed out. There are more children and more old people. And in northern and western metropolitan centers, southern Negroes in mounting numbers are replacing foreign-born groups, by now assimilated into the wider community.

CASELOADS TO GROW

The Negroes will follow the identical pattern of the European immigrants, Hauser said. Both groups migrated in search of greater economic opportunity. As they move up in the economic scale, they move out of the city centers.

For a time, however, welfare agencies can expect a disproportionate number of Negroes in their caseloads, just as a few years ago the caseloads were top-heavy with European immigrants and their children, he said. To prepare for learning to live in northern cities, Negroes from southern rural slums have an average of only 4.8 years of schooling, he noted. He predicted, though, that their adjustment would be speeded by the booming economic conditions.

MORE WORKING MOTHERS

"At the moment, the Negro is the problem of the inner city," he said. "But it is only a question of time, and very little time at that, until the Negro is dispersed throughout the metropolitan area."

Another change significant to community planners is the increasing number of working mothers. In 20 years, half the women between 35 and 44 will be in the labor force, said Hauser. Because of early marriages, the youngest child in the average family is in school by the time the mother is 35.

"At 35, mother goes to work, a bridge club, or a psychiatrist," said Hauser.

The unprecedented population boom alone will force a tremendous expansion of health and welfare services," Hauser declared. Just to keep pace with the numbers will mean a 71-percent expansion in services for children 5 to 14, a 90-percent increase for older teenagers and two-thirds more services for those 65 and older.

The social problems produced by a swelling population may be vast, but the country will have the economic resources to meet them, Ewan Clague, Washington, D. C., Commissioner of the Federal Bureau of Labor Statistics, assured the conference.

WORKERS BETTER OFF

To abolish poverty in this country—to bring all families up to a minimum level of health and decency—would take about 5 percent of the national income, he reported. Half of that would be required for medical needs, which prevent many persons from being self-supporting.

How to achieve this minimum standard for all is a problem for the "social engineers," said Clague. Simply diverting the income from other classes and redistributing it would not answer. The Nation is economically able to do it, but the method must not reduce the incentive and productivity which are essential to continued growth, he warned.

The 90 percent of American families who get their income from jobs are better off today than ever, Clague observed. Real purchasing power of workers in manufacturing, for example, has risen from an average of $22 a week in 1939 to $40 in 1956. However, familities dependent upon fixed incomes, pensions, public assistance, savings and the like—including the increasing number of retired persons—are having a tough time because of the mounting cost of living, he said. The need to supplement family income has driven many women to work.

OUTMODED METHODS HIT

Hauser sharply questioned whether present day health and welfare organizations are equipped to deal with the bigger America ahead. He scored the horse and buggy methods of social agencies. They share with local governments, he said, the dubious distinction of operating from long outmoded structures. Just as every metropolitan area has numerous local governments, so manifold welfare agencies and fund raising groups operate independently in a single locality.

He also challenged the welfare world to do something about getting the trained personnel which will be needed in expanded future services. The field has "lagged horribly" he said, in comparison with other professions, in salaries and other incentives offered.

Heins' speech urged closer relationships among all the planning bodies, such as welfare and urban redevelopment. He chided the planners for slowness. The public expects dispatch, he said.

BETTER PLANNING URGED

The democratic process of blending different points of view into a program takes time, he admitted, and gives force to the resulting plan. "However, we have used it as a smoke screen for our lack of tools to do the job, for our confusions, for our self-interests, for our efforts to manipulate and our failure to come to grips with basic problems," he contended. "Unnecessarily complex committee procedures and referrals damage the morale of both participants and the public. Let's smarten it up, tighten it up, speed it up."

Joseph A. Beirne, Washington, D. C., also was grounded en route to St. Louis, but in his speech read by D. Lloyd McCowen, district director of the Communications Workers of America, Beirne, too, called for more vigorous and courageous community planning. Beirne is president of the union.

The loud and vocal minority which has objected to planning as un-American or socialism is dwindling, he said. The greatest challenge to community planning today lies in the large group of uncommitted and unaware citizens. Action and example, not just good publicity, will be needed to get their interest and support, he said.

[From the Milwaukee Journal of February 2]

WELFARE COUNCILS NEED CHANGES, LEADERS SAY—MODERNIZATION URGED; INCREASING SKILLS ARE BEING USED, REPORTS AT SESSION AGREE

(By Ellen Gibson)

ST. LOUIS, MO.—Increasing skill is being brought to bear on community problems in this age of planning reports to the third biennial national conference of volunteer leaders from welfare councils have indicated.

But most of the 410 representatives carried home repeated challenges to modernize their community planning organizations so that they can deal with the greater social problems expected to arise from the sheer numbers of a rapidly growing population.

The 2-day conference here, sponsored by United Community Funds & Councils of America, Inc., ended Friday.

The laymen who contribute service and money to health and welfare causes won a tribute from Bishop-Elect John P. Craine, dean of Christ Church Cathedral in Indianapolis, Ind.

OUR RICHEST HERITAGE

"The fundamental difference between the United States and Russia," he said, "is the sense of responsibility voluntarily assumed by citizens of this country. National fascism or communism will never create that kind of citizenship. The willingness to give time to social planning is our richest heritage."

In a creature comfort society, where the greatest skill ever known has been exercised in the mass production and sale of articles and services, those who try to call attention to unmet human needs are not always able to attract attention, he said.

"Yet history has always marked as outstanding those men who felt most keenly their obligations to their fellow men," he said.

TALK OF CHANGES

Many participants in the round tables and general sessions seemed to agree that community welfare councils should cut out some of the cumbersome procedures that have grown up in them, reach out to groups with which they now have only distant kinship and free their professional staffs from petty details so that more time could be spent on planning and research.

Councils should provide forums for groups with similar interests, but they should not be just a collection of sovereign agencies. Instead, they should be regarded as a pool of skills in every area of service, the participants agreed. The council should be able to mobilise any combination of these skills to attack various community problems as they arise.

The welfare council should be strong and free enough to direct the realinement of services and help establish new ones, said H. Franklin Williams, vice president of the University of Miami, in Florida. A major function is to inspire community action through education on the issues and persistent leadership, he said, even if this means political action.

VALUE IN SHORTAGE

He said that to be effective, the council would have to enlist leaders of government, business, labor and all professions in its activities.

Hugh R. Jones, a Utica (N. Y.) attorney, even found something good in the chronic shortage of welfare funds.

This lack of money, he said, forces councils to judge the values of various proposals, set up priorities based on need and carefully select those which will get the limited dollars.

The multiple demands for money for health and welfare causes disturbed many participants. One delegate, who favored a single community-wide campaign for all agencies, suggested that the day might come when a virtual "collection agency" operated year round.

James H. Bond, a Dallas (Tex.) oil company executive, told how his city licensed local fund drives. The welfare council executive is an ex officio member of the licensing committee and the council often makes studies of proposed campaigns to guide that committee. Last year, he said, the committee licensed 71 drives and turned down requests for drives that proposed to raise $2,500,000.

CAMPAIGNS ARE CLEARED

As a further protection to contributors against unethical or unnecessary appeals, Dallas has a "citizens' council" made up of the bosses of big business and industry, Bond said. "All groups proposing to campaign submit their plans to this council. Only the drives that the council favors have a chance of success," he said. "Total dollar giving to health and welfare causes has increased in Dallas under this screening system," he said.

Two projects of the Milwaukee County Community Welfare Council attracted interest at conference roundtables. Mrs. Joseph F. Hacker described the experiment of five Milwaukee agencies in pooling their resources to serve preschool, mentally retarded children. The project is in its second year. It involves a nursery school at Neighborhood house, case work from family service, psychological testing from Jewish vocational service, medical service from the city health department, and the public school's special education supervisor.

The object is to prepare these children for special school classes when they are 8 years old, and do it without creating a new agency.

ANOTHER EFFORT DESCRIBED

The same method could be used to combine existing services into a program for the aged, listeners to her report agreed.

Steven E. Keane described the current effort to meet the needs of emotionally disturbed children. This, too, is being done without a new agency. After a council study showing that 84 percent of the known disturbed children in Milwaukee were not getting the care and treatment they needed, the council asked all agencies with an interest in the problem to submit plans on how they might alter or expand their own programs to help.

Keane reported that, in 3 months, 23 agencies had replied and that he was confident that a practical program would emerge in a short time.

"There is no limit to the amount of good which can be done," one delegate summed it up, "if you don't care who gets the credit."

Our Future Is in Our Own Hands

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. HOFFMAN. Mr. Speaker, at noon today, before the Advertising Club of Washington, at the Willard Hotel, Elisha Gray II, president of Whirlpool-Seeger Corp., one of the country's major manufacturers of household appliances, made clear some of the dangers which confront this country and clearly outlined the answers to some of our major problems.

In my judgment, his address followed the philosophy of our forefathers, who, realizing the dangers which confronted them, nevertheless went forward courageously and intelligently, gave us a Declaration of Independence and a Constitution which charted the course which gave us personal freedom, prosperity, and national security.

With the same courage and clear vision of the future, Mr. Gray gives us an outline which we may follow with profit.

Following is the text of his address:

Washington is the focal point for problems: here domestic problems and the world's problems are all grist for the mill.

As a visitor at the Nation's Capital, the temptation to throw into the hopper just one more problem is irresistible. Would it be imposing upon your hospitality if I discussed with you—as one businessman to another—a problem which appears to me to be one of the most crucial of our national life? It is the problem of whether our economy is growing fast enough for our survival as a major industrial power.

On today's international stage, power is industrial power—the power of science, technology and production. It is this complex which makes possible military strength. It is this industrial base which gives foreign policy its muscle. It is the magnet of attraction for that part of the world which we are pleased to call underdeveloped.

Today, the balance of world power is weighted in favor of the West because we still hold the edge over the Soviet Union in industrial power. But the balance is poised precariously.

It is quite possible that this 20th century may be known not only as the age when the atom was first split and man discovered the secret for his own annihilation, but also as the time when the Soviet Union and China surpassed the industrial power of the United States and Europe. Were this to happen, it would inevitably alter the whole course of world history and the world balance of economic power in which the United States now occupies the pivotal position.

Perhaps the outstanding event of our time is the emergence of the Soviet Union as a technological society capable of challenging—and, if you please, of overtaking and even surpassing—the technical supremacy of the West.

The Soviet Union has accomplished this prodigious achievement through enormous sacrifices, at a frightful cost in human lives and under the most primitive living standards of any industrial nation. The method used for this accomplishment is no secret: it was done with the whip, by sweating its people, by depriving them of virtually every consumer comfort, and by using investment primarily to build up heavy industry and military production.

Now to Western eyes this new Soviet technical society may appear as misshapen and as grotesque as the baggy, bell-bottom trousers of the typical Russian diplomat. But the stark fact remains that 28 years of forced-draft industrial growth has made the U. S. S. R. the second industrial and military power of the world. You laugh that one off, it seems to me, at your peril.

Downgrading the Russians, scoffing at their technical capabilities, and underestimating their economic accomplishments have become something of an American pastime.

You will recall—as do I—when it was fashionable to scoff at the Russians' capability for producing the bomb. Well, they have both of them.

You will recall—as do I—when it was something of a joke that the Russians could excel us in airpower. Our air specialists now tell us that in certain categories of combat aircraft the Russians may have outdistanced us. We are informed by our air technicians that they have certainly excelled us in the leadtime for aircraft production—a specialty, need I remind you, that was supposed to be uniquely American.

While we fill the Sunday papers with page after page of advertisements for engineers and raid each other's plants to obtain them, the Soviets have been graduating nearly three times the number of engineers as are coming out of our technical schools.

American and British scientists who have had the opportunity during the past 2 years to meet with their Russian counterparts have come away with a healthy respect for their technical attainments. Indeed, in the theoretical fields Soviet scientists are said to be as good as any in the world.

Soviet science, technology, and industrial production are progressing at a rate which exceeds that of any country, including our own.

Soviet gross national product is growing at a rate which is about twice that of ours.

As Prof. Gregory Grossman, of the Russian Research Center of Harvard University points out, "even a few additional percentage points per year in the rate of growth of Soviet industrial output and gross national product may shift decisively the balance of world economic power a decade or so hence."

Undoubtedly, there are a number of factors which will tend to slow up the rate of Soviet economic growth as the interactions between population, resources, and technology begin more nearly to resemble our own. But that time has not yet arrived.

True, there appear to be deep stresses and strains within the Communist system which may be developing into critical weaknesses. The violent convulsion among the Soviet satellites will undoubtedly add a further drain on the Soviet economy. Nevertheless, it would be well to give heed to the old proverb that the bear is most dangerous when he is wounded.

My point is simply this: How much longer can we afford to ignore, disregard, or underestimate these formidable Soviet trends and developments without risking the supreme error in human judgment—national destruction? Hasn't the time come when we'd better start "running scared," to borrow a political phrase?

It seems to me that the first place where we ought to start mending our economic fences, so to speak, is our attitude toward the benchmarks we use for measuring economic progress—gross national product.

Somehow these staggering annual figures of gross national product—$200 billion, $300 billion, $400 billion—have become tranquilizers—"happy pills"—which businessmen, economists, and Government officials begin swallowing with regularity after each New Year.

Last year's gross national product of $412 billion has set off the same chorus of hosannas and has been accompanied by the same back pummeling and hand thumping as in other years.

We are mesmerizing ourselves into thinking we've done a superlative job when in reality it's been mediocre. A $412 billion gross national product represents a growth rate of only 3 percent for the 8 years 1948–56, after adjustment for price increases. That's frightening in the light of what the Soviet Union is accomplishing.

Keep in mind, if you will, that during this same 8-year period of 1948–56 the population increase was 1.75 percent per annum. With an overall economic growth rate of only 3 percent, you have a margin of only 1¼ percent to cover the increases in living standards and whatever else we need for the implementation of foreign policy—a margin which could be easily wiped out if we are forced by international tensions to devote a larger percentage of output to national defense.

I venture to say that, if we can't do anything better than to produce a 3 percent economy; and if it is our national ambition to continue to jog along at this sedate 3-percent rate, the competition for primacy in industrial power will be forfeited to the Communist world.

In my judgment, the time has come when we must set our sights on nothing short of a 5-percent growth economy. That rate of annual growth would mean a gross national product of $640 billion by 1965 instead of the potential $535 gross national product which seems to be the boldest officially projected goal to date.

May I, in this same context, respectfully suggest for the consideration of the Joint Committee on the President's Economic Report that we ought to drop our preoccupation with full employment as an objective of national economic policy and substitute therefor the goal of economic growth and development.

The concept of full employment is a hangover of the great depression. Full employment is not the Nation's major economic problem. As a national objective, full employment puts the emphasis in the wrong place—on what we did last year instead of what we need to do over the next 10 years.

As a measuring gage of economic progress, the concern with full employment falls short of reaching the jugular of the problem of growth in a technological society—for instance: it ignores the role of research as the key industry of our economy, as the generating force behind our economic progress, as the source of new industries, new jobs, and a new way of living. Similarly, looking at a statistical scoreboard of last year's records doesn't help us businessmen to grasp the most important single problem which confronts each of us in our own businesses—the hard fact that one of the major consequences of our explosive population growth makes

increased productivity a dominant need of the American economy for the years which lie ahead. Just to hold our competitive positions, we shall need to produce considerably more than we do today, with less people, and with fewer hours of work. Plainly, in order to achieve an expanded economy we're going to have to step up productivity considerably over any current conceptions of an acceptable annual rate.

Our preoccupation with full employment causes us to concentrate exclusively on short-range considerations whereas the dynamics of our own technological society and the deepening shadow of the Soviet economy call for bold, imaginative national economic policies—policies which could serve as beacon lights for business, for labor, for agriculture—and for government itself—for the next decade and more.

Parenthetically, may I point out that, since the end of World War II, progressive corporate managements have increasingly placed their capital investment programs on a long-term basis.

In our kind of economy where research and development has become perhaps the most important, single factor in economic growth, the large corporation can no longer function effectively or successfully in the absence of long-range research, marketing, manpower, and capital investment programs.

What I have been endeavoring to say to you is simply this: There appears to be a lag between the how-did-we-do-yesterday statistics of those who are preoccupied with the essentially static concept of full employment, and the industrial planning and capital investment programing of our progressive, corporate managements (whose operations are largely geared to the dynamic, long-range needs and opportunities of the future).

It seems to me that business and government—at least on this subject—should be thinking alike and should be talking the same long-range economic language.

In soberest truth, I can think of nothing more important and urgent for our national well-being. It is my earnest hope that the Joint Committee on the President's Economic Report will lend their great understanding and assistance to this endeavor which I have been urging.

I should like now to turn for a brief discussion to some of the specific problems which confront us—problems of an expanded economy which require planning and programing in 1957 rather than 1967 when it will be too late for effective action.

First. There is the overriding and explosive fact of an estimated population of 200 million by 1966. For the businessman that is the most important single figure in the statistical workshop. It colors all of our thinking. It is the foundation for all of our planning. For that statistic equates into customers. Translated into economic realities this population statistic means food, shelter, water, transportation, highways, schools, hospitals. And it also means new industrial plant, more raw materials and energy.

Second. By 1975, there is every probability that in domestic raw materials and energy sources we shall be numbered among the major "have-not" nations of the world. Just how do you provide for this vast increase in population if you don't have on hand the raw materials and cheap energy to fuel your industrial plant? Either we must through scientific innovations obtain substitutes for our dwindling, domestic raw materials; or we must obtain them through more effective and imaginative social and political innovations in our dealings with the under-developed countries. Here, too, our very survival may depend upon our capacity to invent either or both of these solutions to our increasing raw material impoverishment. Moreover, it needs to be remembered that it is in this very area—whether it be in the Middle East, Africa, or Asia—that we are thrown into direct and immediate competitive conflict with the Soviet Union.

Third. What do you use for money to pay for this staggering capital investment just for new industrial plants, for new machine tools—our most basic producing equipment? To say nothing of the vast sums required for engineering, research, and development for new products and new processes?

You will observe that I haven't as yet touched upon the money needed to replace the wear and tear, old age, and obsolescence of existing plants and equipment. Let's dwell on that for a moment.

Last year, American business spent in that one period of 12 months around $30 billion solely to vercome the ravages of time on plant and equipment. Actually, this was an out-of-pocket cost which fell far short of meeting the real replacement demands in terms of today's prices or in terms of today's available technology. Mind you this $30 billion was merely the conventional tax allowance sanctioned under the rituals of the Internal Revenue Service regulations which are geared to the idea of the "wear-out" of the old rather than the creative replacement by the new. And it was still far short of even beginning to meet the actual growth needs of the country.

This problem of replacing and up-grading worn-out and decrepit production equipment is far more critical for an economy such as ours (which has been in the industrial business for a long time) than it is for a Johnny-Come-Lately such as the Soviet Union (which is just beginning its massive industrialization). Starting from scratch, it can move in immediately with the latest technologies.

West Germany—happily now an honored member of the free world—is another case in point. West Germany was enabled to make a spectacular comeback because in part it could resume industrial progress from scratch, picking and choosing the best technologies from everywhere and without being handicapped by the United States Internal Revenue Code.

At the risk of boring you, here permit me to place in juxtaposition a breakdown of the estimated capital expenditures for 1950–55 by the United States of America and the U. S. S. R.

Our capital expenditures were allocated during 1950–55; 53 percent for replacement and modernization and 47 percent for expansion.

In the Soviet Union, on the other hand, capital expenditures were allocated: 10 percent for replacement and modernization and 90 percent for expansion.

Those four figures underscore dramatically why we can't be content with an economy that creeps along at 3 percent.

We must devote the heaviest share of our capital expenditure dollar just for replacement of wornout equipment. The Soviets on the other hand, for years to come will be able to put the lion's share of their capital expenditure rubles into the expansion of new industrial plants.

The Russians are forcing the pace. This is Russian roulette for us with a vengeance.

Much more could be said (and with considerable additional refinement) on these several points which I have raised. There are still other facets of this question of economic growth which are of great moment and of high policy and which should properly be considered in this discussion. I have sought, however, to single out those few points which would have special significance to us, as businessmen.

I cannot emphasize too strongly that continuance of our technical superiority over the Communist system depends upon an environment which is hospitable to continued growth and change.

In a research economy accelerated change (in new products, new processes, new designs, new inventions, new materials, new talents) must constantly be fostered and encouraged. This is not the exclusive responsibility of the business or the labor side of the economy. I believe the responsibility has to be shared by the Congress and the executive branch. Moreover, in my lexicon "to foster and encourage" does not mean verbal exhortations replete with pious platitudes. I have in mind the kind of encouragement, for instance, which the appropriate committees of the Congress could provide by deliberation on and review of our existing tax regulations on depreciation, to take one example. Do our existing depreciation regulations enable the businesses which have expanded rapidly—the growth businesses of the country, the small, the medium sized and even the large companies—to draw down sufficient funds to meet the enormous requirements for modernization and replacement of our production equipment? The right answer to that question alone would carry us with seven league boots into the expanded economy which I have been urging.

To my way of thinking, we are largely prevented from moving more rapidly into an expanded economy by mental impediments unconsciously held and, therefore, often the most difficult for us to abandon. May I cite two examples?

The first of these mental roadblocks is the nostalgic yearning for a return to a simpler society in which small business would be the dominant type of business organization.

The second piece of superfluous mental baggage which could also be readily discarded is the dinosaur type of business mentality which regards competition as a form of original sin and wants to operate without the risks of the market place.

Both ideas are totally wrong.

Both ideas are profoundly antigrowth.

One would turn the clock back and revert to economic folk dancing on the village green—where the great mass production and mass distribution industries of America would be lovingly tended by native artisans and craftsmen (native, that is, to Hollywood).

The other would foist a gigantic collectivism upon us to be managed, of course, by very high-minded and high-principled businessmen—a system of administered capitalism instead of the capitalism of the market place.

I say that both of these conceptions are antigrowth because both are essentially static: neither allows for change or development.

I say that both of these conceptions are antigrowth because they would place the front-runners of business in a straitjacket.

Today's realities—the menacing threat of the growing Soviet industrial power and our own compelling domestic needs—seem to me to demand that we abandon these fixations about business because they are distracting us from the attention we should be directing to the big problem—the problem of economic growth.

At a time when we may be losing the economic race to the Soviet system, we should be thinking clearly how all business can operate in a fluid environment—an environment where little business has the opportunity to grow and to become bigger; where big business risks the loss of its market position whenever it is lacking in efficiency; and whenever it prices itself out of the reach of the consumer; or forgets that it is an organization of human beings, with definite community and public responsibilities.

Social acceptability in an expanding economy should not depend upon size alone—but rather on the kind of organization that it takes to do the job; on whether the particular type of organization (whether it be

big or small) is taking the risks and doing the pioneering to bring about accelerated growth.

It goes without saying that in this kind of economy there is plenty of elbow room for all—the small, the medium-sized, and the big.

In this same context in which I have been speaking, I think we are bound to recognize and to acknowledge—with candor and honesty—that in a technological and research era, only the big—indeed, at times, only the very big—can perform certain jobs well, with a maximum of efficiency and at the lowest manufacturing cost.

Surely, not even the most ardent admirer of small business would seriously urge in this day and age that we should, for example, atomize the great blast furnaces of the steel industry into a congeries of nationwide blacksmith shops; or that the great mass retail distribution system of our country (for which we are justly celebrated throughout the world) should be fragmentized into multitudinous corner drygoods stores?

To sum up:

1. We face the prospect of a revolutionary shift in the world balance of economic power within 10 years because the Soviet Union is surpassing us in industrial power, with the consequent loss of our international position.

2. To meet this threat we must speed up our economic growth. We have to do this not only for our own domestic well-being, but to supply a surplus of strength for binding together the free world. Without this kind of industrial power, you haven't any foreign policy worth talking about.

3. We should fix our goals and set our sights on a new conception of gross national product—one that will encourage the realization of a 5-percent growth economy.

4. We should clear away those mental roadblocks about business which divert us from the main issue of the day—moving more rapidly into an expanded economy.

The American people have successfully undertaken far tougher jobs than the one I am proposing.

This task is not beyond either our technology or our raw materials—if only we give it intelligence, effort, and priority.

The choice before us is not merely one of success or failure—it is the ultimate choice of whether we live or die.

With courage by all of our people, with the will to work, and with a determination to succeed in this undertaking, we can open wide the throttle of the American productive machine to secure our own freedom and freedom everywhere.

Statement of Hon. J. Lindsay Almond, Jr., on Proposed Civil Rights Legislation

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a very able statement made by the distinguished attorney general of Virginia, the Honorable J. Lindsay Almond, Jr., before the subcommittee of the Judiciary Committee considering the so-called civil rights bills.

The views and statements of Judge Almond are forceful and are incontrovertible. It is one of the finest statements I have heard in opposition to these vicious so-called civil rights bills.

His remarks are as follows:

My name is J. Lindsay Almond, Jr. I am the attorney general of the Commonwealth of Virginia.

Mr. Chairman and members of the committee, I thank you for according me this privilege.

I appear in opposition to the pending measures, viz, H. R. 1151 and H. R. 2145. I have no way of knowing which of these bills will emerge from committee. I have reason to believe that H. R. 1151 will in substance be acted upon by the House.

You are so thoroughly familiar with the purpose, scope, and content of both that I will not undertake to analyze either in detail.

Both would establish a Commission on Civil Rights in the executive branch of the Government.

Both would provide for an Assistant Attorney General.

Both would amend and supplement existing civil-rights statutes.

Both deal with the right of franchise.

Both are incongruous, inconsistent, and self-refuting.

This is the first time I have witnessed advocacy of the creation of a commission to investigate alleged conditions, ascertain factual situations and circumstances as a basis upon which to predicate subsequent remedial legislation and, in the same bill, seek to spread upon the statute books a substantive law designed to remedy the conditions which are so allegedly necessary to be investigated. The procedure, so ill considered and recommended, is to apply the cure to the alleged disease and diagnose the disease at a later date. Under such circumstances, no consideration is given to the prognosis of tragedy.

If it is necessary to create another bureaucratic and costly commission to run down propaganda and chase gossip relating to allegations infringing upon the right to vote and that "unwarranted economic pressures" are being applied it is incongruous, inconsistent, and self refuting to assume that the gossip is true and the economic pressures actually exist. If the commission is necessary, then broad expansion of substantive civil-rights legislation is not. If conditions justify substantive legislation, then the commission is useless and unnecessary and of itself constitutes "unwarranted economic pressure" on the back of the already overburdened American taxpayer.

There is one certain, and to many people salutary, thing that such a commission so proposed will accomplish. It will set up another costly bureau and add another tentacle to the Federal octopus. The 2-year limitation upon its duration will mark its first milestone to perpetuity. There will be just as many left-wing pressure groups howling for its permanency as now demand its creation. Considerations of political expediency which spawned it will not let it expire. Its hordes of employees and snoopers will perpetuate themselves on the public payroll. "The commission may appoint a full-time staff director and such other personnel as it deems advisable." It may "utilize services of voluntary and uncompensated personnel." It may pay their actual and necessary travel expense plus subsistence to the extent of $12 per day. Rest assured, with such comfort as you may, they will be legion and of that variety which produced Gunnar Myrdal's American Dilemma, that source of high judicial authority which brands the Constitution as a "near fraud on the people" and as "impractical and unsuited to modern conditions."

The commission is vested with sweeping powers so broad, so general and unbridled as to constitute it a board of inquisition and ex parte condemnation. It will provide a source of harassment to the several States which it will seek to victimize in derogation of their rights under the Constitution to administer their own internal governmental affairs. Without any criteria or standards for its guidance and direction or to require it to inform those against whom its inquisitions may be directed, it is commanded to investigate allegations, however chimerical or insubstantial, relating to the right to vote and "unwarranted economic pressures." What the form and substance of the allegations may be is left entirely to the whim and caprice of the commission or to the person, association, or corporation invoking its powers. However spurious the allegation or irresponsible its proponent, the commission is commanded to investigate. Who but the commission or the agitator is to determine what constitutes "unwarranted economic pressure"? Is the fact that a citizen alleges that he is too impoverished to pay a $1.50 poll tax as a prerequisite to the right to vote "economic pressure"? Is the fact that he must travel a considerable distance to the polls without means of transportation "economic pressure"? Is the fact that he is refused credit by a bank, merchant, or neighbor, and so alleges, sufficient to bring him under the guardianship of the commission?

Those who would regard this approach as facetious, I would call to their attention the case of *Griffin* v. *Illinois*, decided by the Supreme Court of the United States on April 23, 1956, when it was held that a State could deny an appeal in a criminal case without violating Federal due process and equal protection under the 14th amendment, but that when a State does allow appellate review it must pay for the transcript of the record if the appellant is too poor to pay for it himself. The effect of this decision was to establish economic equality for all defendants in criminal cases.

Under the sweeping language of this bill the Commission would be required to investigate an allegation of unwarranted economic pressure that a State judge had fixed bail in a criminal case at what he deemed a reasonable sum which a wealthy man could raise and a poor man could not.

The Commission is required to "study and collect information concerning economic, social, and legal developments constituting a denial of equal protection of the laws under the Constitution."

A decision of a State court subject to a review by a State court of last resort would be a legal development. The enactment of a statute relating to a matter of State concern is a legal development. The action of a governor in the exercise of his prerogatives in making a proclamation in an emergency or issuing an executive order or directive is a legal development. This act would require the Commission to inquire into and investigate the judicial, legislative, and executive branches of a State government and invest a nonjudicial body with power to adjudge their judgments, orders, decrees, enactments, proclamations and directives to bear the stigma of a denial of equal protection of the laws.

The right of an individual to invite into his home whomsoever he might choose, or a club, association or fraternity to select its members and guests are social developments. This measure would require the Commission to inquire into this if, perchance, it should decide that such constitutes a denial of equal protection of the laws.

The right of a State to prohibit miscegenatious marriages or to uphold and preserve its public policy relating to miscegenatious cohabitation is both a social and a legal development. Yet you require the Commission to inquire into this if it should imagine same to constitute a denial of equal protection of the laws.

As fantastical as it may seem, these are some of the duties which you impose on the

Commission in mandatory language. These are some of the powers with which you would invest it in utter abrogation of State sovereignty and in callous disregard of individual rights.

The Commission or any subcommittee of two members may hold hearings and act at any time suitable to its convenience at any place under the jurisdiction of the American flag.

One member, the Chairman of the Commission or the chairman of a two-man subcommittee, may require any person to attend at any time at any place designated anywhere in the United States. Such person may be required to answer any question propounded and any allegation made against him however ridiculous or frivolous the question or however embarrassing and unfounded in fact the allegation may be. The person summoned, be he private citizen, representative of a corporation, association, partnership, judge, governor of a State, member of a State legislature, public official, judge of an election precinct, member of an electoral board, or what not, may be required to produce any written matter, record, journal, ledger, or document, official or otherwise, and submit himself to examination and cross-examination at the hands of the Commission, any member thereof or any person designated by the Commission for the purpose. The person designated to examine and cross-examine might well be one of the voluntary and uncompensated personnel provided by the NAACP, the ADA, or some other professional agitator.

The Commission would have authority to summon to some distant place an election official on the eve or in close proximity to the date of an important election, thus causing him to absent himself from his post of duty and responsibility and compel him to produce records indispensible to the proper and lawful conduct of the election. The process and power of the Commission could be used to preclude the rights of innocent and law-abiding citizens in the exercise of their franchise and to interfere with and abridge the right of a sovereign State to conduct its own elections.

It should not require the citation of authorities, which are abundant, to sustain the proposition that the vesting of such unbridled authority in any Federal Commission or body is in transgression of the Constitution of the United States. To put it bluntly, it constitutes deliberate and unwarranted Federal interference in an essential phase of Government denied by the Constitution to the Federal Government and expressly reserved to the States.

It is as appalling as it is incredible to me that the President and the Attorney General of the United States would call upon this committee and the Congress to create a Frankenstein monster with powers far exceeding in scope and fraught with dangers more dire to the public interest than any power which the committee itself possesses, and which the Congress has ever seen fit to confer upon it. You are asked to create a Commission on Civil Rights and empower it to perpetrate civil wrongs.

In addition to this, any person who fails to appear before the Commission in obedience to a summons or to produce a truckload of records at his own expense and inconvenience at some remote and distant place in this country may, at the instance of the Attorney General, be fined and jailed for contempt. He may have a good defense to the contempt citation and yet may be required to travel from Virginia to California or from Texas to Maine to assert it. This is not the exercise of the normal functions and power of government. It borders too closely and too dangerously on the exercise of the power of tyranny.

AN ADDITIONAL ASSISTANT ATTORNEY GENERAL

I have no objection to the Attorney General having all the assistance he needs to properly perform the necessary duties of his high office.

How many assistants to the assistant will be required remains unanswered. It is reasonable to assume that they will be legion. The Attorney General feels that it is necessary to have this additional assistant in order that he may be placed in charge of a new civil rights division in the Department of Justice. The design behind this is to give permanency and progressive continuity to the constant attempt to broaden and expand Federal authority into an area which belongs to the States. It is part and parcel of the program to constitute the Attorney General as father confessor, parens patriae, and special counsel at public expense to every person who fancies that he has a civil-rights grievance. It will enable the Attorney General of the United States to establish and promote a collection agency to process civil suits for damages at the behest of individuals who should employ and pay counsel of their own choosing. The Attorney General has full authority to assign an assistant to this division without creating the expensive burden of a new office.

TO STRENGTHEN THE CIVIL-RIGHTS STATUTES

This to me is diametrically opposed to every concept of Anglo-Saxon jurisprudence.

The Attorney General not only proposes to violate the sacred precincts of the constitutionally embedded system of trial by jury, but he proposes to abolish it as the time-honored safeguard and means of applying the sanctions of a penal statute. He proposes to enlarge and substitute therefor the contempt powers of the Federal judiciary. He would set at naught and banish from the American scene the right of an accused person to demand the nature and cause of accusation against him, to be confronted by his accuser, to demand proof, to place himself in a position to plead former jeopardy and to cross-examine those adverse and hostile to his rights. In order to accomplish his purpose to amend the criminal conspiracy statute he would sacrifice these constitutional principles.

The proposed amendment would permit the Attorney General to institute a civil action for the United States or in the name of the United States for the benefit of a third party for redress or preventive relief whenever any persons have engaged or are about to engage in any conduct which would form the basis of a cause of action under the conspiracy statutes. He could apply for a permanent or temporary injunction, restraining or other order. The application could be ex parte and without notice. The argument advanced in support of this procedure is puerile. It was a pretended dislike to invoke criminal sanctions because as against public officials they were inflamatory and productive of hard feelings. I ask what would be more productive of inflamatory feelings and conditions than to sneak into a Federal court, stigmatize a citizen with proof of illegal conduct in an ex parte proceeding, secure a temporary injunction or restraining order, and in effect convict him of crime without affording him an opportunity to be heard and to submit his cause to a jury of his peers?

Recognizing the sterility of logic in the reason first assigned the Attorney General comes forward with his real reason. I quote him "I don't want to amend the criminal statute because the leading case (*Screws* v. *U. S.*) on the subject holds that in order to convict under the criminal statute you must prove a willful intent." This is tantamount to saying: "I want to be in a position to harass and convict for an unintentional and inadvertant violation."

The Attorney General considers it nicer, less offensive and more conducive to public peace and tranquility to eliminate the essential component of intent as a requisite of guilt and to evade the burden of proving guilt beyond a reasonable doubt, while at the same time depriving the defendant of his right to trial by jury.

This amendment is totally unnecessary. The civil-rights statutes now provide for every reasonable safeguard. Every person who under the color of any law, custom or usage, the enjoyment of whose rights are threatened, or who is deprived of any of his rights, is afforded ample remedy at law or in equity against those offending. Revised Statutes, section 1979, title 42, chapter 21, section 1983.

We have a penal statute making it a crime to exclude any qualified citizen from jury service on the basis of race or color. Title 18, section 243. The Federal courts have exclusive jurisdiction over these matters. The President is invested by statute with power to direct Federal judicial and trial officials to conduct speedy trials. Revised Statutes, section 1988 (title 42, ch. 21, sec. 1992). Every reasonable and proper safeguard has already been thrown around the exercise of the right of franchise. There is no more reason to justify making the Attorney General personal counsel for private individuals in matters relating to civil rights than there is to assign him this novel responsibility in other tortuous fields. This, in my judgment, is a dangerous innovation in Federal substantive and procedural law. It would place in the hands of a partisan Attorney General a drastic weapon which could too easily be converted into a sword of oppression. It could confederate him with any and every pressure group whose stock in trade is to stir up strife and foment litigation. In these proceedings instituted by the Attorney General the United States would "be liable for costs the same as a private person." You would have the anomalous situation of the people of this country providing legal counsel for private individuals and guaranteeing payment of the cost of endless and voluminous litigation. A housewife who terminated the services of a cook or maid could be summoned under threatened penalty of contempt and compelled to make explanation. The results of her cross-examination before the Commission could form the basis of a civil action for damages brought against her by the Attorney General of the United States. You have had before you the pathetic and astounding picture of the Attorney General beseeching and imploring the Congress of the United States to place him and his high office in a position to, wittingly or unwittingly, become particeps criminis with runners and cappers and those who would practice barratry, champerty, and maintenance.

There has been much said about unwarranted economic pressures. The very powers which you would by this legislation create could and, I fear would, become the most deadly instrumentality of unwarranted economic pressures ever foisted upon any people.

The Commission on Civil Rights would function hand in glove with the sweeping powers of the Attorney General. Every person summoned before the Commission would be, in effect, subjected to the office and function of a bill of discovery. That person would stand under the dire and coercive threat of being amerced in damages through a civil suit brought immediately thereafter by the Attorney General. Enactment of this legislation would place in the merciless hands of unscrupulous pressure groups a weapon of coercion, intimidation and unwarranted economic pressures productive of racial discord, hatred, and strife of proportions appalling and inimical to the welfare of the Nation.

THE ADMINISTRATION'S DISTRUST OF STATE COURTS—ABOLITION OF ADMINISTRATIVE REMEDIES

There is no more salutary rule in American jurisprudence than the requirement for the exhaustion of State administrative remedies before resort to a Federal court. The pending proposals provide for its abolition in the amendment to the civil rights statutes

and the amendment relating to the right to vote.

Instead of abolishing this time honored rule of comity, it should be enlarged to include State judicial as well as administrative remedies.

It is rule of comity and a rule of commonsense. Wherever parties may have their rights adjudicated and remedies afforded at the State level, Federal courts should not interfere. The jurisdiction of State courts should not be ousted. State courts take due cognizance of Federal questions and construe and apply their own statutes with due regard and respect for the Federal Constitution. The writ of certiorari is always available with reasonable facility.

Federal legislation abrogating and rendering ineffectual administrative remedies provided by a State is an unwarranted interference with the orderly process and functions of State government. It is simply another strangling tentacle of the octopus of Federal encroachment.

I can only sum it up as a deliberate, open, and blatant expression of total lack of faith and confidence in the virtue, efficacy, and integrity of the State judicial system in particular and State government in general.

Instead of curtailing and limiting Federal jurisdiction already rapidly devouring our federated system and reducing the several States to inanimate marionettes, it is proposed by this legislation to enlarge it by striking down State law.

In Virginia it is provided by statute that any person denied registration to vote shall have an immediate right to appeal without payment of a writ tax or giving any security for costs. The procedure is so simple as to obviate the necessity of employing counsel. It is provided that the proceeding shall take precedence over all other business of the court and shall be heard and determined as soon as possible. Judgment in favor of the petitioner entitles him to register at once. If the judgment be adverse to him, he has the right of appeal to the supreme court of the State. The election machinery of the State or locality would not in anywise be impeded or affected.

The pending measures before you would enable the Commission or the Attorney General, or both, to harass, disrupt, impede, and obstruct the State's duly ordained election machinery, and would prevent the holding of any election at all, thereby denying to others their right to vote and produce governmental chaos.

That which is proposed here is not only wrong as a matter of policy, but directly contravenes the Constitution of the United States and in addition defeats the very purpose allegedly sought to be accomplished.

MEDDLING WITH STATE ELECTIONS

The proposed amendment relating to the right to vote reaches farther than ever before into an area explicitly reserved by the Constitution to the States.

Irrespective of any safeguards, however effective they may be, thrown around the exercise of the right to vote by a State, the Attorney General, without any limitations, may step in and virtually take over. State law, remedy, procedure, State right jurisdiction, and authority he may ruthlessly brush aside.

Here, no matter of race or discrimination is involved. This represents a bold and unprecedented arrogation of Federal power in utter and defiant exclusion of the constitutional rights of a State to regulate and administer her own electoral process. Neither the 14th nor the 15th amendments are here involved. The next step may well be for the Attorney General to prevail upon the Supreme Court to invoke its extra-constitutional doctrine of Federal preemption and implied supersession, and hold that Congress having legislated on the subject of elections for Federal officials has preempted the field to the total exclusion of State authority.

There is no such thing as a Federal election. There is no Federal election machinery, and the Constitution authorizes none. Every election for any office, high or low, is a State election conducted under the provisions of State law by State officials and State administrative agencies. The Constitution confers no authority on the Federal Government to provide for, conduct, regulate, or administer any election. The Constitution expressly negates every concept of any such authority in the Federal Government and on the contrary makes it abundantly clear that such authority resides only with the States. If this legislation which is designed to delve into and interfere with the election processes is necessary and in the national interest, let it be accomplished through the medium of an amendment to the Constitution. Its enactment is nothing short of a naked arrogation and usurpation of power by the Congress devoid of any semblance of constitutional sanction or warrant. It is not torture of the Constitution; it is ultra vires defiance of the Constitution.

We hear so much prattle today about "the supreme law of the land." It comes from those who lift this phrase bodily from its constitutional setting and context with no consideration for correlative and apposite constitutional language. Any enactment and any judicial pronouncement which is not under the authority of and pursuant to the Constitution does not and cannot bear the halo of "supreme law of the land."

Those who subscribe to or connive at the so-called doctrine of constitutional evolution are not only undermining the pillars of our constitutional system but are sowing the virus of disrespect for the Constitution itself.

Enactment of this legislation sets the stage, opens the door, and invites the Supreme Court to apply the nefarious doctrine pronounced by it in *Commonwealth of Pennsylvania* v. *Steve Nelson* on April 2, 1956. With full knowledge of the danger ahead and the far-reaching implications of the Nelson case you will invite the application and extension of the doctrine of preemption that Congress has "occupied the field to the exclusion of parallel State legislation." Irrespective of the views of the Attorney General, I cannot conceive that the Congress intends to bring this to pass.

No pretense has been made that the pending proposals find any refuge in the 15th amendment. It is totally void of sanction under the 14th amendment. That amendment proscribes State action only. Here, you seek to deal with individual rights inter sese. The 14th amendment has heretofore been amended by the Supreme Court in violation of article 5 of the Constitution. Surely the Congress will not embark upon another amending voyage without submission of the issue to the people.

May I remind you of the language employed by a great liberal of commanding stature, Mr. Justice Oliver Wendell Holmes, in *Baldwin* v. *Missouri* (281 U. S. 586):

"I have not yet adequately expressed the more than anxiety that I feel at the ever increasing scope given to the 14th amendment in letting down what I believe to be the constitutional rights of the States. • • • I cannot believe that the amendment was intended to give us carte blanche to embody our economic or moral beliefs in its prohibitions."

Then again Mr. Justice Brandeis in the Erie Railroad case:

"There stands, as a perpetual protest against its repetition, the Constitution of the United States, which recognizes and preserves the autonomy and independence of the State, independence in their legislative and independence in their judicial departments. Supervision over either the legislative or the judicial action of the States is in no case permissible except as to matters by the Constitution specifically authorized or delegated to the United States. Any interference with either, except as thus permitted, is an invasion of the authority of the State, and, to that extent, a denial of its independence."

In order for these measures to find lodgment in the 14th amendment it would be necessary to place a construction thereon never contemplated by those who wrote it, but in fact expressly rejected by them.

Judging solely from what has been said as a matter of public record in sponsorship of this legislation by the Attorney General, Members of the Senate and House of Representatives and their cohorts and confederates of the NAACP, the ADA and their prototypes it is shockingly punitive in purpose and design and aimed directly and insultingly at the Southern States. It was not conceived in response to the demands of the national interest, but engendered in hate and motivated by political expediency.

In opposing a measure similar in nature that great Republican statesman from Idaho, Senator William E. Borah, speaking in the Senate of January 7, 1938, said in reference to the Southern States:

"These States are not to be pilloried and condemned without a full presentation of the nature of the task which fate and circumstances imposed upon them, and not without a complete record as to the weight and difficulty of the task, what has been done, and with what good faith it has been met. I shall contend that the southern people have met the race problem and dealt with it with greater patience, greater tolerance, greater intelligence, and greater success than any people in recorded history, dealing with a problem of similar nature."

This problem was in the process of progressive and constructive solution in a spirit of mutual good will and in promotion of amity and concord between the two races. The course which this legislation will shape and direct will destroy much of the salutary gain already made and accentuate and stimulate the gravity and difficulty of a solution in the days ahead.

The following statement from President Coolidge is a logical and annihilative answer to the pending proposals:

"It is too much to assume that because an abuse exists it is the business of the National Government to provide a remedy. The presumption should be that it is the business of local and State governments. Such national action results in encroaching upon the salutary independence of the States and by undertaking to supersede their natural authority fills the land with bureaus and departments which are undertaking to do what it is impossible for them to accomplish, and brings our whole system of government into disrespect and disfavor.

"The Nation is inclined to disregard altogether too much both the functions and the duties of the State. They are much more than subdivisions of the Federal Government. They are also endowed with sovereignty in their own right."

Nor do I consider it ever inappropriate or untimely to invoke the sage counsel of Woodrow Wilson:

"Moral and social questions originally left to the several States for settlement can be drawn into the field of Federal authority only at the expense of the self-dependence and efficiency of the several communities of which our complex body politic is made up.

"Paternal morals enforced by the judgment and choices of the central authority at Washington do not and cannot create vital habits or methods of life unless sustained by local opinion and purpose, local prejudice and convenience—unless supported by local convenience and interest; and only communities capable of taking care of themselves will, taken together, constitute a nation capable of vital action and control.

"You cannot atrophy the parts without atrophying the whole. * * * It is the alchemy of decay." (Constitutional Government of the United States, 1956.)

This legislation repudiates the counsel, wisdom, and experience of the great and hallowed dead who practiced what they preached and are revered by the country they served.

Many of us, with faith and hope, were led to believe that President Eisenhower drew inspiration, strength, and wisdom from them when he made and often repeated this statement to the American people:

"I want to see maintained the constitutional relationship between the Federal and State Governments, for if the States lose their meaning, our entire system of government loses its meaning and the next step is the rise of the centralized national state in which the seeds of autocracy can take root and grow. We will see that the legitimate rights of the States and local communities are respected. We will not reach into the States and take from them their powers and responsibility to serve our citizens."

To me the record demonstrates the inescapable and irrefutable conclusion that the present leadership preaches one course of action and basic philosophy but advocates and practices its direct antithesis.

The Direction of Our Gratitude

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Dr. Liston Pope, dean of Yale Divinity School, as it appeared in the February 2, 1957, issue of Protestant Church Life:

THE DIRECTION OF OUR GRATITUDE

(By Dr. Liston Pope, dean of Yale Divinity School, written in the interest of the 1957 one great hour of sharing United Appeal for overseas relief, reconstruction, and rehabilitation, through which our churches support their programs to aid the hungry, homeless, and destitute abroad)

It is customary—as we give thanks to God for our blessings—for us to look backward.

We give thanks for safe conduct through the year that is past, for a bountiful harvest stored against the long winter, and for other evidences of prosperity. We look back with gratitude even far beyond the year that is past—back across centuries to those colonizers who first came to these shores.

We are grateful to these our forbears for the rugged perseverance with which they laid the cornerstones of a great civilization, and for sterling traits they built into the American character.

It is entirely appropriate that we should look backward gratefully. We are the heirs of great riches from times past. A vast continent has contributed to us her wealth. A dozen generations of men and women, from nearly every land on earth, from many races and religious faiths, have toiled here in one common dream: that men should be free and secure and unafraid.

We the the most fortunate people on earth—among the very few fortunate peoples in a miserable world. We are easily tempted to become somewhat smug, to assume that we are greatly blessed because of our superior virtue.

In our more thoughful moments we know that our blessings for the most part have been earned by others than ourselves. They have been won by the toil and devotion of many generations. They have been preserved by the valor, and the death, of millions who have gone forth to battle—and not even a majority of them were Americans.

By the supreme dedication of many others who fought for their homes, our homes too have been kept intact. We are debtors to a vast host of men and women from many lands who have given us their sons and daughters for the terrors of war and the pursuits of peace.

Most of all we are debtors to God, who gave all the riches of farm and field, of minerals and rivers, from which our riches have been created. We give thanks to Him, for He is the giver of every good gift.

When we attempt to give thanks to our benefactors, we are often thwarted. The Pilgrims, Puritans, Cavaliers, and all the others who joined in founding America live only in memory, and they cannot be thanked.

And all those whose kindnesses and help along the years have brought us as individuals to this hour—parents, teachers, friends of the long past—how can they be thanked, when so many are gone from the earthly realm?

If this is true for us as individuals, how much more is it true for us as heirs of mankind. Many of our most precious gifts have come from men and women forever nameless.

Some of the greatest inventors are completely unknown—those dawn-age men who first devised the wheel, and tamed fire, and produced agriculture; who invented worship, and surmised that men lived on after death, and first whispered, stumblingly and fearfully, the awesome name of God. These lie in unmarked graves, forgotten save in the scrolls of God.

For perhaps half a million years they have come and gone, these to whom we owe nearly everything, but to whom we can repay nothing. We are a part of all they have been and done, and debtors to them all, yet we cannot thank them.

But our primary obligation, after all, is not to those who have gone before. It is to those of every race and nation who travel with us and those who shall come after us. Gratitude is always owed to the past, but most often must be paid to the future.

As individuals we can show our gratitude by seeking to serve the needs of our neighbors and our neighbors' children as well as our own.

And as a nation we demonstrate our spirit of thankfulness by serving a distraught world.

America has in the past always been a nation with a frontier. First it was the geographical frontier on the west. That conquered, there rose the new frontier of industrial expansion still being explored after decades of remarkable achievement.

Now we face our third great frontier: that of helping to raise a broken humanity from poverty, from despair into hope, from darkness into light.

Our response as a world leader thus far has been based largely on enlightened self-interest. The events of the last 30 years have shown that communism thrives on human misery; to win the present struggle against communism we must help other nations to become secure and prosperous.

We say we are grateful for our heritage. But the gratitude if real must produce a disposition to settle our accounts with the future.

We honor our forbears most by extending their quest for freedom and their loyalty to faith in God into the decades that lie ahead. This is true even of our greatest debt, our indebtedness for life itself and for hope of life redeemed and eternal—an indebtedness we can never pay to Him who is our creator and our God. How can we thank Him for all His mercies?

What does He need, what does He lack, that we could do Him honor? If we love Him, we can feed His sheep. Many of them are hungry, homeless, hopeless, at this hour.

In service to them—giving thanks to God himself by ministering "unto the least of these my brethren"—we find a true direction for our gratitude for the bounty with which His Divine Providence has favored us.

The 1957 one great hour of sharing will be observed in most participating churches on March 31.

Address by J. N. Robertson, President, American Road Builders' Association, at the Second Annual Convention of the National Crushed Limestone Institute, Inc., Hotel Statler, Washington, D. C., January 24, 1957

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include an address delivered by J. N. Robertson, president, American Road Builders' Association, at the second annual convention of the National Crushed Limestone Institute, Inc., held at the Hotel Statler, Washington, D. C., on January 24, 1957:

Mr. President, Captain Curtiss, ladies and gentlemen, this morning, when I had the privilege of seeing this movie that was shown, it took me back several years. From 1925 until 1941, I was assistant construction engineer and construction engineer for the District government. It made me feel proud to see the work that was being done in that film and felt that I would like to be back in the construction business instead of sitting behind a desk. I believe that you fellows in the field really are the ones that are getting the work done.

I am happy to appear on your program this morning. I have seen many of my friends from the Bureau of Public Roads here today as well as members of this association. I would like to discuss with you the American Road Builders' Association, its aims and objectives. I would also like to tell you briefly some of the accomplishments of this organization toward the betterment of the Nation's highways.

We have before us a tremendous new highway improvement program to be accomplished. The truth is that no a single segment of the highway industry can expedite this gigantic highway program that looms ahead, but the combined segments of the industry can, and that is where the American Road Builders' Association enters the picture.

The American Road Builders' Association is the national association representing all segments of the industry. This organization is not new by any means, as its thousands of members well know. ARBA has, in fact, grown up with motor transportation; it was organized in 1902 under the name of American Road Makers.

For more than half a century, ARBA has earnestly fostered a continuing and adequate highway program on a financially sound

basis, and it has insisted on better and safer highways and streets to accommodate the improved design and increased numbers of motor vehicles. At the same time, ARBA has helped impress on the general public the interwoven relationship between good roads and the physical, social and economic gain of America.

The American Road Builders' Association is composed of eight separate divisions—each made up of members whose interests lie principally within a well-defined field of the industry. Each division enjoys equal privileges and functions under its own bylaws.

I would like at this time to explain to you briefly the eight divisions to which I have just referred.

The county and local roads division embraces local officials concerned with the administration, finance, construction and maintenance of the vast mileage of secondary and farm-to-market roads. This division establishes and maintains relationships with the Bureau of Public Roads, the State highway departments, and the counties. It also promotes the raising of standards in local road administration and increasing the efficiency of operation.

The educational division opens its membership to faculty members, while organized groups of engineering students are admitted as student chapters upon proper certification by college officials. Student members pay only nominal dues of $1 a year, but are entitled to receive all association publications and other services. This division was created to improve highway engineering curricula; to encourage field experience along with academic training; to promote a close relationship between highway engineering schools and highway engineer organizations, as well as industry. Another major objective of this division is to encourage engineering students to enter the highway profession and ladies and gentlemen, that is a very serious thing at this time, as you know. We have got to get the boys interested in becoming highway engineers.

The manufacturers division sponsors the world-famous Road Show and performs a unique and valuable service for its membership composed of manufacturers of construction machinery and all of its components. This division has won special acclaim for its annual studies on the capacity of the equipment manufacturing industry to carry out increased highway construction programs, of which I will speak in more detail a little later. The manufacturers division is formally constituted as the Construction Industry Manufacturers Association. You all know that and have seen it.

The engineering and financing division is a new division composed of consulting engineers and engineering firms, banking houses and allied interests who are vital components to the advancement of the new road-building program. This division promotes the practical application of research findings and other technical data to encourage improved construction and maintenance methods and better utilization of materials and equipment. The engineering and financing division supplies data, based on ARBA's 30 technical committees, on the use of new engineering techniques in the design and construction of roads and in the use of new electronic devices. It also supervises publication of frequent technical bulletins and research reports.

The Pan American division is composed of engineers, officials, and contractors from Latin American countries. In addition, many United States contractors, export departments of manufacturers, export agencies, and professional engineering firms have memberships in this division. A principal aim of the Pan American division is to provide a continuous, beneficial exchange of technical information between United States and Pan American engineers and road-builders.

The municipal and airport division includes city and airport engineers and officials concerned with the design, construction, and maintenance of city streets, expressways and airport paving. Technical studies by committees cover engineer design, construction, and maintenance techniques and use of materials, as well as administration, finance, economics, and street traffic. The coordinated relationships between Federal, State, city, and county officials make a major contribution to the efficiency of the planning and the execution of the work.

The contractors division is composed of affiliated State highway contractor organizations and individual contractor members. It promotes and encourages the use of the contract method in road construction. I would like to point out that here in the District of Columbia all of the work is done under the contract system including the maintenance and repair of our city streets. We have been doing that for the last 15 years and have found it very economical. Also it takes some of the headaches from the highway official and gives it to the contractor. We get much more work done because the contractor is efficient in his operation. Such efficiency results in better prices.

This division also assists through cooperative committees in development of specifications and standards; acts as spokesman for the highway-contracting industry before Federal agenices; operates a Washington inquiry service to assist contractors in dealings with Government agencies; conducts a full-time field service; and offers low-rate group insurance to contractors.

The last division of this association is the materials and services division which consists of members who furnish materials and services used in highway construction, maintenance, and operation; producers of materials, service organizations; and technical services; including bonding and insurance. We have expanded since you last heard about the American Road Builders, and now include the whole cross section of the industry.

This division maintains close contact with Federal agencies and with national organizations and conducts continuing studies dealing with design standards and material specifications. At the annual ARBA conventions, this division sponsors a national exhibit of highway materials, supplies, and services. There was one little phrase that caught me and I would like to repeat it. These material boys are having a show within a show and it will be really a show.

The initial task-force studies of the American Road Builders Association, relating to the capacity of industry, were started back in 1954, in anticipation of a vastly accelerated highway program. Findings of our task-force studies have been presented to the President's Highway Advisory Committee. Request to make this study was made by the President's Highway Advisory Committee.

These findings were also presented to the Senate Subcommittee on Roads and to the House Committee on Public Works, first in the spring of 1955 and again in 1956, in connection with the pending Federal Aid Highway Act.

The first time that we appeared, Mr. S. Howard Brown was chairman of task force No. 3 on construction. Hal Sours was chairman of task force No. 1 on planning and design, and Fred Salditt was chairman of task force No. 4 on construction machinery and equipment. ARBA published two task force reports with the assistance of Mr. Curtiss, Mr. Radzikowski, and other officials of the Bureau of Public Roads. I would like to state that the other member of our task force committee was Mr. A. T. Goldbeck, who was chairman of the task force No. 2 on materials and supplies.

The first year that these studies were published, they were used by congressional committees and by practically everyone in the highway industry. After the proposed highway bill was first defeated in the House, and because considerable time had expired since the first task force studies were made, it was felt to be of great importance that these original studies be remade and brought up to date.

Consequently, ARBA once again began work on the task force reports under the chairmanship of the same gentlemen who had made the first studies, and when we appeared for the second time before the House and Senate, we were able to present to them the latest information on the ability of all segments of the highway industry to carry out this tremendous long-range highway program on a national basis.

These studies are available in pamphlet form and can be obtained from the road builders.

I want to thank Mr. Curtiss for his help on these reports and on all of our other projects. As president of ARBA and as Director of Highways for the District, I have worked closely with the Bureau. I have never worked with a finer group of men. I also want to thank Mr. Brown who so ably assisted us the last time we were up on The Hill.

The American Road Builders' Association again exerted its traditional leadership on January 9 and 10 when it responded to a request of the United States Senate for authenticated data on the readiness and capability of all branches of the highway industry to move ahead on time on the new national roadbuilding program. The specific inquiry came from the Senate Committee on Public Works through hearings called by Senator ALBERT GORE, of Tennessee, chairman of the Subcommittee on Roads. We were very fortunate because quite a few congressional Members were there. The first day of the hearings approximately 12 or 14 Members were there; the next day there weren't as many but the last two days an average of 8 to 10 attended. That is a good average to have that many interested in what you have to say. They are all so busy and have so many other things to do they sometimes like to read about it when they are at home and not able to attend meetings. We did have good representation and were able to present the story for the highway industry.

Good progress has been made by the highway industry in expanding its production facilities to meet the requirements of the new highway program. We are confident in the ability of the roadbuilding industry to proceed with the accelerated rate of construction with maximum efficiency and economy. I say that with a great deal of feeling for I know that the highway industry can do the job. There has never been any doubt in my mind and there isn't any today.

At this point, I would like especially to commend the Bureau of Public Roads for the fine cooperation they have shown in dealing with the State highway departments and the highway industry. It is a splendid example of the historic policy of cooperation between the States and the Federal Government in road building matters.

Now, I believe there is a subject that I was asked to talk about in the beginning. Mr. Koch said, "Would you say a few words about the association? Really, we want to hear about that motion picture you are going to put out."

I would like to tell you of a proposed project of ARBA consisting of a 16-millimeter color sound motion picture, to run for approximately 28 minutes. The main objective of this motion picture is to show the latest developments in highway engineering, with the thought in mind that we could increase the interest of college students in highway engineering as a profession. The picture would show how aerial photography, photogrammetry, digital computers, photographic

reproduction, and various other forms of electronics, have all been adapted to highway engineering.

We want to show the taxpayer how the highway dollars is going to be spent; that it is to be spent through competitive bidding by qualified contractors with the specifications prepared under State highway supervision and under standards established by the Bureau of Public Roads with the award of the contract being made to the lowest responsible bidder.

It is our intention to show that the highway dollar is being efficiently spent by demonstrating the latest techniques in highway construction and the latest developments in highway construction equipment.

The film is to be completely free of commercials. The people who will join in its sponsorship will be doing so as a public service with the thought in mind that by advancing the cause of industry, they will get their profits from the assured volume of work which will be forthcoming under the accelerated program, provided, of course, that there are no obstacles.

Another point which we expect to stress in this film concerns the characteristics of the Interstate System, that is, the limited access of controlled access characteristics. We expect to show the safety aspects of such a highway, and how it is expected to result in a marked reduction in fatalities and personal injuries. Also, it is our desire to bring out the economic impact on an area by the type of highway running through it and to show how this type of highway converts miles into minutes and makes possible developments for industrial, residential, or commercial uses in areas that were heretofore undesirable for such purposes.

This film, which will cost between $60,000 and $75,000 is intended to show the step-by-step construction of the modern highway, in not too great detail, but in sufficient detail so that an engineering student can look at this picture and feel that he has been given a visual textbook on highway construction. The film must also be entertaining enough so that it will be of interest to meetings of various local groups such as the Rotary Club, Kiwanis Club, Chamber of Commerce, Boards of Trade, just to mention a few.

With the new highway program on the books, we look forward to a continuing period of high activity in the field. According to ARBA Task Force studies, there is no question as to the ability of the aggregate production industry to support the anticipated increases in this program. For every billion dollars of construction, we need more than 76 million tons of aggregate. If we expand from five to eight and one-half billion dollars per year, then we can anticipate for each billion dollars increase, some 75 million tons of aggregate. In 1956, the aggregate requirement was approximately 540 million tons, which will be increased to approximately 800 millions tons when we reach the ultimate rate of $8½ billion per year.

In closing I would like to mention briefly the 1957 ARBA Road Show and Convention to be held in Chicago, Ill., January 28th through February 2d. I am happy that the National Crushed Limestone Institute, Inc., has seen fit to set up a booth at this road show and to exhibit its product. It is my hope that as many of you as possible plan to attend this most fabulous road show in the history of the country and to visit the booth of the National Crushed Limestone Institute.

Ladies and gentleman, I appreciate the opportunity afforded me today to discuss the American Road Builders' Association, of which it has been my extreme honor to have been president for the past 2 years. I trust that the information which I have just presented will give you a better understanding of the composition, aims and objectives of this national highway association toward providing safer and better roads for America.

Civil Rights

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on civil-rights legislation as delivered to the Subcommittee on Civil Rights of the House Committee on the Judiciary:

STATEMENT OF HON. JOHN F. SHELLEY, FIFTH DISTRICT OF CALIFORNIA, TO THE SUBCOMMITTEE ON CIVIL RIGHTS, HOUSE OF REPRESENTATIVES, FEBRUARY 25, 1957

Mr. Chairman and members of the Subcommittee on Civil Rights, let me first express my thanks for the courtesy you have shown in arranging for me to appear before you today, and also to compliment you on the thoroughgoing manner in which you are proceeding in your study of the vital problem of assuring that none of our fellow citizens are denied the civil rights guaranteed them by the Constitution. Certainly when legislation is reported by this subcommittee no one can rightfully say that any aspect of the problem has been ignored, nor that full weight has not been given to all shades of opinion, pro and con. Because of my own lifelong efforts in support of equal opportunity for all races and creeds I have followed closely the progress of these hearings and those in previous Congresses. It is a tremendously good feeling to know that at last we seem to be nearing the goal of congressional action to chart such a course.

For my own part I have long believed that the United States, at a peak never reached by any nation in the history of the world, faces but two really crucial problems, and they are interrelated. The one is the relentless fight against world communism; the other the elimination of second-class citizenship as applied to any segment of our people by force of law or custom. As long as such discrimination exists in this land, based on group antagonisms rather than an evaluation of the individual as he stands on his own two feet, so long shall we be morally disunited and subject to the divisive threat of subversive forces.

We do not have to prove the existence of the problem. What we do have to prove is that we are looking for an honest solution. Left to themselves the States and local communities have failed, and we might as well admit it. And I speak not only of the South but of countless communities in the North as well—Detroit, where a critical problem is right now receiving the attention of the press; Chicago, New York, the Southwest, where Americans of Mexican ancestry are subject to the same type of treatment as Negroes in the South; and even my own area, the west coast, to some degree.

The executive branch of the Federal Government has also failed to use either the legal means now given it under discretionary authority, or the moral force of the Presidency to act against the evil. Where the administrative will is weak or subject to political opportunism, it is the inherent duty of the Congress to provide through laws which say "shall" and not "nay" the force which will implement the constitutional guaranties with which we are now concerned. The Constitution which guarantees to the States certain rights, does not guarantee them the right to do wrong. It does, however, contain in its preamble a guparanty of an overriding purpose to establish justice and to promote the general welfare and secure the blessings of liberty to all citizens, white, black, brown, yellow, or red, and it is that purpose we must now implement.

The legislation now before this subcommittee will let us take a long stride in the right direction. Your distinguished chairman and the equally distinguished ranking Republican member have both contributed much to clarifying the issues involved. By the legislation they have drafted they have charted a practical course for us to follow in beginning to right the wrongs under which generations of our fellow citizens have suffered. I personally believe that the Celler bill, H. R. 2145, because of the more explicit guide lines it lays down, should serve as the basis upon which the subcommittee acts.

The establishment of a Commission on Civil Rights to serve as an authoritative body for studying the legal and moral issues, and for formulating executive policy and recommendations is an absolute essential in bringing the executive branch of the Government to a proper exercise of its functions. As a counterpart in the Congress, the provision for a Joint Congressional Committee on Civil Rights in the Celler bill is also necessary lest we tend to delegate too much of our responsibility to the executive authorities. A third requirement in setting up the legislative and administrative framework needed for active operations in the civil-rights field is provided for in the establishment of a Civil Rights Division in the Department of Justice. Such a new division will lay the proper stress on these functions of our law-enforcement agencies, functions which have been sadly neglected heretofore. Fourth, the Federal courts must be granted clear and undeniable jurisdiction over civil-rights violations if the framework we set up is to be complete.

However, it must be remembered that these provisions of the bills now before the subcommittee provide only a framework. If the legislative structure is to be complete, we must gird that framework with a definite body of principles and definitions upon which to act. The protection of the right to political participation and of other civil rights provided in the Celler bill, and the criminal penalties authorized for violations of these rights, are, it seems to me, an absolute minimum for our present purposes. Certainly there are other forms of discrimination widely practiced, such as that in the field of employment, to which attention must be given. But we must in deference to the great difference of views in so many of these problems, and because of the practical impossibility of immediate agreement on all phases, be content with a beginning aimed at the more basic discriminations.

I certainly agree with those who contend that mere passage of a law, however comprehensive, will not automatically solve the complex problems of racial discrimination, nor bring a new era of good feeling overnight. The deep-seated social attitudes and customs with which we are dealing are not that easily uprooted. We must be wary of any tendency to feel that once the job is begun it will finish itself. Automation has not yet reached that stage of development. The unhappy experience with the 18th amendment should be an example to us in this regard. Therefore, I feel quite strongly that we must be tolerant of intolerance to a degree at least in the initial stages of this vast undertaking. We must look to other measures than the law for a real and final solution of the unhappy problem.

In the last analysis, education must provide the answer. By that I mean not only providing book learning for those to whom it is now denied, but education in the deeper sense. We must educate ourselves to a full understanding and acceptance of the Golden Rule as it applies to our human relations with our fellow man. We must not attempt to force acceptance of a principle where we

ourselves are not willing to practice it. We must, in short, use "deliberate speed" in moving toward our goal of true brotherhood, but we must begin to move toward that goal. I believe that our education has now reached the stage where a fruitful beginning is in order through the legislative processes. For that reason, I urge the subcommittee to bring out a bill which will let us take the first step.

Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. ADDONIZIO. Mr. Speaker, February 16, 39 years ago, Lithuania threw off the shackles of czarist brutality and proclaimed her independence. For the following 22 years, every February 16 was joyfully celebrated by the Lithuanian people.

It was natural and proper that these free people proudly observed every independence day. Each year found Lithuanian growing in all the attributes that makes a free nation strong. Through the creative energy of her people Lithuania became a progressive independent democratic republic. With freedom there naturally followed internal consolidation. Industrial establishments grew in number. Socially, great strides were made to insure the health and general welfare of the people. Rapid progress was also made in education. Politically, Lithuania became a respected member of the international community.

However, now, on the 39th anniversary of independence, Lithuania is no longer free. Nevertheless Lithuanians throughout the world still commemorate this glorious day.

Unfortunately, today, the people in this enslaved nation will have to mark it in their hearts. For the past 17 years, Soviet oppression has prevented any open celebration of this day.

Consequently, it rests with the free world to transmit hope and aspiration to them on this occasion. It is especially important that the United States, the leader of the free world, speak for these silenced Lithuanians. It is just that we Americans remind these brave Lithuanians that we have not forgotten their suffering. It is also just that we assure these persecuted people that we will continue to renounce the fraudulent incorporation of Lithuania into the Soviet Union; and continue to demand the right of all people to choose the form of government under which they will live.

The American people will not rest until Lithuania once more is master of her own fate. We will not sit idly by as long as any nation with such an historical record of independence remains enslaved.

The recent events in Hungary perhaps has provided us with an opportunity to aid these oppressed peoples. This revolution is indicative of the unrest that is spreading throughout the Communist-controlled world. Accordingly, it might be the opportune time to negotiate with Russia on the satellite problem.

With this in mind I recently joined with 10 other Democrats in offering President Eisenhower a plan for achieving the peaceful liberation of the satellite countries. This plan would provide a startling point for negotiation with the Soviet Union. Briefly, the plan included the demilitarization of the area between the Rhine and Soviet Russia; international guaranties of constitutional liberties in the liberated nations; and economic aid to promote regional federation and economic integration.

I think it is appropriate on the anniversary of Lithuanian independence that we Americans remind the captive Lithuanian people that we have not become reconciled to their fate. The plan that was submitted to the President is evidence that we are constantly trying to find a solution to the satellite problem. We assure the Lithuanian people that we will continue to work for conditions that will eventually lead to their freedom.

Winning Articles in Freedom Test

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. JENSEN. Mr. Speaker, I am herewith inserting with my own remarks, a story from the Council Bluffs Nonpareil of Council Bluffs, Iowa, about its editor, Mr. A. M. Piper, and a student of the Abraham Lincoln High School of that city, Miss Donna Reed, both of whom won freedom awards. I congratulate them most highly.

The newspaper story and winning editorials follow:

EDITOR PIPER, ABRAHAM LINCOLN HIGH SCHOOL GIRL WIN FREEDOMS AWARDS

Two Council Bluffs writers have received major awards in the annual Freedoms Foundation contest for editorials on the American way of life. They were:

A. M. Piper, editor of the Nonpareil since 1937.

Miss Donna Read, a senior at Abraham Lincoln High School.

The entries rated $100 prizes and George Washington honor medals. They were judged under separate classifications for professional and high-school journalists.

VALLEY FORGE CEREMONY

The foundation made the announcement Friday during special Washington's Birthday ceremonies at Valley Forge, Pa.

Mr. Piper named his editorial "Our Constitution Will Not Maintain Itself." It was printed February 10, 1956.

Miss Read, 18, is the daughter of Mr. and Mrs. Ben Read, of Neola. Her piece, entitled "Are Freedoms Privileges?" was in the A. L. Echoes on October 26, 1956. She was news editor for the publication last semester.

"In the chaotic conditions that have prevailed in recent years," Mr. Piper stressed, "many Americans have forgotten they must earn, over and over again, the rights guaranteed to them by their Constitution."

Miss Read developed the theme: "As freedoms are privileges, they are also responsibilities."

The editorials are reprinted in full on page 2. Other awards made throughout the United States also appear on that page.

WINNING ARTICLES IN FREEDOM TEST

(EDITOR'S NOTE.—These editorials won Freedoms Foundation awards Friday for two Council Bluffs writers.)

(By A. M. Piper, editor, the Nonpareil)

We look at the Constitution of the United States with pride. We regard it as a fulfillment of man's yearning for liberty, for authority which respects and permits human dignity. It symbolizes the overthrow of tyranny, the recognition of our rights as citizens of a Republic.

If one were to read the constitution of the Soviet Union, he might think, "What a haven of paradise. All these rights the people of Russia have. All the equity, all the justice. What a fortunate people!"

The Russian experience demonstrates what we ought never to forget—that a constitution is just a document.

It is only a promise. Words by themselves can be nothing but promises.

Since our Constitution, like that of Russia, is only a promise, its value depends upon those who are charged with carrying out its provisions.

Unless the American people elect officials who translate words into deeds, our Constitution is only a lot of words inscribed on a piece of parchment.

But our Constitution is more than a promise made to people. It is also a promise made by the people.

The Constitution brings us benefits but it also brings us duties and obligations.

In the chaotic conditions that have prevailed in recent years many Americans have forgotten they must earn over and over again the rights guaranteed to them by their Constitution.

It was Benjamin Franklin who said after the constitutional convention adjourned that it gave us a Republic, "if we could keep it."

We have kept it pretty well through the years but the trend is to repose more responsibility in the Federal Government and less in the States and the people.

Certain features of the Bill of Rights are ignored by seekers of Government benefits.

If we are not vigilant in defense of our rights we may lose them without realizing what is happening. We must always remember that these rights will not perpetuate themselves.

The United States will continue to be a great nation only so long as the people maintain the rights guaranteed to them by the Constitution.

(By Miss Donna Reed, senior at Abraham Lincoln High School)

In order that we might have freedom our forefathers fought and died. However, we as Americans often take our rights and privileges for granted. Yet we would be the first to complain if they were denied us.

It is a privilege to enjoy these rights. As we practice the religion of our choice, speak the words of our thoughts, or meet in a group, we should think of those who are less fortunate. Some cannot even own property, move about as they please, or assemble without government supervision, restriction, or both. Think about these rights, examine them, and be conscious and appreciative of them.

As freedoms are privileges, they are also responsibilities. When we speak against injustices, we must remember not to defame. The right to worship as we please must be allowed everyone, not just us. Sometimes it is necessary for officials to place restric-

tions on some freedoms, such as privacy in our own homes and to move freely at home and abroad. It is only fair to accept restrictions as they are placed upon us for the benefit and safety of all concerned.

So stop a minute, think of these great opportunities, and remember our privileges are also responsibilities.

One Dollar and Twenty-five Cents Buys 5 Gallons of Water in Dry Dallas

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks, I include an article which appeared in yesterday's edition of the Washington Post and Times Herald.

This article points up in a dramatic way the impact families have suffered and are suffering in numerous communities where domestic water shortages are experienced.

The problem is both acute and growing throughout an increasing area of our country. The bills introduced by Senator JOHNSON of Texas and myself aim at providing a practical means of helping State and local governments to solve these shortages.

TO SLAKE A 7-YEAR THIRST: $1.25 BUYS 5 GALLONS OF WATER IN DRY DALLAS

(By Aubrey Graves)

DALLAS.—Here in this drought-stricken city is a preview of conditions which could exist in the Washington area if the waters of the Potomac are not cleaned up and conserved.

Front windows of chain grocery stores are filled with displays most likely to draw passersby inside. These displays are not luscious tropical fruits or fancy commodities from the North, but 5-gallon jugs full of water. They sell like hotcakes for $1.25 plus a $1.50 deposit on the bottle. The price was 50 cents a gallon before recent rains temporarily alleviated the situation.

For decades, Dallas depended on a municipal lake for its drinking water. Then came the drought, which is now extending into its seventh year. Lake Dallas has all but gone dry. To siphon more from it would kill the fish and make the remaining water unpotable.

In its desperation, Dallas looked to the Red River. This fabled stream, celebrated in cowboy ballads, courses through salt flats and separates Texas from Oklahoma. From it, water was brought at great expense more than 100 miles into the city's system.

This expedient did not prove satisfactory. What came out of the taps was so brackish that it brought nausea to the drinker. It killed the grass when sprinkled on long-parched lawns. It ruined the finish on automobiles and corroded air-conditioning systems.

Distillation plants have sprung up over the city and the precious fluid in the big demijohns is being quickly snatched up by those who can afford the price.

Hydraulic engineers, backed by rich oilmen, recently made a perfectly serious proposal to lay a giant conduit from Texas to the Great Lakes. They figured on receiving some Federal aid.

"If our Government can afford to send billions upon billions of dollars abroad," declared one promoter, "certainly it can afford to spend a fraction of that to quench the thirst of the Southwest."

Observed another, in less serious vein: "If Israel can qualify for foreign aid, why can't Texas, which is a more formidable ally?"

Dallas' city fathers have decided, however, to tap the Sabine River, separating Texas from Louisiana, for its future water supply. This will require a pipeline 200 miles long.

The story of the female chicken farmer just outside Georgetown, Tex., illustrates the prevailing sense of values among thirsty Texans. This farmer, a widow, drilled a deep well to supply her laying hens when her shallow-dug well went dry. Instead of striking water, she brought in an oil well—a real gusher. In great disgust she capped it.

"My hens can't drink that stuff!" she said. "I started after water and water I'm going to get." She's now drilling a third well.

This may sound like another tall tale from Texas but investigation has proved it substantially true.

American Bar Association Opposes Gore-Holifield Bills

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. COLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

AMERICAN BAR ASSOCIATION OPPOSES GORE-HOLIFIELD BILLS

RECOMMENDATION

Resolved, That the American Bar Association opposes Senate bill 151 (Gore) and H. R. 2154 (Holifield) (both 85th Cong., 1st sess.), identical bills which set up an "accelerated atomic-power program" through requiring the Atomic Energy Commission, at an initial expense of $400 million, to construct, own, and operate both large-scale and smaller prototype power reactors for the generation of electric energy in industrial or commercial quantities in competition with existing privately and locally owned power utilities; and further

Resolved, That, if it is the will of Congress that our atomic-power program be accelerated, that this be accomplished by an extension of the present Atomic Energy Commission power demonstration reactor program under which the AEC makes contributions toward the cost of power reactors proposed to be built by existing privately and locally owned utilities, thus reducing the burden on the Federal Treasury and hastening the achievement of competitive nuclear power.

REPORT

Federal versus private and local atomic power for civilian use

The above Gore-Holifield bills were introduced at the last session of Congress and received extensive study. Subsequent to the reporting out of the bills, they were amended in a number of highly important respects, not only for the protection of existing utilities but also the public. The amendments generally were considered by our committee to be desirable. However, the bills failed of passage. It appears the present bills, just introduced, incorporate none of these beneficial amendments.

We reported on these bills at the Dallas 1956 annual meeting with a resolution opposing them. We asked postponement of consideration in order to permit the mineral and public utilities sections to study the report. We are advised that there is no opposition from those sections. Accordingly, we renew our resolution in the form above in order to give some leeway to the association as to amendments in the event it is the will of Congrss to pass some acceleration program.

Under section 103 of the Atomic Energy Act of 1954 the Atomic Energy Commission has been carrying on a reactor-development program through private and locally owned public utilities. This program involves the development of various types of atomic reactors for use in the generation of electricity. As we pointed out in our report to the 1956 annual meeting, there are a number of large and small scale plants being constructed by private and locally owned utilities under agreement with the Atomic Energy Commission. Thus the Commission is already authorized to carry out this program with the help of such utilities.

These bill therefore raise fundamental questions with respect to the existing Commission policy since it would direct the AEC to undertake with public funds a major portion of the prototype-reactor phase. This committee agrees with the AEC that present privately and locally owned utilities, thus delivering a serious blow to the latters' reactor programs.

An important advantage of the present privately and locally owned utilities is that they must necessarily operate on an economically competitive basis. They have necessarily developed the industry in accordance with sound economic principles. Your committee fears these principles would be upset by Government owned and operated plants built throughout the country with no past experience in the economics of the operation in the various areas.

The chief argument of the public-power group backing these bills is that there is great need for haste in the development of nuclear power for civilian and other uses. Your committee has concluded that this argument is fallacious. Perhaps greater apparent progress might be made by the lavish use of public funds, but the entire program would eventually be delayed because only private and locally owned utilities working under economic incentive can select proper sites for the most effective channeling of power for industrial and commercial purposes.

The Commission would find itself caught in the crossfire of the Federal versus private and local power controversy. Your committee suggests that it would further involve our Government in business at the expense of private industry. The United States Government is already the largest electric power producer in the country. President Eisenhower on September 20, 1952, in an address in St. Louis, laid down the following policy:

"That no Federal project, large or small, will be undertaken which the people can effectively do or be helped to do for themselves; that no Federal project will be undertaken which private enterprise can effectively undertake; that no project and no program will be started on the Federal level which can be undertaken and effectively carried through on State or local level."

Respectfully submitted.

BENJAMIN WHAM,
Chairman.
JOHN B. BURKE.
MAURICE H. MERRILL.
GERALD D. MORGAN.
C. BREWSTER RHOADS,
ROSS RIZLEY.

Congressman JOHN J. FLYNT, JR., a member of the committee, takes no position on the Gore-Holifield bills at this time.

FEBRUARY 11, 1957.

Panama Railroad: Revitalization Program Started

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. FLOOD. Mr. Speaker, in my remarks on the Panama Railroad in the Appendix of the RECORD of February 5, 1957, I commented at some length and with considerable gratification on the recent decision to retain the Panama Railroad. This was brought about through the independent inquiry and action by the Committee on Merchant Marine and Fisheries as reported to the House in House Report 2974, 84th Congress.

I feel especial gratification at this outcome because, when the liquidation of the Panama Railroad was proposed by the Board of Directors of the Panama Canal Company, I was one of those who publicly proclaimed the strongest opposition to the proposal—this opposition being based largely on the grounds so well stated in the indicated committee report.

It is with equal pleasure that I have read, in the Panama Canal Review, the official organ of the Panama Canal Company, volume 7, February 1, 1957, page 1, a summary of the program to improve the efficiency of this vital transisthmian rail link.

In order that this account may be recorded in the annals of the Congress and made available to the Nation at large, under leave to extend my remarks, I quote the text:

IMPROVEMENT, EFFICIENCY PROGRAM IS STARTED FOR PANAMA RAILROAD

A positive and vigorous program to cut expenses and increase revenue of the Panama Railroad has already been initiated in conformity with the report and recommendations on railroad operations approved last month by the House Merchant Marine and Fisheries Committee.

The House committee's report was based on a survey made last year by John T. Ridgely, formerly vice president of the Pennsylvania Railroad, who was employed by the congressional committee as a consultant on the railroad operations. Mr. Ridgely spent several weeks on the isthmus making the study which included finances, personnel, operating schedules, rolling stock, and potential business.

The House committee report, which Governor Potter has announced he considers as a directive, proposed the following principal points:

Continued operation of the railroad (the proposal to abandon the railroad led to the congressional study).

Diversion of military and company freight and passenger business from the highway to the railroad.

A study of piggy-back operation and other means of increasing freight volume.

Provision of refrigerated car service.

Revision of some rates and schedules.

TRAVEL BY RAIL

Shortly after the report was issued, the Governor issued instructions to curtail to the minimum the transportation of Company-Government employees across the isthmus by automobile. Bureau directors and the heads of independent units were also instructed to consider any means within their individual units to augment business for the Panama Railroad, cooperating with the Comptroller and Transportation and Terminals Director in an investigation on accounting and operating procedures.

One recommendation contained in the consultant's report has already been instituted. This was for the replacement of hand labor by a mechanical means for the control of weeds along the right-of-way. A chemical sprayer has already been placed in service and a force reduction of 17 men has been made in the track and roadway maintenance gang.

REFRIGERATED CARS

Six refrigerator cars are to be equipped with mechanical refrigeration units to haul frozen products. When these are in service the commissary division will switch back to railroad transportation for supplying quick-frozen foods to Pacific side units.

At present all refrigerator cars in service are chilled with ice but temperatures on these are not low enough for hauling products at near-zero temperatures. Only six of the refrigerator cars now in service are fit for conversion to mechanical refrigeration.

The Governor this week submitted a long-range capital program for the Panama Railroad to the board of directors. This includes the purchase of an additional six refrigerator cars next year, a completion of the track coding system begun several years ago, replacement of motorcar engines, and the purchase of 60 boxcars in the future years.

The track coding of the Panama Railroad is being done under a system developed several years ago by Robert S. Wood, signal supervisor. In "track coding," the rails are used in operation of the signal system, rather than the more expensive cable system.

The extent to which economies can be effected by personnel reductions, train schedule changes, and other suggestions is now being determined by studies being conducted jointly by the Transportation and Terminals Director, the Office of the Comptroller, and the executive planning staff. This study will also include means of increasing railroad volume, rate changes, and related subjects.

The general revitalization program for the Panama Railroad, which has been showing steadily climbing losses for the past 3 years, will be complicated by changes which are required under the 1955 treaty. Commitments under the treaty provide for the withdrawal of railroad service from the terminal cities of Panama and Colon and the transfer of those properties to the Republic of Panama. When this is done, new passenger and freight-handling facilities will be required in the Canal Zone.

These terminal facilities will include passenger sheds near the boundary line in Ancon and in Cristobal, and a freight house in Ancon. It is tentatively planned to convert the Tivoli Commissary, closed last month, for use as a freight depot.

Middle East Problems Defy Quick Solutions

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. FASCELL. Mr. Speaker, under permission to extend my remarks, I include the following reprint of an editorial by Mr. John S. Knight, the distinguished editor and publisher of the Miami Herald. This editorial, which appeared in the Miami Herald on Sunday, February 17, 1957, is one of the finest analyses of the Middle East situation which I have had the privilege of reading.

Mr. Knight has analysed a very complicated problem with admirable clarity. Last month, while sitting with the House Foreign Affairs Committee, I listened to the statements of many distinguished witnesses testifying on the administration's proposed Middle East resolution. In none of the testimony, however, do I recall hearing a more lucid summary of a very complicated problem than in this editorial by Mr. Knight:

MIDDLE EAST PROBLEMS DEFY QUICK SOLUTIONS

Former President Truman believes that a durable peace cannot be achieved in the Middle East unless "we can bring together into close economic cooperation all of the nations of that area."

He points out their common water resources in the Euphrates, the Jordan, and the Nile and suggests that if fully developed, a flourishing civilization such as existed in the ancient days would again come into being.

Mr. Truman makes a plausible case for joint action. But his plan is beset by many difficulties, all stemming from years of tension and strife in the Middle East.

It appears extremely doubtful whether any comprehensive solution can be found until the matters at issue are first resolved by a step-by-step approach.

ISRAEL AND EGYPT MUST BE BROUGHT INTO ACCORD

At present, the United Nations and the United States andeavoring to bring about the withdrawal of Israeli troops from Sharm El-Sheikh and the Gaza strip.

Reportedly, and subject to certain conditions, Israel will pull out of Sharm El-Sheikh but reject demands that she yield the protective Gaza strip.

The Israelis, who have been repeatedly harassed by Egyptians Fedayeen attacks, do not believe the U. N. emergency forces can guarantee security against further Egyptian raids. A spokesman for the Israeli foreign office has recited a series of recent instances in which the Fedayeen had penetrated through the U. N. lines to carry out murderous attacks against Israel for the third straight week.

The United States, as the Nation which is most neutral, is striving mightily to bring both sides into at least a temporary accord, and should continue to exert even pressure on both Israel and Egypt until a peaceful solution is found.

VITAL ISSUES IN MIDEAST REMAIN TO BE SOLVED

The cooperation among all countries in the Middle East, as advocated by Mr. Truman, must await the disposition of these vital questions:

1. Israel's expedition into Egypt was clearly an act of aggression, as defined in the United Nations charter.

But while her troops should be withdrawn from Egyptian territory, as demanded by a U. N. resolution, she is just as clearly entitled to adequate protection of her borders.

Until that is accompliished, there can be no peace.

2. Egypt, by its blockading of Israeli ships from the Gulf of Aqaba, is violating a promise of 1950 to respect the right of all ships to enjoy freedom of navigation in the gulf.

3. Israel, like all other nations, should have access to the Suez Canal.

4. Egypt is still trying to shrink Israel's borders as established by the 1949 armistice. She would like them shrunk to the 1947 boundaries, as then approved by the U. N.

This would lop off nearly one-quarter of Israel's present territory.

In addition, Egypt is demanding repatriation of Arab refugees back into Israel.

REVISION OF DOCTRINE CLARIFIES AMERICA'S STAND

The issues in conflict, charged with hatred and emotionalism, are so large as to hold little hope of early solution.

But, as Mr. Truman has indicated, unless prompt solutions are found, the areas will continue to deteriorate economically and armed conflict may explode at any minute.

The former President is impatient over the delays in approving the Eisenhower doctrine for the Middle East.

But it seems to me that the Democratic-controlled Senate Foreign Relations and Armed Services Committees have made a distinct contribution in clarifying the language of the original resolution asked by President Eisenhower.

It expresses our interest in preserving the independence and integrity of the nations in the Middle East, but says that any use of United States Armed Forces "shall be consonant with the treaty obligations of the United States and with the charter of the United Nations."

If this revision may be said to have the appearance of hair splitting, it nevertheless has the merit of removing any charge that the United States is intent upon filling a power vacuum in the Middle East for the purpose of grabbing this oil-rich territory.

FORGET TALK OF SANCTIONS WHICH DEPEND ON UNITED STATES VOTE

There should be no thought of "coercing" Israel through the employment of sanctions if the Israelis do not immediately withdraw to their own lines.

The United Nations is under pressure from Egypt and Arab allies to apply sanctions and the U. N. is stalling until it knows where our own country stands.

We are ourselves in somewhat of a predicament since President Eisenhower has said that if the U. N. voted for sanctions, "we are committed to the support of the U. N."

But he did not explain that how we cast our vote will determine what action by the U. N. we are committed to support.

So the U. N. is sitting on its hands until it finds out what we want.

ISRAEL CAN BE COERCED BUT NOT EGYPT

Our dilemma is that the Arab, Afro-Asian, and Soviet blocs would vote with the United States in the General Assembly to censure Israel but they also have the power to block any similar action against Egypt.

In other words, Israel violated the U. N. Charter by its invasion of the Sinai Peninsula, and the Gaza strip, by Egypt is also flouting the U. N. by blocking the Suez Canal, the Gulf of Aqaba and by conducting commando raids across the Israeli frontier.

But Israel can be coerced—while Egypt can't.

Under these conditions, it would be an act of incredible folly to vote sanctions against Israel and let Egypt go unrestrained.

PRESIDENT SHOULD AVOID ANY HASTY ACTION

Such are the intricacies of international diplomacy which confuse not only the average American citizen, but presidents, kings, and foreign ministers as well.

Admirable as Mr. Truman's concept of the Middle Eastern nations working hand in hand may be, only the most patient, persistent, step-by-step diplomacy can solve the complex problems which at the moment present such formidable obstacles to the objective he seeks.

Meanwhile, the President, through his fumbling Secretary of State, should avoid any precipitate action which the Soviet Union could employ as an excuse to set off new bonfires in the Middle East and possibly trigger a third world war.

JOHN S. KNIGHT.

Free World Prefers Better Living to Better Defense

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Edgar Ansel Mowrer:

FREE WORLD PREFERS BETTER LIVING TO BETTER DEFENSE

Last November, the Moscow men threatened to destroy Paris and London by guided missiles—and thereby forced France and Britain to desist from their attack on Egypt.

Marshal Zhukov in India has uttered several warnings to the United States concerning our persistence in seeking to realize an Eisenhower doctrine in the Middle East.

The Kremlin replaces as Minister of Foreign Affairs the moderately civilized Shepilov by Stalin's former U. N. hatchetman, Andrei Gromyko.

A third Israeli-Arab war could break out at almost any moment.

Hungary has demonstrated the falsity of the sheep's mask recently worn by the Soviet bear.

German military experts fear lest the U. S. S. R. announce it intends to bring about the reunification of that country under a Communist government by strictly old-fashioned, orthodox weapons—and dare the United States to stop it by H-bombs and all-out war.

All these items, plus other lesser warnings, amount to storm signals for the coming year or two. Indeed, some United States experts confess to feeling the possibility of another major war for the first time since 1945. One might have supposed that the free countries would react by increasing their own military defenses.

FREEZING OR CUTTING

If one had so supposed, one would have been wrong. The major Western countries, beginning with the United States, are either freezing their forces at heights which the U. S. S. R.—still unfrozen—may soon surpass or engaged in cutting them down.

The United States has frozen the Air Force at a lesser figure than formerly accepted and—if one may believe some experts—is ordering replacement for rapidly aging types so slowly that at a certain time we shall be well behind the Soviets.

Over in Europe, British conservatives have reacted to American failure to support them and their fruitless expenditures on the abortive Suez adventure by announcing an economy campaign that will cut British military expenditures by about one-quarter—and make that country's defense dependent to a greater extent upon the United States. A first result will be the reduction of NATO ground forces in Germany to a point that sent Commanding General Norstad to London to protest—only to be brushed off.

If Britain cuts back, France and Italy will surely follow. And it is questionable how long the Germans will continue raising an expensive force that will at best be completely incapable of preventing an invasion.

Years ago NATO planners calculated that it would take 90 divisions armed with strictly conventional weapons to halt a Soviet attack. Later, they said—and perhaps believed—that armed with superweapons, 30 divisions could do the trick. But General Norstad now commands—according to the Manchester Guardian—not more than 20 divisions, soon to be decreased by British withdrawals.

KREMLIN MAY NIBBLE

A first result of these cutbacks is to make any attack by the U. S. S. R., against any part of the NATO countries (or against neutral Sweden for that matter) either a thermonuclear affair, or a successful bluff. This situation may well tempt the Kremlin to nibble at Europe, hoping that the democratic governments will hesitate to unleash a general war for Danzig.

So, as I said, one might imagine that free world leaders would be planning to outspend the U. S. S. R. and company for as long as may be necessary. Yet they are doing just the opposite.

The reason, in my opinion, is their infatuation with good living. Each government, beginning with the United States, acts as though it were more important to maintain a rising living standard with full employment than to maintain a rising defense standard with fuller security. Each free government seems to feel that the possible risk to the national economy through greater military spending is larger than the risk to national existence by failure to spend. And all are acting accordingly.

It is a gamble, perhaps a successful gamble. It is also the biggest in which rational leaders have ever indulged.

Attorney Robert J. Hourigan Appointed United States Attorney

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader Evening News of February 18, which comments on the appointment of Attorney Robert J. Hourigan, of Forty Fort, a Wilkes-Barre suburb, to the position of United States attorney for the middle district of Pennsylvania:

Appointment of Attorney Robert J. Hourigan of Forty Fort to the post of United States attorney for the middle district of Pennsylvania by judges of the Federal court enhances his chances for permanent designation to the vacancy, created by the resignation of J. Julius Levy.

The action of members of the bench was a compliment to Mr. Hourigan, who was first assistant to Mr. Levy until he assumed charge of the important office today. While it is primarily recognition for him personally, and an expression of confidence in his ability, it is also a logical step in view of his familiarity with the routine of the office as Mr. Levy's principal aide.

Mr. Hourigan is unusually well equipped for the heavy responsibility he assumed this morning. Before he joined Mr. Levy's staff, he served as deputy attorney general for Pennsylvania and assistant district attorney for Luzerne County, demonstrating a capacity for public service.

Mr. Hourigan's appointment also constitutes recognition for Luzerne County. The post was held by Attorney Arthur Maguire of Plains when Mr. Levy was named. Thus, it returns to this area after a lapse of 4 years, added cause for satisfaction in the middle district's most populous county which has been without a major Federal appointment.

Power of Congressional Committees

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. ROOSEVELT. Mr. Speaker, when the House voted to recommend that the Justice Department have Mr. Arthur Miller, the noted playwright, cited for contempt of Congress, I found myself in a minority of eight in casting my vote against such action.

It is comforting to note that one of the leading newspapers of the United States, the Washington Post and Times Herald, has now printed an editorial which is in line with the position I took at that time, protesting a congressional abuse of power.

Under leave to extend my remarks, I include this editorial of February 24, 1957, in the RECORD:

CONSCIENCE AT THE BAR

We suspect that even zealous partisans of the unlimited power of congressional committees must feel a trifle uneasy about the case of Arthur Miller. The playwright has been indicted for contempt following his refusal—on grounds of conscience—to name acquaintances at a Communist-sponsored meeting a decade ago. Mr. Miller, of course, was hailed before the House Un-American Activities Committee at the time of his marriage to a celebrated actress last year. Some critics have suggested that the prospect of headlines stimulated the committee's interest in Mr. Miller, despite his assertion that he had long before lost any sympathy with communism.

Mr. Miller's honorably maintained position has ample precedent in the tradition of American dissent, but none in the realm of constitutional law. When he was asked to name writers who attended the Communist-sponsored meeting in 1947, he refused. The playwright said he was perfectly willing to discuss his own past, but that the commands of conscience would not allow him to name associates. The meeting in itself did not involve a violation of law, and Mr. Miller could not be expected to know the views of persons who might have attended innocently.

It can hardly be a surprise to Mr. Miller that a grand jury has voted a contempt citation—although the wisdom of the Government's pressing the case is doubtful. Under present law, there is a likelihood that the playwright may face a jail sentence. This would be a sad outcome, more embarrassing to Congress than to Mr. Miller because the problem is essentially one of Congress' conscience rather than the playwright's. Mr. Miller's appearance before the committee was essentially pointless; the committee's grilling of Mr. Miller after he had made his position clear was just another case of abuse of power.

On a larger scale, the case throws into sharp relief an enduring dilemma in every democracy: A loyal citizen has an obligation to assist the law officers of the Government in exposing crime and conspiracy, but how far can the legislature properly go in compelling an individual to violate his conscience? In time of war, this country's draft laws recognize that even in society's most perilous hour there should be leeway for the conscientious objector. It may be that Congress can compel a betrayal of conscience. But even advocates of unlimited congressional power might draw back from this ultimate conclusion. As John Stuart Mill once wisely observed: "A state which dwarfs its men, in order that they may be more docile instruments in its hands even for beneficial purposes—will find that with small men no great thing can be accomplished."

Menace From the Sea

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1957

Mr. SIKES. Mr. Speaker, under permission granted to extend my own remarks and to include extraneous material, I wish to have inserted in the CONGRESSIONAL RECORD the two articles by Don Whitehead on the "Menace From the Sea," appearing in the Washington Post and Times Herald issues of February 23 and February 24, 1957, respectively. I feel that the subject of Mr. Whitehead's articles is of utmost importance and that there is a need for serious consideration of the matters pointed out therein. The articles follow:

MENACE FROM THE SEA: SUBMARINES COULD DEVASTATE

(By Don Whitehead)

Without sending a single bomber into the air, the Soviet Union today can be assumed to have the capability of delivering shattering blows from the sea against major industrial and defense centers in more than 30 of the 48 States of this Nation.

This capability—largely overlooked in the intense interest in Soviet airpower—lies in the Soviets' development of long-range submarines which can be used as launching platforms for nuclear missiles having ranges up to 500 miles.

If only six enemy submarines escaped detection and took positions 100 miles off the harbors of New York City; Charleston, S. C.; Pensacola, Fla.; Galveston, Tex.; Los Angeles, Calif.; and Cape Blanco, Oreg.; they could shower destruction on most of the population and industrialized areas of the United States.

COULD BATTER PITTSBURGH

Even such far-inland points as the Oak Ridge atomic development in east Tennessee, the steel mills of Youngstown, Ohio, Pittsburgh's great industrial complex, the oilfields, and chemical industries of the South, all of New England, New York State, Pennsylvania, and the West Coast States are within range of this potential terror streaking out of the Atlantic, the Pacific, and the Gulf of Mexico.

From the six vantage points named above, nuclear or nonnuclear missiles with a 500-mile range could be hurled against any point in these States: Maine, New Hampshire, Vermont, Massachusetts, Connecticut, New Jersey, Rhode Island, Delaware, New York, Pennsylvania, Maryland, West Virginia, North Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, California, and Oregon.

Within range of these weapons also are eastern Ohio, eastern Kentucky, southeast Oklahoma, western Arizona, almost all of Tennessee, most of Arkansas, most of Texas, central and western Nevada, the southwest corner of Idaho, and actually the entire State of Washington.

WORSE WITH 1,000-MILERS

This threat becomes magnified to even more chilling proportions when it is realized that with the development of missiles with a 1,000-mile range, only 3 submarines standing 100 miles off New York City, New Orleans, and San Francisco could drop nuclear devastation onto defense and industrial areas in any State in the Union except Minnesota, North Dakota, and South Dakota.

This growing Soviet potential in the field of submarines and missiles is the reason the United States Navy is now making a major, multimillion-dollar drive to strengthen this country's antisubmarine defenses.

Little is heard about this threat in the continuing debate over the United States relative position in the race with the Soviet Union for supremacy in airpower.

Secretary of the Navy Charles Thomas touched ony briefly on this threat recently when he went before the House Armed Services Committee to outline the Navy's program under the present budget. He said:

"* * * Our Navy holds the grave responsibility of controlling the high-speed, deep-diving submarine menace. At the outbreak of any general war, enemy submarines will try to sink our ships and cut our supply lines. They will try to close our harbors with mines. They will try to blast our exposed coastal and inland areas with missiles launched from the sea. * * * The security of our country (is) dependent upon the Navy's ability to meet and destroy this threat * * *"

Before the same committee, Adm. Arleigh A. Burke, Chief of Naval Operations, reported that major emphasis is being placed on antisubmarine warfare.

When the Soviets succeed in installing nuclear powerplants in submarines (and Navy men say it must be assumed they already have achieved this in test models) then the potential for successful attack increases.

"* * * The greatest potential of the nuclear sumbarine is as a launching base for ballistic missiles. These can be able to hit practically any target in the world from a multitude of unknown, unpredictable and sovereign positions. They can approach their launching site at top speed, surface, fire a missile, submerge, and be gone. Their mobility, their ability to hide their lethal striking power, make the nuclear-powered, missile-equipped submarine a potent weapon."

This being true of American-made nuclear submarines—then the same capability for offense must be presumed to be held by the Russians. In their planning, military men say it would be foolhardy not to presume this capability.

Russia already has the greatest submarine fleet of any nation in the world—an estimated 500 undersea craft which basically are the same as the German Mark 21 models but with major improvements. And it is known that many of them are long-range models capable of carrying and launching missiles with a range equal to the Navy's Regulus 11 which can reach out well over 500 miles from the launching site.

Because of this country's vulnerability, the Navy is making an intensive effort to overcome the barriers to long-range detection of undersea raiders. And there has been encouraging progress in the direction of establishing a defense against a sudden and devastating nuclear attack from the sea.

NAVY GIVES TOP PRIORITY TO SUBMARINE DETECTION

(By Don Whitehead)

The Navy today is going all out to achieve breakthroughs in research into long-range detection and destruction of submarines which must be realized if this country is to be protected against possible nuclear attack from the sea.

Adm. Arleigh A. Burke, Chief of Naval Operations, hinted at progress along this line recently when he told the House Armed Services Committee: "Progress in antisubmarine warfare detection equipment and weapons during the past 12 months has been encouraging."

Scientists have been moving forward in their efforts to unlock the secrets of how to

break through thermal barriers beneath the surface of the sea with sonar—the detecting device which does undersea what radar does above the surface. They are learning how to pinpoint at longer and longer ranges the location of submerged submarines.

All the problems have not been whipped, but the range of detection is reported rapidly increasing. The urgency in this program comes from the fact that in case of war, Russia can be presumed to have the capability of lobbing conventional or nuclear missiles into more than 30 of the 48 States. And this could be done if only 6 submarines escaped detection and took up positions to launch 500-mile-range missiles from strategic points 100 miles of the east, gulf, and west coasts.

The Navy is making a major, multi-million-dollar effort to checkmate this threat with "hunter-killer groups" of ships, planes, submarines and helicopters armed with new sonar, radar, and electronic equipment, and with new submarine-destroying weapons.

The offensive capabilities of submarines—particularly the fast nuclear-powered subs—have increased so greatly within the past 5 years that countermeasures have become a top priority in the Navy's defense effort. And the offensive progress in missiles has been spectacular.

British Defense Secretary Duncan Sandys announced last week that Russia "soon" will be able to launch 5,000-mile-an-hour guided missiles capable of carrying nuclear warheads—and this fact is playing a great part in shaping the British military thinking.

The British expect the range of these rockets to be such that they could be launched within Soviet-controlled territory and reach Britain—weapons against which the R. A. F. fighters would be defenseless, just as the fighters were defenseless against the German V-2 rockets of World War II.

Mr. Sandys advanced the argument that "the power of defense is for the time being at a very low ebb in relation to the power of attack."

Be that as it may, the threat to the United States from nuclear attack from the sea perhaps is more real at this time than the threat of aerial bombardment, Admiral Burke told the House Armed Services Committee.

"The Navy places major emphasis on antisubmarine warfare. We have to be able to identify enemy submarines at long range, and kill them at long ranges. We are now making progress in these areas. Most ships and weapons the Navy now has, or has under development, are designed to play some part in antisubmarine warfare."

This means that ships, planes, helicopters and submarines are being equipped with new electronic devices designed to locate an enemy submarine whether it is afloat or submerged.

In this race with time, the defense against submarines are beginning to catch up with the offensive capability of the undersea raiders. But as long as a major gap remains—then the United States obviously is open to a devastating nuclear attack from the sea.

Facts About the National Guard

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column from the Wilkes-Barre Times-Leader Evening News of February 19, 1957, written by M. Sgt. Stanley B. Krzywicki, of the 109th Infantry, Pennsylvania National Guard, in which Sergeant Krzywicki discusses the National Guard:

FACTS ABOUT THE NATIONAL GUARD

EDITOR, TIMES-LEADER NEWS:

Because of a statement made recently by a high ranking Government official concerning the standards and motives of the National Guard, and which put the guard in a "tinted limelight," I would like to forward some facts which may help give the residents of our community a better knowledge and understanding of the guard.

The Army National Guard, today at its highest strength in history, is campaigning to enlist young men and veterans in order to push its strength even higher. But emphasis during this recruiting drive is not on numbers alone.

The guard wants men who will take 6 months basic training with the active Army, or veterans.

By enlisting men in these categories, the guard will move toward a goal of greater mobilization readiness.

Today, for the first time in its 300-year history certain Army National Guard units are engaged in fulltime, active defense of the United States during peacetime.

Antiaircraft positions in eight key centers of high population are being manned around the clock by guardsmen to relieve Regular Army personnel for operating Nike sites.

This marks the first time any of our military reserve components have ever played a fulltime, active defense role along with the Regular Army during peacetime.

Why was the Army National Guard chosen for this important mission? A major part of the answer comes from Hanson Baldwin, famous military authority of the New York Times. Mr. Baldwin wrote in 1956 that the National Guard, has "moved ahead in both quantity and quality," a situation resulting from its having a "well established system of recruiting, and roots deep in the local communities."

These community roots Mr. Baldwin speaks of are as ancient as they are deep. The National Guard is the oldest military organization in this country, older even than the Nation itself. Its history dates back more than 300 years to the militia forces of colonial times.

Today, the National Guard is still as much a force in community life as were the earliest militia groups. There are more than 5,500 National Guard units in some 2,500 communities throughout the land. Their total strength is 472,000—408,000 in the Army Guard and 64,000 in the Air Guard. And in connection with what Mr. Baldwin wrote about the "quality" of the National Guard, it is important to note here that all guardsmen are volunteers. In other words they are in the National Guard because they want to be, not because they have to be.

There's still another important reason why the National Guard has been chosen for its unique role in our military defense. Everywhere across the country, wherever men are needed to do a military job, homegrown guardsmen are right there on hand to do it.

They are not here-today, gone-tomorrow military men. They are men who for the most part have lived and worked all their lives in their communities, and will continue to do so. This lends a stability to their job performance for the guard which is long sought but seldom achieved by any other military force.

There's still another National Guard factor—a pocketbook factor, which makes a lot of sense. A large and strong National Guard, composed of volunteer citizen soldiers, is about the most in the way of defense we can get for our money.

Most guard units have a long and heroic military past to back up their claim to competence. The National Guard has fought for its country in every major war of our history. Six Presidents of the United States were guardsmen. Of the eight American divisions rated "excellent" or "superior" by the German High Command in World War I, six were National Guard divisions.

In World War II, 14 guardsmen won the Congressional Medal of Honor, and guard units took part in 11 separate campaigns and 34 assault landings around the world. In the Korean conflict, 160,000 guardsmen were called to active duty, and two guard divisions—the 45th and the 40th—fought at the front.

One of the great benefits the Nation derives from the National Guard is its peacetime service in time of natural disaster. Hardly a disaster of major importance occurs but what hundreds of guardsmen are on the scene, saving lives, evacuating the sick and injured, patrolling against looters, hauling in vitally needed medicine and food and serving in innumerable other ways.

Guardsmen figured prominently in the relief operations at the San Francisco earthquake, the New England and south coast hurricanes and at Texas City. Wherever disaster has struck on a major scale, there you are sure to find the National Guard performing service in relief and rescue.

There is also the matter of guidance and leadership given by the National Guard to younger youth groups such as the Boy Scouts and school safety patrols. Thus, while the guardsman is learning from his commanders the essentials of discipline he is also able to exercise with the younger groups his talents for leadership.

In this day of shifting populations—the increased movement of people from one section of the country to another, from country to town, and from city to city—there's a premium on those community institutions which afford the cohesiveness of a common gathering place for community functions of all kinds. Such an institution is the National Guard armory. In hundreds of communities across the land these armories are a principal meeting place for all those gatherings, from political speeches to fashion shows, which sociologists tell us are such important stabilizing influences in community life.

The Guard is sometimes in the same group as a doctor or clergyman—seldom appreciated until needed.

M. SGT. STANLEY B. KRZYWICKI,
AMST, Tank Company, 109th Infantry, PNG.

Arbitrator Cuts Handbag Imports

EXTENSION OF REMARKS

OF

HON. HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. ZELENKO. Mr. Speaker, for some time it has been evident that unless steps are taken either by legislation or by judicial edict to prevent the undermining of certain American industries by the uncontrolled import of merchandise manufactured through sweat-shop methods by underpaid labor in foreign countries, great segments of American labor, American industry, and the American economy in general will suffer.

I am pleased to insert into the RECORD an article which appears in the New York Times of February 25, 1957, reporting a history making decision by the arbitrator of the pocketbook industry. This decision is the result of the fight by the Pocketbook Workers Union of New York, AFL–CIO, to prevent unfair competition from government subsized French and Italian manufacturers.

The article follows:

ARBITRATOR CUTS HANDBAG IMPORTS—KHEEL FORBIDS BRINGING IN OF PURSES OF TYPE MADE BY 33 WHO LOST JOBS HERE

Tight curbs on the freedom of New York pocketbook manufacturers to import bags from Europe were imposed in an arbitration award made public yesterday.

The decision was signed by Theodore W. Kheel, impartial chairman in the enforcement of contracts between the Pocketbook Workers Union and the employers of its 10,000 members in the metropolitan area.

Mr. Kheel forbade a manufacturer who had laid off 33 workers from importing bags of the type formerly made by the displaced New Yorkers. He allowed the company to continue bringing in other types of bags, but he emphasized that this concession was made only because the employer had been making such imports since 1920.

The decision reflected the general concern of unions in the needle trades over the adverse effects on New York employment and wage standards of goods produced abroad. Eighteen months ago an arbitrator ordered three local blouse manufacturers to pay the International Ladies Garment Workers Union $60,000 for importing blouses from Japan.

MILLION BAGS SOLD IN YEAR

In the pocketbook industry, the principal competition is from France and Italy. The union estimates that 1 million foreign-made bags were imported last year. This is nearly eight times the 1949 total.

Philip Lubliner, secretary-treasurer of the union, put the hourly cost of wages and fringe benefits for a worker here at $1.81, as against 51 cents in Italy and 62½ to 75½ cents in France. He added that both countries had set up a system of subsidies designed to encourage manufacturers to export their handbags to the United States.

The union chief said he would call on the industry to raise $500,000 to fight unfair encroachment of foreign-made products on the American market. The union itself plans to use strikes and legal proceedings before the Federal Trade Commission and the Customs Court to restrict European competition.

The company directly involved in the arbitration expressed no unhappiness over the award. It emphasized that the decision would in no wise curtail its right to carry on its busines as in the past or to offer a full spring line to its customers.

COMPANY CURTAILS OPERATIONS

The case arose when Gold Seal Importers, Inc., of 30 East Thirty-third Street, laid off 33 of its 50 factory employees as part of a decision by the company's president to curtail his operations because of advancing age and ill health.

Mr. Kheel absolved the company of any intent to substitute foreign imports for pocketbooks it had formerly manufactured itself. However, he formally restricted its import rights and gave the union the right to complain if it felt the ban was being violated.

He also directed the company to make severance payments to the ousted workers. These will range from 1 week's pay to 5 weeks' pay, depending on length of service.

Mr. Lubliner expressed certainty that the industry would greatly benefit from the Kheel award. He said the import problem had vexed the industry for a decade.

Brig. Gen. David Sarnoff

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. FARBSTEIN. Mr. Speaker, there are many stories of immigrants to this country who worked diligently and rose to positions of importance. Among those who came to this country as a child and learned the meaning of democracy and freedom, who used to the benefit of his adopted country the knowledge he gained in the public schools of New York City, was David Sarnoff. The following editorial which appeared in the East Side News on 66th birthday of General Sarnoff aptly indicates the caliber of the man. It is a true to life Horatio Alger story. I commend it to my colleagues:

BRIG. GEN. DAVID SARNOFF

(By Abe E. Eisenstein)

"He has displayed in his career the opportunities America offers." (President Eisenhower.)

"Soon after I arrived in New York as an imigrant boy of 9, I jointed the Educational Alliance on the Lower East Side. There I was taught the meaning of freedom and democracy. I learned the English tongue, formed new friendships, learned to sing, and even tried public speaking." (Brig. Gen. David Sarnoff.)

February 27 marks the 66th anniversary of the birth of David Sarnoff, East Side and New York's famous son and one whose career is as amazing as those magical devices of farflung sound and vision which he has done so much to perfect. He is one of America's distinguished and public-spirited citizens and foremost industrialists and also an outstanding alumnus, honorary trustee, and member of the Hall of Fame of the world-famous Educational Alliance.

Son of Abraham and Lena (Privin) Sarnoff, David Sarnoff was born in Uzlian, Minsk, Russia, the eldest of 5 children (4 sons and 1 daughter), and was brought to the East Side 57 years ago. His father, a merchant, died in 1906.

Brig. Gen. David Sarnoff was an East Side schoolboy, an errand boy for a local butcher store, a newsboy, and a boy soprano in a synagogue.

At the age of 15, David became a messenger boy for the Postal Telegraph at $5 a week. ("With the first $2 I was able to save, I bought a telegraph key and a book of codes. Within 6 weeks I was able to send and receive Morse at a fair clip.") Later, he was an office boy for the Marconi Wireless Co. at $5.50 a week. Soon, David was sent as a junior telegraph operator to the isolated station at Siasconset (here he found an excellent technical library), on Nantucket Island, Mass., at $60 a month. Later on, he acquired practical experience as a marine radio operator on many sailing ships.

As the first wireless operator at the old John Wanamaker's New York-East Side department store, David Sarnoff played a leading role in one of the most dramatic and important events in radio's precipitous rise. He was first to receive the message: "CQD, S O S from MGY (Titanic call). We've struck an iceberg, sinking fast." ("For 3 days and 3 nights, on a continuous stretch of 72 hours, I sat with the headpiece clamped on tightly, straining to hear a word or detail that might come through the air.") Not until he could announce the name of the last survivor did David Sarnoff leave his station. He still has the old wireless key.

Chairman of the board of the Radio Corporation of America, pioneer in American broadcasting, television, and leader in color TV experiments, David Sarnoff was responsible for the beginning of the Marine Medico-Service that has saved the lives of countless seamen all over the world, and originated the idea of the combination radio and phonograph cabinet.

As general manager of RCA (1921) he borrowed a Navy transmitter and helped give a blow-by-blow broadcast of the Dempsey-Carpentier world championship fight. He created a sensation. Thousands of amateur wireless operators and others with home-made sets heard it at that time.

Trustee of the American Heritage Foundation, Pratt Institute, member of the Grand Street Boys Association, a director of the Chatham Square Music School, etc., David Sarnoff initiated the music appreciation hour conducted by the late Walter Damrosch, pioneered the broadcasting of grand opera from the stage of the Metropolitan in New York, and also had seen to it that the late Arturo Toscanini and the NBC Symphony Orchestra, and others, were heard by millions of Americans.

In 1928, he set up a special NBC station (B2XBS) to experiment with what is now known as TV. The first public demonstration of TV was made by NBC at the opening of the New York World's Fair on April 20, 1939, when David Sarnoff was seen and heard to say: "Now at last we add sight to sound."

He married the former Miss Lizette Hermant in 1917 and they are the parents of three sons, Robert William, Edward, and Thomas Warren.

East-siders, New Yorkers, and friends everywhere salute and congratulate you, David Sarnoff, on your 66th birthday, and may the Lord bless you with many more of them.

District Convention of United Mine Workers Held in Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader Evening News of February 18, 1957, calling attention to the recent district convention held by the UMW in Wilkes-Barre:

While the color and excitement are missing, the district convention of the United Mine Workers of America, opening here today, recalls memories to an earlier generation. It has been 33 years since Wilkes-Barre was the scene of such a gathering.

A great deal of water has gone over the dam since 1924. The industry has gone backward with attendant loss in jobs and members of the UMWA. But, on the other hand, the union has made considerable progress in wages and working conditions. Not the least of the advances in the intervening decades is the health and welfare fund.

There has been progress in another direction, too. We have in mind the union's relations with the industry. Adversity has made them teammates instead of rivals. They have learned to live together and to work together for their mutual advantage.

Wilkes-Barre today is generally recognized as the anthracite capital, with Scranton out of the picture because of the depletion of the Lackawanna coal reserves.

It goes without saying the delegates to the convention will be at home in this city. They will have reminders in every direction that they are among friends.

Mideast Policy Criticized

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I deem it a privilege to include the following article by Henry Hazlitt, a contributing editor to Newsweek magazine.

Of all the presentations and all the columns written on this vital subject, Hazlitt's article seems to pinpoint the question so clearly that there could be no doubt left in anyone's mind that unless the basic problem is understood and recognized, there can be no solution to the Middle East crisis. In any event, it strengthens the conviction that no sanctions should be imposed on Israel, thus setting up a double standard of justice by the United Nations:

MIDEAST POLICY CRITICIZED—EISENHOWER-DULLES STAND UNTENABLE, IT IS SAID

To the EDITOR OF THE NEW YORK TIMES:

Our policy in the Middle East crisis may be judged in three ways: legally, morally, and realistically—i. e., from the standpoint of whether it is best calculated to promote the peace, security, and interests of the United States and of the free world. From all three standpoints the Eisenhower-Dulles policy is untenable.

That policy seems to be based primarily on legalistic grounds. Its tacit assumption appears to be that Egypt was acting peaceably and wholly within its sovereign rights when it threatened Israel, barred Israeli shipping, and seized the Suez Canal. Only from such a prior assumption would it follow that Israel, France, and Britain in invading Egypt were the aggressors and the first to resort to force.

ANALOGY CITED

The legal presuppositions of the Eisenhower-Dulles policy are more than shaky. To take an analogy from private domestic law: Suppose B and C own properties that are only accessible through an easement on A's property; that this easement has been written into all three deeds, and adhered to, for 68 years; that A suddenly announces the seizure of this easement as exclusively his own, and claims the sole right to decide who shall use it and under what conditions. Such an action would clearly go beyond his own legal rights and invade the legal rights of B and C. His action would be rightly regarded as an act of force and aggression.

Secretary Dulles and President Eisenhower should have denounced Nasser as a treaty-breaker and a violator of international law on the day he seized the canal. They should have brought this threat to peace immediately before the United Nations. Instead, they futilely tried to appease Nasser. Their failure to acknowledge this initial blunder seems to have dictated their subsequent course. It led them to call Britain, France, and Israel the "aggressors" and to support an incredibly one-sided series of resolutions before the U. N.

Why cannot the President see that in refusing to reward the aggression of Israel he is in effect rewarding the original aggression of Nasser?

BASIS FOR INTERVENTION

Fortunately the right legal course in this instance would correspond with the right moral course and the right realistic course. If we intervene in this matter we must intervene two-sidedly. If we wish to unhold the prestige or authority of the U. N. we must uphold it universally and without exceptions or not at all. It is unrealistic as well as immoral to ask Israel to give up the only bargaining position it has left against Nasser in the hope that the more his own bargaining position is strengthened the more magnamimous and reasonable Nasser will become.

If the United States supports any further resolution within the U. N. let it be a resolution calling upon Israel to give up its positions in the Gaza strip and at the Strait of Tiran the moment Nasser restores the Suez Canal to its legal status before he seized it, the moment Russia starts actual withdrawal of its troops from Hungary and the moment India agrees to restore the legal status of Kashmir before Nehru forcibly annexed it.

Any resolution that now fell short of this general and simultaneous application would be discriminatory, hypocritical and ignominious.

HENRY HAZLITT.

NEW YORK, *February 22, 1957.*

Rev. Father Nicholas Chopey, of Wilkes-Barre, Lauded

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial and news story from the Wilkes-Barre Record, as well as an editorial from the Wilkes-Barre Times Leader Evening News on the retirement of Father Nicholas Chopey, of St. Mary's Greek Rite Catholic Parish, Wilkes-Barre, after 59 years of outstanding service in the priesthood:

[From the Wilkes-Barre Record of February 18, 1957]

It would be difficult if not impossible to find a parallel to the record of Very Rev. Nicholas Chopey, newly-named pastor emeritus of St. Mary's Greek Rite Catholic Church, North Main Street. His retirement comes after a pastorate of 54 years and 59 years of service in the priesthood. The long tenure in one parish would in itself give him distinction. In addition he is only the second priest in the history of the Pittsburgh Byzantine Rite Catholic Diocese to be designated as a pastor emeritus.

But members of his parish and his numerous friends in the general community will remember him for more than his newly-attained honors. He has been a foremost member of the clergy of his denomination having served as dean of Wilkes-Barre-Scranton Deanery and as diocesan counselor. He was a recognized leader as well as a pioneer among Greek Catholic clergy of the region.

His own parish has known him as a builder as evidenced by the expansion of its properties and growth of its spiritual work. The community has recognized him as one interested in its welfare and advancement.

He is a native of Hungary and a member of a family with service in the priesthood a tradition followed in every generation for three centuries. Father Chopey's background and career are both notable and we hope will prove the forerunner of happy years of retirement in St. Mary's Greek Rite Catholic rectory where he and his family have lived over a remarkably long span, one fruitful for the parish.

[From the Wilkes-Barre Record of February 16, 1957]

FATHER CHOPEY RETIRES AFTER 54 YEARS DUTY—GREEK RITE CATHOLIC CLERGYMAN BECOMES PASTOR EMERITUS

After 54 years of active service, Very Rev. Nicholas Chopey, pastor of St. Mary's Greek Rite Catholic Church, North Main Street, has been named pastor emeritus of the church.

Announcement of Rev. Father Chopey's retirement from active service and designation as pastor emeritus, effective yesterday, was made by Bishop Nicholas T. Elko, D. D., head of Pittsburgh Byzantine Rite Catholic Diocese.

Rev. John Toptich, Pottstown, who arrived in this city yesterday, will become active pastor of St. Mary's Greek Rite Church.

By becoming pastor emeritus Rev. Father Chopey ended more than a half century of spiritual life in one parish, an accomplishment unique in the Pittsburgh Byzantine Rite Catholic Diocese. He becomes the second priest to be a pastor emeritus in the history of the diocese, the first being Rev. Joseph Hanulya, Cleveland, who retired from active service several years ago.

While pastor of St. Mary's Greek Rite Church Rev. Father Chopey celebrated three golden jubilees. November 22, 1948, he and his wife celebrated their 50th wedding anniversary; December 12, 1948, Rev. Father Chopey observed his 50th anniversary of ordination; and June 7, 1953, he marked his 50th year as pastor of one church, St. Mary's Greek Rite Catholic.

Rev. Father Chopey retired without change of rank because of long, faithful service. In bestowing this honor, Bishop Elko took cognizance of the fact Rev. Father Chopey's entire priestly life in America was spent in Wilkes-Barre. Rev. Father Chopey and his family will continue to reside in the rectory of St. Mary's Greek Rite Catholic Church.

Pioneer among Greek Catholic clergy of the region, Rev. Father Chopey has been dean of Wilkes-Barre-Scranton deanery, which extends from Nanticoke to Binghamton, N. Y., and has been diocesan consulter.

Born in the village of Perecseny, Hungary, January 2, 1876, Rev. Father Chopey was the youngest of 12 children of Very Rev. and Mrs. Gabriel Chopey. His father was archdean of Uzhorod County. Two of Rev. Father Chopey's brothers also entered the priesthood and six of his sisters married priests. This bore out a tradition of the family which, during more than 300 years, had contributed priests in each generation.

On November 22, 1898, Rev. Father Chopey married Paula Elizabeth Suba, whose father was Very Rev. George Suba, dean of the Munkcas District. On December 12, 1898, Rev. Father Chopey was ordained a priest.

After 12 months Rev. Father Chopey was appointed pastor of the church in the village of Vorocso, Hungary. Here, the two older children of Reverend Father and Mrs. Chopey died within 24 hours of each other during a diphtheria epidemic. Their third child, Charlotte, now Mrs. John B. Szabo, lives with her parents.

On recommendation of his bishop, Rev. Father Chopey was sent to the United States in 1903 by orders of the Holy See. At request of Apostolic Visitator Msgr. Andrew Hoboday, Bishop Michael J. Hoban of Scranton Diocese appointed Rev. Father Chopey as pastor of St. Mary's Greek Rite Church, North Main Street, and the Rev. Father Chopey said his first mass in the edifice, June 7, 1903.

First venture in acquiring church property resulted in the purchase of five lots on North Main Street, site of the present church and rectory. Seven lots adjacent to the church property, but facing Madison Street, were purchased later and a frame school was erected. As soon as nuns from the order of Sisters of St. Basil the Great were available, Rev. Father Chopey invited them to his parish and a convent was erected. A modern large brick school now accommodates several hundred pupils. In 1947 the church was completely renovated and a plot of 65 acres near Misericordia College at Dallas was acquired as a cemetery.

Starting practically from scratch, Rev. Father Chopey made St. Mary's Greek Rite Catholic property one of the best in the region. His last project was the erection of chapel in the parish cemetery at Dallas, which is to be completed in March or April.

Rev. Father Chopey made the motion in 1910 to organize the Sokol branch in Greek Catholic Union. For three terms he was spiritual adviser of Greek Catholic Union. He was active in strengthening Pennsylvania Slovak Roman and Greek Catholic Union by service as its spiritual adviser.

Rev. Father Chopey was the first priest in the Pittsburgh diocese given the Facultas Binanci—the privilege of saying two masses on the same day. This took place in 1908. He also preached the first English sermons. In 1953 Pope Pius XII bestowed on him the medal Pro Ecclesia et Pontifice.

In 1910, Rev. Father Chopey was chosen as representative of the clergy to go to Europe to plead for a bishop for the then rapidly growing Byzantine Rite diocese in the United States and as a result he was appointed a consultor from the United States to the mother diocese.

[From the Wilkes-Barre Times-Leader Evening News of February 16, 1957]

A priest for 59 years, 54 of which have been spent as pastor of St. Mary's Greek Rite Catholic Church, North Wilkes-Barre, the Very Reverend Nicholas Chopey has retired with the title of pastor emeritus and the gratitude of countless thousands of coreligionists and others he served and, on occasions, befriended.

His retirement comes at a time when his native Hungary, which he left at the request of the Holy See to serve in the missionary field of America, is in the clutches of a ruthless Communist regime. Apart from this sad note because of the sufferings of many near and dear to him, termination of Father Chopey's career is a pleasant milestone because he now will be in a position to enjoy the rewards of a busy and fruitful life, replete with honors and achievements.

Father Chopey has been singled out for many distinctions. The Pope conferred on him "Pro Ecclesia et Pontifice," an award reserved for individuals whose service to the church has been outstanding. The Bishop of the Greek Rite Catholic Diocese of Pittsburgh showed appreciation for his priestly zeal by naming him dean and consulter. Both the church and community, on numerous occasions, paid tribute to him at testimonials. Not many clergymen have had the unique privilege of observing the golden jubilees of their ordination, pastorate and marriage, as has been the case with him. Father Chopey, incidentally, is a member of a family that has supplied priests to the church for four centuries.

In extending congratulations and best wishes, Wilkes-Barre notes with no little satisfaction that Father Chopey will continue his residence in the place that has been home to him the greater part of his eventful life.

World, Take Notice

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an address by the distinguished Secretary of the Air Force on February 22, 1957, to the sesquicentennial meeting of the Washington Light Infantry in Charleston, S. C.

This great American, who is more conversant with our air defense than any living American, delivered a magnificent address. My people were honored that he came to see us. His gentle voice spoke with authority. His soft tones let the world know that aggressors, bent on conquest, face retribution for any attack made against our Nation:

REMARKS BY SECRETARY OF THE AIR FORCE DONALD A. QUARLES BEFORE WASHINGTON LIGHT INFANTRY DINNER, CHARLESTON, S. C., FEBRUARY 22, 1957

General Clark, distinguished guests, gentlemen, I am highly honored to take part with you tonight in paying homage to the memory of our first President and to join you in marking the 150th year of the Washington Light Infantry. It is a special privilege to visit your beautiful city, so modern and at the same time so steeped in the traditions of the past. Then too, it is always a refreshing experience to get away from a Pentagon desk and to see such solid evidence of our national defenses, as the Citadel Corps of Cadets and the units at Charleston Air Force Base, and the citizen-soldiers of the Centennial Legion units.

Because of my special interest in the Air Force I know you will understand if I call attention to two other anniversaries we are celebrating this year: 1957 is the golden anniversary of the Air Force. Half a century ago an aeronautical division was established in the Army Signal Corps to (in the language of that day) "Have charge of all matters pertaining to military ballooning, air machines, and kindred subjects." Forty years later, in 1947, the Army Air Corps and the Army Air Forces had become a familiar phrase to all Americans and the importance of airpower as an element of a national defense had reached such proportions that the Air Force was established as a separate service in the Defense Establishment. This year we also observe the 10th anniversary of that event.

The number "7," which has some other lucky connotations, must also have some special historic significance: 1947, for the USAF; 1907, for military aviation; 1807, for the Washington Light Infantry; and 1607—350 years ago—when the Jamestown colonists established a bridgehead from the Old World to the New, a milestone in that history of our Nation in which Charleston and South Carolina have played such an important part. And, finally, of course, a lot of people across the country feel that 1957 started off as a good luck year with the January inaugural ceremonies in Washington, but I realize this is not quite a unanimous opinion.

When the average person thinks of Charleston, he is apt to think of its spacious homes, its beautiful and historic gardens, and the gentle way of life that has come down from generation to generation. From the history books one learns however that in this gracious setting there has burned, to an exceptional degree and from its earliest days, that spirit of freedom which is one of our most cherished heritages.

It was South Carolina which was the first State to throw down the gauntlet to royal tyranny, some months before the Declaration of July 4, 1776. It was the Palmetto flag which was first planted on the ramparts of Mexico City in 1847. Your Washington Light Infantry left a quarter of its members dead on the battlefields in the War Between the States. And later, in happier times, it has sought to erase the bitterness from the memory of that tragic conflict.

And so it has gone, right down to the present. We saw this same spirit today in the spectacular parade of the Centennial Legion organizations and the impressive display of the students of The Citadel, which has given so many fine leaders to our Armed Forces, and today is training future leaders for our Air Force, through its Air ROTC program. Perhaps the whole spirit could be captured in the one word, "readiness:" readiness to proclaim an ideal, and readiness to fight for it if need be.

Readiness is still the watchword of our Armed Forces, but readiness today has a new and even more urgent meaning. Today, we must be instantly ready or be engulfed by militant communism. This urgency is a product of the revolution in technology that has come so swiftly upon us since World War II; and the revolution in military strategy it has caused.

It was barely 10 years ago that we could still look to our ocean barriers to protect us from aggression. We could scarcely envisage a war that did not begin somewhere on a different continent and proceed through slow stages while we used the time thus given us to mobilize our manpower and our industrial potential. It was almost inconceivable to us that our mobilization base would itself become the target, and not merely a possible target, but the first and primary target of any future global war.

Like our pioneer ancestors at the frontiers of civilization, we must all live in peril, from day to day, that a potentially hostile power might decide to attack. Such is the extent of the revolution in the instruments of war that we have been forced to reconstruct our national defense policy and our traditional military concepts. With the progress in aviation the world has so shrunk in size that only a few hours of flight lie between us and the Iron Curtain; and with atomic explosives that are roughly a million-fold more powerful, pound for pound, than gunpowder or TNT, weapons of terrible destructiveness are becoming available. Since we cannot build a Maginot line to shield ourselves completely from this danger, we have had to meet it by a strategy of deterrence, that is, by creating and maintaining such striking power as to restrain any would-be aggressor from pursuing his aims through military means. To be effective, this policy of deterrence must do two things: it must persuade the aggressor that we mean what we say—that we will retaliate if our vital interests are attacked; and second, it must convince him that we have the means with which to retaliate so forcefully that not even in the most favorable circumstances could he hope to profit by a resort to armed force.

This policy has had the most profound impact upon our Military Establishment. It has made readiness our top military priority. In these days of air-atomic power, deterrence

is a function of what you can hit the enemy with in the first days and even hours after the outbreak of hostilities. If total war should occur, what we plan to have, or have under construction, will never get off the drawing board or the assembly lines in time to affect the outcome of those first critical days. Of course, such a war may continue for some time thereafter on land and sea as well as in the air, but the final outcome will almost certainly have been determined in the initial air battle. Success in this air battle depends, of course, on defensive forces to keep attacking bombers from destroying our air power on the ground, as well as retaliatory strike forces to destroy his base of air-atomic operations.

We can see solid evidence of our military readiness at work right here at Charleston Air Force Base. The 444th Fighter Interceptor and the 722d Air Control and Warning Squadrons are fine examples of our air defenses, while the 1608th Air Transport Wing is typical of our military transport capability.

Readiness is apparent in the 24-hour watch maintained by the A. C. & W. Squadron and the instant response to its warnings of the fighter-interceptor squadron. The 444th, incidentally, recently won an award as the outstanding squadron of the Air Defense Command, for its alertness and demonstrated ability to intercept what were fortunately friendly intruders.

Readiness while not so obvious is no less real in the case of the 1608th Air Transport Wing. To the average layman, MATS, the Military Air Transport Service, of which the 1608th is a part, represents a far-flung ocean-spanning air-freight and passenger line, notable chiefly for such exploits as ferrying U. N. troops from South America to Suez and Hungarian refugees from Europe to this country, in the recent Operation Safe Haven.

Perhaps Charleston sees the 1608th as the operator of the seventh busiest airport in the United States now set up to process from eight to twelve thousand military personnel and dependents a month from Charleston to overseas bases. It may be noted that since MATS operates no domestic air routes for other than medical purposes, all of these people will converge upon Charleston by bus, rail, or commercial air transport. To the people who travel on it, the 1608th is probably most notable for its fine safety record and the efficiency of its operations under Colonel Wasem's and Colonel Moomaw's leadership.

To the armed services, however, MATS represents one thing—readiness—a force trained for specific wartime functions, flexible enough to meet the demands of any likely situation, and ready for instant action should the H-hour of D-day ever strike.

The concept of readiness has also had its impact on a segment of our defense structure that is of particular concern to me as well as to all of you: namely, the Air National Guard and the Air Reserve Forces.

Here again, we must have individuals trained and ready to fill specific positions; and units that can operate as units when the whistle blows. If we are to win the initial critical air phase of the war we must do it with the airpower that is ready at the start.

This concept imposed upon our traditional Reserve organizations has inevitably caused some disappointments, and even some personal hardships. However, I have the utmost admiration for the way in which the individuals in our Reserve Forces have understood and accepted the changes made necessary by the stern realities of the air-atomic age.

This new look in the Air Reserve forces is already paying real dividends to the Air Force and the Nation. For example, one of our Air National Guard units is completely manning 24 hours a day one of our radar warning sites. At 19 other locations, squadrons of Air National Guard men operating fighter-interceptor units are voluntarily manning these stations around the clock, 7 days a week. These men are not only training for a future emergency. They are an integral part of our defense system, ready, today.

They must be trained and ready if they are to manage the highly complex weapon systems of air warfare that have been developed during the past 10 years.

I am afraid many of us still tend to think of flyers as a fraternity of carefree adventurers. Romantic as it is, this concept of the flyer does not begin to do justice to the men who operate our modern planes. Over and above their special aptitudes, combative spirit, and physical stamina, they must develop a high order of professionalism in the technical functions of instrument flying, cruise control, rocketry, gunnery, navigation, and so on. To highlight the greatly increased compounded demands we are today placing on our air crew members, and especially our pilots, let me give you an example. While up to 12 crew members were on hand to observe and correlate the readings and adjustment of approximately 130 instruments and controls on the B–29, we now have about 350 gages, switches, dials, buttons, and levers confronting only 3 crew members on a B–47. In a modern fighter, a single pilot may have to cope with about 100 such devices. He must operate an electronic system that is about as complex as a city power station and radio station combined.

We need to remember, additionally, something about the character of the environment in which these duties are performed. A G-suited, helmented B–47 pilot packs more weight on his mission than did the knights of old, in full battle armor. And on some extended missions, he packs it for 18 hours at a stretch, meanwhile giving full uninterrupted attention to countless details of plane performance and flight plan progress. If he lost oxygen and pressurization at the altitudes at which he must fly he would lose consciousness in less than a minute.

At supersonic speeds attained by modern fighters, pilots have only a matter of seconds to react after their electronic fire control devices have locked on to a target. Their closing speed may be well over a thousand miles an hour, a fact which complicates the problem of avoiding collision with friendly planes just as much as it complicates the task of getting in firing position, on an interception mission. Because fuel consumption is rapid and fuel reserve at flight destination is critical these fighter pilots must be able to navigate with precision up to the extreme range of their planes in any kind of weather, day or night.

As you can readily understand, the skills necessary to these operations cannot be acquired overnight. They must be learned painstakingly and practiced constantly, if they are to serve us instantly in time of need.

I have been talking a great deal about the importance of readiness, but of course the really crucial point is whether or not the Air Force that is ready to take to the air when the chips are down is the kind of Air Force that can perform its retaliatory mission and survive in sufficient numbers to go on and win the air phase of the war.

I believe it is important that we examine this question not just in terms of the individual components of our airpower but in terms of our air capability, as a whole; and in relation to our defense posture, as a whole. It is not just the numbers of planes in an air force that are important but it is the mission capability that these planes possess, in the aggregate. The requirements that the Soviets must meet in the air forces are quite different from ours, because of many factors, such as geography, climate, terrain, and so on. A mere quantitative comparison of the two air forces—theirs and ours—will not tell you which air force best achieves its misison capability.

Further, of course, our defense position is broader than airpower. It must take account, realistic account, of what each service component contributes under the conditions that are expected to prevail. And even that frame of reference is too narrow, because we must not think solely in terms of our national position. We must also take into consideration what our allies, some twoscore of them, will contribute to the defense of the free world, and also what help they will need from us to maximize their contribution.

It is not until all of these factors have been assembled, analyzed, and evaluated that we can begin to formulate a defense budget, and it is quite clear that if the total is not to reach astronomical figures, each item in the final budget must be rigorously justified. The point is not whether we would have a better Air Force if we spent more money on it; we certainly would. The point is whether the Air Force that we have and that we project for the future can perform its assigned mission.

As far as our own position is concerned, I can state without reservation that our present retaliatory deterrent force is much more powerful than it was a year ago. In basic terms, this means that the Air Force can deliver tremendously greater fire power on more targets, more quickly and more accurately than ever before. Our air-defense forces have progressed in a similar manner during the past year. Their fire power and ability to destroy attacking aircraft is being increased manifold. For example, last Wednesday the Secretary of Defense announced the deployment of nuclear weapons for air-defense purposes. We now can equip our interceptor aircraft with nuclear air-to-air rockets. Because of this great power, the employment of such weapons will greatly increase the effectiveness of our interceptor squadrons in stopping enemy bombers short of our cities and other strategic targets, and the Army is making similar progress with its new weapons. All these weapons provide a further deterrent to aggression against the free world.

Other examples of our growing deterrent power were seen recently when a group of B–52's circled the earth nonstop, in 45 hours and 19 minutes, and when, a few days later, one of our B–47's flew across the continent in 3 hours and 47 minutes.

In spite of some downward adjustment in the number of wings, the forces we forecast in the immediate future will continue to increase in power and effectiveness, as, indeed, they must do if we are to retain our deterrent position against the growing air/atomic power of the Soviets.

It is my opinion that we have an effective deterrent position today and that the fiscal year 1958 budget will provide us with the funds required to maintain this deterrent strength and to improve its effectiveness, and it will do this within a figure that the civilian economy not only can but must support.

I want to make it clear, however, that I would not hesitate to recommend budget changes if at any time it should appear that our estimates had been invalidated by new developments, whether here or behind the Iron Curtain. The present figures simply represent the best thinking of the military and civilian authorities in the Government. Above all, they represent the considered opinion of the President, whose judgment and experience in defense matters is so invaluable to our country at this time.

I have been talking mostly about things such as money and hardware, but we should never forget that the vital ingredient of any military organization is the men who wear the uniform. It is the men who make or break a military unit; who determine whether their unit will live in history or pass into

oblivion with others now long forgotten. These men must be capable, and they must be ready. And here once again I would like to use "ready" in the sense that I first used it, so well exemplified as a part of our American tradition by the men of South Carolina and the Washington Light Infantry, readiness to proclaim an ideal and the readiness to fight for it.

Is Your Child Surplus?

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. METCALF. Mr. Speaker, the New York Times once again has hit the nail squarely on the head.

In an editorial in this morning's edition, the Times has reduced the question of Federal aid to school construction to its simplest terms. The question, which every parent must answer is: Is your child surplus?

As the Times points out, 7 or 8 of every 100 children enrolled in our schools right now are surplus—that is there are no school buildings for them.

These surplus children are going to school in shifts or they are meeting in makeshift quarters, or they are being jammed into overcrowded classrooms.

These physical conditions are not conducive to the kind of education upon which our democracy rests. The remedy lies in H. R. 1, by our colleague, the gentleman from Pennsylvania [Mr. KELLEY]. I support this bill.

The Times editorial follows:

IS YOUR CHILD SURPLUS?

In the past 5 years the number of pupils in the Nation's public schools has increased by 5.5 million, and in the next 5 years it will jump by another 6 million. This extraordinary rise in school population, combined with a completely inadequate rate of school building, means that this year—right now—7 or 8 percent of the total number of enrolled schoolchildren in this country may be considered surplus in the sense that there are not facilities properly to take care of them.

The latest report of the United States Office of Education estimates the classroom shortage at 159,000, and the number of excess students at about 2.3 million out of a total of 31.5 million. This excess is taken care of, so to speak, by various expedients such as half-day or two-shift sessions, makeshift accommodations, or, most simply, by excessive overcrowding. While satisfactory physical conditions certainly cannot guarantee a good education, the absence of such facilities is pretty certain to prevent a child in the America of today from getting a good education.

As President Eisenhower said in his message on school building earlier this year, "solutions to all of the other problems in education will be empty achievements indeed if good teaching is not available"; and everyone knows that, by and large, teachers are disgracefully underpaid, and the teaching profession has yet to achieve the status in public esteem and support that is its due. Yet of all the many problems facing education in the public elementary and secondary schools today, perhaps the most critical and certainly the one where the Federal Government can be of most immediate and effective help, is the classroom shortage.

Considering the disproportion between the immense rise in national income during the last two decades and the relatively small rise in expenditures on the public schools, the country has to become as accustomed to thinking big in terms of schools and education, generally, as it already is doing in terms of highways and national defense. Surely there is no defense more important to a democracy than an educated and enlightened citizenry. We would like to see Congress produce action on a school bill as early in this session as possible.

Can We Trust Mr. Dulles Not To Aid Nasser in His Nefarious Schemes?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1957

Mr. MULTER. Mr. Speaker, the following article, written by Frank Kelley, from Paris, appeared in the New York Herald Tribune of February 12, 1957.

I believe that this article should be read by all of our colleagues at this time of crisis in the Middle East:

EGYPT-SOVIET PLOT IN AFRICA CHARGED—FRENCH SAY NASSER FOMENTS REVOLT BY MOSLEM ELEMENTS IN EIGHT AREAS

(By Frank Kelley)

PARIS, February 11.—With financial and political backing from the Soviet Union, Egypt has begun on a large scale an economic, religious, cultural, and ideological penetration of at least eight areas of Africa, it was learned today. The purpose is to foment eventual revolution by Moslem elements in these areas.

The task of developing this scheme is entrusted, sources here said, to Ali Sabry, one of President Gamal Abdel Nasser's closest associates.

In the wake of the French National Assembly's decision to set up 13 semi-autonomous "republics" in French West Africa and Equatorial Africa and the island of Madagascar, authoritative informants here disclosed the vast extent of Egyptian operations at several critical spots in the "black continent."

AIMED AT ETHIOPIA

The immediate goal, it appeared from diplomatic reports, is to strike southward down the Nile Valley and southeast along the Red Sea in a movement aimed at destruction of the Christian country of Ethiopia.

A longer-range objective on the West Coast of Africa poses problems for the British colony and protectorate of Nigeria and for the independent Negro republic of Liberia.

Soviet-Egyptian plans also include, sources here said, the undermining through Moslem rebel units of these countries: Libya, Somaliland, Kenya, Uganda and the island of Zanzibar in all of which there is a sizable population of Moslem malcontents.

NASSER'S BOOK

The Egyptian operations, sources said, are based on Col. Nasser's book "Egypt's Liberation: The Philosophy of the Revolution," in which he stated in part: "Not in vain is our country located in Northeast Africa, a position from which we can look over the Black Continent, which is today the scene of a hard fight between the white settlers and the black children. . . . The duty of Egypt is the creation of an immense power which will be able to drive these countries into revolutions."

In Libya, site of American and British military bases and the first country to gain independence under United Nations auspices, there is a Moslem majority of 93 percent in the population of 1,340,000.

There, sources said, Egypt has set up a corps of Agitprops—sometimes humorously known as Egyptprops—in an organization known as the Front for the Fight of the Libyan People.

This outfit is known to be engaged in a double effort: first, to push subversive propaganda against the Libyan government and, second, to make certain that 30,000 light weapons are distributed to Moslems in Libya for local use or transfer across the borders to Tunisia and Algeria.

In Somalia, an Italian trusteeship under the U. N., and in the British and French Somaliland areas, the Cairo radio is reported to have been making an effective campaign for the last 18 months to whip up the Moslems. Moreover, 250 young Agitprops have been brought to Egypt to study and undergo indoctrination at Egyptian expense. The League of Somali Youth is said to be financed mainly by Egypt. Its object is to create a united, free Somaliland.

In Kenya, a British crown colony with 5,900,000 people, which lies next to Somaliland and east of Uganda, the Egyptians are reported as of August to have begun "importing" promising young natives to study at Cairo and to enter special "African units" of the "Egyptian Liberation Army." In these units they are given large doses—on instructions, it was said, from Moscow—of old-fashioned national socialism of the Hitler variety.

MOSLEMS IN ETHIOPIA

In Ethiopia, the target is Moslems in a population of 8 million. The Cairo radio puts in a lot of time urging them to rebel. That is one reason why Emperor Haile Selassie recently turned down an invitation to visit Colonel Nasser.

Haile Selassie is also upset because, it was understood, Egypt is propagandizing Eritrea, the former Italian colony which under a U. N. vote in 1950 was to be federated with Ethiopia. The separatist line pushed by Cairo would, if successful, cut off Ethiopia from the Red Sea and hurt its economy.

In Eritrea the Egyptians are known to be operating a religious mission, and Eritrean students are sent up to Cairo for favored treatment at the university.

The Cairo radio is said to be making a big effort on Zanzibar, a British protectorate island 23 miles off the coast of East Africa. Broadcasts encourage revolt against the British. In 1955, Anwar Sadad, then in charge of Moslem affairs in Cairo, had long talks with Zanzibar's Moslem councilmen on the mainland at Mombasa.

The pattern is similar in Nigeria, where there are 15 million Moslems out of 31 million inhabitants, and in independent Liberia, a rubber-rich country of 2,700,000 people.

ARTICLE IN REVIEW

The tip-off to Egyptian aims was stated in August in an issue of the "Egyptian Economic and Political Review," a weekly, which said Egypt should establish a net of consulates in Africa, develop broadcasts in native African tongues, send religious and economic missions to African areas and grant scholarships to promising youths, create an African congress to be held yearly in Cairo, establish an Egyptian commercial air line linking all of Africa, and set up an institute for African Affairs with Cairo headquarters.

Do We Really Want Federal Aid to Education?

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. McDONOUGH. Mr. Speaker, how urgent is Federal aid to education? How much better quality of education will we get with Federal funds than we now get with State and local funds? Why are some of the States that can now afford better schools postponing their school construction programs? Are they waiting for Federal funds to do what they should be doing for themselves?

These and many other questions should be answered before we take steps to authorize Federal funds for education which, like all other such funds, lead to Federal direction and control.

The education of our youth has by tradition and custom been kept very close to their parents and under the jurisdiction of local authorities. Can we afford to invade that area of local authority or break that custom and tradition by providing Federal funds for education?

Does California want to contribute $28,364,000 to the Federal Government in order to obtain $14,180,000 back or should we use our own money and build and control our own schools.

Here is an excellent editorial from the Los Angeles Times which poses and answers some of these questions:

THE PRESIDENT'S SCHOOL SUBSIDIES

In his message on Federal aid to education President Eisenhower told Congress "the program must be recognized as an emergency measure * * * Federal aid must not infringe upon the American precept that responsibility for control of education rests with the States and communities."

EMERGENCY MEASURE?

In matters such as this the whole American public has learned to trust the President's sincerity and intentions. When he says that this proposal to pass out $2,200,000,000 of Federal aid to the States during the next 4 years is an emergency measure, that is surely what he thinks it is.

But most of the people who have been putting on the pressure for Federal aid have no intention whatever of letting Federal aid lapse. Their chief spokesmen assure us that they stand firm against Federal interference in the conduct of the public schools, yet they have projects not only for building schools with Federal money but for raising teachers' salaries with it and somehow using it to solve what they call the shortage of teachers.

President Eisenhower believes them when they say the Federal Government must not infringe on the schools, but do they really believe it themselves? How can they believe that the Federal Government will provide all the billions they want for the schools without having a hand in school management?

THE CASE OF TEXAS

Even the present proposal for building schoolrooms is in a way an infringement of State and local educational autonomy, for it attempts to change certain State educational preferences. Texas, for example, is a wealthy State, as any Texan will tell you, with money enough to set up a public-school system as good as California's, but she has chosen not to do so. In fiscal 1956 Texas was seventh in personal and corporate income taxes paid to the Federal Government among all the States.

Now President Eisenhower says, "The allocation of Federal funds among the States should take into account school-age population, relative financial ability to meet school needs and the total effort within the States to provide funds for public schools. An allocation system based solely on school-age population would tend to concentrate Federal aid in wealthy States most able to provide for their own needs. An allocation system which provides more assistance to States with the greatest financial need will reduce the shortage more quickly and more effectively."

But under the matching fund proposal, with the States required to put up various amounts in order to get various Federal subsidies, Texas would receive $19,842,000 in return for $13,846,000 of State money. California, the third State in fiscal 1956 tax payments to the Federal Government, would receive $14,180,000 in school subsidies if she put up a matching fund of $28,364,000. California would receive a lower Federal allotment per child ($5.58) than any other State except Nevada ($4.72).

SYSTEMS PENALIZED

The proposal penalizes some States not simply for being wealthy (by the tax return criterion), but for having good school systems. Michigan, just ahead of California in tax payments, would receive a subsidy amounting to $7.69 per pupil, paying in $16,233,000 to get $12,102,000.

There are schoolroom shortages in some of the States; that in California has been nearly acute. But on the whole the situation has ben exaggerated, with false representations to the Government founded on statistics which were uncritically if not fraudulently compiled. The President's Committee on Intergovernmental Relationships put a task section to work on the school situation 2 years ago and its findings on school needs, after careful analysis of the emergency alarms, made the representations of last year's school conference in Washington look very much inflated.

Good school systems need money to operate them, but they need something besides money. These are places in the United States where Federal money might save the day for public education, but if all the public schools in the United States had 3 times as much money as they have now the quality of education would not be 3 times as high.

The Tax Bite

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. HOSMER. Mr. Speaker, the Sunshine magazine for March contains an interesting analysis of the amount of time we Americans devote during the working day to earn the money we pay out. It is as follows:

TAX BITE IN 8-HOUR DAY

Are you shocked by the fact that all government—Federal, State, and local—collected about $90 billion in taxes last year? Probably not, because that figure is just too big for most of us to even understand.

Putting the tax burden on a daily work basis, the Tax Foundation (a private research organization) has issued this information.

Here is how a $4,500-a-year man's 8-hour day is divided:

NEEDED TIME

To earn money for—
Taxes: 2 hours, 35 minutes.
Food: 1 hour, 37 minutes.
Housing: 1 hour, 24 minutes.
Clothing: 36 minutes.
Transportation: 42 minutes.
Medical and personal care: 23 minutes.
Reading and recreation: 20 minutes.
Other goods and services: 23 minutes.
Total: 8 hours.

Considering the Federal tax reductions recently, we might guess that a man saves about 2 minutes of the time spent working for taxes whenever the Government knocks a billion off its tax take.

Resolution on Defamatory Film

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 6, 1957

Mr. ANFUSO. Mr. Speaker, a film is currently being shown in many theaters throughout the country which contains certain derogatory remarks about Americans of Italian origin. I regard this as deplorable and highly objectionable. I do not consider it a contribution to Americanism and to the concept of brotherhood to besmirch any group in this country.

Under leave to extend my remarks in the RECORD, I wish to insert the text of a resolution adopted by the Columbian Lawyers Association in New York protesting against this film and the abuses contained therein. The resolution is as follows:

RESOLUTION MADE BY COLUMBIAN LAWYERS ASSOCIATION, FIRST JUDICIAL DEPARTMENT, BRONX, AT A REGULAR MEETING HELD ON JANUARY 9, 1957, AT THE SHELTON HOTEL IN NEW YORK CITY

Whereas Warner Bros. has released the picture entitled "Baby Doll" produced by Tennessee Williams and Elia Kazan; and

Whereas the said picture depicts a character as an Italo-American and permits the said character in the dialog in at least five scenes to use the words "wop" and "dago"; and

Whereas said motion picture by permitting the use of those words is derogatory and defamatory of Italo-Americans: Now, therefore, be it

Resolved, That we the members of the Columbian Lawyers Association, First Judicial Department, declare—

First, that we are proud of our ancestry and origin as Italo-Americans and do hereby condemn the motion picture entitled "Baby Doll" as being defamatory and derogatory of Italo-Americans by the unnecessary use in its dialog in at least five scenes of the words "wop" and "dago."

Second, that the members of this organization on behalf of themselves and their families do hereby agree to boycott the said movie.

Third, that a copy of this resolution be forwarded to Warner Bros., Tennessee Williams, Elia Kazan, the Motion Picture Association of America, the Association of Theater Owners of America, the Catholic Na-

tional Legion of Decency, the Department of State of the State of New York, Board of Regents, Congressmen PAUL A. FINO, ALFRED E. SANTANGELO, VICTOR L. ANFUSO, United States Senator, JOHN PASTORE, NAACP, all of the local and metropolitan newspapers and magazines, and the United States Army, Special Service Division, United States Navy, Special Service Division.

Fourth, that a copy of this resolution be also forwarded to all of the Italo-American organizations in the city and State of New York.

Fifth, that a copy of this resolution be also forwarded to the United Jewish Appeal, Anti-Discrimination Division.

Respectfully submitted.

THOMAS CARTELLI,
President.
NICHOLAS IANNUZZI,
Executive Secretary.

The Trinity River Development in Northern California

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1957

Mr. GUBSER. Mr. Speaker, in the next few months, Congress will be calleed upon to make a decision regarding the proposed partnership agreement between the Pacific Gas & Electric Co. and the Federal Government with respect to the Trinity River development in northern California.

Recently, I have noted that the first two contracts for the Trinity project have exceeded the Bureau of Reclamation's estimates by more than 30 percent. I am sure my colleagues will be interested in this fact since it indicates that an even greater economy to the Federal Government can result from the partnership agreement which Secretary Seaton recently approved.

It appears to me that the issue involved in this proposed agreement is the fundamental one of public ownership as opposed to the free enterprise system. Admittedly, power is a commodity which is consumed by all of the people in our Nation. If public power were to serve all the people, perhaps I could find some merit to the public-ownership argument. But our power needs are so tremendous that even the wildest advocate of public power cannot hope for 100 percent ownership by the Government.

In the absence of Government monopoly, we find a situation where a selected group of power users receives low rates which are made possible by subsidies and tax exemptions at the expense of other taxpayers across the country. Though areas in my district would benefit from preferential rates, I do not feel that it is fair to taxpayers in areas who pay their own way. Public power for all may be a desirable objective, but public power for some at the expense of others is not fair.

Address of Hon. Carmine G. DeSapio

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1957

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the address of the Honorable Carmine G. DeSapio, before the annual dinner of the New York Democratic State Committee, February 16, 1957:

TEXT OF ADDRESS BY DEMOCRATIC NATIONAL COMMITTEEMAN CARMINE G. DESAPIO BEFORE THE ANNUAL DINNER OF THE DEMOCRATIC STATE COMMITTEE, FEBRUARY 16, 1957, HOTEL WALDORF-ASTORIA, NEW YORK CITY

It's a great pleasure for me to join with and extend my greetings to this enthusiastic gathering of Democrats and to this warm union of old friends.

We meet here this evening as the representatives of a political party which finds itself in a very curious—indeed, a virtually unparalleled national position.

There are two historic precedents in our national political scene. For one thing, a President has been reelected with the congressional mandate given to the opposite party. If I remember my history, such a phenomenon has not occurred in over a hundred years.

Secondly, where the President is supposed to give leadership and direction to the Congress and to the country, we find, in our National Capital, that the responsibilities of Congress overshadow even those of the President, and that in the absence of positive executive leadership, it is the Congress which must guide America through 4 years which may prove to be the most critical and perilous since the recording of history.

All of which is a reflection on the innate good judgment and intuitive soundness of the American voters.

They elected a President in whom they reposed confidence and trust. But they said to the President: "We do not trust your party. We have no confidence in Republicanism or in the Republican philosophy of government, and we will, therefore, exercise the insurance afforded us by the constitutional system of checks and balances."

Now, you will recall, my good friends, that in 1952 Mr. Eisenhower was elected along with a Republican Congress. But 2 years later, in 1954, when the people had had an opportunity to observe Republicanism in action, they elected a Democratic Congress just as they did again in 1956. And if the American people, by their votes, have declared that they will not trust their futures, or those of their children, to the Republican Party, then it certainly clearly becomes our responsibility as Democrats—and our challenge as Americans—to put aside partisan interests and concerns, and to advance genuine and meaningful leadership for the welfare of our Nation and its people.

I am proud to report to you that the Democratic Members of Congress from our State already have established their determination to provide sound direction and meaning for our National Government.

1. Our delegation has pledged itself to the support of a strong civil rights bill, and has reaffirmed its determination to reject any measure which would compromise the constitutional rights of any American citizen.

2. Our delegation has gone on record in vigorous opposition to the attempts to impose United Nations sanctions against the State of Israel, and will insist upon redoubling all efforts to bring about a meeting of Israel and the Arab States at the peace conference table.

3. Our delegation will fight for the creation of an effective and workable program of Federal aid to education, and its members have signified their rejection of the kind of parliamentary maneuvering which enabled Republicans in the 84th Congress to defeat last year's bill.

4. Our delegation has taken a strong stand in favor of amending the McCarran-Walter Act to eliminate the discriminatory national-origins quota system, and to provide for the filling of unused quotas of nonparticipating nations by immigrants from countries which may have filled their own quotas.

5. Our delegation has voiced its determination to end the economic squeeze which, today, grips small business—through tax relief, through the extension of Federal loans, and through the medium of increased technological assistance.

6. Our delegation will press vigorously for the amendment of the Taft-Hartley law, and especially for the notorious provisions which have enabled some States to enact the repressive and cynically named "right-to-work" laws—those restrictive measures which, in reality, curtail the rights of working people, and seek to destroy local trade unionism.

7. Our delegation has rejected the proposal to raise the legal interest rate on loans to veterans, and will fight all measures to impose such financial burdens upon those who willingly have fought for our country.

In short, our delegation is bringing to Washington the kind of leadership; the kind of vision; and the kind of strength which have characterized the Democratic Party through years of service to the people, in the cause of progress for our country.

No, my friends, the voters do not trust the Republican Party. Why should they? How can they?

But they do clearly look to our party—through Congress—to restore faith and meaning to our National Government, to bring us from the brink of war to an era of understanding and peace and to secure for all free people a happier and better world in which to live.

With your continued support, and with God's help, we will fulfill this sacred obligation.

Thank you very much.

A Bouquet to the Junior Bar of Milwaukee

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. REUSS. Mr. Speaker, I am very pleased that the Milwaukee Junior Bar Association has just received a $10,000 grant from the Fund for the Republic with which it will seek to revitalize community understanding of the Bill of Rights. The following editorial from the

Milwaukee Journal of February 23, 1957, well express my feelings:

A BOUQUET TO THE JUNIOR BAR

The community may be proud of the Milwaukee Junior Bar Association. The Fund for the Republic has singled it out, the first group in the Nation at its level of bar organization, to be entrusted with the constructive use of a $10,000 grant.

This is a substantial vote of confidence in the civic concern and thoughtfulness of these young men of Milwaukee, and the proven capacity of their organization to do real jobs of work. Fund staff members were convinced that this group had some worth while bones of ideas and would put some meat on them.

The fund's broad aim is to promote "redefinition" of American civil liberties in the public consciousness, and to help revitalize them in the practice of everyday affairs. Milwaukee Junior Bar plans to this end include preparing a mock trial to be enacted before school and civil groups, to show what civil liberties mean in court, and putting more local meaning into the constitutional "right to counsel" even for unpopular or penniless defendants.

Milwaukee is fortunate to have this kind of activity launched here, and in the hands of able, earnest young lawyers from whom it may expect some concrete results.

The Father of Our Country

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. FARBSTEIN. Mr. Speaker, I am pleased to include an editorial which appeared in the East Side News in commemoration of the 225th anniversary of the birth of our first President, George Washington.

The article follows:

THE FATHER OF OUR COUNTRY—GEORGE WASHINGTON, 1732–99

(By Harry H. Schlacht)

Yesterday marked the 225th anniversary of the birth of George Washington.

In paying tribute to the Father of Our Country, Abraham Lincoln said: "In solemn awe pronounce his name and in its naked deathless splendor leave it shining on."

Washington was our first general. He was the President of the Constitutional Congress. He was the first President of the United States. He was first in the hearts of his countrymen.

Washington was the uncompromising foe of despotism. He was the eternal foe of bigotry. He was the great champion of the sovereignty of man. He was the greatest of good men and the best of great men.

Washington lived in the mountaintops of vision and hope. He was a child of the hills, with the great outdoors as his playground and the storehouse of his inspiration.

It was at Mount Carmel, amid the shouts of "the Lord, He is God," that fire was sent from the heavens to consume the altar so that Elijah could expose the false prophets of Baal.

It was on Mount Ararat that the ark rested and God's covenant was written in the many-colored rainbow in the clouds, that still thrills the imagination with wonder and awe.

It was on Mount Sinai, quivering from the lightning and thunder of the skies and engulfed in smoke and fire, that the law was given to Moses.

It was in the sacred precincts of the mountains that Christ permitted the chosen few to witness His divine majesty.

It was in Mount Vernon that Washington rose to lead his people from oppression and tyranny into the land of justice, freedom, and equality.

The story of his life is the heritage of every schoolchild.

Washington towers in history like the lofty monument in the Capital which bears his name.

Washington became the benefactor of the ages and bathed his name in the august halo of immortality. It was Washington's belief that the sacred rights of man are written, as with a sunbeam, in the whole volume of human nature by the hand of God and cannot be erased by mortal power.

Our sainted forebears preferred death to shackles.

Our Founding Fathers died for the American spirit of freedom. It is the spirit that represents our treasured traditions. It is the spirit which embraces the political institutions of the greatest Republic ever built by the genius and the daring statesmanship of man. It has given a new definition to home, a new ideal to fireside, a truer conception to the brotherhood of man.

The spirit of Washington hovers over our Nation. His voice comes ringing down to us with a commanding challenge.

It is a call to duty that comes from every battlefield in all the wars of the Republic. It is a call that comes from every cemetery where sleep our martyred dead whose graves number the page of our history.

America is determined to stand by and preserve the ideals and principles for which sons and daughters have fought, bled, and died. America is determined never to abandon or compromise them. America is determined to contest any hostile philosophy and repugnant ideology which holds in contempt the deepest yearnings of the human heart.

Liberty is a living thing. It is nutured by the living faith of a living people. It is the quality of the soul. It must be protected at all times.

Those who have sacrificed so much for liberty dearly appraise its value. They know that once liberty is lost, it may never be regained.

Let us in the name of the "Father of our Country" go forward to fulfill our great destiny. Let us be united in spirit and purpose. Let us emulate the lives of our deathless dead. Let us remember that their spirits hover over us, bidding us in the service of America to think in the highest that is in us to think, to be the noblest that is in us to be.

May we vow to protect and preserve our blessed land and all it stands for, "Our nation indivisible, with liberty and justice for all."

More About E-Bonds

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following article written by the well-known financial writers, Paul Heffernan and Leslie Gould:

SHOW TREASURY OFFICIALS HOW THEIR OBSOLETE MERCHANDISE, THE E-BONDS, CAN BE RESTORED TO THEIR FORMER COMPETITIVE POSITION

You can be even more constructive and render still greater service to the millions of E bond holders and the country if you show the Treasury officials how their obsolete merchandise, the E-bonds, can be restored to their former competitive position. Take it for granted the Treasury officials and practically everybody knows the money market has changed and something has to be done and done quickly or there will be a "run" on the E and other bonds. The records show that the rank and file are slowly but surely waking up and cashing in their "dead stuff."

The question is, what should the Treasury do? Needless to say, everybody has a different idea of how and what to do to prevent this run or dumping, depending on his experience, his advisors, his interests, etc. There are many angles and slants to this, as you know. The Government could very easily take practically all the business away from the savings banks, etc., for example, if they continually offered a little more than the savings banks, that is, if they adjusted the rate periodically to meet competitors or the market. The problem is how much business should they take as a matter of policy or for the general good of all concerned.

The greatest service the financial writers and the best brains in the financial business—the set-up men in the houses of issue—and others who profess to be authorities on the matter, could render the country, would be to throw the light of day on this matter and present concrete, specific suggestions as to what should be done. Open it all up. State the pros and cons freely and frankly as to why the E-bonds shouldn't yield each year one-fourth of 1 percent more than the savings banks (and commercial banks that have big savings deposits like the First National City Bank) and be redeemable at the prevailing savings bank rate as long as depositors in savings banks can get their money back at any time guaranteed by the Government (FDIC up to $10,000). For all practical purposes a savings bank account is as riskless as E- or H-bonds, and it is easier and quicker to get the money in and out—by mail.

Who else can get billions for 20 years and not have to pay any interest whatsoever? No one who understands what this means can argue the money isn't worth more than one-fourth percent more than the savings bank rate. You shouldn't let the Treasury officials abuse this unique racket. The E- and H-bonds should be the same all the way through except the E's (accumulation bonds) get a bonus of one-half of 1 percent, or something, if held to maturity.

The old Treasury crowd were told time and time again that the accumulation scale has always been and is notoriously bad and must be corrected first of all. Most Treasury officials don't know or admit that the rank and file have been disillusioned about the Government's honesty and integrity when they didn't get what they could have gotten on their money in a savings bank while the Government had it, when they had to cash their E-bonds in. Many writers have touched on this matter. It is a long story, but everybody who has handled the sale of E-bonds knows that the rank and file felt they were gypped, as they expressed it.

It doesn't require a great deal of resourcefulness or ingenuity to tie the redemption price into the prevailing savings bank rate, the 90-day bill rate or to something so it will fluctuate and change with the market. The rank and file can understand that. They know the savings bank rate changes. Of

course, the savings bank people will fight that and anything that will make the Government's merchandise more attractive than their own. That is only natural, of course. The big question is, as it always has been, should the Government hold an umbrella over the savings banks, Federal loan associations, etc.

THE TREASURY WILL GAIN MORE THAN LOSE BY MAKING THE E-BONDS TAX EXEMPT

Of course, the E-bonds should be made tax exempt, as Leslie Gould and many others have suggested, as the Government would not lose much, if anything. Most of those who buy the E-bonds are in a very low bracket and, as is well known, very few of them report the interest they receive. It would cost too much to try to check them.

DRESS UP E-BONDS WITH LOTTERY FEATURE

The rate of interest as well as the redemption rate should be tied to something. No one is wise enough to work out a rate that will meet changing conditions, stand the test of time. Government securities, like all other securities and merchandise, must be kept continually polished up and competitively strong. They must fluctuate with the market. When asked what the market was going to do "J. P.'s" stock answer was, "It is going to fluctuate."

Some kind of a bonus or "kicker" should be put on them, as the foreign governments do, so they can be called "lottery bonds." Five percent or 10 percent of all those sold during the year could be made redeemable at double value, for example. There is certainly enough brains in the financial world to make them convertible into something attractive.

The Treasury officials are all fine men doing the very best they know how. What they don't realize is that their experience is rather limited—they don't know it all. Even the best of them, like George Humphrey and Randolph Burgess—strong, wonderful characters—cannot possibly have the feel of all the gadgets on this very complicated, intricate, delicate piece of machinery. Savings Bank Director John R. Buckley needs plenty of help.

EXTEND THE F-BONDS

The F-bonds, of course, should be extended, as so many people have told the Treasury officials, as the E-bonds were. Naturally, there are some "outs" about this, as there are about everything, but the advantages far offset the disadvantages. It certainly will cost much more to refinance them than to extend them. They could be extended for 10 years at a correspondingly higher rate and made callable in 5 years or so if there is some doubt about the future rate, or anything. This should be done at once to save the cost of refinancing them as they come due.

The indirect cost of issuing all the E-, F-, G-, and H-bonds is enormous. It is a terrible burden on all business, banks, etc. This should receive much more consideration than it has in extending the F-bonds.

How about forming a committee of the financial editors of the biggest newspapers and financial magazines and getting the best brains in the country to come to the rescue of the Treasury with suggestions for the best way to handle the E-, F-, G-, and H-bonds? Publish every day the suggestions of the best men in the country. It would pay the Government to offer $50,000 or $100,000 in prizes for the best ideas—to be decided by a disinterested, outside committee, George Humphrey to be Chairman.

If the ideas are good they'll sell themselves.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

One Hundred Fiftieth Anniversary of Birth of Henry Wadsworth Longfellow

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Wednesday, February 27, 1957

Mr. PAYNE. Mr. President, today marks the 150th anniversary of the birth, in Portland, Maine, of the poet, Henry Wadsworth Longfellow. Educated at Bowdoin College, following a Yankee boyhood which imbued him with many principles of versatility, Longfellow served his alma mater as professor of modern languages and librarian, before he joined the Cambridge community of great 19th century writers, in 1835. It was at Harvard College that Longfellow drew upon his Maine background to create some of the immortal poetry which has endeared him to Americans of later generations.

Longfellow's poems have appealed to the people of this country and of many foreign lands down through the years. He has rightly been recognized as America's first poet of the people, and certainly no other American writer has ever been loved by more citizens than Henry Longfellow. From schoolchild to old folk, there is hardly a person who cannot quote some favorite line from his works.

Henry Longfellow succeeded as no other poet had in capturing the spirit of a growing America. He drew from the heritage of the forefathers, the builders, and the leaders of the new Republic in writing such epics as the Midnight Ride of Paul Revere, Song of Hiawatha, Evangeline, and many others.

It is indeed fitting that we should pay tribute today to this great American. May we never lose sight of the spirit of freedom and love of mankind which Longfellow expressed so well to his fellow Americans. It has been this spirit which has contributed to the emergence of a powerful and free nation to assume the leadership of today's world.

It is a privilege for me to join with the many citizens of my State who today are honoring, at Bowdoin College, the memory of this great son of Maine.

I ask unanimous consent to have printed in the Appendix of the RECORD copies of two excellent articles on Henry Wadsworth Longfellow from the New York Times and the Lewiston (Maine) Journal.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times of February 24, 1957]

THIS VOICE AMERICANS UNDERSTOOD

(By G. Stuart Demarest)

At this moment, close to the 150th anniversary of his birth on February 27, 1807, Henry Wadsworth Longfellow is a national poet only by courtesy of a vanished reputation. Although a few scholars and critics are trying to proclaim a revival, little more than a shadow of his former fame is likely to appear. With the ordinarily unpoetic folk to whom he once looked for his ultimate criticism, he is now a name associated with bad puns and some jouncing lines on sentimentalized history. Little has survived of a familiar affection that was almost personal.

In one sense the dismissal of Longfellow is serious. It has deprived the country of one of its best influences, not unlike Chaucer's, for keeping warm a sense of human history, that fourth dimension of reality. The continuity of mankind has received a palpable check, and a large segment of the past has been curtained off from the modern view. Because Longfellow's vast, miscellaneous, essentially personal poetry had animated reality for millions of people, literature gained a national vigor which later writers had cause to be grateful for. But those properties of life he had disclosed are no longer visible.

Today, it is true, he is often mildly puzzling. Swarms of critics once praised his noble sentiments, his high moral tone, and his sweetening style—suggestions of which sometimes crept into his work. And in the twenties he went down into oblivion, not without a hastening shove, for precisely these reasons. Yet how did this gentle poet reach the feelings of unimaginative Americans so well? Why, too, have so many ordinarily clear-minded critics, like Lowell, Whitman, Saintsbury, or Canby, felt a curiously uncritical pleasure in his poems?

One bar to a revealing evaluation of Longfellow's poetry has been the narrowed vision from a fixed point in history. The question which true judgment eventually turns upon is very simply: What, after all, does life look and feel like to the thoughtful mind? If Longfellow gave it too much allowance of sentiment and morality for our taste, it is because he granted spirit to reality, largeness of soul to men, and optimism to literature, all now relatively unfashionable and unreal.

On such grounds, nevertheless, must Longfellow's significance be found—or rejected. For in accepting as his poetic mission the finding of ideal meanings in a hitherto rather fixed and untractable world, he opened an almost unexplored cultural wilderness. At his hand were American life and the mellowed, sometimes shabby riches of European art and history. But in himself, with his love of books and his reflective moods, were a simple candor and the inclination to share his intellectual pleasures with a nation of plain people. By such gentle influences was American literature led out of library and college, without actually forsaking either, to meet American minds at their own hearthsides.

There had been forerunners equally able—in Franklin, Irving, Cooper, and Bryant; in John Neal and Charles Brockden Brown—who had summond America to look to its own life. But they had done more summoning than answering, and although the Nation had responded hopefully, it had not yet discovered itself, its mind or its literary character. With an exciting past, a challenging life in town and countryside, and a beckoning future, the Nation lacked the artistic instrument for getting at them—an artist who should stand in the dooryards and look out with his mind and America's eyes.

What seems to have carried Longfellow closer to American homes than his predecessors was his quiet conviction that life is, after all, real and not an empty dream or a formal design. This was his main difference from the sentimental classicist. The sturdy anatomy of his poetry was such as to render things, places, customs, and people fit for enjoyment by ordinary, healthy American minds. Often he rearranged reality. But the Viking, the Indian, the Pilgrim were at base recognizably human, and so also, for that matter, was the Psalmist. And in drawing as close to his subject as his experience, or his sometimes obtrusive sources, would permit, he sought in his strong, firm style to suggest its human implications. This may explain why, from the time of his first enchantment by Washington Irving, his work began to resemble a poetic sketch book of his own tastes. It may also explain how he came onto a rather bleak literary scene with a richness and a directness that both refreshed and heartened.

The record of how he developed his literary character and placed it at the disposal of the American people forms a sort of bibliographical biography. When he graduated from Bowdoin his confidence in his own talents had convinced him that what American literature principally needed was a writer with talents very much resembling his own. But Bowdoin offered him a professorship of modern languages, and literature stepped aside. A preparatory 3-year tour of Europe gave him mainly a rather unscholarly delight in taking trips to Europe, and when George Ticknor assisted him to a Harvard professorship 6 years later, he had to hurry back with his attractive wife for the rest of his scholarly training. The young professor was ready neither to teach nor to write—nor yet to live, as he presently discovered.

When Mary Longfellow died in Rotterdam, Henry faced what in fact was a choice between consuming himself in a romantic, Werther-like melancholy or becoming a national poet. His later, though temporary, rejection by the talented Frances Appleton of Beacon Street did nothing to make his conflict less bitter. In the misery of a solitary professor's life in Craigie House in Cambridge, his problem had little to do with poetry; it centered squarely on the man. Out of this, as Sir Philip Sidney showed him, came poetry.

His first book of verse, Voices of the Night, was for Longfellow his most important, because it contained A Psalm of Life, that much abused fragment of a man's inner battle. "From the cool cisterns of the midnight air my spirit drank repose," he signed in Hymn to the Night. Yet his Yankee temperament became persuaded that life is

real and earnest, that the past must bury its dead, and that a man must act in the living present.

From the American public he received a reply in sales and letters that confirmed his resolution. It was, in fact, A Psalm of Life that got America its poet. Sidney's admonition to look in your heart and write very seldom thereafter meant exhibiting it on the sleeve. The reposeful midnight moods became a kind of delightful laboratory, a step in the poetry making, in which experience could be savored and given shape. After his marriage to Fanny Appleton, he turned his gaze steadily outward for the materials of poetry. Even the moralizing had an external sound.

Ballads like The Skeleton in Armor had opened the realm of old stories for him. And in spite of the controversy over an unfamiliar hexameter, Evangeline advanced him to the top rank of American poetry. That he understood his talents now was clear when he wrote to his classmate Hawthorne, who had passed along the story: "This success I owe entirely to you, for being willing to forego the pleasure of writing a prose tale which many people would have taken for poetry, that I might write a poem which many people take for prose."

Eleven years after his marriage he was ready to leave Harvard and press for what may be his greatest work. In Hiawatha, the Indian was to receive at least poetic justice. Longfellow had known him in Cooper and Chateaubriand, but he had also known him on his very doorstep, and like many other Americans he realized he was not the noble savage of Cooper's pink-ribboned literature.

The scholar knew where to turn. Henry Rowe Schoolcraft and others had reported their firsthand experience, and the poet needed only a series of sketches which would weave together their beautiful traditions. In 22 cantos of a verse that mildly suggested an Indian trot, he captured a forest life that was peculiarly Indian, ideally human, and characteristically Longfellow. In tales, episodes, songs, and fables; among tribal rites, village characters, animal personalities, and manifold natural symbols, the half-primitive, half-divine Hiawatha moved through his wilderness life toward the promise of peace in a white man's civilization. For the most part this was a physical world as the Indian might see it. Yet there was a haunting sense of pain and sadness consequent to his being merely mortal.

Longfellow's own happiness had to be maintained, during much of his life, from some sort of inner hearth. In 1861, with a rich career still before him, it was dashed to the rocks in a single evening. His wife, while sealing some locks of her children's hair, set fire to her dress. Longfellow clasped her against his own body and only burned himself. Fanny died next day, and Henry stepped in a moment from his domestic happiness into a lonely, grief-stricken world. The only cry he ever uttered publicly was The Cross of Snow, published after his death.

In his need to act in the living present, he resumed the translation of Dante, which had often served as relief from creative toil. Translating, he felt, was "like running a plowshare through the soil of one's mind." Still, he added, "it sometimes seems like an excuse for being lazy—like leaning on another man's shoulder." Here, in effect, he was confessing the scholar's habit, which brought Poe's wrath down on him, of forming his poetry out of existing materials. Something that already had a body of its own stimulated his genius for finding meanings. Yet from the companionable business of editing and translating Dante came the famous sonnets on "Divina Commedia."

His creative energies were still active, however. From earliest days he had planned to build some towering masterpiece with Christianity for a theme. Gradually the three-part "Christus," ideas for which can be traced across 40 years, took shape on the themes of hope, faith and charity. But whether because life had taken too much from him or because his countrymen were not ready, the work that had best promised an enduring name dropped quietly out of the public mind and was forgotten. Only the medieval Golden Legend was praised. The Divine Tragedy may have suffered from having been done better elsewhere. Longfellow was not to compete with the King James Version of the New Testament.

The third part, the twin "New England Tragedies," on the Quaker persecutions and the witchcraft delusions, was particularly disappointing. One of his biographers wryly observed that, "Rather than read of Giles Corey's fate, a generous man would prefer to pass a pleasant afternoon in the morgue. There is no light, no relief, no escape from the fateful march of events."

Such strange criticism of Longfellow suggests that his attachment to the real had at last carried him out of his own day and close to ours. Many of the dramatic speeches were lifted bodily from court records, from old chronicles and histories, as if the poet had discovered "noble meanings" in the living language. This way, of course, lay realism.

In his last 10 years he completed the "Tales of a Wayside Inn" (actually another sketch book) and a multitude of other short and long poems. But in "Michael Angelo" Longfellow rounded out the whole. Much he had planned was still unaccomplished, much had disappointed him. And death was now, he said, a constant companion. Yet he had completed for his country a full circle of its poetry—a poetry that had come from the mind, perhaps more than the heart or the soul, but still a man's poetry that had stirred the imagination of an awakening nation.

[From the Lewiston (Maine) Journal of February 23, 1957]

Maine's Great Poet, Henry Wadsworth Longfellow, World Famed

(By Isabel Whittier)

This month of February marks the 150th anniversary of the birth of Henry Wadsworth Longfellow, and Maine has every reason to take note of it. For the poet was born in Portland on February 27, 1807, in a house at the corner of Fore and Hancock Streets. Portland was his boyhood home, he was graduated from Bowdoin College, and he soon became a member of the faculty there. So Maine knew Longfellow before the whole world knew him.

Longfellow has often been called the children's poet and sometimes the people's poet. Some consider him the most popular of American poets. Many of his poems are familiar to all of us, and also to people of other lands. Arthur Jackson, president of the Longfellow Society, after being entertained some years ago by George VI said that both of the King's daughters, Elizabeth and Margaret, could recite lines from Longfellow.

Most Americans become acquainted early with the Village Blacksmith, the Courtship of Miles Standish, the Ride of Paul Revere, and later with Evangeline and Hiawatha.

Acknowledged Abroad

Henry Wadsworth Longfellow, like his contemporary, Washington Irving, did a great deal to interest Americans in European culture. When Longfellow took up his duties at Bowdoin College as professor of modern languages in 1829, this young man of 22 was the most outstanding scholar in his field in this country. When he retired from his professorship at Harvard in 1854, he was well known throughout his native land and was acknowledged abroad as one of the outstanding poets of the 19th century.

This son of Maine, born in the beautiful town by the sea, had the seriousness frequently associated with the New England character. He was deeply religious. He did not possess the aggressiveness of the reformer or the narrow intolerance of the bigot. His antislavery poems show that he had the courage of his convictions and that he was stirred by injustice. His was a gentle nature and his sympathies were broad. There is a mixture of joy and sorrow in his works, and an underlying faith. His poems lift the downhearted and give new courage for the battle of life.

Take for instance lines from Hyperion:

"Look not mournfully into the past;
It comes not back again; wisely improve
The present; it is thine; go forth to
Meet the shadowy future without fear,
And with a manly heart."

Or from the Village Blacksmith:

"Toiling, rejoicing, sorrowing,
Onward through life he goes;
Each morning sees some task begun,
Each evening sees it close;
Something attempted, something done."

The Present Shrine

Henry Wadsworth Longfellow was the second son of Zilpah Wadsworth and Stephen Longfellow. He was named after his mother's brother, who had died in Tripoli in 1804.

Most of Longfellow's boyhood was spent in Portland on Congress Street in the brick colonial house built in the year 1785–86 by his maternal grandfather, Col. Peleg Wadsworth.

The three-story building shaded by tall elms near Monument Square is now the property of the Maine Historical Society and is known as the Wadsworth-Longfellow House. Hundreds of sightseers visit it during the summer months.

As a young lad Henry took walks to Munjoy Hill with his Grandfather Wadsworth who had been a general in the American Revolution. Among his earliest recollections was the burial in Portland of men killed in a naval conflict off the Maine coast in the War of 1812. A United States frigate had fought one from England.

His parents were respected citizens in Portland. His father, a Harvard graduate, was a lawyer and an active member of the Unitarian Church. It is probable that his mother had a great influence in molding his character and temperament. Zilpah Wadsworth Longfellow was a quiet, devout woman.

Reader at Early Age

Henry never seems to have been much interested in sports and was not dependent upon others for amusement or even companionship. He was a reader at an early age. The boy spent only a very short period in a public school. He attended private schools, and then the Portland Academy.

In 1821 Henry, along with his brother Stephen, 2 years his senior, was admitted to Bowdoin College in Brunswick. His father was a trustee of this new college, then only 20 years old. The people of Maine felt that they should support this college of their own—which might in time rival the one in Cambridge. Henry was 1 of 44 to enroll for Bowdoin in 1821.

As was often customary at the time, the boys pursued their studies at home, the first year. Henry and Stephen went to Bowdoin in 1822 as sophomores.

Lived on Federal Street

They lived on Federal Street where some years later Harriet Beecher Stowe was to write Uncle Tom's Cabin. Henry wrote his mother that the house was cold and the room bleak. Later he moved into No. 27 Winthrop Hall. He showed a conscientious interest in his studies and was considered likable by his classmates.

He was a member of a Unitarian group of six. Unlike some of the students, he did not take an active part in pigeon and squirrel hunting or bat-fowling, but contented himself with walking along the Androscoggin and watching shipbuilding at Maquoit.

At Bowdoin his classmates were Nathaniel Hawthorne and Franklin Pierce, who was also enrolled in the belles-lettres course.

Henry's father was now a Member of the House of Representatives in Washington. The youth wrote to him, "I most eagerly aspire after future eminence in literature," and he wanted to go to Cambridge for a year and learn Italian and later become attached to a literary periodical.

"What I do study ought to be engaged in with all my soul—for I will be eminent in something," he said. He was studying modern languages and most of his publications while at Bowdoin dealt with European scenes.

In his senior year, a suggestion was made to him that after his graduation in September 1825 he should study in Europe and return to Bowdoin as professor of modern languages. This seemed a great opportunity, and he gladly agreed. In those days there were no passenger ships to Europe, and a fall or winter sailing across the Atlantic was to be avoided, so Henry read Blackstone in his father's office until spring.

IN EUROPE

He sailed from New York on May 15, 1826, aboard the packet *Cadmus* and landed a month later, June 14, at Le Havre in France. After some months in Paris studying French, he moved on to Spain.

Longfellow met Washington Irving in Madrid and was delighted with the city, where he studied Spanish for 6 months. Later he visited Toledo, Seville, Cadiz, and Granada where he was enthralled with the Alhambra.

After 8 months in Spain, he set out for Italy by way of Marseilles in southern France. Here he met a young man from Rhode Island—George Washington Greene, who was to become a lifelong friend, and their correspondence became a valuable source of information.

In Italy, Longfellow saw Genoa and Pisa and spent some time in Florence studying Italian, later going on to Rome and Naples, and then to Venice.

From Italy he went to Goettingen in Germany, later making a brief visit in England.

Longfellow spent 3½ years in Europe and returned to America in 1829 to become professor of modern languages at Bowdoin. His travels had done a great deal for him. One of his biographers, Herbert S. Gorman says "He became a bridge between the actualities of the Old World and the potentialities of the New World."

It was on September 14, 1831, when he was 24, that he married Mary Storer Potter, a girl of 19, daughter of a Portland judge. They set up housekeeping on Federal Street in Brunswick. Longfellow was the youngest member of the faculty and head of his department, and he was popular with his students.

After 5 years at Bowdoin he was approached about taking a position at Harvard as professor of modern languages. This appealed to Longfellow who had become restless at Bowdoin and was ambitious to get ahead. Another period of study in Europe was suggested and agreed to.

FIRST WIFE DIES

On this trip Longfellow spent some time in Sweden visiting both Stockholm and Upsala and then went to Copenhagen and later to Rotterdam. It was in Holland that his wife died as the result of a premature birth. Longfellow did not abandon his plan to study in Germany and later went to Switzerland.

In 1836 he became a member of the faculty at Harvard—rooming in the Craigie House and actually occupying the room in the southeast corner on the second floor, used by George Washington during the American Revolution when he had his headquarters in Cambridge.

In addition to his teaching Longfellow wrote textbooks for his classes. He played the flute, sang in the choir of the new Unitarian Church, and conducted a Bible class.

BRILLIANT SECOND WIFE

On July 13, 1843, he married Frances Appleton whom he had met in Switzerland some years before. Charles Sumner was his best man. His father-in-law purchased the Craigie House for the couple as a wedding gift. This was where Longfellow lived the rest of his life. His first son was born in June 1844 and his second in November 1845. Later Frances Appleton gave him three daughters, Alice, Edith, and Anne Allegra, who figure in the poem, The Children's Hour.

It was at Harvard that he wrote Evangeline, one of his great successes. Written in classic hexameter it dealt with the expulsion of the French from Acadia after the English acquired the territory. The ending has true pathos: "Side by side in their nameless graves, the lovers are sleeping."

While teaching at Harvard he started Hiawatha, which he finished in his retirement.

INTIMATE OF THE NOTED

Longfellow resigned from teaching in 1854 to devote all of his time to writing. He was now 47, a personage in the United States, and known abroad. At Cambridge he had become a close friend of Senator Charles Sumner. He also knew Thoreau, Emerson, Holmes, Lowell, Whittier, and William Dean Howells.

In July 1861 his work on Dante's Divine Comedy was interrupted by his wife's tragic death.

Frances Appleton Longfellow's summer dress had caught fire and she was fatally burned.

His poem, Morituri Salutamus, delivered in the First Parish Church in Brunswick in 1875, on the 50th anniversary of his graduation from Bowdoin, has been called the grandest hymn to age that was ever written:

"For age is opportunity
No less than youth itself, though in another dress,
And as the evening twilight fades away
The sky is filled with stars; invisible by day."

HIS DEATH IN 1882

The Maine Historical Society on the occasion of his 75th birthday in 1882 planned a celebration in his honor. Longfellow wrote that he appreciated the invitation, but was unable to attend because of his health. He was writing few letters and seeing few callers and he was now rising late and retiring early, he wrote to a friend. His death came after a short illness on March 24, 1882.

The pathetic story is told of Emerson—now failing and forgetful—attending the funeral for Longfellow. Twice during the services Emerson got up to look at the figure in the casket. "I can't recall my friend's name," he said, "but I know he was a good man."

In March 1884, within 2 years of Longfellow's death, his bust was placed in Westminster Abbey, the first American to be so honored.

THE SIMMONS STATUE

The Simmons' bronze statue of Longfellow at the intersection of Congress and State Streets in Portland—now Longfellow Square—was erected from money received by public subscriptions. The first money came from England and among other contributions were small sums from Maine school children.

The poet's own words from Hiawatha, make a fitting eulogy:

"All the many sounds of nature
Borrowed sweetness from his singing. * * *
For he sang of peace and freedom
Sang of beauty, love, and longing
Sang of death, and life undying
In the land of the Hereafter.
For his gentleness they loved him
And the magic of his singing."

The Girls' Drill Team of Reagan High School, Houston, Tex.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Wednesday, February 27, 1957

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement giving the history of the girls' drill team of Reagan High School, of Houston, Tex., and the names of the members of the team who are in attendance today as visitors to the Senate, where they are now seated in the gallery. Their high school is one of the best in the largest city of Texas, and is one of the outstanding educational institutions of the Southwest. It has been a great pleasure to me to present these students—63 very charming young women—to the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JOHNSON OF TEXAS

The girls' drill team of Reagan High School, of Houston, Tex., is the oldest drum and bugle corps in that city. It was founded in 1926.

This is a leadership organization. The girls chosen for membership must have demonstrated a high degree of scholarship and conduct. They are carefully selected by a faculty committee which also sees to it that the same high standards are maintained after a girl is chosen for membership.

Mrs. Johnson and I had the privilege this morning of visiting with 63 members of this girls' drill team who are here for a tour of the capital city. This was a great pleasure to me, one which I shall not soon forget.

Sponsor of the girls' drill team is Mrs. Harry F. Noe, of Houston. Mrs. Noe accompanied the group to Washington, as did the following: Mr. Harry F. Noe, Mr. and Mrs. Gordon Cotton, Mrs. Gale and Miss Keller, Mr. Hank Worsham, and Mr. Lloyd Williams.

The following girls are included in the group that visited with me this morning and are in the Senate today: Judy O'Dell, Judy Walser, Barbara Long, Gladys Wallis, Mary Carol Lemons, Diane Dishroon, Delores Moore, Carolyn Kilgore, Beverly Brenner, Nancy Greer, Darlene Ming, Barbara Clark, Jeannine Davis, Camille Morrish, Judy Kelley, Jo Ann Elsik, Patricia Abernathy, Carolyn McKee, Frances Smith, Charlotte Ballard, Julia Kirkpatrick, Myrna West, Linda Patterson, Sharley Early, Vernita Cunningham, Mary Ann Evans, Virginia Huffington, Gay Chapin, Mary Carolyn Smith, Kay Menton, Bettie Scott, Sharon Andexler, Gladene Michel Barbara Duke, Julia Jeu, Barbara Vinsonhaler, Sherry Ledbetter, Barbara Wood, Hedy Hauk, Judy Gillespie, Shirley

Joynson, Glenda Swanner, Connie Su Collins, Sarah Boozer, Claudette Rogers, Paulette Darcy, Carol Petty, Carole Ann Guastad, Anne Gest, Shirley Miller, Marcelyn Bond, Mary Nell Ward, Linda Huffman, Pat Moore, Ann Hillyer, Terry Schoenemann, Lerma Engberg, Sigrid Haller, Carol Kay Morrison, Julia Schwartz, Carol Sue Pitchford, Daler Santell, and Francine Gordon.

The Coast and Geodetic Survey's 150th Anniversary

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 27, 1957

Mr. SALTONSTALL. Mr. President, for the past 150 years the United States Coast and Geodetic Survey has given effective service to the people of this country. In observance of the 150th anniversary of that agency this month I should like to call the attention of the Senate to an article by Tom W. Gerber, in the Boston Herald, February 22, 1957, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COAST AND GEODETIC SURVEY OBSERVING 150TH YEAR—AIDED RISE OF NEW ENGLAND INDUSTRY

(By Tom W. Gerber)

WASHINGTON, February 21.—A little-recognized Government agency that helped lay the foundation for New England's industrial growth is observing its 150th anniversary this month.

It's the Commerce Department's United States Coast and Geodetic Survey, the first technical bureau in the Government. The effects of its work stretch into every backyard in the Nation.

Though once restricted to mapping coastlines of young America, the agency's surveyors now range from ocean depths to mountain peaks, crisscrossing the Nation.

VITAL AID TO NEW ENGLAND

The bustling international trade and the fishing industry which set New England on its course toward national industrial leadership could not have flourished without the Coast and Geodetic Survey.

For this trade and fishing gave New England, and particularly Boston, the capital that was the original basis for the region's economic growth.

Before the Coast and Geodetic Survey was established by Congress in 1807, there were nearly 50 shipwrecks a year in New England waters.

But among the first charts of coastal areas produced by this tiny bureau were those of the New England coast. Within a few years, shipwrecks in New England's coastal waters dropped 80 percent.

Dr. A. Joseph Wraight, Commerce Department geographer-historian, told the Herald the effect of this was to "reduce marine insurance rates which in turn stimulated more shipping.

"In short," he said, "the progress and early charting of New England's waters by the Coast and Geodetic Survey contributed much to the vast commercial and industrial development of the region, and especially to Boston."

But charting coastal waters is only one of the farflung jobs of this obscure but essential technical agency.

Each year it distributes millions of marine and aeronautical charts and land maps to aviators, mariners, fishermen, pleasure yachtsmen, explorers, and other persons interested in knowing where they live in relation to the rest of the world.

These maps and charts are the payoff for the Coast and Geodetic Survey.

DANGER INVOLVED

Sometimes years of work, delicate calculations, and even dangerous assignments have gone into collecting the data from which the maps and charts are made.

Amateur mountain climbers, scaling a peak where they believe a human being never has trod, often are shocked to find a bronze Coast and Geodetic Survey marker at the summit.

The dividing line between your property and that of your neighbor probably was established by private surveyors who used a Coast and Geodetic Survey landmark as a starting point.

And this landmark is precise to the fraction of an inch.

For the Coast and Geodetic Survey allows for an error only cardboard thickness over a 10-mile distance.

The Survey not only maps land areas with infinite precision, but also determines topography of the ocean floor.

In the early days of American shipping, this was done by heaving overboard a lead weight attached to a long rope to determine water depth at various intervals.

But in 1904 the cruiser *Brooklyn* struck an uncharted underwater pinnacle near New Bedford, Mass. And this led to development of the so-called wiredrag for determining characteristics of the ocean floor.

The wiredrag, still used, is a device for sweeping the bottom to reveal hidden crests that may have been missed in the lead-heaving operation.

It was first tested in New England waters.

Because tides and ocean currents affect the topography of the ocean bottom, these surveys are reconducted periodically.

TO REMAP BANKS

Next month the Coast and Geodetic Survey will remap Georges Bank off the Massachusetts coast, a shoals area that makes up the principal fishing grounds for the New England fishing industry.

Fishing skippers and boat owners have reported changes in the shoals and channels that may have a drastic effect on the region's fishing activities.

The Survey hopes to have these studies completed by October. The last survey of Georges Bank was more than 25 years ago.

Results of this investigation also will be important to the United States Air Force's air defense command which has built Texas tower radar warning stations in the Georges Bank area.

Even as this study is underway the Coast and Geodetic Survey will be celebrating its sesquicentennial throughout the Nation.

A special postage stamp is expected to be issued in observance of the anniversary.

Open house will be held at Coast and Geodetic Survey headquarters in the Commerce Department building in the Nation's Capital and in field offices throughout the Nation.

Scientific and professional societies are planning special occasions in recognition of the Survey's contributions to science, public safety, commerce, and defense.

Hydrographic ships from which much of the basic data is assembled also will be opened to the public. And several booklets and a medal will be issued by the Survey to mark its 150th anniversary.

These celebrations will be under the direction of Adm. H. Arnold Karo, the Coast and Geodetic Survey Director.

MUCH ROUTINE

But even public inspection won't disclose some of the Survey's apparently drab activities that are such a part of everyday life few give them a second thought.

Each day, for instance, Coast and Geodetic Survey scientists check the movement of the earth on its axis. They keep close watch on seismographs that record violent movements of the earth's crust—even in the ocean depths.

And in this connection they advise builders how to prepare resistance against earthquake shocks.

Another constant job is to answer—regretfully—letters from small boys (and some not so small) who wants charts of sunken treasure.

The Survey also prepares tide tables, of vast interest to bathers and mariners, for virtually every spot along the United States coast. In fact, Survey scienfists can predict tides hundreds of years in advance.

Another link between this essential agency and New England is its former Director, retired Adm. Leo Otis Colbert.

The Cambridge-born scientist headed the Coast and Geodetic Survey from 1938 to 1950. He joined the bureau soon after he graduated from Tufts College in Medford with a civil engineering degree in 1907.

Now 73, Admiral Colbert is head of the Arctic Institute for North America and retains his lifelong interest in the Survey's work.

Announcement of Marshall Field Awards for Achievements on Behalf of Well-Being of Children

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, February 27, 1957

Mr. WILEY. Mr. President, I was pleased to receive a copy of the public announcement of seven awards yesterday given in the name of the late Marshall Field in honor of individual notable achievements on behalf of the well-being of our Nation's youngsters.

These awards are a most fitting recognition of the outstanding services rendered by each of the recipients on behalf of America's children.

Regrettably, because of Mr. Field's untimely passing, the awards will not be continued after this year. I hope, however, that though other public-spirited sources, the idea of appropriate recognition for those who served the Nation's youngsters may be carired forward.

I send to the desk the text of the release by Marshall Field Awards, Inc., including the names of each of the award winners and the names of the very distinguished membership of the awards committee—each one a leader in one or more fields of endeavor, and each and every one a servant of American children in his or her own right.

I ask unanimous consent that this release be printed in the Appendix of the RECORD.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

First Marshall Field Awards Presented

Seven awards for outstanding contributions to the well-being of children were made today by the Marshall Field awards. The awards, each consisting of $2,000 and an inscribed scroll, were presented for notable achievements in the areas of education, physical and mental development, social welfare, and communications. Two special awards were also given. Marshall Field established the awards in 1956, not long before his death, for the purpose of focusing public attention upon children's needs.

The recipients of the Marshall Field awards in their respective areas are:

Education: Martin P. Gunderson, of Five Points, Fresno, Calif., for extensively developing the educational facilities of the Westside Elementary School of which he is principal. The pupil enrollment fluctuates greatly during the school year because of the migrant children. Mr. Gunderson has instituted detailed vocational training, medical care, and a shoe and clothing bank. He brought the school's needs to the taxpayers' attention, has succeeded in raising the tax rate in the community, and has won wide support.

Physical and mental development: Lydia J. Roberts, of the University of Puerto Rico, for her studies, publications, and constructive programs in child nutrition in Puerto Rico. Formerly professor and chairman of the department of home economics of the University of Chicago, Dr. Roberts went in 1944 to assist the Puerto Rican Government in its plan to better the people's living conditions, especially diet. Her work in Puerto Rico has effected many specific improvements.

Social welfare (project): The California State Department of Social Welfare, for the marked extension and increased services to children needing adoption. Children with special needs and those with minority backgrounds have been given priority and California is the only State with public funds for adoptive services to children under the Refugee Relief Act. In 10 years, licensed adoption agencies have increased in number from 2 to 25, and in number of children placed, from 598 to 2,157 per year. The program was made possible by the aid and cooperation of the adoption survey committee and the citizen's committee on adoptions, and private and public licensed adoption agencies in the State. Funds for the study that preceded the program were provided by the Rosenberg and Columbia Foundations.

Social welfare (individual): Frank J. Cohen, of New York City, director from 1944 to 1953 and presently a staff member of Youth House, which was established as a detention facility in New York for delinquent children under 16 years old. His nonpunitive approach to children and his actual administration at Youth House established a new pattern of services in this neglected field of child care. Mr. Cohen is presently adjunct professor of institutional administration at New York University graduate school of public administration and social welfare.

Communications: Station WFIL and WFIL-TV in Philadelphia for pioneering the development of in-school radio and television in schools in the Philadelphia area. Programs produced are for curriculum enrichment and a wide range of subjects is presented. The station publishes an annual Teachers Manual to aid teachers in planning classroom activities around the programs.

Special listing:

Mrs. Nina Perera Collier, of Darlington, Md., for her contributions to children's musical education by introducing live, recorded, and filmed music, of exceptional performance and excellent commentary, into the regular curriculum of the Baltimore schools. The Young Concert Movement which she started has enabled local groups throughout the Nation to bring the highest standard of music to the attention of young people.

Margaret Scoggin, of New York City, for developing and moderating the radio program Young Book Reviewers, heard weekly over radio station WMCA. The program is an unrehearsed discussion by children over 12 who have read a specific book, always posted well in advance on school bulletin boards, with the author taking part when possible. New York City schools carry the program over WNYE, the board of education's official radio station, for use during school hours. Miss Scoggin has worked with teen-agers since 1928 in the New York Public Library, and in 1941 organized and became the first librarian of the Nathan Straus branch, a modern experimental library for children and young people.

Mrs. Ruth Pruyn Field, widow of Marshall Field, made the announcement of the awards. Because of Mr. Field's death, the awards will not be continued after this year.

In addition to Mrs. Field, members of the awards committee who selected the recipients of the awards are:

Leona Baumgartner, M. D., commissioner of health, New York City.

Mrs. Richard J. Bernhard, president, Arthur Lehman Counseling Service, New York City.

Sarah Gibson Blanding, president, Vassar College, Poughkeepsie, N. Y.

James Brown IV, executive director, the Chicago Community Trust, Chicago, Ill.

Hon. Ralph J. Bunche, Under Secretary Without Department, United Nations, New York City.

Martha M. Eliot, M. D., former Chief, United States Children's Bureau, Washington, D. C.

Leonard H. Goldenson, president, American Broadcasting-Paramount Theatres, Inc., New York City.

John Gunther, writer, New York City.

Herold C. Hunt, the Under Secretary of Health, Education, and Welfare, Washington, D. C.

Charles A. Janeway, M. D., professor of pediatrics, Harvard University Medical School, Boston, Mass.

Clark Kerr, chancellor, University of California, Berkeley, Calif.

Mrs. David M. Levy, president, the Citizens' Committeee for Children of New York City, Inc., New York City.

Ernest K. Lindley, director, Washington Bureau, Newsweek, Washington, D. C.

Leonard W. Mayo, director, Association for the Aid of Crippled Children, New York City.

William C. Menninger, M. D., the Menninger Foundation, Topeka, Kans.

Hon. Justine Wise Polier, judge, Children's Court, New York City.

Mrs. Anna M. Rosenberg, public and industrial relations consultant, New York City.

Howard A. Rusk, M. D., associate editor, the New York Times; chairman, Department of Physical Medicine and Rehabilitation, New York University Bellevue Medical Center, New York City.

Federal Aid to School Construction

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. YOUNGER. Mr. Speaker, in a short time we will have before us for debate a Federal aid to school construction bill. At the present time two bills of the many which have been introduced on this subject are receiving the most consideration—H. R. 1, the Kelley bill, and H. R. 3986, the administration proposal.

In order that the representatives of each State may know what each bill offers to his State in the way of aid and cost, I have asked the Tax Foundation of New York to prepare the following table, showing the grant to each State under each bill as well as the cost to each State as their share of the tax burden imposed by the appropriation for each bill:

[In thousands]

	Federal grant		Share of Federal tax burden	
	H. R. 1	H. R. 3986	H. R. 1	H. R. 3986
Alabama	13,453	11,148	5,841	3,125
Arizona	3,807	2,524	2,804	1,500
Arkansas	7,971	6,620	3,037	1,625
California	41,319	14,180	56,426	30,186
Colorado	5,417	3,009	5,374	2,875
Connecticut	7,174	2,011	11,916	6,375
Delaware	1,253	381	2,979	1,594
Florida	11,436	6,309	12,442	6,656
Georgia	15,356	11,926	7,944	4,250
Idaho	2,538	1,801	1,519	812
Illinois	30,371	11,125	42,407	22,686
Indiana	15,340	8,021	14,194	7,593
Iowa	9,630	5,813	7,243	3,875
Kansas	7,125	3,744	5,958	3,187
Kentucky	12,477	8,917	6,425	3,437
Louisiana	12,135	9,204	6,834	3,656
Maine	3,367	1,932	2,745	1,469
Maryland (D. C.)	11,712	5,829	15,654	8,374
Massachusetts	15,860	6,782	20,970	11,218
Michigan	25,588	12,102	30,666	16,405
Minnesota	11,550	7,047	10,047	5,375
Mississippi	9,760	7,772	2,862	1,531
Missouri	13,762	5,885	15,129	8,093
Montana	2,391	1,405	2,044	1,094
Nebraska	4,831	2,856	3,972	2,125
Nevada	699	203	1,168	625
New Hampshire	1,920	1,074	2,103	1,125
New Jersey	17,016	5,489	23,949	12,812
New Mexico	3,481	2,643	1,986	1,062
New York	49,192	15,765	77,864	41,654
North Carolina	18,270	14,615	8,411	4,500
North Dakota	2,586	2,013	1,460	781
Ohio	30,355	11,321	35,982	19,249
Oklahoma	8,573	5,998	5,783	3,094
Oregon	5,840	3,099	5,724	3,062
Pennsylvania	37,659	18,803	40,947	21,905
Rhode Island	2,668	886	3,213	1,719
South Carolina	10,509	8,727	3,972	2,125
South Dakota	2,586	1,881	1,402	750
Tennessee	13,762	10,144	7,243	3,875
Texas	32,974	19,842	25,701	13,749
Utah	3,253	2,317	2,103	1,125
Vermont	1,448	1,007	1,110	594
Virginia	13,811	9,275	9,755	5,218
Washington	8,996	4,298	9,112	4,875
West Virginia	8,622	6,699	4,206	2,250
Wisconsin	13,111	7,365	12,442	6,656
Wyoming	1,171	674	1,051	562

Desirability of Security Guaranties to Israel

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 27, 1957

Mr. JOHNSON of Texas. Mr. President, it has seemed to me that there is one widely held misconception arising out of the current Middle East dispute. It is that granting Israel some guaranties of its security would somehow constitute a reward for aggression. The issue is far more complicated.

Roscoe Drummond, the scholarly and careful columnist for the New York Herald-Tribune, addressed himself to this issue this morning. With his usual

clarity, he points out that such guaranties would be simple justice—not a reward. I ask unanimous consent that his article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUT OF THE EGYPTIAN-ISRAELI IMPASSE

(By Roscoe Drummond)

WASHINGTON.—A negotiated solution, which would bring about the withdrawal of Israeli forces from Egypt with assurances against new Egyptian raids and discriminations, seems within reach.

If this end is achieved in the next few days—and the ingredients of agreement appear definitely at hand—then everybody, with the possible exception of the Soviet Union, which prefers turmoil, will be the winner.

It seems to me that the United States has rightly committed itself, both morally and, in all reality, irrevocably, to establishing for all nations, including Israel, the right of innocent passage through the Egyptian-held Gulf of Aqaba to the Israeli port of Elath.

For its part, Israel now seems disposed to accept assurances, which are less binding than guaranties, as a basis for withdrawal. This would be a wise and justifiable act of faith in the firm intentions of the United Nations and the United States not to permit a resumption of the Egyptian actions which provoked the invasion.

What has brought this explosive and apparently irreconcilable impasse to the border of peaceful solution?

The Israeli position was that its very survival depended upon being guaranteed against repeated Arab raids from the Gaza strip and assured of uninhibited access to the port of Elath.

The United Nations position was that, despite the provocations, the Israeli invasion of Egypt in force was a massive violation of the U. N. Charter and that the U. N. couldn't give any guaranties to Israel as long as it was violating the charter.

The stalemate—no Israeli withdrawal without guaranties; no guaranties without Israeli withdrawal.

This deadlock could only be broken by two things:

Recognition by the United States that the U. N. had become so involved in the technicalities of the dispute that in the end it was dealing primarily with what it would do—that is, vote sanctions—if the deadlock were not broken, rather than dealing effectively with the substance of the deadlock.

Recognition by Israel that in the end its best interests would be served rather by relying on the United States and the U. N. than by provoking the aroused hostility of the free world through trying to obtain its rights by force.

It seems to me that there has been a confused and overelaborate concentration on the need of making sure that Israel is not rewarded as the result of its invasion of Egypt.

This would be an important concern were it not for two circumstances:

The responsibility for the series of conflicts between Egypt and Israel is so interwoven that a similarly interwoven solution is not only realistic but justifiable. Both countries are at fault, and I should think there is no moral reason why the conditions which would bring about a solution should not come into being simultaneously—or as nearly simultaneously as possible.

Secondly, the real test of whether the U. N. has rewarded aggression is surely not whether Israel withdraws before it has some solid assurance that Egypt's offenses against Israel will not be repeated but whether Israel is being given anything in the wake of the invasion that it didn't deserve before the invasion. It isn't.

Secretary Dulles' initiative to break out of this hobble is apparently yielding results. With increasing precision he is assuring Prime Minister Ben-Gurion that if Israel withdraws its forces, the United States will act to establish the international right of free passage through the Gulf of Aqaba. This is not reward; this would be righting a longstanding injustice.

Reports from Cairo suggest that Egypt may be ready to accept U. N. troops in the Gaza strip to prevent border raids. If not, the same protection could be achieved by Israel inviting the U. N. troops to stand guard on the Israeli border.

Craftsmen Donate Talents to Polio Victim

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, February 27, 1957

Mr. NEUBERGER. Mr. President, human generosity and kindness have fortunately been present in every age, including our own. These qualities were again demonstrated when an entire crew of carpenters, electrical workers, bricklayers, and other trade-union members went to work without pay in the community of Hillsboro, Oreg., to add a room to the home of Leo Helsby.

Mr. Helsby is an outstanding war veteran, ex-schoolteacher, and former union official, who has been stricken with polio ever since October 31, 1955. Due to excellent care and therapy which he received at the veterans hospital in Portland, Mr. Helsby has made a substantial recovery, although he is still severely crippled.

Under the leadership of a former schoolmate of mine, Harry Failing, of Portland, these trade-union members went to work unselfishly and voluntarily to add a room to Mr. Helsby's home so that his recuperation may be facilitated. In addition to the union members, many businessmen and lumbermen of the community of Hillsboro cooperated generously in the project.

I ask unanimous consent that articles from the Oregonian of Portland of February 25 and from the Oregon Labor Press of February 22, which tell of this good deed, be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Portland Oregonian of February 25, 1957]

CRAFTSMEN DONATE TALENTS TO POLIO VICTIM

(By William Hilliard)

Labor worked overtime in Hillsboro Sunday—and without time and a half.

The carpenters, electrical workers, bricklayers, and other union men that labored overtime would be compensated all right, but not in extra wages.

Their overtime pay would be the happiness of a Hillsboro family of 4, cut to 3 temporarily more than a year ago when the father was stricken with polio.

The unionmen worked feverishly Sunday to build an addition to the home of Leo Helsby, 240 Southwest 282d Street, Hillsboro. They had only 1 day to complete the job.

Helsby, 29, was stricken with polio October 31, 1955, and has been hospitalized since. For 8 months, the ex-schoolteacher was confined to an iron lung, but now he is able to be without artificial breathing for more than 10 hours and he is coming home.

The new addition will be Helby's own room, fully equipped to take care of his every need. Mrs. Helsby, a registered nurse, and the children, Paula 4, and Michael 3, will also use the addition as a "family room."

HE SOLICITS HELP

Helsby will keep himself busy doing tutoring when he returns home. In his spare time he will probably paint, a hobby he picked up in occupational therapy at the veterans' hospital when he decided to find some use for his left hand.

Helsby, who used to do everything with his right hand, lost the use of the right hand following the polio attack that paralyzed his chest muscles and left his legs useless.

Harry Failing, 2469 Northwest Kearney Street, a polio victim who has recovered from his attack from the great crippler, is responsible for Sunday's activity at the Helsby residence.

Failing met Helsby while showing films to polio patients at Good Samaritan Hospital. He became interested in Helsby because, as Failing put it, "Leo was in a tremendous state of depression."

"I could see that Leo's recovery was not going to be very great," said Failing, "and that his future was going to be in a rest home."

MANY VOLUNTEER TO HELP

Failing said he talked to many people in Hillsboro called upon them to come to Helsby's aid. Failing was sure he could keep Helsby out of the rest home if he could give him encouragement.

He talked to local newspapers, unions, and individuals. All volunteered to pitch in and help see that a room was added to Helsby's home—an addition that would keep him as comfortable as in the hospital and allow him to come home.

Sunday's activity on 282d Street is the result of cooperation. Failing calls it "an investment to keep Leo out of the rest home."

To Mrs. Helsby it will be the family room, where she and the children can be with Helsby every day.

Man's faith in man paid dividends to Helsby and to Failing.

[From the Oregon Labor Press of February 22, 1957]

UNIONMEN WILL BUILD ROOM FOR HILLSBORO POLIO VICTIM

Union carpenters, plumbers, bricklayers, and members of other crafts will be giving their time and skill next Sunday for another union member.

Leo Helsby, former secretary of Pulp & Sulphite Workers 166, was stricken 15 months ago by polio. The disease took a severe toll of his body but not of his spirit. Although he does not have the use of his arms or legs, Helsby is determined to be self-supporting and more than a score of union members are determined to help him.

Helsby lives at 240 Southwest 282d, Hillsboro, half a block south of Oak (formerly 13th Avenue), near Hillsboro's east city limit.

The plan is to add a bedroom-sitting room to the Helsby house which will be adapted to his needs. Materials have been donated or secured at cost. The foundation has been laid.

Construction will be a 1-day project like an old-fashioned barn-raising on Sunday, February 24. Union craftsmen and friends will gather early and hope to complete the addition that day. Volunteers will be welcome, according to Harry Failing, a fellow polio victim now recovered, who has organized the project.

The Oil Price Situation

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 27, 1957

Mr. MARTIN of Pennsylvania. Mr. President, there is now much talk in the country relative to the price of oil and oil reserves. Few seem to realize that oil has advanced very little in price, while the cost of production has greatly increased during the past 10 years.

The Oil City Derrick has published a very instructive editorial on this subject, and, the Guaranty Trust Co. has made a study entitled "Are We Running Out of Oil?" I ask unanimous consent that the editorial and article be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Oil City-Franklin-Clarion (Pa.) Derrick of February 13, 1957]

THE OIL PRICE SITUATION

Oil is still the favorite whipping boy in Washington.

That's the only conclusion that can be drawn from the hue and cry over the recent price increases in petroleum and some of its derivatives—a hue and cry that completely ignores the age-old law of supply and demand, the cost structure, and other factors that vitally affect this industry the same as any other in the economy.

Yet it is significant to note that in the past 10 years all major industries have advanced the prices of their products with methodical precision and regularity. There was scarcely a peep in Washington. Nary a stir followed these advances.

But the recent oil increase—the first general increase in about 4 years—loosed a torrent of abuse upon the industry and a flood of unwarranted charges of monopoly, conspiracy, and the like.

The oil price increase can be fully justified. In fact, the increases were long overdue and, in the opinion of those in position to know the real status and problems of the industry, are wholly inadequate to permit producers to meet steadily increasing demands and replenish reserves in the face of mounting costs.

In the last 10 years, crude oil prices have increased only 28 percent. During the same period, average hourly wages paid in the producing industry have increased 61.3 percent, oilfield machinery prices have advanced 55.6 percent, oil well carbon casing 77.8 percent, oil well alloy casing 87.5 percent, carbon line pipe 117.8 percent, finished steel products 80.7 percent, and automobiles 45.9 percent.

Just since the last general crude oil price adjustment in June 1955, the oil-producing industry has absorbed 5 rounds of increases in basic steel prices and 4 rounds of wage increases.

In the face of these increased costs—increases that have put the cost of finding and producing petroleum 6 to 10 times higher than it was 10 years ago—the industry is expected to set new records of production to meet increasing demands and, at the same time, continue discovery work in order that proved reserves may be maintained in keeping with the growing needs and in preparedness for any emergency.

During 1956 the statistical record of the industry shows that demand and production increased approximately 5½ percent, but drilling increased less than 1½ percent. This lag in drilling was due primarily to the fact that crude-oil prices remained unchanged while producers continued to absorb mounting costs.

There's a limit to the power of the oil industry, or any industry, for that matter, to absorb spiraling costs. When that limit is reached, there is no alternative but to increase prices.

That's the situation in which the oil industry finds itself. The disparity of crude-oil prices must be eliminated if the industry is to be able to meet demands and maintain reserves at an adequate level. The recent price increase was a step in that direction. And, despite the furor created by the boost, it's doubtful if the increase is sufficient to bridge the gap between producing costs and justifiable revenues.

A realistic view of the whole situation indicates that the oil industry, rather than being subjected to the attack now being made upon it, deserves commendation for resisting so long and at burdensome cost the inflationary pressures which engulfed it.

[From the February issue of the Guaranty Survey]

ARE WE RUNNING OUT OF OIL?

The abrupt increase in demand for American oil due to the closing of the Suez Canal has sharpened interest in the question of present and future supply. Are we within sight of the end of our petroleum resources?

Some authorities have assumed that about half of the total reserves have been discovered, placing the ultimate figure somewhere between 150 and 200 billion barrels. Others are much more optimistic. The Department of the Interior says, for example: "A total of 300 billion barrels as the ultimate reserves of the United States and of the adjoining continental shelves seems to be a reasonable figure." Still other authorities believe that even the most optimistic of present estimates will eventually prove conservative.

NEED FOR CONSTANT DEVELOPMENT

One point on which all authorities agree is that the adequacy of the oil supply must always depend upon the continuous process of exploration and discovery.

The finding of oil is a costly and hazardous business. The cost of a well ranges from $20,000 to as much as $1 million, averaging about $90,000. Of every 9 discovery wells drilled, 8 are dry. Only 1 in 43 finds a field of a million barrels, which is close to the margin of profitability.

Recognizing these extraordinary costs and risks, Congress in 1926 enacted legislation permitting the holder of an oil-producing property to treat as depletion for tax purposes 27½ percent of the gross income or 50 percent of the net income from the property, whichever is less. Under this incentive, Americans have developed an oil industry that is one of the principal foundation stones upon which the 20th century standard of living has been built and have discovered new reserves fast enough to meet increasing current requirements and maintain provision for a decade or more of future years.

Yet the oil-depletion allowance has often been, and still is, under attack. Demands will probably be made in Congress this year, as in years past, for the repeal of this special-interest legislation. Representatives of the industry and of oil-regulatory agencies will probably be called upon to appear before congressional committees and explain anew why the depletion allowance is not special-interest legislation, but legislation in the public interest, because it provides no more than fair compensation for the special risks and costs involved in producing oil.

ECONOMICS OF DEPLETION

Rational analysis of the economics of the oil-depletion allowance confirms the verdict of experience. Against the existing legislative background, oil has taken its place among the great epics of American enterprise and welfare. Nothing could be more short-sighted than to jeopardize the future of a resource so vital to prosperity and national security by changes that cannot be justified even on theoretical grounds. Adequate production has always been a direct function of economic incentive. Expert opinion holds that our known oil reserves are not likely to become inadequate in the foreseeable future, provided we have the wisdom to maintain that incentive.

Statement of Representative James C. Davis of Georgia, Before a Subcommittee of the Judiciary Committee, February 25, 1957

EXTENSION OF REMARKS
OF
HON. JOHN J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Representative DAVIS of Georgia before a subcommittee of the Committee on the Judiciary:

Mr. Chairman, I am glad to have the opportunity to appear before you and the members of this subcommittee in opposition to this group of bills you are now considering.

There are so many valid objections to this legislation that one individual can deal with only a small percentage of them.

There are many able Members of the House and Senate who want to present arguments, both factual and legal, against these bills. I felt when the announcement was first made that hearings on this legislation would be confined to 4 days, at such an early stage of this session, that that was a grave and serious mistake.

Your subcommitee has now extended the hearings, I believe, until tomorrow, February 26. I do not believe hearings on such far reaching and revolutionary legislation should be closed until ample opportunity has been afforded for full hearings to those desiring to be heard. I sincerely hope that you gentlemen will not close these hearings until that opportunity has been afforded.

I am opposed to this legislation, first, because it is unconstitutional; second, it is absurd and ridiculous; and third, it is unnecessary.

Advocates of this type of legislation have tried to create sectional prejudice. Some have promoted the false theory that the South, my section of the country, is prejudiced against Negroes and has denied them equal rights in education, jobs, housing, justice in the courts, and otherwise, while people of the North, East, and West, in direct contrast, eagerly extended to them the right hand of fellowship and gave them a warm

welcome into schols, churches, office, factory, and neighborhood community life.

In both respects these claims are false, and that attitude is false.

Some progressional liberals and professional South haters have had the brass and effrontery to assume a holier-than-thou attitude toward the South, and to deal with this question on the basis that it can be assumed without argument that the southern people hate Negroes, and make a practice of murdering them, cheating them, oppressing them, and depriving them of civil rights.

Whether this attitude stems from ignorance, political considerations, or an evil heart and mind, I do not know. I do know that such an assumption is unfounded, and first I want to give to you some facts in support of the proposition that the Negroes in the South (and the great bulk of them do live in the South) have fared better and received more consideration from white people than those who have left the South and gone to other sections of the country in search of the Promised Land.

Whatever opposition may exist in the South to integration with the Negro, has its counterpart in the North. The thinking people of all sections know this.

I want to quote a paragraph from an editorial in Collier's weekly for May 11, 1956:

"The people of the North can help most, we believe, by cleaning up their own mess—and this process might well begin with a general soul searching to discover what residues of prejudice remain there. When Harlem has been desegregated, when Negroes have been welcomed as neighbors in the present suburbs of New York and Chicago, when Chinese and Filipinos have been made to feel at home in San Francisco's Sea Cliff and Pacific Heights, there will be time enough to point a finger at the South."

That editorial writer faces the facts, and admits the truth, that there is no warmer welcome for desegregation in New York, Chicago, or San Francisco than there is in the South.

I do not, of course, have time to go into this situation in the great detail which the facts bear out, and in support of which thousands of instances could be cited from every section of this country. However, I do want to go into it to a sufficient extent to satisfy any fair-minded person that I am not dealing in isolated instances or referring to rare and unusual occurrences.

Former Senator Herbert Lehman, a supporter of integration, of New York, on June 3 last year, speaking at an Urban League meeting in New York City, said that conditions in Harlem, a large Negro and Puerto Rican community in New York City, are "a rebuke to us of the North." He further told them that "Harlem is an area of proverty, congestion, substandard housing and substandard schools." This is not the statement of a northerner talking about the South. It is not the statement of a southerner talking about the North. It is the statement of a former Governor and Senator of the State of New York talking about conditions existing in his home State and city.

The Christian Science Monitor carried in its issue of June 12, 1956, an article written by Mary Hornaday, bearing the title "Barriers Confront Negroes Seeking Housing in North." She quoted Alan S. Paton who wrote a survey of the Negro in the North for Collier's magazine, as saying "the cry of the Negro is no longer: " 'Let my people go'; it is: 'Let my people in.' "

I quote the following from her article:

"FREE CHOICE DENIED

"Here in New York City, where Negroes make up about 20 percent of the Manhattan population, they are still almost completely excluded from a free choice to buy or rent homes in the open competitive market. The Protestant Council of the City of New York recently found that 22 of the city's 27 major real estate operators turned down Negro applicants for apartments, though accepting white applicants of the same economic status.

"Into New York's Harlem are crowded more than a quarter of a million Negroes from the Southern States, West Indies, and Africa. Negroes began to move into Harlem in 1901 as a result of a deflated boom in real estate. Hundred of families deserted tenements on the west side to move into apartments built by speculative real estate promoters. Today Harlem contains Sugar Hill where affluent Negroes live in dignity and comparative splendor but it also contains some of the most notorious rat-ridden slums in New York."

I take it that these statements are true. Certainly no one would undertake to accuse the Christian Science Monitor as being either prosouthern or antinorthern.

On June 12 last year, Mr. Hal Dumas, formerly executive vice president of the American Telephone & Telegraph Co. in New York City, said in a speech to the Atlanta Rotary Club that except for public transportation segregation is just as strong in New York City as any place in the South. He said:

"They make a great effort to condemn segregation in the South, but it (New York) is the most painfully racial and religious clique-minded town in existence."

Some writers who have devoted study and thought to these problems feel that Chicago gives New York City keen competition in the field of segregating Negroes. In the Christian Science Monitor of July 16, 1956, a news item by James K. Sparkman quoted a Negro director of the Urban League as saying that Chicago "is the most segregated city in the North," and that Negroes in Chicago "are situated in the middle of the Nation's largest racial ghetto."

He quotes the same Negro spokesman as saying that Negroes pay 30 to 50 percent more than a white man would pay for the same housing and that: "Negroes are not only denied freedom of movement, but they are ruthlessly exploited, overcharged, overcrowded, and disproportionately forced into slum living."

The article by Mr. Sparkman is quite long, but I want to quote a few paragraphs from it:

"CHICAGO NEGROES FIND OLD MANSIONS DISAPPOINTMENT

"(By James K. Sparkman)

" 'Many of our people thought that mansions were palaces. They have found them monstrosities.'

"This is how Roi Ottley, noted Negro author and Chicago radio commentator, brings home the point that for Chicago Negroes, achieving size in homes has not proved an answer to their longings.

"Mr. Ottley, along with Negro newsmen, welfare, and politician leaders, is quick to say that if jobs are the incoming Negro's primary gain here, housing is his area of least progress.

"Indeed, despite the visible evidence of changing home and apartment ownership, including that of many old South Side lakeshore mansions, little has been accomplished when compared with the growing problem, they argue.

"Less than a month ago, Edwin C. Berry, new executive director of the reorganized Urban League, concluded from the weight of the league's study data that Chicago 'is the most segregated city in the North' even though there has been progress in Negro housing.

" 'You and I,' Mr. Berry told delegates here to a red cap union convention, 'are situated in the middle of the Nation's largest racial ghetto.'

"It is, he said in describing the area lying parallel to Lake Michigan south of the Loop which takes in the site of the ill-reputed Mecca flats and a hefty fraction of Chicago's 23 square miles of densely populated slums, '8 miles long by 2½ miles wide and contains more people than the entire population of Columbus, Ohio.'

"Restrictive device

"By its nature, if not always by design, housing restrictions are 'a landlord's device for controlling rents,' one Negro spokesman observed here to this correspondent recently. The victimized tenant, if given poor return for his money, has little chance to flee. Said the Urban League on this subject:

" 'This residential segregation forced by Chicago custom means that Negroes are not only denied freedom of movement, but they are ruthlessly exploited, overcharged, overcrowded, and disproportionately forced into slum living.' Although no study of Negro rents in Chicago has yet been made, Mr. Berry estimates that Negroes pay 30 to 50 percent more than would a white man for similar quarters.

"Why has there been no answer to this problem—especially in an era of record home and apartment building? The causative forces are to be found deep in the nature of the steady stream of 1,000 to 2,500 Negroes which are believed settling monthly in Chicago.

"Some Negro spokesmen believe this figure should be smaller; southbound trains are daily full of Negroes, they note, who have decided they have stayed long enough in the Windy City."

Illinois, a State which produces so many knights in shining armor to point an accusing finger at the South, has been the scene of race riots with more violence and disturbance in one riot than in all of the Southern States combined. In 1951 the International News Services reported that an anti-Negro mob of 10,000 milled about an apartment building in Cicero, Ill., a west Chicago suburb.

These 10,000 Illinois people were stirred to a mob-violence pitch because a Negro war veteran undertook to move his family into an apartment building in a white neighborhood. This news item stated that Illinois National Guardsmen were lined up 4 deep holding back the crowd with guns and fixed bayonets, and that at least 6 persons were bayoneted by the guardsmen. The mob which began on Wednesday with 3,000 people, grew to 10,000 by Thursday.

The Atlanta Constitution of July 12, 1951, carried this news story of the mob violence taking place in Chicago on that occasion:

"SIX WOUNDED AS 10,000 BATTLE IN RACE RIOT

"CHICAGO, July 12.—At least 6 persons were bayoneted Thursday night while steel-helmeted troops and police fought to rout an anti-Negro mob of 10,000 milling about an apartment building in Cicero, west Chicago suburb.

"The most seriously wounded was identified as Vicent Kaduk, 20, of Cicero, who was jabbed in the left side with a bayonet.

"The others were reported to have suffered minor cuts.

"Illinois National Guardsmen were lined up four deep, holding fixed bayonets in a cordon about the building, trying to push the screaming crowd back.

"Although most of the crowd had edged back to 200 feet from the building, some of the mob kept breaking through to as close as 50 feet from the troop perimeter, tossing bricks, rocks, and firecrackers at the building.

"Several windows that had remained intact through two pillagings Wednesday night and Thursday were broken.

"Although the guardsmen were outfitted with guns, no shots were fired.

"The menacing crowd, kept a block away from the building since sundown, broke through police lines as the steel-helmeted

troops arrived aboard guard trucks and chartered buses.

"Earlier, police routed 25 persons who broke through their lines by firing pistols into the air.

"The violence stemmed from efforts of a Negro war veteran and his family to move into the apartment building. They would have been the suburb's first Negro residents.

"Gov. Adlai E. Stevenson ordered 500 troops to the apartment building Thursday after vandals rampaged through the building for the second time.

"An estimated 3,000 screaming, jostling Cicero residents gathered outside the building Wednesday night when teen-agers and hoodlums raced into the dwelling, ransacked four apartments, and made a bonfire of the furniture.

"Not a single family remained in the 12-flat structure."

Chicago people have not become more tolerant since the Cicero occurrence. In 1954, 2 years later, a mob of such size as to require approximately 2,000 policemen per day staged riots at the Trumbull Park's housing project in Chicago. This resulted, as in Cicero, Ill., from efforts to forcibly integrate a Negro family into a white housing project. Eighteen months after the riot started Police Commissioner Timothy O'Conner said that 313 policemen were assigned to the project daily, and that police details at the project have ranged to more than 1,800 men in a 24-hour period.

Michigan has pointed the finger at the South from time to time. In the 1952 Democratic National Convention, Michigan's Governor was brazen enough to say that delegates from the South should actually not be seated in the convention of the Democratic Party.

Yet Dearborn, Mich., is far more prosegregationist than Atlanta, Ga. Dearborn's mayor boasts in newspaper interviews that not a single Negro lives in the city limits of Dearborn.

One might judge from the breastbeating of the Michigan Governor that Detroit would be a model brotherhood city, to which Negroes might come as a place of refuge from the segregated South, and be welcomed with open arms. However, on April 5, 1956, a mob of nearly 500 people in Detroit threw rocks through the windows of the home of a 70-year-old retired private policeman who had just moved in. Although this man said he and his family were white people, the word got around among the neighbors that he was a Negro, and the same sentiment manifested itself in Detroit as in Cicero and Chicago, Ill. The news item about the Detroit incident is as follows:

"DETROIT MOB FORCES OUT FAMILY RUMORED NEGRO

(By Bem Price)

"DETROIT, April 5.—Aged John W. Rouse bowed today to his neighbors' belief that he and his family are Negroes.

"Rouse said he had decided to sell and move after a near race riot by nearly 500 people last night on quiet, tree-lined Robson Avenue in northwest Detroit. Two windows in the modest brick home were broken by rocks before police broke up the growing demonstration.

"Private policeman

"Rouse, a retired private policeman, insists that he and all of his family, wife, daughter, and two grandchildren, are white. The 70-year-old former watchman sold the house to the Belmont Subdivision Association for $18,500, a $2,000 profit.

"Under the terms of the sale Rouse has 2 months in which to move. In the meantime he has free rent. When the sale was completed a 6-foot red-lettered sign appeared on the front lawn, reading, "Settled." It was taken down an hour later by the association. Police blocked both ends of the street, cutting off the steady stream of curiosity seekers who had been driving past.

"People think that (sign) means they're going to stay here," one member of the association said.

"Mrs. Rouse, also 70, cried, 'How do they know we are Negro? They haven't even seen us. We didn't even get out here until after dark Tuesday. I think there is something very wrong. I could expect something like this in a foreign country."

"Youngsters play

"While Mrs. Rouse talked, her two grandchildren, a boy 7 and a girl 10, were playing with a baseball in the backyard under police protection.

" 'You know how children are,' she said. 'They don't know about things like this and I couldn't keep them in the house all day.

" 'I did not want them in the front yard where the other kids could make nasty remarks.'

"Girls giggle

"Off and on all day little girls in Bermuda shorts and long hose passed in front of the Rouse house giggling and occasionally yelling, 'There's a Negro in the crowd.'

"Large numbers of teen-agers gathered in knots across the street from time to time while housewives sat on porches in the warm sun gossiping about the neighborhood affair.

"Oddly, a reporter ranging the street could find no one who admitted having seen or known the Rouse family, but all insisted they knew they were Negro.

"Racial unit

"Sgt. Thomas Nickerson and Detective Ed Boggs, members of the special investigation bureau which deals with racial problems, tried all day to trace the source of the rumor which set off the demonstration.

" 'As near as we can determine,' said Boggs, 'it started with the movers. One of the workmen moving furniture into the house told a boy, "You ought to tell your folks there is a Negro moving in." It apparently started from there.'

"The gray-haired Mrs. Rouse said, 'I guess you know how all this started. I wish they had broken my dishes instead.'

"Trace rumor

"Boggs and the sergeant, in tracing the rumor, found it passed by word of mouth mostly from one agitated neighbor to another.

"The two officers said that their investigation showed that both grandchildren were registered at birth as white. Rouse said he is part Cherokee Indian and that his wife is Scotch-Irish and French Canadian."

As I prepare this statement for this subcommittee, newspapers are carrying stories of riotous demonstrations taking place night after night in Detroit to protest a Negro moving into a white neighborhood. These demonstrations began on February 11 this year, and continued nightly, the crowds ranging up to 250, and requiring 25 policemen to prevent breaches of the peace. The demonstrators are now not only demonstrating in front of the house of the Negro, but also are demonstrating in front of the home of the white woman two blocks away who sold the house to the Negro.

The Washington Evening Star on Thursday, February 21, 1957, carried the following news item, and I quote it for the purpose of illustrating the fact that Detroit white people today are exhibiting the same antipathy to Negroes moving into white sections which they exhibited last year in the case of the man who said he was an Indian and not a Negro:

"DETROIT CROWDS PROTEST NEGRO IN WHITE AREA

"DETROIT, February 21.—Nightly crowds demonstrating before the home of a Negro woman who moved into a white neighborhood February 1 have grown to more than 100 on Detroit's Northwest Side.

"Police said 100 to 150 were dispersed last night in the vicinity of 12356 Cherrylawn, a house recently purchased by Mrs. Ethel Watkins, a widow seamstress.

"Detroit's Commission on Community Relations said demonstrations began February 11 and have continued nightly since with most participants now also demonstrating before the home of a white woman who sold the home to Mrs. Watkins.

"The commission identified the white woman as Mrs. Eugenia Novak, who now lives two blocks away, and police said they had established an around-the-clock two-man guard there as well as at Mrs. Watkins' home.

"Police usually dispatch around 25 men to the neighborhood to disperse demonstrators and at times have barricaded Cherrylawn, turning back anyone who could not prove he lived there.

"There have been no daytime demonstrations and no peace breaches during the night gatherings, police said.

"David Gracie, field representative for the commission on community relations, said several demonstrators have been taken to the precinct police station and talked to, but none has been arrested.

"First crowds of demonstrators ranged around 200 to 250, but dwindled to 35 to 40 over the weekend, then increased last night and the night before."

Feeling between the races became so intense in Detroit in 1943 that the worst race riot in the Nation's history occurred there. I hold no brief for race riots. I have never seen a race riot. I have never been near one. I hope I never see one.

Race riots, of course, are illegal. They occur only when normal restraints are discarded, when respect for law and order is overcome by emotionalism. A race riot, or any kind of riot for that matter, is the final culmination of a feeling that anything is better than submission to the impending event.

We in the South have maintained all along that by reason of our experience with the race problem, we know better how to keep down race tensions, race riots, and ill feeling between the races, than those people in other sections who have not had the experience, and to whom the problem is a new one. We believe we are correct in this attitude and belief. I think the riots in Detroit, Cicero, Ill., the Trumbull Park housing project in the South Deering section of Chicago, the lake steamer riot in Buffalo, N. Y., the situation in Dearborn, Mich., where no Negro is permitted to live, and the evidences of race tension in many cities and areas throughout the country demonstrate the correctness of our views and position on this serious problem.

Regarding the 1943 Detroit race riot, the U. S. News & World Report of May 11, 1956, said:

"On that occasion, roving gangs of each race terrorized downtown Detroit and other parts of the city for 3 days—shooting, stabbing, beating, and looting. Before the United States Army could restore order, 25 Negroes and 9 whites were killed, 700 persons injured, and millions of dollars worth of property damaged or destroyed."

That magazine in the same issue May 11, 1956, quoted a Detroit Negro paper as follows:

"Detroit seems to be rapidly returning to its old pattern of a few years ago, when we lived from crisis to crisis in the the last 2 years there has been an unmistakable resurgence in organized resistance to Negroes based upon color prejudice no effort is made to correct tragic mistakes in attitudes which can only lead to the destruction of our whole town."

Another example of the resentment which the white people of Detroit have against Negroes moving into white sections is the occurrence in October 1955 when a Negro couple with 3 children moved into a home

on Chalfonte Street. A mob of about 1,000 white people collected and threw rocks at the home. Two policemen were injured. The family sold the house and moved. This was reported in the Sunday Star on May 13, last year.

There are some things which cannot be forced upon people. Mayor Orville Hubbard of Dearborn, Mich., told a newspaper reporter in an interview in regard to Negroes moving into that city: "That can't get in here. We watch it. Every time we hear of a Negro moving in—for instance, we had one last year—we respond quicker than you do to a fire. That's generally known. It's known among the Negroes here."

He was asked if the NAACP ever called upon him, and he answered: "No we'd chase 'em to hell out of town." He also is quoted as saying: "The politicians have made the race question a football. It's hot up here, but we've taken an open stand in our community. Detroit hasn't done it; they're in a hell of a mess. We're for complete segregation, no if's, and's or but's about it. That is my position and I tell the Negroes the same thing. I say 'we don't have equality among the whites and you don't have equality among the Negroes. Why stir up something when you are getting along all right' "

The newspaper reporter also quoted Mayor Hubbard as saying: "The politicians are trading out their votes. Our governor up here is way over on the thing. He's doing it for votes, right? And civilization is suffering over it."

While the mayor of Dearborn, Mich., states that he would chase the NAACP out if they called on him, they do call upon the mayor of Atlanta, the governor of Georgia, and any other public official in our State at will. They hold regional meetings in Atlanta; in Birmingham, Ala.; New Orleans, La.; without any trouble at all. And while we know they are troublemakers, and while we know that more than 41 percent of their officers and board of directors are listed in the records of the House Committee on Un-American Activities as having connections with subversive organizations, and while we know that their program closely parallels the platform of the Communist Party, they are free to come and go as they please in our section so long as they are orderly and do not violate our laws.

We know, of course, that there is a breaking point in this problem of good race relations. We know that if attempts are made to force things beyond this breaking point by legislation, executive orders, or judicial decisions there finally will come violence. It is to avoid this tragic result that we are so vigorously protecting this legislation.

It is hypocritical for so-called liberals in other sections of the country to point an accusing finger at the South and say we are more intolerant and have more racial antagonism than other sections, in the face of such occurrences as fights between 300 white and Negro high-school students at the Kansas Municipal Stadium on April 24, last year; a fight between about 200 whites and Negroes, with thousands of spectators milling about, in Asbury Park, N. J., on July 2, last year; a fight between white and Negro sailors in Honolulu on June 9, last year, resulting in the death by stabbing of 1 white sailor; fighting between white and Negro Air Force recruits in Crocker, Mo., on June 1, last year; a racial disturbance in Muncie, Ind., on June 10, last year, resulting in the closing down of a newly integrated swimming pool in that city; Memorial Day race riots last year in Crystal Beach, Ontario, which was referred to in newspaper stories as "a nightmare of flashing knives and sobbing, frightened passengers"; a riot at Newport, R. I., among 1,500 white and Negro sailors and marines, their wives and women companions, on September 18, last year, which completely wrecked a club and sent 15 sailors to a hospital; 1,100 taxi drivers in St. Louis going on strike on August 18, last year, in protest against the hiring of Negro taxicab drivers. On July 25, last year, a Toronto judge upheld an apartment house owner in his refusal to rent to a Negro; cross burnings and court hearings in Columbus, Ohio, on November 14, last year, resulting from Negroes moving into a white section in Columbus; banishment of a Negro woman and 8 children from Cleveland, Ohio, on June 8, last year, although the woman tearfully protested she didn't want to return to Alabama.

Ohio seems to be learning something about the race problem. On August 1, last year, a Negro, one I. W. White, Jr., executive director of the council to aid migrant workers in Cleveland, wrote a letter to an Alabama schoolteacher, advising him to urge his pupils to stay in the South instead of coming North. He was reported as having said that "The exodus North of southern Negroes has hurt the battle of Negroes to obtain first-class citizenship." The Ohio Supreme Court on April 18, last year, upheld an amusement park near Cincinnati in refusing to admit a Negro.

The papers are constantly carrying news stories of similar occurrences and of racial problems in the North, East, and West. Several years ago Sgt. John Rice, an American Indian who was killed in Korea was refused burial in a privately operated Sioux City, Iowa, Memorial Park Cemetery. Burial in that cemetery is limited to Caucasian only and the body of the American Indian sargeant was finally interred at Arlington National Cemetery. Time does not permit me to give anything like a recital of all occurences of this nature even for only 1 year. I have taken the time and trouble to give you merely a few of those which occurred in 1956.

While we are thinking about the sectional aspect of this problem, it is well to bear in mind that the first court case upholding segregated schools for white and colored children was in Massachusetts, and not in Georgia or any other Southern State. The case was that of *Sarah C. Roberts* v. *The City of Boston* decided in 1849, 108 years ago. It is reported in 59 Massachusetts 198 (Cushing 5, 1849–50). The opinion was written by Chief Justice Shaw. It was a case where the parents of Sarah C. Roberts, a Negro girl, wanted her to go to a primary school supported by the city of Boston for white children only. She had been assigned to a primary school supported by the city for colored children only. She alleged that this was discrimination on account of race and color. The court denied the petition and held that it was proper for the city of Boston to send this child to a colored school. On the question of prejudice the court had this to say:

"It is urged that this maintenance of separate school tends to deepen and perpetuate the odious distinction of caste, founded in a deep-rooted prejudice in public opinion. This prejudice, if it exists, is not created by law, and probably cannot be changed by law."

On the question whether prejudice would not be as effectually fostered by compelling colored and white children to associate together in the same schools, the Massachusetts court said:

"At all events, it is a fair and proper question for the committee to consider and decide upon, having in view the best interests of both classes of children placed under their superintendence, and we cannot say, that their decision upon it is not founded on just grounds of reason and experience, and the results of a discriminating and honest judgment."

Although vote-hunting politicians are pandering to such groups as the radical NAACP in trying to force race mixing on protesting people, it is not succeeding. This is true in New York City as well as Atlanta, Ga. On February 7 this year, Robert C. Weaver, New York rent administrator, said that racial segregation is increasing in cities and suburbs. He said that "existing Negro ghetto in cities were getting larger, and newly lily-white subdivisions were growing beyond city lines." He also said "the majority of our dwelling units are still closed to minorities. Our failure to secure a wide distribution of ethnic groups throughout communities tends to increase segregation in all its forms."

He also said that the influx of Negroes into northern cities increased their concentration in those neighborhoods where housing was available to them, and this, in turn, resulted in some schools, parks, and other community facilities being utilized almost exclusively by Negroes while those in other neighborhoods served only white residents.

His statements are found in the following article in the February 8, 1957, issue of the Atlanta Constitution:

"NEW YORK RENT CHIEF FINDS SEGREGATION ON UPSWING IN CITIES AND SUBURBS

"NEW YORK, February 7.—Racial segregation is increasing in cities and suburbs, Robert C. Weaver, New York rent administrator, declared tonight.

"Despite scattered progress against discrimination in the sale and rental of housing, Commissioner Weaver said, existing Negro ghettos in cities were getting larger and new lily white subdivisions were growing beyond city lines.

" 'Signal gains have bene made in New York State in barring discrimination in publicly assisted housing,' he said, 'but the majority of our dwelling units are still closed to minorities. Our failure to secure a wide distribution of ethnic groups throughout communities tends to increase segregation in all its forms.'

"Weaver said the influx of Negroes into Northern cities increased their concentration in those neighborhoods where housing was available to them.

"He declared this, in turn, resulted in some schools, parks, and other community facilities being utilized almost exclusively by Negroes while those in other neighborhoods served only white residents.

"Weaver and Herbert Bayard Swope were guests of honor at a fund-raising party for the national and New York State committees on discrimination in housing. Two hundred persons were present in the home of Mr. and Mrs. Ronald Tree, 123 East 79th Street.

"Weaver was chairman of the committees from their organization in 1950 through 1954. He resigned to become deputy State housing commissioner. Swope was honored for his service as chairman of the New York City Commission on Intergroup Relations, which he held until last December 31.

"Weaver said passage at Albany of the Metcalf-Baker bill was 'imperative to extend nondiscrimination coverage to a broader segment of the housing market.'

"The bipartisan measure is now in the finance committee of the State senate and in the assembly's judiciary. It would outlaw discrimination in most of the 4 million private housing units in this State. The present Metcalf-Baker law bans discrimination in housing that receives any form of public aid.

"Algernon Black, chairman of the committee on discrimination in housing, declared passage of the Metcalf-Baker amendments would 'set an example in civil rights for the whole Nation.' He said it was the first anti-bias bill affecting private housing to be introduced in any State legislature."

It is a cruel fact that the hypocritical representations of some contemptible politicians seeking Negro votes have created false hopes in the minds of Southern Negroes. Some Negroes have accepted these hypocritical

statements at face value and are moving into such cities as New York City, Chicago, Ill.; Detroit, Mich.; Columbus and Cincinnati, Ohio, and elsewhere believing that they will be accepted into schools, churches, and all phases of community life.

When they arrive, they find the opposite is true. They are herded into squalid tenement quarters like cattle. They are overcharged. They are cheated. If they settle in a white neighborhood, the white people rush to move away as if the bubonic plague had struck the community. Although Negroes there are not segregated by law, they are segregated by reason of residence, and the only way their children can be sure of attending non-segregated schools is for the school authorities to haul Negro children from Negro communities, past Negro schools, and enter them in white schools in white communities, and on the other hand to haul white children from white communities, past white schools, and put them in Negro schools in Negro communities. This is pointed up by an article in the Wall Street Journal of January 29, 1957, entitled "School Migration," which is as follows:

"SCHOOL MIGRATION—NEW YORK CITY REGROUPS PUPILS IN EFFORT TO ABOLISH NORTHERN FORM OF SEGREGATION

(By Peter B. Bart)

"NEW YORK.—Every weekday morning several school buses pull up in front of Public School 93 in the Bronx and some 200 Negro children scamper off to class.

"Until last September these 7- and 8-year-old tots could walk to their own neighborhood schools. Today the city of New York takes them in buses the 20 city blocks or more to Public School 93.

"Their daily journey is part of an enforced migration of school children being launched by New York's board of education. It's a matter of racial integration. Until the Negro children were transferred to Public School 93, that school was attended almost entirely by white pupils living in the neighborhood. Now, like many of the 790 other New York public schools, it is mixed.

"Mixed is a big word in New York City these days. Without fanfare—but by no means without objections—city officials have begun a program of racial integration that involves more than a policy of nondiscrimination. As at Public School 93, many school youngsters are already being transported from one school district to another so the board of education can achieve what it feels is a proper balance.

"This is only a beginning. A master plan to speed up the integration process for New York's 925,000 public-school pupils has been drawn up by the subcommittee on zoning of the board's commission on integration. If approved, the plan will take effect next September. It proposes extensive use of city-financed buses to create racially balanced schools, and suggests that racial integration should be the sole objective of school zoning.

"Rotating teachers

"Also under consideration: A plan for the rotation of experienced teachers from 'good' schools to 'problem' schools so as to improve the quality of instruction in slum areas. Meantime, the board of education wants a $68 million boost—to $412 million—in its new budget; some of the additional money would be used to expand the work of the commission on integration.

"The aim of all this activity is to eliminate the school segregation that occurs in the North as an outgrowth of local housing patterns. To banish it the officials must also banish the traditional concept of the neighborhood school.

"Elsewhere in the North this campaign to abolish alleged de facto school segregation is also picking up in intensity—notably in cities like Chicago, Philadelphia, and Detroit. But the most impressive efforts are being made here in New York.

"Even here the size of the school migration can't be fully measured. One difficulty is that its operation is decentralized; school officials say they've made no attempt to add up the number of pupils transferred. Another is that the best informed officials hesitate to give a guess; they shy away from public comment because they think it is an explosive subject.

"Crisscrossed city

"Nevertheless, all concede that hundreds of New York students are already crisscrossing the city by bus and subway to schools far from home. In the slum-ridden Bedford-Stuyvesant area of Brooklyn, full-scale transfers of children from zone to zone have brought about integration in at least 20 schools since the opening of the school year.

"Not only are children from Negro sections like Harlem traveling to hitherto all-white schools; in some instances, white pupils are crossing regular school zones to enter all-Negro schools.

"'One junior high school in my three Brooklyn districts was almost entirely Negro last year, and it's now 50–50 in racial composition,' says Samuel M. Levenson, an assistant superintendent of schools. He adds: 'In another junior high school white students were brought in from a mile or so away to prevent it from becoming 100 percent Negro.'

"'We've got busloads of Negro children coming in from big distances,' the principal of a formerly all-white school in Manhattan relates. 'I hate to think what it's costing the city.'

"In some cases, integration is being achieved by means of minor gerrymandering of school zones without much transfer of pupils. This is particularly true of schools in so-called fringe areas where white and Negro neighborhoods converge.

"Vigorous pursuit

"Spearheading the integration movement in New York and other cities, is the National Association for the Advancement of Colored People. At its 1956 convention in San Francisco, the NAACP resolved that 'the entire resources of this organization be dedicated to pursue with vigor the elimination of segregation in fact in the schools in northern communities. * * * We cannot wait for residential discrimination to be eradicated before something is done about the elimination of segregation in our northern public schools.'

"Backing the NAACP in a number of cities are such groups as the Urban League, Americans for Democratic Action, United Automobile Workers, plus local civil rights and religious groups.

"Not surprisingly, public officials are extremely sensitive on the issue. Consider the curious case of an obscure Brooklyn minister, Dr. Milton A. Galamison of the Siloam Presbyterian Church. Irritated by what he considered to be a delay in desegregating Brooklyn Junior High School 238, Dr. Galamison sent a personal telegram to Superintendent of Schools William Jansen, demanding the latter's resignation.

"To the minister's astonishment, Dr. Jansen personally called and 'asked for an appointment.' Later the telegram was released to the press along with a rather defensive explanation by Dr. Jansen of this position. Thus the affair attained citywide publicity. And Dr. Galamison was elected president of the Brooklyn branch of the NAACP.

"Moving away

"School authorities tend to discount the protests they hear. 'We had some white parents who threatened violent action if their children were transferred to Negro schools,' confides a Brooklyn principal, 'but in the end some of them just gave up and moved away.' Agrees Rev. Dr. David M. Cory, executive secretary of the Brooklyn division, Protestant Council: 'You hear a lot of talk about violent opposition to school integration, but I have yet to find any actual manifestation of it.'

"Nonetheless, some open opposition exists. The scheme to rotate experienced teachers from good to problem schools has already drawn sharp objections from the powerful High School Teachers Association. Its president, Mrs. Concetta T. Roy, warns: 'It will only create more dissatisfied high-school teachers.'

"And Rev. W. Sterling Cary, of Brooklyn, says: 'I just don't think the schools are the answer. The real problem lies in the housing ghettoes themselves which are the cause of northern school segregation. And I think all this rezoning could be a hardship on children who may have to travel great distances to school every day.'

"'I believe we're being stampeded into a dubious program,' contends the principal of a recently integrated Brooklyn school. 'We have incontrovertible evidence of large numbers of white children withdrawing from schools when Negroes are brought in from outside. Many New York schools will be 100 percent colored within 2 years after Negro children are introduced. The hard truth is that we can't have full-scale integration until both Negroes and whites are really ready for it.'

"But such voices seem unlikely to halt the rush. As one highly placed New York school official puts it: 'Any racial issue is political dynamite in a city like this. If anyone suggests that the integration program be slowed down while we find out where we're going he's immediately branded a racist'."

Any unbiased and objective study of the race question will show that where there is any appreciable number of colored people, generally the same attitudes exist and the same feelings are held, whether it be Detroit, Chicago, New York City, or below the Mason-Dixon line. One difference which exists is that people in the South are less hypocritical, and deal with the problem more realistically than people in other sections, to whom the problem is a new one.

At present rate of migration, the people in the North, East, and West are not going to remain unacquainted with the problem much longer. It is probably a good idea that Negroes are being attracted away from South into other sections by the pleasing stories they hear of higher wages, good living conditions, and integrated schools and dwellings.

This migration very likely will continue, unless such people as the Cleveland judge who banished the Negro woman and her eight children back to Alabama, and the Cleveland Negro who wrote to the Alabama schoolteacher to keep his pupils in the South, can convince southern Negroes that they are better off at home, and that they are not wanted in the North.

In the South, we have known for many years that if Negro children are to be educated, the cost of educating them would have to be borne by white people. I live in DeKalk County, Ga., a county whose population now is about 210,000. It was 186,000 in 1950. The city of Atlanta lies in Fulton County and DeKalb County. I want to give you some facts about our treatment of Negro children, which may be news to some of you. In 1950, I requested the superintendent of county schools in my home county to give me figures from his records regarding the number of Negro children in our county public school system, the cost of operating those schools, and by whom that cost was paid. These facts were that we had 2,042 Negro children in the county public school system; that the county (not including the State contribution) spent $85.33 per pupil on white and colored alike which amounted to

$174,243.86 the county paid toward the education of these Negro children.

His information further showed that Negro property owners in DeKalb County paid school tax upon 1,348 parcels of real estate, total valuation $357,320, net valuation after deducting the homestead exemptions $77,600. Negro property owners paid taxes upon 842 items of personal property, gross valuation $79,500, net valuation after homestead exemption $50,750. The Negro property owners thus paid school tax upon $128,350 of taxable property. Our school tax rate is $1.50 per 100. The total amount of school taxes paid by those property-owning Negroes was $1,925.35.

The county operated 4 Negro school buses to haul Negro schoolchildren to the county public schools at an annual expense of $2,000 each, or a total expense just for school buses of $8,000. So, the total school taxes paid by the Negroes of DeKalb County into the county school system was less than one-fourth the actual money spent by the county to haul their children to the school houses. The $1,925.35 would have provided less than $1 dollar per pupil for the 2,042 Negro children who attend the county public schools.

We have known all through the years that we have to carry the tax burden. We have carried it uncomplainingly, and are now carrying it uncomplainingly, because we know that if the burden of educating their own children were carried by the Negroes, they simply would not be educated. Last year, in 1956, I asked the county school superintendent to furnish me the same information which he previously furnished me for 1950. Last school year the State of Georgia paid $92.35 per pupil for operating purposes, and DeKalb County paid $51.70 per pupil, making a total of $144.05 per pupil. Of the $51.70 local payment the Negro taxpayers paid $1.93 per pupil; the white taxpayers paid $49.77 per pupil. In the past 6 years the DeKalb County Board of Education has spent $1,377,223.28 rehousing Negro children and purchasing school equipment for them. This represents $517.95 per Negro pupil in capital outlay.

The value of Negro property in my home county has grown now to $326,920, and their annual school taxes for 1956 amounted to $5,124.47, which, as I stated before, amounts to $1.93 per Negro pupil.

On Sunday, December 11, 1955, DeKalb County dedicated 13 new school buildings. Eight of those were for white children, and 5 of them were for Negro children. At this time all Negro children in our county are in new classrooms. All Negro schools meet full standards for accreditation; of the Negro teachers 17 percent hold master's degrees; 75 percent hold bachelor of arts or bachelor of science degrees, and only 8 percent have less than 4 years of college. No Negro teacher with less than a bachelor of science degree has been employed in the last 5 years.

Such legislation as that which you are now considering would disrupt our peaceful relations. Destruction of our segregated system of schools would carry with it destruction of the opportunities now enjoyed by qualified Negro teachers in the South. This is pointed up by a recent article written by a Negro named Davis Lee, who is publisher of the Newark (N. J.) Telegram. This article was written by Lee after visiting in Georgia and the South and seeing for himself what the conditions are. I quote several paragraphs from Editor Lee's article:

(By David Lee, Publisher, Newark (N. J.) Telegram)

"The efforts being made by certain paid agitators and pressure groups to have segregated schools in the South declared unconstitutional may cause southern Negroes to lose a lot more than they will gain. * * *

"Integration in the schools in the North and East is not a howling success. A Negro can attend most of the schools up here and get an education, but few of the States that educate him will hire him as a teacher. The State of Connecticut doesn't have 25 Negro teachers.

"Recently I visited Albany, the capital of New York State, and learned that the city only employed 3 Negro teachers. Our own city, Newark, with Negroes constituting 20 percent of the population employes 2,200 teachers, but only 70 of them are Negroes, and we don't have 1 Negro principalship.

"Nowhere in these integrated States do Negroes get anywhere near proportionate representation. Every device is employed to keep qualified Negroes from being assigned. Recently a reputable New York labor union made a report on the employment of Negro teachers in New York City and charged that a systematic scheme has been adopted to exclude Negroes as teachers.

"This is not true in the South. The State of Georgia employes 7,313 Negro teachers and paid them close to $15 million in salaries last year. North Carolina paid its Negro teachers over $22 million last year. Florida is another State that ranks at the top on teacher pay.

"If these States, that are now pouring millions of dollars annually into Negro pockets which provides our people with money that enables them to enjoy the dignity of man, to enjoy prestige and respectability, to buy homes and the necessities of life, are forced to abandon the segregated school, 75 percent of the Negro teachers in the South will lose their jobs. Not only that, but approximately 20,000 Negro principals will lose their jobs as well.

"Can the Southern Negro afford to take this sort of economic licking for the privilege of sending his kids to a mixed school? I don't think so. The price is too great. Again, what will happen to race relations in the South if school integration is forced down its throat? At present 50 percent of the southern Negroes assume very little personal responsibility. Their employers do everything for them including selecting an undertaker when a death occurs.

"Certainly ruling out segregation in the schools is not going to change the habits of these Negroes, but white employers will definitely change their habits, and to the detriment of these poor people who are not responsible for the force change. * * *

"This present movement to end segregation in the schools is merely the beginning of a well laid plan to completely end segregation in everything in the South. If this happens, the Negro will be thrown into direct competition with the white race, and our business institutions will crumble.

"No place in the world do Negroes own and control as much as do those in the South. Atlanta is without question the Negro capital of the world. It is the center of Negro culture, education, business and finance. And both Negroes and whites live, work and operate business without either being conscious of the other race.

"This movement to integrate the schools in the South is loaded with more racial dynamite than appears on the surface, and the Negro will be the one who is blown away.

"During the past 2 years I have spent more time in the South than I have in my office, and I have interviewed thousands of Negroes in all walks of life and I have found very few who favor mixed schools. They want their own schools, but equal facilities. This being the situation, one questions the fairness of forcing these colored citizens to accept what they don't want. If a little group of paid agitators succeed in forcing their will upon these people, it appears to me that they should at least be given an opportunity to be heard.
